## Contents

**Foreword**  
L. Bragança, H. Koukkari, R. Blok, H. Gervásio, M. Veljkovic, Z. Plewako, R. Landolfo, V. Ungureanu, L.S. Silva, P. Haller

### Chapter 1. Sustainability and life-time structural engineering

Integration - the key and the way to life-time structural engineering  
*H. Koukkari & L. Bragança*

From Theory to Practice - From Practice to Theory - Two sides of the Same Coin  
*A.N. Tombazis*

Urban Habitat Constructions under Catastrophic Events  
*F.M. Mazzolani*

LCA - Comparison of building structures in different materials  
*W. Winter*

Sustainable construction products for energy-active façades  
*B. Weller, C. Hemmerle & S. Jakubetz*

How to value the sustainability - Differentiating, adjusting and extending traditional paradigms  
*E. Günther*

The “German Sustainable Building Certification” system for Sustainable Design  
*W. Sobek, H. Schuster & H. Trumpf*

Educational material on sustainable constructions  
*H. Koukkari, M. Veljkovic & L. Bragança*

### Chapter 2. Criteria for Sustainable Construction

Introduction to Criteria for Sustainable Construction  
*R. Blok & H. Gervásio*

Global Methodology for Sustainability Assessment: Integration of Environmental LCA in Rating Systems  
*L. Bragança & R. Mateus*

Multicriteria and multi-actors interactive tools aiding to sketch the project choices during the first stages of design, with objective of best environmental performances, for new or existing buildings  
*J.-M. Hauglustaine, M. Descamps, S. Azar, C. Baltus*

Optimising structural grids of Multi-Functional buildings  
*R. Blok, H.G.E. Daamen, S. de Kok*
