Proceedings of the 1st International Conference on Building Sustainability Assessment

Porto, Portugal
23-25 May

Edited by

Rogério Amoêda
Ricardo Mateus
Luís Bragança
Cristina Pinheiro
## Contents

**Foreword** vi

**Organizing Committee** vii

**Scientific Committee** ix

**Partners and Sponsors** xi

**Contents** xiii

### Chapter 1 – Emerging tools and methods for building sustainability assessment (BSA)

- Developing a framework for socio-economic assessment of regeneration projects 3
  J Akotia & C Fortune
- Passive building design: a user centered approach 13
  A Alzaed & A H Boussabaine
- Sustainability Index Concrete: a first approach 23
  M Calero, Z Lladosa & M Haas
- The building stock and traditional building principles: sustainability assessment for historic buildings 31
  S Dirlich
- Sustainability assessment models in the Gulf & Mena region: An analytical study of QSAS 39
  F Fadli
- Economic and environmental benefits related to a sustainable building refurbishment 53
  N Gohardani & F Bjork
- Thermal comfort and sustainable building assessment: A discussion of current practice and conflicting issues 59
  P Hernandez
Chapter 2 – Development and application of existing sustainability assessment tools, methods and certification systems

Incorporating biophilic design principles into green building assessment tools
T A Alencar & R J Cole

Energy performance of a residential villa in Dubai designed in accordance with the Abu Dhabi PEARL villa rating system
G S Amin & B Abu-Hijleh
Slovak building environmental assessment system
E K Burdová & S Viščková

Sustainability assessment tool of Green building renovation in Taiwan: An introduction to EEWH-RN
C-Y Chang, H-T Lin & M-C Ho

LEED certification system and Serbian building and design
N Cukovic-Ignjatovic, D Ignjatovic & B Stankovic

Adapting BREEAM for communities to the Spanish urbanism: modification of a conventional urban development as a sustainable neighbourhood
D Garabito, J C Garabito, J Garabito & V Echarri

Internationalizing a UK-based sustainability assessment framework for construction products
S Ghumra, J Glass, M W Frost, M Watkins & J Mundy

Extending the concept and validity of responsible sourcing certification through environmental product declarations
J Glass

Green building classification system for developing countries
P Kapoor

Sustainability verification and life cycle evaluation of residential building modernization with industrialized retrofit solutions
S K le Roux & Y E Crouhjort

Construction sites assessment based on AQUA Brazilian guidelines
A C Lordaslem Jr & P R A Lima

Guideline for the sustainable refurbishment of residential buildings
C M Pires, L Bragança & R Mateus

The advantages of integrating BSA tools in the early stages of the architectural design process of dwellings
A Rezaallah, C Bolognesi & R A Khoraskani

Practical experience with the implementation of Sustainability in Buildings in Germany
A Rieß & N Kerz

Using LEED to evaluate a built apartment building in Estonia
E Seinre & H Voll

Evaluation of the control of carbon emissions of construction facilities in Hong Kong
A Y H Wu & R M Skitmore

Green Globes
J Skopek

Influence of the LEED system application on the development of Serbian building market in the state of crisis and transition
B Stankovic, N Cukovic-Ignjatovic & D Ignjatovic

Patterns in green building practice: analysis of LEED project data
J A Todd & R Tufts
Adaptation of environmental indicators to assess the existing buildings to different requirements of users
C V Ulloa, J Crepin, P Lagiere & J R Puiggali
SBToolCZ - Sustainability rating system in the Czech Republic
M Vonka, A Lupíšek & P Hájek

Chapter 3 – Comparison of BSA tools and methods

Comparison of green building certification systems and a proposal for Turkey conditions
M Altin & H O Kaya
The cultural values embedded in building environmental assessment tools: a comparison of LEED®-Canada and CASBEE
A Blaviescumaite & R J Cole
Vantages of certification of sustainable construction
V Lucas & M P Amado
Sustainability tools in architecture: artefacts of our time?
A Magliocco
LEED and BREEAM; Comparison between policies, assessment criteria and calculation methods
A Rezaatlab, C Bolognesi & R A Khorasani

Chapter 4 – Normalisation of life-cycle analysis and building sustainability assessment

Sustainable construction: energy efficiency in residential buildings
A M Ganhão & M P Amado
Building sustainability assessment - from calculation to valuation
T Lützkendorf, N Kohler, H König & M Baloukski
The need of harmonization: from building product information to the whole process of the construction
B Rivela, C Bedoya & A García-Santos

Chapter 5 – Life-cycle assessment (LCA) of materials, products and buildings

Emery analysis of building construction materials
R Amoêda
Net energy analysis of geothermal energy installations
E Arrizabalaga, P Hernandez, L Mate, X Oregi & B Sanchez
Making LCA data on building materials accessible and relevant for building
J Bricout, A Comelles, M Darul, M Vieira & A Norton

</tbody>
</table>
Assessing ecological sustainability (eco efficiency) in urban and regional planning – EcoBalance Model
J Wahlgren

Life cycle assessment in buildings. The case of a steel composite structure
G J Xanthakis

The environmental effects of solar system usage in detached house
A Żelazna & A Pawlowski

Chapter 6 – Life-cycle costs analysis (LCCA) of materials, products and buildings

Carbon and energy reduction: a case study of Norton Park, Edinburgh
R N Atkins & R Emmanuel

Robust low energy design that accounts for occupant behaviour
A P R González, T S Blight & D A Coley

How do costs and technology interact in sustainable building over an LCA perspective? A comparative analysis in Italian context
F Pittau, N Villa, E De Angelis & G Dotelli

Buildings’ thermal rehabilitation: thermal characterization of building stock and cost effective rehabilitation proposals
A C Rodrigues & M Almeida

Chapter 7 – Education on building sustainability assessment

Integration of building sustainability criteria within the studies of building engineer degree, University of Burgos, Spain
J Garabito, A Rodriguez, J C Garabito, J Gadea & D Garabito

Construction21 – A platform to inform and communicate about building sustainability
C Gazulla, P F Palmer & V Pappe

“Easy Wind Tunnel”, a fluid dynamic approach for everyone
G P Monizza, C Benedetti, M T Girasoli, M Marchesi & J Ratajczak

Using SBTool as an educational platform
N Larsson & L. Bragança

GreenBuildingSolutions Summer University Vienna – An education program for international participants
V Landa, M Treberspurg & C Neururer

The influence of design methodology on building sustainability
E M Sergunicheva, E Kazakova & K Vereshchagina

Chapter 8 – The relevance of the BSA methods for the environmental policies

Feasibility study for private households towards a zero carbon economy in 2050
A Köhler, J Stengel & F Schultzmann
The influence of design methodology on building sustainability
E M Sergunicheva, E Kazakova & K Vereshchagina

Chapter 8 – The relevance of the BSA methods for the environmental policies

Feasibility study for private households towards a zero carbon economy in 2050
A Kühlen, J Stengel & F Schultmann

Pragmatic measures to encourage contractors contributing towards emission reduction
S T Ng & C T S Kwok

A study on energy consumption of cities: case study of Low-density, Medium-density, High-density and Super-high-density cities
N Yokoo, T Shoda, Y Kato & T Oka

Chapter 9 – Integration of BSA tools in building design tools

The importance of the hospital buildings to the sustainability of the built environment
M F Castro, R Mateus & L Bragança

Life Future direction for effective sustainable design: A survey on the extent and the format of a decision support tool
I Erbas, & S van Dijk

The study of variation in Gross Building Coverage Ratio (GBCR) on outdoor ventilation for Singapore’s high-rise residential estates
R X Lee & N H Wong

Software for environmental assessment of building materials - Product Module (EABM-P)
F Lembo, F P R Marino & D Ioannì

Software for environmental assessment of building materials - Technical Element Module (EABM-TE)
F Lembo, F P R Marino & D Ioannì

Integrated Approach for Intelligent Envelope Design: Simulation performance of building envelope design strategies and technologies during the early design stage
S Monna

Future direction for effective sustainable design: A preliminary study on utilisation of existing tools in the architectural practice
S van Dijk & I Erbas

Application of particle swarm optimization to time, cost and carbon emission analysis for building construction
Y Zhu & W Orabi

Index of Authors
