Foreword

The international conference “Portugal SB07: Sustainable Construction, Materials and Practices - Challenge of the Industry for the New Millennium” is organised in the scope of the International Initiative for Sustainable Built Environment (iiSBE). This event is supported by the Portuguese Presidency of the European Union during the second half of 2007 and by a range of international organisations such as CIB, UNEP, SD-MED and COST / European Science Foundation.

This international conference is part of the SB07 regional/national event series and as such constitutes also a preparation for the 2008 World Sustainable Building Conference to be held in September 2008 in Melbourne, Australia. The venue of this conference is also relevant, as it is the first international conference on this topic to be held in Portugal. The organisers hope that this initiative will promote further the sustainability of construction industry and the built environment, consequently, contributing to further sustainable development of Portugal and the other participating countries.

The construction industry is a vibrant and active industry representing approximately 10% of Portuguese GDP. The building sector is responsible for creating, modifying and improving the living environment of humanity. On the other hand, construction and buildings have considerable environmental impacts, consuming a significant proportion of limited resources of the planet including energy, raw material, water and land. Therefore, the sustainability of the built environment, the construction industry and the related activities is a pressing issue facing all stakeholders in order to promote Sustainable Development.

The new millennium is challenging practitioners and researchers with the sustainability of the built environment and the construction industry. Hence, the main purpose of this conference is to discuss these challenges and look for solutions that actively facilitate and promote the adoption of policies, methods and tools to accelerate the movement towards a global sustainable built environment.

The intention of the organizers is to give an opportunity to practitioners, academics, scientists, engineers, architects, contractors, manufacturers, owners and users from all over the world to come together in a pleasant location to discuss recent developments in the field of sustainable construction, materials, practices and construction sustainability assessment.

The conference main topics cover a wide range of up-to-date issues and the contributions received from the delegates reflect critical research and the best available practices in the Sustainable Construction field. The issues presented include:

- Building sustainability assessment tools
- Indoor environment quality and benchmarks
- Sustainable resources and materials use
- Use of non-conventional materials
- Use of industrial waste
- Eco-materials and technologies
- Sustainable management of existing building stock
- Innovative sustainable construction systems
- Design for climate change
- Design and technologies for energy efficiency and conservation
- Design for minimizing and using construction and demolition waste
- Design for service-life
- Design for deconstruction
• Design for flexibility
• Use of IT in design
• Closing the loop
• Actions and policies to implement sustainable construction
• Designing the sustainable city of tomorrow and Urban Sustainability
• Planning aspects for sustainable construction (construction site, procurement and commissioning)
• Integrated decision making process
• Biomimicry and design with nature
• Teaching sustainable construction
• Case Studies

All the papers selected for presentation at the conference and published in these Proceedings, went through a refereed review process and were evaluated by, at least, two reviewers.

We want to thank all the authors who have contributed papers for publication in the proceedings. We are also grateful to the reviewers, whose effort and hard work secured the high quality of papers expected for this conference. Their efforts reflect their commitment and dedication to Science and Sustainable Construction.

We want to thank the support given by InCI (Instituto da Construção e do Imobiliário) that sponsored and made possible the international edition of these Proceedings.

Finally, we want to address a special thank to iiSBE, CIB, UNEP, Ordem dos Engenheiros and SD-MED and wish great success for all the other SB07 events that are taking place all over the world.

The Organizing Committee and Proceedings Editors

Luis Bragança (University of Minho)
Manuel Pinheiro (Instituto Superior Técnico)
Said Jalali (University of Minho)
Ricardo Mateus (University of Minho)
Rogério Amoêda (University of Minho)
Manuel Correia Guedes (Instituto Superior Técnico)
Welcome

The strategy defined by the Portuguese Government for construction and real estate is based in sustainable concepts, optimizing the State regulatory functions in view to reduce bureaucracy, improve processes transparency, strengthening cooperation and guarantying an effective coordination in the definition and implementation of Government Program policies.

As a result of the above mentioned strategy, the Portuguese Government recently assigned a new mission and new challenges to InCI - Instituto da Construção e do Imobiliário, I.P. (Institute of Construction and Real Estate).

The mission of InCI, I.P. comprehends the regulation of the construction and real estate markets being the new challenges the promotion and implementation of solutions that achieve sustainability priorities, reduce environmental impact, enable energy efficiency in buildings, contribute to energy and environment certification, improve the rational use of materials and the construction waste management in Portugal. Summarizing, InCI, I.P. has an ambitious and challenging aim that is the modernization of the Portuguese construction sector contributing to the efficiency and sustainability of construction in general and of buildings in particular.

The aims of InCI, I.P. are fully in line with the scope of the conference “Portugal SB07: Sustainable Construction, Materials and Practices - Challenge of the Industry for the New Millennium” and, therefore, participating in the edition of these Proceedings is a contribution to positively changing the construction industry towards the adoption of sustainable and efficient building practices.

InCI’s support will also promote the opportunity to increase awareness and interest among the economic operators to the issues related to sustainable construction, through the exchange of practices, experiences and information.

It is with a great pleasure that InCI, I.P. warmly welcomes all the participants and wishes a great success to the Conference Portugal SB07.

The Executive Board

**Chapter 1. Actions and Policies to Implement Sustainable Construction**

Energy Ratings Based on Measured Energy Consumption: A Practical Approach for Implementation of EPBD and Identification of High-Energy Use Buildings

P. Hernandez, P. Kenny and R. Cohen

Achieving Sustainable Infrastructure in Washington DC

M. Cederoth

Sustainability Recommendations for a Social Housing Project: Barreiros, Vitória (BR)

M. Bissoli, J.L. Calmon and K. Caser

Sustainable Housing: From Consensual Guidelines to Broader Challenges

J. Mourão and J. Branco Pedro

The Impacts of Residential Buildings – How to Identify Life Cycle Based Improvement Potentials

B. Wittstock, C. Makishi, A. Braune, J. Kreißig, N. Gallon and C. Wetzel

The Contribution of the National Laboratory of Civil Engineering (LNEC) to a Sustainable Built Environment

C. Pina Santos, J. Branco Pedro and J. Vasconcelos Paiva

Energy Efficiency of Old and New Buildings in Romania

D. Dan, V. Stoian, T. Nagy-Gyorgy and C. Dăescu

Construction Sites Environment Management: Establishing Measures to Mitigate the Noise and Waste Impact

J.P. Couto and A.M. Couto

How to Attract Consumers and Real Estate Agents to Sustainable Housing

A. van Hal

Promoting the Environmental Management Systems into Construction Industry: The First Step

J. Šelih
Reasons to Consider the Deconstruction Process as an Important Practice to Sustainable Construction 76
   J.P. Couto and A.M. Couto

Methodology for the Application of Sustainable Construction 82
   L.N. Jesus, M.G. Almeida and A.C. Almeida

The Calculation Model of the New Portuguese Thermal Regulation – Put Side by Side with Dynamic Simulation 90
   P. Silva, L. Bragança and M. Almeida

Local Actions to Improve the Sustainable Construction in Italy 98
   C. Clemente

Alternative Network Geometry of Essential Networks for Enduring Sustainable Development 105
   A. van Timmeren, J. Kristinsson and L.C. Röling

The Certification of Buildings as an Enterprise Strategy of the Real Estate Sector: A National Scope Analysis 113
   Eloísa Cepinha, Paulo Ferrão and Sofia Santos

The Sustainability in Rehabilitation and in Its Education 121
   J.S. Elizírio, A.R.P. Roders and I. Valverde

Chapter 2. Sustainable Management of Existing Building Stock

A Framework to Sustainable Renewal of Existing Building Stock in Brazil 131
   M.A.S. González and A.P. Kern

Sustainability and Natural Resources Uses at a South Brazilian University: Proposing an Environmental Plan to University of Passo Fundo 139

The Service Integrated Envelope Applied for Sustainable Office Refurbishment 147
   T. Ebbert and U. Knaack

Characterization of the Lisbon Elementary Public School Building Stock 155
   S. Raposo, M. Fonseca and J. de Brito

Overcoming the Barriers to Improving the Sustainability of Existing Commercial Office Buildings 163
   J.B. Storey

Sustainable Management of Existing Building Stock: A Strategy to Reduce the Energy Consumption and the Environmental Impact 171
   Érica Mata, Fabian López and Albert Cuchi

Housing and Information Society: Integration of ICT in the Existing Housing Stock 178
   S. Eloy, I. Plácido and J.P. Duarte
Thermal Rehabilitation of a Student’s Hostel Belonging to the “Politehnica” University of Timişoara
D. Dan, V. Stoian, T. Nagy-Gyorgy and C. Dăescu

Existence and Progress of Deterioration of Concrete Facades
J. Lahdensivu, I. Weijs and U. Marttila

Environmental Assessment of the Maintenance of Façade Openings in Dwellings – The Dutch Case
I.S. Blom and L.C.M. Itard

How Sustainable Rehabilitation Designers Really Are
A.R. Pereira Roders, J. Post and P.A. Erkelens

Sustainable Management of Building Stock Refurbishment by Using MCDM
J. Šelih

Renewal of a Big High Density Housing Block in Berlin Kreuzberg
S. Giussani

Sustainable Management of Buildings
T. Häkkinen, E. Vesikari and S. Pulakka

Effect of Balcony Glazing on the Durability of Concrete Structures in Nordic Climate
J.S. Mattila

Technical Solutions for Sustainability in Post-War Residential Areas
S. Vidén

Sustainable Technologies in the Refurbishment of Existing Building Envelopes in Italy
S. Brunoro

Sustainable Recovery Approach to the Existing Housing Stock in Italy
P. Civiero

Living Building Concept: New Approach to Value Delivery in the Built Environment
R. Vrijhoef and H. de Ridder

Measuring the Effect of Design Changes by a Neuro-Fuzzy System
S. Durmisevic, S. Sarıyıldız and Ö. Çiftcioglu

Chapter 3. Building Sustainability Assessment Tools

Early Design Stage Evaluation Tool for Sustainable Energy Systems in Large New Buildings
K. Shanks

The Use of EPDs in Building Assessment – Towards the Complete Picture
A. Braune, J. Kreißig and K. Sedlbauer

Some Observation About the Efficiency of Building Sustainability Assessment Tools
C. Monterotti and A. Cuchí
Vitória’s Healthcare Buildings Environmental Performance Based on LEED/NC 2.2  
L.S. Araujo and J.L. Calmon 310

Assisting the Commissioning of the Low-Energy Buildings Design: From a Methodology to a Dynamic Tool  
N. Hannachi-Belkadi, M. Jandon, F. Guéna and Y. Diab 318

Selecting Aspects and Indicators in Environmental Assessment Methods for Buildings  
T. Malmqvist and M. Glaumann 326

Life Cycle Assessment Tool for Building Assemblies  
J. Carmody, W. Trusty, J. Meil and M. Lucuik 334

Performance Assessment for Sustainable Construction: Lest We Forget About the Client  
W. Gyadu-Asiedu, F.J. Scheublin and E.L.C. van Egmond 341

Urban Bioclimatic Indicators for Urban Planers with the Software Tool SOLENE  
F. Miguet and D. Groleau 348

Perspectives of Building Sustainability Assessment  
L. Bragança, R. Mateus and H. Koukkari 356

Life Cycle Assessment of Construction Processes  
J. Selih and A.C.M. Sousa 366

Optimization of Variable Selection for Sustainable Construction  
S. Pushkar, A. Katz and R. Becker 373

Sustainability Assessment of Building Refurbishing Operations  
L. Bragança and R. Mateus 381
