Foreword

The Proceedings of the 16th European Conference on Reading and of the 1st Ibero-American Forum on Literacies gather a great part of the papers that were presented in these scientific events which took place at the University of Minho, Braga, Portugal, between the 19th and the 22nd of July, 2009.

During these days near four hundred researchers, teachers, librarians and other professionals, from all continents, met to share their practices, ideas and visions about literacy, with commitment and enthusiasm.

The two events aimed at bringing together multiple worlds (and the corresponding words), and ways of researching, teaching, learning and doing the multiple literacies that characterize the semiotic landscapes of today. This was indeed a great moment for debating experiences on an international level.

Furthermore, the Conference and the Forum represented a meaningful step to reinforce the presence of literacy, in its multiple dimensions and perspectives, in the scientific and professional agendas.

The publishing of these Proceedings aims at the strengthening of such presence. All those who are interested in most of the issues concerning literacy will find here viewpoints, data, and debates that can illuminate dimensions of a reality which is always very complex, as it depends on a multiplicity of factors, political, economic, social, educational and moral. Literacy is a multidimensional issue that can hardly be understood if a comprehensive perspective is not adopted.

The papers in the Proceedings testify the encounter and the significant diversity of theoretical approaches and issues in the field of literacy studies, allowing that the conversation initiated in July, 2009, may be continued and fruitfully sustaining the development of new views, be them of analytical or intervention kind.

The 16th European Conference on Reading was co-organised by Littera, the Portuguese Association for Literacy, the Research Group Literacies – Practices and Discourses in Educational Contexts, from the Research Centre on Education of the University of Minho, together with the International Development in Europe Committee of the International Reading Association. Littera and AELE, the Spanish Association for Reading and Writing, were co-organizers of the 1st Ibero-American Forum on Literacies. It was simultaneously a great challenge and a great pleasure the possibility of unifying efforts to make possible these events.

For the Portuguese partners, mainly for Portuguese researchers, teachers and other literacy professionals, at a time when in Portugal literacy is a key issue, this was seen as an excellent opportunity for discovering worlds of literacy while “being discovered”.

The Editors would like to acknowledge the contributions of the institutions that made these events possible namely the Portuguese Foundation for Science and Technology (FCT), the Unit for Adult Education of the University of Minho (UFAE) and the University of Minho.

A last word of gratitude is also due to Patrícia Ferreira, Ana Gomes, Joana Sousa e Adriana Fischer who helped with the editing of the texts for these Proceedings.

Hipótese silábica e variabilidade intra-figural na fonetização de escritas infantis: da escrita manual para o computador

Neste trabalho pedimos a 30 de crianças de idade pré-escolar que escrevessem uma mesma lista de palavras, primeiro à mão, com lápis e papel e depois num processador de textos. Todos os participantes sabiam escrever o seu nome próprio e diferiam quanto ao nível conceptual. Para a definição do nível conceptual a que pertenciam os participantes escreveram as palavras gato, gatinho, cavalo, hipopótamo e boi. Foram criados 3 grupos experimentais (n = 10) de níveis conceptuais diferentes quanto ao seu pensamento sobre a escrita: silábico com fonetização, silábico-alfabético e alfabético (Ferreiro, 1988; Alves-Martins, 1996).

Os resultados apontam que a estabilidade da escrita de nomes comuns está relacionada com os níveis conceptuais de escrita, indicando ainda que a presença do teclado com todas as letras não é condição suficiente para as crianças fonetizarem mais ou melhor. Constata-se também que na comparação dos pares produzidos se verifica uma maior presença de pares com alternância grafo-fonética nos participantes do nível conceptual silábico-alfabético comparativamente aos participantes dos níveis conceptuais silábico e alfabético. Estas alternâncias grafo-fonética têm um interesse teórico considerável na compreensão da evolução do conhecimento infantil sobre a linguagem escrita.

Teaching strategies for individual development of reading literacy

First we have to think about the importance of silent reading. While reading in their individual speed, children could be offered a special training based on linguistic theories about texts. The question is "What makes a text?" Although there are many theories, we could use a simplified text model to get some interesting methods of training. To achieve this, texts could be prepared in a special way. Children could reconstruct a text or find a word which was taken off for example.

New Literacy and Academic Literacy in Higher Education

This paper focuses on presenting a program - the New Literacy – that aims at creating an alternative path for the instruction of reading and writing in the academic community. I follow John Willinsky's proposal as it is presented in his book *The New Literacy: Redefining Reading and Writing in Schools*, first published in 1990. The main motivation for choosing to introduce this program lies strongly on the fact that, although it was written almost twenty years ago, it is extremely current/up-to-date as its principles share some common ground with the Bologna Declaration signed on the 19th June 1999. Overall, the New Literacy proposes to offer a set of reading and writing methods that will shift «the education authority from without, from the experience and knowledge of the teacher, to within, to those qualities of the students» (Willinsky, 1990: 192) with the purpose of promoting a more autonomous and critical attitude from students, which is one of the most important tenets of the Bologna Declaration.

Opportunities to learn literacy: children's interpretations of teacher practices

Schools are the primary settings where children develop literacy proficiency. One aspect of schools that is hypothesized as leading to that proficiency is opportunity to learn literacy. In recent literature (cf. Boscardin & Aguirre-Munoz, 2006) opportunity to learn in classrooms has been defined narrowly to only include curricular coverage, time, topic emphasis, and teaching strategies. When classrooms are viewed as communities for literacy learning, opportunity to learn becomes more complex, encompassing the literacy events and practices that are privileged and the materials that are available during those events, the amount of challenge, the teacher's expectations, and how much choice learners have. Engagement becomes a learner's choice to accept or decline an invitation to participate in literacy events and activities. This choice, we assert, is predicated on the learner's interpretation of the literacy activities offered in a classroom. This research explores the interpretations of children in grades 4, 5, and 6 of the literacy events and practices that they are offered during reading and writing instruction. Teachers completed a survey of the reading and writing lessons, activities, structures, and materials that they use to support literacy learning. Children in those classrooms were interviewed in focus groups about the purpose of those practices and which practices engage them the most as well as describing good readers/writers. This presentation will discuss the findings of this research, offering suggestions about what classroom practices are opportunities to learn from the perspective of students. Implications for teacher preparation will be discussed.

How do Hungarian adults read aloud?

In everyday life we often have to read something out aloud. The way we do this shows how fluently we can read, how proficient readers we are, and whether we can interpret a written text and transpose it into speech.

As far as we know, no survey has so far been conducted on this particular skill amongst Hungarian adult native speakers. The current survey investigates this issue with the help of the Hungarian Spoken Language Database (BEA). 25 males and 25 females aged between 20 and 76 took part in the survey. Each participant had to read the same text aloud, after they had become familiar with the text by reading it silently for themselves. In the recorded readings we analyzed the reading mistakes, speech rate and articulation rate, the location and length of pauses, stress and intonation, and how intelligible and comprehensible the reading was.

The results help us find out what typical mistakes adults tend to make when reading aloud. We can also explore whether it is the reading (decoding) process itself or the pronunciation/articulation or indeed the interpretation of the text that proves to be too difficult for them.

France

Construction de la représentation de l'acte lexique chez le jeune enfant en Petite Section de maternelle

Cette contribution s'intéresse l'entrée dans l'écrit du très jeune enfant et propose une réflexion sur la manière dont l'enfant en école maternelle construit ses connaissances et ses premières représentations de l'acte lexique.

Le travail présente la comparaison de la production textuelle orale de deux situations de lecture: l'une en situation de lecture partagée avec l'adulte (celui-ci lit le livre avec l'enfant); l'autre en situation de 'simulacre de lecture' (le même enfant prend un livre et le "lit" à haute voix).

L'analyse du discours et plus particulièrement l'analyse prosodique de ces deux productions (durée, mélodie, pauses, intensité) à l'aide du logiciel Praat montre que très tôt l'enfant est capable d'une

activité métadiscursive ("qu'est-ce que je fais quand je lis?"). En effet, alors qu'il maîtrise en interaction avec l'adulte le langage articulé référentiel, on observe la mise en œuvre de stratégies prosodiques spécifiques associées à l'absence d'un langage articulé lorsqu'il est en train de construire le sens de la tâche à accomplir (simulacre de lecture): la centration de son discours porte alors sur l'objet même de la production verbale, à savoir le concept en train de se construire. Dans une perspective didactique, ces résultats nous conduisent à nous interroger sur le fait qu'à l'école maternelle, particulièrement en classe de Petite Section, ce n'est pas parce qu'on ne la comprend pas que la parole de l'enfant n'est pas signifiante: les indices intonatifs le sont. Quels dispositifs mettre alors en place pour favoriser ces conduites langagières réflexives?

Life-long learning and literacy development: what role does children's literature play?

Life-long learning may seem a nebulous concept; one to which we all aspire, but how? Teachers play a significant role in developing the motivation for life-long learning by providing a stimulating learning environment where children are encouraged to explore their creativity and develop responsibility. In order to be confident, considerate, and successful citizens of the future, children will need to have high levels of self-motivation and nurture a disposition for on-going learning experiences. Where does children's literature fit into this vision? On a continuum of learning, literature produced for children is present from a child's earliest memories. It is logical to capitalise on these early experiences and exploit the pleasure children's literature imbues in learning and discovering worlds of literacy. Throughout schooling, children's literature continues to offer valuable learning experiences in: critical thinking; empathy; vocabulary development; multiliteracies; and most importantly, it serves as a springboard for future reading, and engagement with a variety of texts.

Personalised learning is one way of describing a shift in emphasis in our education system as we respond to twenty-first century challenges. There is an increased focus on high standards, high achievement, and a commitment to life-long learning. With the phasing in of the new curriculum in New Zealand, and the central positioning of the five key competencies (thinking, relating to others, using language, symbols and texts, managing self; and participating and contributing) I am interested in exploring how children's literature can be an effective tool in supporting growth in the competencies, as these competencies for living in an increasingly complex society form a basis for life-long learning. In opening doors to all the learning areas, the key competencies lay the foundation for discovering worlds of literacy. As children's literature can be utilised throughout the curriculum, it can serve as a lively vehicle for competency enrichment, prepare children for the variety of texts they will encounter in the future, and pave the way for mature students to display motivation for life-long learning. This paper will explore specific texts in an attempt to investigate how integration of children's literature within the classroom programme offers alignment with the future focused dispositions for learning reflected in the essential learning competencies.

Bukowiecki, Elaine

Discovering how to be critical readers in varied content subjects

It is often stated that "every teacher is a teacher of reading" (Gray as cited in Vacca, 2002, p. 186). Teachers in each academic discipline must be able to guide students in accessing, analyzing, evaluating, and producing information and ideas. Every student needs to learn effective strategies for reading and writing across the curriculum and to critically evaluate the varied texts used in content area instruction.

In this interactive workshop, participants will discover the rationale for and application of varied and current literacy strategies that can be employed across the content areas and in elementary, middle, and secondary school classrooms. Direct and indirect strategies for teaching vocabulary, reading processes, skill acquisition, study skills, levels of questioning and varied writing forms will be presented and discussed as they apply to different content subjects and materials. Additionally,

workshop participants will learn about and directly practice different critical literacy techniques in order to “disrupt the commonplace [by examining] the written source from multiple perspectives” (McLaughlin & DeVoogd, 2004, p.14). In this way, the reader will move beyond the text’s message to “question, examine, and dispute power relations that may exist between readers and authors” (McLaughlin & DeVoogd, p. 14).

Also, in this workshop, 30 educators at four separate campuses of an international school (prekindergarten to grade 12) will be highlighted as they first learned through two graduate reading and writing courses and then incorporated different critical literacy techniques and reading/ writing strategies into the varied grade levels and content subjects they teach.

Viewing literacy through a 3-D lens: A ‘four resources’ model for multi-dimensional and multi-contextual readers of the 21st century

Freebody & Luke’s (1990) four resources model identifies four key abilities exemplified by a fully literate citizen: competence in coding and decoding, semantics or meaning-making, pragmatics or everyday literacy, and finally, competence in criticism. This paper builds upon this model as represented by the corresponding “four roles of the reader” and redesigns it in ways that fit multi-dimensional literate persons, including those who are in the process of becoming literate. This is done in the context of a multi-dimensional, multi-contextual ‘world’ conception of literacy whereby it is not enough to possess the aptitudes of coding, decoding, meaning-making, concept-building, and criticism, but we must also consider what it is that we do in terms of our own worlds and those of others. At the core of literacy, in our conceptualization, is the ability to re-vision, transform, design, and build your own world and that of others.

Carignan, Isabelle; Caron, Annabelle

Canada

Comparaison du degré de compréhension à l’écran et sur papier chez des élèves du secondaire

L’intérêt pour les technologies de l’information et de la communication (TIC) continue de transformer le monde de l’éducation (Lou, Abrami et d’Apollonia, 2001), malgré lui. Ce changement dans le domaine éducatif incite à parler de plus en plus de la littératie médiatique, c’est-à-dire l’habileté de lire, d’analyser, d’évaluer et de communiquer à l’aide de divers médias (télévision, texte papier, radio, ordinateur). En effet, il importe maintenant de connaître le mode de fonctionnement des élèves lors de l’utilisation des technologies afin qu’ils puissent réellement tirer profit de leur apprentissage et développer, par le fait même, un jugement critique qui les aidera à devenir des citoyens du monde (Kellner, 2000).

Coutinho, Virgínia; Azevedo, Fernando; Pinto, José Costa

Portugal

Reading literacy in Portugal and in Finland – preliminary study

The results of the international studies PISA and PIRLS raised discussions in many countries about how youngsters are being prepared for a world in permanent changing.

In the last PISA study that occurred in 2006 Portugal was once more below the OECD average showing poor domain in essential abilities such as reading and understanding a text. Today it is recognized that without this knowledge the capacity of intervention in society diminishes and this is an obstacle to strengthen social cohesion and democracy (Duru-Bellat, 2004; Willows, 2002).

Going deeper in the conclusions of the PISA and PIRLS studies we tried to identify the relations of teachers’ qualifications to the students’ success, the importance that teachers give to reading literacy, to the use of literary texts and which instructional methods they use. We compare a

school in Portugal with one in Finland, a country with the highest achievement in reading literacy. Showing some preliminary results we can already say that we found some interesting correlations that makes us conclude for a necessity of rethinking the qualifications of the Portuguese teachers of mother tongue from the 2nd and 3rd cycles and the necessity for further qualifications in children and youth literature as a contribution to the instructional efficiency and efficacy of reading literacy, in Portugal.

Cussac Pomel, Jocelyne

France

Le rôle du contexte dans la psychogenèse de l'écrit : variété interfigurale ou autocopie?

Dans le cadre d'un programme de recherches qui vise à identifier les mécanismes d'écriture du jeune enfant, nous lui demandons d'écrire alors qu'il ne sait pas encore coder l'oral. Il écrit ainsi des lettres avec ce qu'il connaît et comprend de l'écrit. Ferreiro (1988) avance que l'enfant fait alors une hypothèse de variété interfigurale qui l'amène à ne pas écrire la même suite de lettres pour deux mots différents. Nous faisons l'hypothèse que ces variations ne sont pas toujours réalisées pour différencier les mots et qu'elles dépendent du contexte dans lequel elles sont produites. Nous étudions les procédés d'écriture de 117 enfants de 4/6 ans, répartis en 3 groupes. Chaque groupe effectue, à quelques jours d'intervalle, deux des trois tâches suivantes : écrire 4 mots bisyllabiques en liste, en ligne ou sur des feuilles différentes. Les résultats montrent un effet voisinage visuel qui se traduit par des comportements d'autocopie : quand l'enfant voit ce qu'il a déjà écrit, il recopie des suites de 3 ou 4 lettres qui sont dans son champ visuel et/ou utilise la longueur d'une graphie comme unité de mesure pour écrire la suivante. Aussi les principes de variation qualitative et quantitative identifiés par Ferreiro ne relèvent pas d'une seule explication psychogénétique du développement de l'écriture, notamment pour la notion de variation interfigurale, car pour certains enfants nous ne les observons que lorsqu'ils écrivent en liste. Ces résultats remettent en question les conclusions des études basées sur un protocole d'écriture inventée d'énoncés en liste et constituent une contribution à un développement sociopsychogénétique de l'écrit.

Social contextualisation matters: learning to read with the help of Mentor

Reading together a thrilling book, talking about single words, sentences or the topic of a story or simply feeling confident about understanding a text – these are experiences that young readers should encounter during the process of learning to read. Since the structure of families and the way of using media changed in the last years it cannot be taken for granted that every child has the opportunity to make those fundamental reading experiences. Nonetheless, according to Bettina Hurrelmann (2004) the social contextualisation of reading can be seen as the most important parameter that influences the motivation to read and the frequency of reading. Since this social contextualisation correlates with the social background of the families the question arises how these social disadvantages can be compensated.

The charitable organization Mentor, which was founded in Hanover by Otto Stender five years ago, counts 800 members at the moment and the concept spreads nationwide. Alone in Hanover 147 schools participate and 1100 children between the ages of 7 and 12 are accompanied by so-called mentors during their way of learning to read. Mentor follows the concept of one-by-one teaching. Each mentor works with a child once a week for about half a year. Almost every child improves in the competence of reading and learning in general. In addition, the children develop self-confidence in their own reading abilities.

This presentation will give insights into the concept behind Mentor and the practice of this successful concept.

Playing with Phonics Fast and First: Mixed messages in the teaching of early reading in England's primary schools

This paper examines brief samples of whole class reading lessons in a primary school in a town on England's south coast. These 'snapshots' are related to recent governmental initiatives and to England's scores on the PIRLS 2006 survey, in which England scored relatively poorly in terms of both test results and the children's attitudes to reading. The classroom practices presented, which follow governmental advice are then examined against a brief analysis of the sound structure and orthography of English. The paper concludes by recommending ways forward that take proper account of English spelling and place the development of positive attitudes to literacy at the heart of literacy teaching.

Understanding neologisms and where they come from

English is now spoken so widely, and by so many cultures, that it is evolving probably faster than it has ever done before. It is a truly global language, the lingua franca of business, politics, education, entertainment and the Internet the world over. Consequently, new words are introduced to the English lexicon every day. Knowing the right words – and the new words – means understanding, social acceptance and influence. It also means pleasure and satisfaction. But words – particularly new ones, old ones with new meanings and putting old ones in the wrong places – can be a source of confusion even among native English speakers. Knowing new words does not really mean just increasing word power – it means keeping in touch with modern society, understanding new terms and new applications of existing words (e. g. 'leverage') or new constructions ('wedded' instead of 'wed' – part of the trend to regularise irregular verbs). At the same time as words are falling into disuse, new ones are being added.

It is paramount, therefore, especially for non-native-speaker teachers working outside an English-speaking environment to keep abreast of these changes through constant and systematic reading of the press and contemporary literature, through listening to the radio and watching undubbed films on TV and videos.

This paper presents the main ways in which new words are currently coined for the English language and is based on experience with our own students, as well as recent research by British linguists using native English speakers.

Espinosa, Natacha

France

Evaluer la compréhension des textes d'élèves de 8-11 ans. Une approche linguistique de ce que les élèves écrivent pour montrer qu'ils comprennent

Notre contribution se propose de mettre en évidence qu'il est possible de relever des indices d'évaluation de la compréhension d'un texte à partir de ce que l'élève peut écrire lorsqu'on lui demande de raconter ce qu'il vient de lire. Notre approche est linguistique et s'appuie sur une conception du lire-écrire qui considère ces deux activités comme des activités langagières (Lentin) et interactives (Giasson).

Notre travail s'appuie sur deux hypothèses :

1. il existe une interaction entre ce que l'enfant lit, ce qu'il comprend/intègre et ce qu'il peut en dire par écrit.
2. il existe différents indices linguistiques dans les réponses écrites des élèves qui permettent de repérer ce que l'élève comprend et retient du texte lu.

Ainsi, l'analyse linguistique que nous proposons de la reformulation écrite du texte par les élèves, s'appuie sur des critères linguistiques appliqués aux textes soumis à l'élève. Notre approche se veut qualitative et nous permet de dégager différents indicateurs de la compréhension des élèves mais aussi de leur degré de littératie (Lafontaine) à partir de ce qu'ils font et non de ce que nous en attendons.

Notre analyse porte sur des données recueillies auprès d'élèves de 8-11 ans qui ont accepté dans le cadre scolaire de répondre à un questionnaire portant sur la compréhension de deux textes narratifs courts.

A travers quelques exemples d'analyses, nous souhaitons dégager diverses stratégies de traitement du texte qui permettent aux élèves de répondre à des questions de compréhension et donc à l'enseignant d'évaluer leur compréhension.

Restitution d'une histoire en PS de maternelle à partir d'une projection de diapositives: mouvements discursives et «difficile à dire»

A partir de dialogues scolaires en maternelle autour d'albums, on s'attache à décrire la spécificité des types de mouvements (discursifs et interprétatifs) dans ces situations d'apprentissage.

La notion de «mouvement» (François, 1989, 1998) permet de caractériser la façon dont le sens se «travaille» à plusieurs, dans la classe, compte tenu du commun au groupe et de l'hétérogénéité de chacun. Cette hétérogénéité est liée au fait que chaque «enfant-élève» est socialement pluri-appartenant. Chacun replace le discours reçu, l'objet de discours, dans un/plusieurs cadre(s) interprétatif(s) selon un/des fil(s) associatif(s) dont il ne contrôle pas le déroulement. Le mouvement se joue principalement dans les enchaînements, sur le discours de l'autre ou sur son propre discours.

On décrit les mouvements sollicités par l'enseignant et les mouvements spontanés des élèves, mais aussi les différences de mouvements en fonction de l'album de départ. On décrit aussi en quoi certains mouvements discursifs sont aussi mouvements de pensée (notion de travail langagier et cognitif), le travail langagier participant du processus d'apprentissage et d'appropriation des savoirs. On montre en particulier que l'école attend que les élèves prennent une distance, opèrent

un mouvement de «secondarisation» (Bautier & Goigoux, 2004) par rapport à leur expérience et leurs habitudes langagières.

On souligne pour finir le fait que l'analyse des pratiques concrètes dans la classe permet, à partir de la notion de mouvement, de tenir compte de l'enfant-élève, c'est-à-dire tout à la fois d'un commun à tous les enfants et d'une singularité irréductible.

Vom Event zum Leseprojekt – Vorleseaktivitäten in der Schule Vorlesen wird schick

„Lesen ist wieder in“ frohlockt ein erfahrener Aktivist der Leseförderung und bezieht sich dabei nicht zuletzt auf eine Reihe von erfolgreichen Vorleseaktivitäten in Schulen und Bibliotheken der Region (Pöller 2009). Galt das Vorlesen schon traditionell als ein Königsweg in die Welt der Bücher, so machte es nach PISA eine zusätzlich rasante Karriere. Vorlese-Events aller Art schossen wie Pilze aus dem Boden, nach amerikanischen Vorbild ‚lasen‘ ganze Städte, und zwar an möglichst extravaganen Orten. Politiker, Schauspieler und prominente Sportler wurden zu Vorlesern und Lesepaten, Schüler lasen sich gegenseitig, aber auch in Kindergärten und Altenheimen vor, und als der regelmäßige ‚Vorlesewettbewerb‘ des Deutschen Buchhandels sein 50-jähriges Bestehen feierte, war das dem Bundespräsidenten eine Einladung der 30 besten Vorleser ins Palais Bellevue wert. Bundesweite Kampagnen wie ‚Deutschland liest vor‘ unter Schirmherrschaft der damaligen Kanzlergattin Doris Schröder-Köpf sollten „Kinder und Jugendliche an das Lesen heranzuführen“ und entwickelten dabei erhebliche mediale Durchschlagskraft (vgl. www.deutschland-liest-vor.de)

Literacy practices in secondary school: which learning opportunities do teachers and students create in everyday classroom?

This research aims to analyze the learning opportunities teachers and students create in the classroom to master written language. This is an ethnographic research performed through active observation of subject classes of an 8th grade group of a secondary public Brazilian school. As theoretical-methodological approach, the research adopted the interactional ethnographic perspective in (Castanheira; Crawford; Dixon; Green, 2001); the social-historical approach of the learning and discourse appropriation in (Vygostsky, 1987, 1991); as well as the discursive and dialogic approach in (Bakhtin, 1981; 1992) that suggests the association among interaction, discourse and knowledge. To collect data, observation and classroom ethnographic note taking (Emerson; Fretz; Shaw, 1995), audio and video recordings (Erickson, 1986, 2006), ethnographic interviews (Spradley, 1979; Brenner, 2006) and transcripts and data representation (Ochs, 1979; Koch, 2001; Tannen; Wallat, 2002) were used. The research considers the construction of knowledge in the classroom as a reflection of the complex and multifaceted nature of discursive and interactional practices between teachers and students in their social, cultural, and historical contexts. Results demonstrate that both teachers and students participate in the literacy process in different contextual dimensions that both inform and constitute knowledge construction in the classroom.

Slovenija

A creative teacher and methods of teaching

Modern school lays great stress on the pupils/students taking active role in lessons; this cannot be established without a teacher's precise, well-considerate and systematic preliminary preparation of lessons as it is not enough to give word to pupils/students, i.e., to stimulate them with questions and tasks to cooperate when dealing with new subjects, revising subjects, etc. Moreover, even an excellent introductory motivation does not suffice since it often stirs up only initial curiosity, which soon disappears, especially when the whole work in the class is not designed as a project, in which pupils/students know exactly what their task is, what aims they should achieve and also what the significance of their work is.

The lessons should be carefully planned and their objectives presented to pupils/students in a way, which enables to experience them as «achievable».

A creative teacher constantly tries to invent new attractive methods to achieve the lesson's objectives; this article deals with the making of a didactic poster, which aims at mastering of the following skills: comprehensive reading, summarizing, searching for key words, transforming of verbal messages into non-verbal.

Health and reading: building literacy together

Building on national concerns for the health of school age children, health educators joined with reading educators to support the development of literacy skills while enhancing health instruction. Health skills, like reading skills, need to be practiced in non-threatening situations in order to become automatic lifelong skills. In this three year project, a reading specialist and a health education specialist investigate a collaborative health-reading curriculum.

Using six selected novels in the first year of instruction, literature circles were implemented with thirty-four college children's literature students and replicated with twenty-eight fifth grade students. In the second year, additional literature titles were infused into the instruction as well as additional professional development opportunities were provided for teachers. In the third year, assessment materials were added to this expanding project. The question guiding this investigative project was: Do teachers have sufficient understanding of health standards and reading skills to conduct literature circles that provide a collaborative health-reading curriculum for student?

In most schools across the United States, classroom teachers are the health teachers. Seeing health education as a separate discipline, teachers do not take time to teach it. In order to overcome this perception, the current emphasis within health education is to infuse reading with the health curriculum.

From this project, the researchers found that when teachers select meaningful literature for reading instruction, students establish understandings in two curricula. The literature acted as the catalyst for students in non-threatening situations to practice making decisions about their health and well-being.

Welcome to the world of German literacy: reflections on teaching adults from culturally diverse backgrounds

Teaching alphabetization courses in Germany is a challenge. Illiteracy is not only a taboo topic but also a negligence of the German government. This paper offers critical reflections on alphabetization in Germany and shares some of the experiences teaching alphabetization under the umbrella of a Volkshochschule (VHS). Overall findings must highlight the failure of the German government in addressing illiteracy. Based on my own teaching experience, I conclude that

alphabetization classes have their own rhythm und timing: teaching adult literacy requires a great deal of time, patience, and individual attention.

Mathématiques et littératie: perspective didactique

La littératie mathématique reflète les aspects culturels des mathématiques dans leur enseignement et dans leur apprentissage. Elle implique une certaine compréhension du langage mathématique qui véhicule la culture mathématique. Les mathématiques sont l'expression d'une force de pensée, de langage et d'action qui s'exprime par des processus pratiquement invisibles pour la plupart d'entre nous. Il est crucial, dans la perspective didactique que chaque élève fasse l'expérience de cette force à son niveau, qu'il comprenne le sens et en perçoive les dangers et les limites afin de démystifier les mathématiques, de se sentir responsable de sa propre formation mathématique et d'appréhender son rôle de futur citoyen (D'Ambrosio, 1998).

Dans ce texte, il est question de clarifier les trois concepts de littératie, de numératie et de littératie mathématique qui sont polysémiques et de proposer la résolution de problèmes comme une activité mathématique susceptible de soutenir la littératie mathématique.

Germany

Schule - Sprache – Migration

The article presents a new view on different teaching strategies for the teaching of multicultural pupils in Germany's secondary schools. It will show that the label 'migration background' is an inappropriate approach to the very different 'cultural orientations' of pupils with a family history of migration to Germany. In contrast to the beliefs of many supporters of 'intercultural education' it is not enough to support the adherence of young migrants to their 'home-language' in order to help them form their identities. Many young migrants want strong support from the school in their struggle for success in the German society. In that struggle the language standards used in all subjects of the secondary schools in Germany present the biggest problem for young migrants. The article will show how different groups of migrants have different needs for the training of language skills that will help them to be successful in final exams as well as in vocational training and in their lives.

Using Professional Learning Communities to Improve Student Learning in Reading: Better Understanding the Stages of Development

This text presents a framework to situate the developmental stages of schools working as professional learning communities based on the observation grid of the evolution of the school as a professional learning community (OGPLC). This chapter aims at assisting teachers and school administrators in implanting professional learning communities (PLC) in the hopes of improving students' reading abilities. Initially, we will discuss the particular context of French Ontario schools, where this type of functioning seems to be greatly encouraged. Furthermore, we will define what a professional learning community implies. A distinction will also be established to compare the functioning of traditional schools and professional learning communities. Lastly, the three developmental stages of schools working as professional learning communities will be presented as well as illustrated using the (OGPLC) grid.

Enquête sur les pratiques déclarées et les difficultés rencontrées dans l'enseignement de la littérature à l'école primaire québécoise

L'amateur, selon l'étymologie, c'est celui qui aime. En matière de formation littéraire scolaire, il conviendrait de faire de chaque élève des amateurs éclairés de littérature (Dumortier, 2001, 2005, 2009), des amateurs qui arrivent à comprendre, à interpréter et à apprécier des œuvres. Cependant, il semble qu'à l'école, le temps passé à lire et les attitudes positives envers la lecture diminuent plus les écoliers avancent dans leur parcours scolaire (Baudelot, Cartier & Detrez, 1999; Lebrun & Baribeau, 2003; McKenna, Kear & Ellsworth, 1995). La didactique de la littérature, champ de recherche en émergence (Fourtanier, Langlade & Rouxel, 2001) dans lequel nous nous inscrivons, se préoccupe, en plus de l'histoire de la discipline, de ses finalités et de ses fondements, des conditions, des instruments et des démarches liées aux pratiques scolaires. Les travaux dans ce domaine visent donc, pour les écoliers du primaire en particulier, d'apprendre à comprendre et d'initier au plaisir de lire de la littérature (Tauveron, 2001a). Cependant, il reste à voir pourquoi tant d'enseignants semblent, selon certains chercheurs (Rosier & Dufays, 2003), résister aux recherches didactiques innovantes tournées vers l'acquisition de savoirs littéraires structurés.

Étayage d'enseignants et écriture en dyades chez de jeunes scripteurs

Afin de favoriser la réussite du plus grand nombre d'élèves, la réforme québécoise des années 2000 reconnaît l'importance des interactions sociales entre élèves dans l'apprentissage. Par ailleurs, au cours des dernières années, des recherches ont mis en évidence que l'étayage semble une stratégie d'enseignement-apprentissage efficace. Toutefois, peu de recherches se sont préoccupées de l'effet d'un étayage auprès des élèves sur la qualité des interactions qui sont produites et la recension des écrits permet de constater que cet objet n'a pas été étudié dans des situations d'écriture avec des jeunes scripteurs. Les objectifs de la recherche sont de mesurer l'effet de l'étayage sur le niveau d'élaboration des interactions entre élèves du premier cycle du primaire dans des tâches d'écriture et de mesurer l'effet du niveau d'élaboration de ces interactions sur les productions écrites. L'échantillon est constitué de 8 classes (4 classes expérimentales et 4 classes témoins) de première année du primaire et 8 classes (4 classes expérimentales et 4 classes témoins) de deuxième année. Le niveau d'élaboration des interactions de même que la qualité des productions écrites sont mesurés avant et après l'expérimentation. Les enseignants des groupes expérimentaux sont entraînés à étayer les interactions des élèves. Pendant l'expérimentation ils font réaliser hebdomadairement une tâche d'écriture aux élèves regroupés en dyades et procèdent à l'étayage des interactions.

Une brève synthèse du contexte problématique et du cadre théorique de la recherche sera exposée. Ensuite, les outils méthodologiques seront présentés ainsi que les résultats. Certaines propositions pédagogiques clôtureront la présentation.

The Interaction of Language and Para-language: New Meanings for New Readers

This research explores the new meanings that readers are faced with nowadays when dealing with an extremely diversified written page. It investigates the effect of the interplay of paralinguistic and language on the accessibility of written texts. It examines textual factors that may hinder the reader's understanding of the message.

Although studies of reading comprehension have traditionally concentrated on the language of texts, many written texts also rely on paralinguistic features to convey their messages, and to

complement, illustrate, clarify and organise their content. Hence, it is paramount that a study investigating obstacles for reading comprehension be able to account for the complex web of paralinguistic devices, not only present in every language classroom but also essential for communication in the world today.

A corpus of written texts was composed for the purpose of the study. Verbal protocols and interviews were used to gain access to readers' interpretative processes when dealing with texts from the corpus. They aimed to evince accessibility problems. The application of this procedure both verified the hypotheses and revealed new facts, thus increasing understanding of the factors that contribute to the accessibility of written texts.

Reading the pictorial text – A hermeneutical analysis of Paul Delveaux's the Pitzer Museum

After revisiting some of the concepts pertaining to the semiotic analysis of paintings, namely by Louis Marin, a brief history is made about the relations of literary and pictographic texts, from Lessing's Laocoonte to the theoretical works by W. J. T. Mitchel. We then proceed to an indication of the aspects to be taken into account when analysing a figurative painting, and to the analysis of the specific work by Paul Delvaux entitled The Spitzner Museum (1943). One of the characteristics of this analysis is the tentative of finding marks of historicity even in a painting that presents us with a surrealist mode of representation. A comparison between some elements of this painting with similar ones in other works by the same artist is also made.

Reading Written and Pictorial Texts

In this paper we report the findings of a study in which we helped students learn to read and integrate the meanings in the pictorial text (illustrations) with the meanings in the written text to construct meaning. The research question we investigated was: How does learning to read the meanings of art in pictorial texts along with reading the meanings in the written text relate to third graders' understandings of stories in picture books? Since the relationship between art and reading is identified as a neglected area of research (Kiefer, 1995; Sipe, 2008), understanding the interconnections between art and reading and how they can be brought together to support learning is critical.

Message Boards: A Springboard to Literacy

The Message Board activity is a voluntary sharing of important events on large or small chalkboards by Pre-Kindergarten students, teachers and parents. It encourages children to be active participants in language learning. It is a variation of the traditional show and tell activity.

To begin this multiple case qualitative study, a preschool teacher took pictures every day over the past ten years of all the Message Boards written by her students. She placed the pictures in a log, recorded the oral messages next to the pictures, and noted the dates and students' names. In 2007, outside researchers (from Towson University) interviewed the teacher and the students about the message boards. The outside researchers also observed Message Boards in action and collected documents from the teacher related to Message Boards, such as the logs, children's observation records, and the curriculum. By doing so, data triangulation was created, which is essential for effectively examining case studies in qualitative research (Stake, 2000).

The logs were analyzed, coded for key phrases (Flick, 2002), words, or picto-writing, and patterns that evolved were studied to note student progress (Bogdan & Biklen, 2003). Charts were created

to segregate the data by: native English speakers, English Language Learners, and year - 1997 vs. 2007. The Message Boards were then analyzed to determine: literacy development, similarities and differences among English language learners and native English speakers, and how Message Boards compared in 1997 to 2007. The results will be reported in this poster presentation.

Portugal

Mother tongue textbooks and the acquisition/development of reading comprehension competences

Reading comprehension holds a key position in the building of the future of both individuals and societies, since regular reading habits contribute towards an active and reflective exercise of citizenship.

International and national studies on literacy have been recently conducted in order to assess the proficiency of the measures taken to improve reading comprehension in modern societies. In spite of all the efforts, the Portuguese population shows little changes since the first results obtained more than ten years ago.

New studies centred on strategies and resources for teaching/learning reading comprehension try to identify and characterise the problems, in order to find suitable solutions.

Research on teaching/learning reading comprehension has shown that textbooks can present characteristics that are an obstacle to the development of motivated, competent and critical readers.

Our study intends to determine the influence that textbooks used for the teaching of Portuguese as a mother tongue have on the acquisition/development of reading comprehension competences by the students.

Therefore, our main aims are: i) to draw a reader's profile based on the acquisition/development of reading comprehension competences which promote academic success and social integration; ii) to analyse textbooks associated to the teaching/learning of Portuguese as a mother tongue in order to assess their adequacy in the acquisition/development of transversal reading comprehension competences during the attendance of compulsory education and iii) to define essential principles for the designing of textbooks capable of supporting a teaching/learning process which encourages the acquisition/development of such transversal competences.

Learning data underlying interventions based on the reading needs of students

The present document describes the results of the first phase of a joint research project aimed at exploring the evolution of learning in reading ability by students from the first to the third grade in eight schools located in a Canadian minority community. The objective is a better understanding of the impact on students of the implementation of new teaching strategies based on three factors: a) teaching strategies for reading, based on the Guide to Effective Reading Instruction (OME, 2003), b) the use of learning data to facilitate an informed selection of literacy intervention strategies, and c) working as a professional learning community. The results and their analysis place the emphasis on the use of learning data underlying interventions centred on the reading needs of the student.

Visualising Europe: Visual Literacy and Intercultural European Education Project

Presentation of the Visualising Europe: Visual Literacy and Intercultural European Education project, developed under the Comenius/Socrates framework, from the perspective of its theoretical

rational and its materials. The project puts forward an integrated approach for the development of visual literacy and intercultural education and offers materials that integrate means to negotiate multiple cultures, languages, (visual) texts and inter-texts, the local and the global. The visual texts in the Pupils' Workbooks 1 and 2 are taken as cultural artifacts that communicate meaning while being culturally specific materials. The methodology for the analysis of visual texts includes recognising what is being represented (the natural theme), understanding the symbolic content, the visual text type and its function, as well as understanding the cultural contexts of its production and consumption. To look is proposed as a cultural practice in which production, consumption, beliefs and meanings that lookers carry onto a particular visual text are important as a means of meaning making and 'constructing' a particular worldview. Using the notion of constructivism, the Project, which aims at developing ways of seeing and at inviting young people (6 to 12 year-olds) to get actively involved in meaning making of their surrounding worlds, presupposes that learners should be active in order to develop their own ways of seeing, interpreting and explaining why they see the way they do. This way the skills they develop may be transferrable to situations that require interaction and negotiation with other cultures.

Multilingual use of the multimodal: picture books in an English language class

The paper presents the findings of a pilot project investigating the use of English picture books in pre-school English classes in Portugal. Picture books representing parallel and interdependent storytelling models were used during read aloud sessions. Transcripts of the audio recordings of these read alouds were analysed and categorised according to the utterances prompted by the verbal or the visual. Results show that foreign language production is extended when both the verbal and visual in picture books are used for language input and that children are more actively involved in meaning making. Implications are discussed.

Erfassung und Entwicklung des Leseverständnisses von Tabellen, Graphiken und technisch strukturierten Zeichnungen – Eine Untersuchung bei Jugendlichen und jungen Erwachsenen mit Behinderungen in Ausbildung

Die Lese- Rechtschreibschwäche (LRS) weist auf mangelnde Kompetenzen vor allem von Kindern und Jugendlichen innerhalb der Primar- und Sekundarstufe I hin, geschriebene Texte altersangemessen zu verstehen, zu schreiben, zu nutzen und über sie zu reflektieren. Während der Berufsausbildung, in der Alterstufe von etwa 16 bis 24 Jahren, treten neben jetzt stärker geforderten berufsbezogenen Lese- und Rechtschreibkompetenzen zusätzliche berufsbezogene Lesekompetenzanforderungen im Umgang mit Tabellenwerken, graphischen Darstellungen und Technischen Zeichnungen hinzu. Hierbei geht es einerseits um das Leseverständnis auf Grund bestimmter Fragen zur Anwendung von Tabellen und Graphiken, andererseits aber auch um die Anfertigung von aussagegenauen Zeichnungen und Skizzen.

Während es in der neuesten Literatur inzwischen vereinzelt Konzepte zur berufsbezogenen Lese- und Rechtschreibförderung in der Berufsausbildung und im Arbeitsleben gibt, wird der Aspekt des Leseverständnisses von über die Texte hinausgehenden kommunikationsbezogenen Inhalten nur in ersten Ansätzen punktuell beachtet und erforscht. In dem geplanten Paper sollen deshalb erste diagnostische Ansätze zur Förderung dieses spezifischen Leseverständnisses vorgestellt werden, die sich auf Auszubildende in den Berufen für Menschen mit Lernbehinderungen beziehen und die die Berufsfelder Metalltechnik sowie Ernährung und Hauswirtschaft betreffen. Die Untersuchungen finden statt im Rahmen eines vom Bundesministerium für Bildung und Forschung (BMBF) unterstützten Forschungs- und Entwicklungsprojektes, welches im Rahmen eines Verbundvorhabens zwischen der TU Dortmund und dem CJD Dortmund, wo über 250 junge Menschen mit Behinderungen eine Berufsausbildung durchlaufen, realisiert wird.

Diagnostic and development of reading comprehension for tables, graphs and technical drawings – A study with young people with handicaps in vocational training

In 2007 the German Federal Ministry of Education and Research invited tenders for a programme in the field of literacy and basic education for adults.

In cooperation the Technical University Dortmund and the Christian Youth Village Foundation in Dortmund will therefore realize a project from 2008 to 2010 for the improvement of chances in prevocational and vocational training as well as to help young adults in their first steps in working life.

Rackwitz, Rüdiger-Philipp

Germany

Dialogue-based diagnostics of reading and orthographic development of illiterate adolescents and adults: concepts, methods and materials to assess and follow-up their skills and development.

According to estimates in Germany about four million adolescents and adults with German as their first language are considered to be functionally illiterate. Approximately 20,000 of them are currently attending courses at adult education centres to learn reading and writing. The skills and competences of the participants of such courses usually vary a lot. Consequently, their teachers must not only be able to arrange differentiated learning situations and to offer a rich variety of learning materials, which meet the individual skills and competences. To do so, they must also be able to assess the individual reading and writing competences of each student and to interpret them in order to find out how to stimulate and support their further development. Such a diagnosis can be efficient only, if the learners are given the opportunity to express their own views on the progress of their performance and on the adequacy of their learning and development opportunities.

The aim of the joint research project PROFESS (www.profess-projekt.de), funded by the German Federal Ministry of Education and Research, is to develop and evaluate a Master Study Programme "Alphabetisation and Basic Education" for the education and training of teachers and counsellors of adolescent and adult illiterates. Within the project a group of researchers at the University of Siegen and the University of Education in Schwäbisch Gmünd is developing and evaluating concepts, methods and materials for dialogue-based diagnostics of reading and orthographic development as well as a training module preparing for their professional use for the Master Study Programme, which will be presented and explained within the poster presentation.

Reulier, Jocelyn

France

La compréhension en lecture: Le rôle des interactions entre pairs dans le développement de la métacognition

Notre recherche doctorale prend son ancrage d'une part, dans l'analyse comparée des Instructions Officielles de La France et du Québec, d'autre part, dans des constats effectués par des évaluations

internationales sur les compétences des élèves de fin de primaire en lecture, et enfin, dans des modèles d'enseignement-apprentissage de la compréhension en lecture validés notamment par des chercheurs nord-américains et français. Elle s'intéresse tout particulièrement aux aspects métacognitifs relatifs aux difficultés de compréhension de lecture et se réfère au modèle de l'enseignement réciproque proposé par Palincsar et Brown (1984) dont la validité en regard de l'amélioration de la compréhension en lecture des élèves en difficulté est reconnue. Néanmoins, même si ces études ont permis de révéler que les interactions entre pairs portant sur des stratégies métacognitives permettaient aux élèves en difficulté de progresser, elles visaient principalement à déterminer la validité du modèle sans pour autant apporter des éléments de compréhension sur la nature des interactions dans le développement de la métacognition. L'inédit de notre recherche repose sur l'élaboration d'un dispositif plus adapté aux réalités de classe et centré sur les stratégies métacognitives puis permettra d'acquérir une meilleure compréhension de l'articulation entre les interactions sociales entre pairs, la métacognition et l'accès au sens de l'écrit d'élèves initialement reconnus en difficulté de compréhension. La question de recherche est la suivante: en quoi les interactions entre pairs permettent de développer la métacognition et font progresser l'élève initialement en difficulté de lecture? Du fait des concepts mentionnés ci-avant, le cadre épistémologique est l'approche socioconstructiviste.

Sá, Cristina Manuela

Portugal

Teaching Portuguese for the development of transversal competences

Modern education emphasizes the importance of developing competences essential to life in an ever changing society.

Teaching the mother tongue contributes to the development of transversal competences, which play a primordial role in success at school and in social and professional contexts.

Reading and writing are included in this set of competences.

Otherwise, one must recognize that the teaching of all the other subjects may contribute to a better performance in reading and writing, because all the verbal intercourse between teachers and pupils takes place in the mother tongue. So, teachers of all the other subjects should recognize this role and act according to it for the benefit of their pupils.

Thus, we conducted a series of studies leading to the presentation of PhD and Master dissertations and centred in the analysis of the principal features of this issue.

Some of them concern the conceptions of the actors involved in the process (teachers, pupils, people in charge in the schools, supervisors, teacher trainees). Others deal with the analysis of instruments devoted to the transversal approach of the teaching of mother tongue. Some of them are focused on the design and assessment of classroom practices leading to a new kind of curricular management contributing to an effective development of transversal competences while learning the mother tongue.

These studies (and others still taking place) produced some tips to strengthen the contribution of school for a better preparation for life.

Rôle de la mémoire lexicale orthographique dans l'acquisition de l'orthographe lexicale

Trois études ont été réalisées afin de démontrer que l'acquisition des connaissances lexicales orthographiques acquises de façon implicite et explicite dépendrait de différentes capacités cognitives indépendantes, dont notamment la capacité de mémoire lexicale orthographique (rétention à long terme).

Ces trois études ont été menées auprès d'une population d'enfants franco-québécois, issus d'un groupe initial de 338 enfants, suivis de la fin de la maternelle à la fin de la deuxième année. Diverses tâches ont été soumises aux participants au cours de cette étude longitudinale, avant l'apprentissage du langage écrit, et lors de cet apprentissage. Les tâches visaient à évaluer le niveau des connaissances orthographiques implicites (maternelle) et explicites (première et

deuxième année) ainsi que la contribution respective des facteurs cognitifs (traitement phonologique, traitement visuoattentionnel et mémoire lexicale orthographique à court et à long termes). Ces études sont les premières, à notre connaissance, à examiner le rôle de la mémoire lexicale orthographique sur l'acquisition ultérieure des connaissances orthographiques implicites et explicites à la fin du premier cycle du primaire.

Children's utilization of written language in meaningful situations: literacy events in role play contexts

In this paper, the participation of preschool aged children (4, 5 – 6 years old) in literacy events during "free choice" activities in play corners in a kindergarten class is investigated.

Play, and especially role play, seems to be the most meaningful activity for children through which they are motivated to be engaged in authentic literacy events. It seems that only in these communicative contexts children's reservoir of literacy knowledge becomes fully activated. Data collected through an ethnographic observational approach in a Greek kindergarten during a four week period empirically support the assumptions about the emergence of literacy as situated practice, and more specifically the reinforcement of literacy throughout role play. The communicative purposes into a specific context (scenario) enact children's situated literacy practices and, therefore, enhance the socio-semiotic recourses of literacy events as social interaction.

Observation of children's reading and writing in context initiated by them not only provides evidence of their knowledge about the symbolic nature of written language and of the purposes it is used for, but also illustrates the significance of pre-school education in the development of early literacy, by supporting children's investigation and engagement with written language.

Preschool children's use of photography to document their out-of-school literacy practices and partners

This paper will present data from an action research study that occurred over an entire school year in an inner-city early childhood Canadian classroom. In this study, photography was used to elicit the children's views of their meaning-making practices in their homes; including documenting the role of guiding lights (Padmore, 1994) in their out-of-school lives. Each child was given a digital camera for a one-week timeframe to document the objects, people, and practices that play a role in shaping his/her home literacy life. This sociocultural research was informed by emerging work in multimodalities (e.g., Jewitt & Kress, 2003; Kress & van Leeuwen, 1996, 2001) which argues that as children develop as social beings, both language symbol systems and multiple symbol systems (e.g., pictorial, digital) play an important role in their lives. This study looked at the ways children and their families defined literacy through particular ways of acting, believing, and valuing literacy, and how through the use of photographs, young children were provided with opportunities to document what it means to be literate from their own perspectives. The intention of this research was to analyze how children's photographs can inform primary classroom teachers about the meaning-making practices utilized by students in their homes, and how the relationship of home to school literacy can be explored.

Using Journaling Attributes to Improve Struggling Sixth Grade Readers' Response to the Comprehension of Narrative Text

The purpose of the study was to determine if teacher directed journaling activities could help struggling sixth grade readers understand and remember narrative text. The teacher taught the following journaling response attributes to her struggling students: how to predict of what events might occur, how students could connect to the materials, vocabulary enrichment, how to develop opinions and questions, how to clarify their own text misconceptions, how to determine character and thematic insights, and author's technique. Students were given instruction in journal response attributes before, during, and after they were engaged in reading appropriate narrative texts.

Student journal response entries were examined to assess the type of statements used by the students. Results indicated that there was an increase in the quantity and quality of journal responses.

Republic of Macedonia

Group work and assessment: effects of individual work on group success

Many projects in Macedonia have enriched the educational system with techniques and strategies that offer the teacher powerful tools to improve everyday educational practice and to perform effective teaching. It is a fact that active methodology has found fertile ground in Macedonia, i.e. teachers have implemented active methodology in their everyday practice. It is a fact that this implementation has brought many new directions which shape the way teachers should think about the positive aspects of active methodology.

The implementation of active methodology has put new questions and challenges to the teachers. In this session, we want to stress the meaning of the group work, i.e. when the students are performing an activity to understand some specific content in the class. Group work is very strong tool to animate the students and to put them into an active role. Our researches and our everyday practice has shown that our concern should be to question the way we asses (formative or summative) not only the results of the group work, but also the results of the individual work in the group. Teachers need to ask questions about how will we asses all of the students within the group – how will teachers know that everyone in the group has given his or her maximum, that everyone has done what was expected and that he or she – and nobody else – has done that individual's work in the group.

Thoughts about this complex question encouraged us to examine and analyze it very deeply and to offer some possible ways to resolve this issue. We propose that our suggestions will provide solutions to some of the dilemmas of teachers have about group work.

Turkey

The process of development of mother tongue laboratory

Reading laboratory is the place where academic studies are conducted in order to identify reading miscues of the students with reading disability, describe identified miscues and decrease such reading miscues. In such laboratories, beside learners with reading disability, also other students sometimes join activities such as reading comprehension, using reading strategies, informative acts and practices in several types of reading in small or larger groups. Considering the functional structure thereof, the laboratories can be said to serve two main goals: first of all, to identify developmental level of students' reading skills; secondly, to carry out exercises to improve reading comprehension skills. It was decided to establish a laboratory in the Private Maya College with an eye to accomplish abovementioned objectives. The Project, which can be considered as a distinctive laboratory for developing mother tongue, is composed of two basic processes: (a) the

process of analysis, (b) the process of development. The former aims to photograph the development process of students' language skills while the latter aims to support individuals, if needed, with further exercises related with learning language. Main challenges met in the process of establishing a reading laboratory can be listed as follows: the lack of a standard scale for analyzing reading, that the libraries are not eligible for reading exercises, lack of reading specialists to facilitate reading exercises, that readability of children's books cannot be identified, and that basic vocabulary lists cannot be drawn up.

Function of libraries and internet in purpose of achieving learning while implementation of Bologna process

Modern library, with its technical support, gives exceptional possibilities for quicker gathering of data while studying. Because the studies in Bologna process are assuming efficient studying and mostly one-semester exams, the research on the gathering of material necessary for students learning was not taken – solely over the internet, immediate work in library, or combining sources. The basis of this work will be research on attitudes of students of Pedagogical faculty in Sombor and Faculty of technical sciences in Novi Sad (II, III, IV year of study, sample 150 + 150 students, questionnaire method). The research will take place at the end of December 2008. Hypothesis of research is: students of Technical faculty are using internet more than library, while the situation with students of Pedagogical faculty is inverse. The dependent variable will be success of students. Under hypothesis of research will be: 1) students of humanitarian faculties are using more immediate work in library, 2) students of technical sciences are more using data from the internet, 3) the level of achievement in the year before was not contingent upon the way of work. The data will be processed by parallel statistical, analitic-synthetical and descriptive method.

Impact of on-line writing groups in a National Writing Project Invitational Summer Institute

The National Writing Project (NWP) has made a positive impact on student writing across NWP sites as compared to the writing of students whose teachers were not participants (Eldman-Aadah, & Sterling & Buchanan & LeMahieu & Friedrich, 2006). A key component of NWP training includes an extensive Invitational Summer Institute (ISI) in which teachers experience long-term face to face writing interactions with their colleagues for both personal and professional writing. Requests to maintain a reflective learning community beyond the Invitational Summer Institute have been consistently made by the NWP fellows at Central Connecticut State University. This investigation explores the impact of online writing workgroups as an aid to maintaining and enhancing the professional community developed in the ISI.

Teachers will be asked to do the following on a monthly basis:

- 1) Submit a piece of writing for response,
- 2) Provide feedback to others within group,
- 3) Reflect on their writing as it connects to classroom practice.

The data will be qualitatively analyzed and will include online writing responses and artifacts and participant interviews in light of the following research questions:

- 1) What are the supports and challenges of establishing and maintaining an online learning community of writers?
- 2) What are the benefits and drawbacks to the members of the group?
- 3) In what ways if any does this experience impact their teaching of writing?
- 4) How can we use what we have learned to address the need for teachers to continue to be part of a learning community beyond the Summer Institute?

Role of conditional knowledge in conscious reading: the integrative model of metacognition

The central role of metacognitive processes in conscious reading is well-demonstrated by now. However, there are still problematic aspects regarding the concept of metacognition: what makes a process metacognitive? How could we firmly distinct metacognitive processes from cognitive ones? The answers to these questions will define the way we construct intervention programs for improving reading comprehension. If we want to teach metacognitive strategies to use in reading, and to prompt the using of these processes in order to improve reading comprehension, we have to formulate a precise definition of metacognitive processes.

In order to answer these questions I have created the Integrated Model of Metacognition (IMM). The model builds on current models of metacognition and of problem solving. Theories and results of previous researches regarding the role of declarative and procedural knowledge in thinking processes are considered as well. I present IMM-based arguments that conditional components make strategies metacognitive, so this kind of knowledge can be used to differentiate metacognitive processes from cognitive ones. Although there are several researches arguing for the role of conditional knowledge, the IMM is a model which incorporates this kind of knowledge in metacognitive processes, and in problem-solving processes in general. IMM is well-suited for modelling the role of metacognitive processes in conscious reading.

According to IMM, teaching conditional knowledge in conjunction to procedural ones is the key ingredient of any metacognition-based teaching comprehension educational program.

Hipótese silábica e variabilidade intra-figural na fonetização de escritas infantis: da escrita manual para o computador.

1. A estabilidade gráfica como processo evolutivo

A obrigação de escrever uma mesma palavra da mesma forma não foi uma condição inicial nos sistemas de escrita alfabéticos, nem mesmo para os nomes próprios. Diversos estudos (Desbordes, 1995; Catach, 1996; Diaz, 2001; Blanche Benveniste, 2002, cit. Molinari, 2007) indicam a existência de uma evolução progressiva nos sistemas de escrita até se definir um padrão de estabilidade gráfica e fonética dos diferentes códigos. Do ponto de vista histórico a variação gráfica nunca foi considerada um obstáculo à compreensão da mensagem escrita, ainda assim a escrita evolui na direcção de uma crescente estabilidade gráfica para facilitar a legibilidade a um público mais alargado.

Ao considerarmos estas breves referências sobre a evolução história da estabilidade gráfica da escrita facilmente percebemos que a forma como se escreve hoje em dia não resulta de um ponto de partida estabelecido desde logo, mas sim, de um processo evolutivo com etapas graduais e progressivas que nos conduziram aos sistemas de escrita contemporâneos (Molinari & Ferreiro, 2007).

Do ponto de vista evolutivo, se considerarmos a escrita como um utensílio humano, característico da produção cultural enquanto espécie, a progressiva estabilização gráfica, ao longo do tempo, pode ser encarada como uma parte da “filogenese” do Homem. Da mesma forma que este processo se deu num âmbito mais alargado (toda a espécie), também se dá na apropriação individual da escrita (indivíduo). Assim, poderemos considerar que uma parte da “ontogénese” da descoberta da escrita, pela criança (indivíduo), passa também pela apropriação que a mesma sequência de letras codifica uma mesma palavra (Alves Martins, 1996).

Assume-se então que, também para a criança, a estabilidade gráfica da escrita é uma conquista e não um ponto de partida (Molinari & Ferreiro, 2007).

O estudo de Molinari (2007) avança com uma análise pioneira da evolução da estabilidade gráfica da escrita em crianças de idade pré-escolar. O seu objectivo foi analisar, pormenorizadamente, as letras usadas na produção de pares de palavras

(primeiro manualmente e, posteriormente, a computador), identificando e classificando diferentes modos de produção quanto à estabilidade gráfica dos pares produzidos.

Os resultados da autora (op. cit.) indicam que os precursores da estabilidade, na produção escrita de nomes comuns, estão relacionados com os níveis conceptuais e que tal estabilidade se inicia a partir do nível silábico com fonetização, obtendo-se, quase na totalidade, no início do período alfabético.

A evolução das produções com estabilidade, segundo Molinari e Ferreiro (2007), não se pode caracterizar como sendo um desenvolvimento linear e contínuo, traduzido por uma acumulação paulatina de letras com valor sonoro convencional.

Molinari e Ferreiro (2007) classificam quatro tipos de identidade gráfica que podem surgir nas produções escritas de crianças em idade pré-escolar:

a) *Sem identidade*: pares cuja semelhança entre as palavras produzidas nos dois momentos de escrita é nula, ou seja, não existe qualquer proximidade entre os dois momentos de produção. Este tipo de escrita aparece com maior frequência nas produções das crianças pré-silábicas (por exemplo na palavra PATO, a criança escreve numa primeira produção I (pa), Y (to) e numa segunda produção O (pa), E (to));

b) *Identidade parcial*: pares cuja semelhança entre as palavras produzidas nos dois momentos de escrita é próxima, ou seja, existem letras que se repetem nos dois momentos de produção. Contudo, as diferenças verificadas entre os pares não podem ser nas letras pertinentes, apenas nas outras (por exemplo na palavra PATO, a criança escreve numa primeira produção P (pa), Y (to) e numa segunda produção P (pa), E (to));

c) *Identidade total*: pares cuja semelhança entre as palavras produzidas nos dois momentos de escrita é total, ou seja, existem total concordância nas letras mobilizadas nos dois momentos de produção (por exemplo na palavra PATO, a criança escreve numa primeira produção P (pa), T (to) e numa segunda produção P (pa), T (to));

d) *Alternância grafo-fonética*: pares cuja a semelhança entre as palavras produzidas nos dois momentos de escrita é próxima, ou seja, existem letras que se repetem nos dois momentos de produção, embora se verifiquem variações na mobilização de pelo menos uma letra pertinente entre os pares (por exemplo na palavra PATO, a criança escreve numa primeira produção P (pa), T (to) e numa segunda produção A (pa), T (to).

O estudo das alternâncias grafo-fonéticas através da utilização do computador e do processador de textos, revelam-se particularmente interessantes pela potencialidades de análise que oferece em relação os modos de evolução infantis em relação á escrita. Com esta metodologia Molinari (2007) conseguiu diferenciar as formas de produção escrita, realizadas manualmente e em computador.

2. Utilização do computador na apropriação da escrita.

Existem poucos estudos que relacionem a escrita manual e a escrita em computador com os níveis conceptuais relativos à linguagem escrita introduzidos por Ferreiro e Teberosky (1986). Consequentemente não existem certezas se a utilização do processador de textos traz vantagens as crianças pequenas como as trazem para escritores mais experientes. Mas também não existem indícios para pensar que a iniciação à linguagem escrita, realizada através da utilização do teclado de processador de textos, seja um obstáculo para a criança. Pelo contrário, diversos estudos apontam algumas tendências favoráveis quando o computador é utilizado na iniciação à linguagem escrita (Haugland, 1992; Shilling, 1997) .

Shilling (1997) considera que a interação precoce com o processador de textos pode oferecer à criança boas oportunidades para aprender o sistema de escrita, quando utilizado em práticas de produção similares à da prática social e em contexto educativo.

Também Piazza e Riggs (1984) descobriram que, através da exploração da linguagem escrita com processador de textos, em contextos lúdicos, a criança descobre relações entre os grafemas e os fonemas e começa a formular a suas próprias hipóteses. Recentemente, o estudo de Molinari (2007) refere que o computador, nomeadamente, o teclado e o processador de textos são instrumentos importantes, com uma função educativa precisa, que possibilitam um amplo espaço de decisão para os alunos, pois oferecem a oportunidade de interagir com todas as letras (Molinari & Ferreiro, 2007).

Naturalmente, devemos colocar a questão se será mais fácil ou difícil, do ponto de vista infantil, a produção de escrita mediante a utilização do computador.

3. Objecto de estudo e questões de investigação

O objecto de estudo deste trabalho é o processo de construção da estabilidade gráfica na produção escrita de nomes comuns, por parte de crianças em idade pré-escolar. Assim, pretendeu-se analisar a natureza das variações e as identidades que existem no processo de estabilização gráfica das produções escritas infantis.

Investigações anteriores (Alves-Martins, 1996; Ferreiro & Teberosky, 1986; Ferreiro, 1988) em espanhol e em português, indicam que no começo das produções escritas alfabéticas as palavras com sílabas CV do tipo “bala” e “rato” apresentem estabilidade gráfica. A criança tende a representar as mesmas letras na mesma ordem cada vez que escreve as palavras.

Ferreiro e Zamudio (*in press*, cit. Molinari, 2007), referem que esta aquisição apresenta formas distintas noutras estruturas silábicas, por exemplo nas sílabas CCV e CVC. A estabilidade obtida nas sílabas CV não se transfere de imediato a

estruturas silábicas mais complexas. A estabilidade gráfica da escrita - tal como sucede com outras conquistas infantis - parece resulta dum processo de aproximações sucessivas, isto é, duma conquista conceptual, cuja história é necessário explorar nos níveis conceptuais precedentes.

Diversas investigações (Ferreiro & Teberosky, 1986; Alves-Martins, 1996) permitiram evidenciar várias etapas na evolução conceptual infantil sobre a natureza da linguagem escrita. Neste percurso destacam-se as escritas infantis não determinadas por critérios linguísticos e a evolução para escritas determinadas por critérios linguísticos, primeiro com as escritas silábicas onde se estabelece uma correspondência termo a termo entre as letras a escrever e as sílabas das palavras e depois procedendo a uma análise que vai para além da sílaba, com as escritas silábico-alfabéticas e alfabéticas.

Desde os primeiros momento evolutivos as crianças constroem critérios quantitativos e qualitativos para diferenciarem as suas produções escritas e, assim, garantirem que palavras diferentes são representadas de formas diferentes. Nestes trabalhos, e noutros realizados no âmbito da psicogénese da linguagem escrita, a ênfase está colocada na forma como as variações quantitativas e qualitativas são utilizadas para garantir produções escritas de palavras diferentes. A exigência de colocar letras diferentes, ou de mudar a ordem das mesmas, não implica que as crianças utilizem as mesmas letras na mesma ordem para dizerem o mesmo.

Assim, com a presente investigação pretendeu-se estudar o seguinte problema: *de que maneira estes critérios qualitativos e quantitativos podem influenciar a escrita das crianças quando se trata de escrever a mesma palavra em momentos sucessivos - pares de palavras - sem consulta entre versões.*

Procurámos analisar os critérios que as crianças usam quando enfrentam a tarefa de produzir uma lista idêntica de palavras (analisadas como pares) com instrumentos distintos e a maneira como sucede esse confronto nos diferentes níveis conceptuais de escrita infantil.

Assim definiram-se, de acordo com o estudo de Molinari (2007) e as investigações prévias de Ferreiro e Teberosky (1986), Alves-Martins (1996) as seguintes questões de estudo:

- a. Será que estabilidade grafo-fonética na escrita de nomes comuns estará relacionada com os níveis conceptuais de escrita?;
- b. Será que a estabilidade grafo-fonética na escrita de nomes comuns será maior quanto mais avançado será o nível conceptual?;
- c. Será que a estabilidade grafo-fonética tenderá a ser plena no início do período alfabético?;
- d. Será que a estabilidade grafo-fonética não aparecerá como um sucessivo acréscimo de letras foneticamente pertinentes?

4. Metodologia

4.1. Participantes

Neste estudo seleccionamos aleatoriamente 30 crianças com idades compreendidas entre os 5 e os 6 anos, cuja média de idades era de 71,24 meses e 3,05 meses de desvio padrão. Estas crianças pertenciam à classe média e frequentavam 4 jardins-de-infância dos concelhos de Cascais e Sintra, cada turma com a sua educadora que trabalhavam do mesmo modo ao longo do ano. Desde os três anos que todas as crianças seleccionadas frequentavam a mesma escola. A recolha dos dados deu-se nos meses de Maio e Junho e cada criança participou individualmente (investigador-criança), num ambiente tranquilo e isolado no jardim-de-infância.

Para seleccionar os participantes do nosso estudo, realizámos uma entrevista com três tarefas:

- a. Escrever o nome próprio de forma convencional sem recurso a cartão;
- b. A escrita com lápis e papel de cinco substantivos comuns (*gato, gatinho, hipopótamo, cavalo e boi*) para definir o nível de conceptualizações das crianças de acordo com a perspectiva psicogenética;
- c. A escrita em computador de um conjunto de palavras, escolhidas pelas crianças, para verificar se utilizavam de forma adequada as funções de teclar, apagar e mudar de linha recorrendo à tecla enter. Caso as crianças desconhecessem alguma destas funções, o investigador mostrava como se fazia e solicitava que repetissem nas palavras seguintes.

Depois de seleccionados os participantes foram divididos em 3 grupos de 10 elementos cada, consoante os níveis conceptuais definidos por Alves Martins (1996). Assim, estabelecemos 3 grupos experimentais em que a condição seguida foi os níveis de conceptualização: crianças com escritas silábicas com fonetização (as quais escreviam uma letra pertinente e convencional por sílaba;) crianças com escritas silábico-alfabéticas (as quais representavam com letras pertinentes todos fonemas de algumas sílabas, mas que em outras sílabas da mesma palavra escreviam apenas uma letra) e; crianças com escritas alfabéticas (as quais representavam com letras pertinentes todos os fonemas das palavras).

4.2. Desing Experimental

A situação experimental foi delineada com base nos estudos de Molinari (2007). Foi pedido às crianças que escrevessem uma lista de nomes comuns, sendo que faziam-no primeiro manualmente e logo de seguida com o processador de textos "Word".

Situação experimental

Escrita de uma lista de nomes comuns por parte das crianças em dois momentos

imediatamente sucessivos (produção manual primeiro e com processador de texto depois); comparação e interpretação de ambas as listas produzidas.

Aos participantes foi pedido a seguinte sequência de tarefas:

Produção de uma lista de compras em dois momentos distintos, primeiro de forma manual e depois com um processador de texto, sem consulta entre as versões.

- i. A produção manual foi efectuada com lápis e papel a partir de uma lista de palavras que formavam uma lista de compras. O material utilizado foi cedido pelo investigador, ou seja, quando o participante iniciava a tarefa de escrita tinha à sua disposição dois lápis (caso o bico de um se partisse), uma borracha e uma folha A4 dividida horizontalmente com 6 linhas (uma para cada palavra ditada);
- ii. Produção em computador da mesma lista de palavras logo depois da escrita manual, com fonte Verdana, tamanho dezasseis, “zoom” cem por cento, teclado bloqueado em letra maiúscula. A lista de palavra escritas manualmente não estava ao alcance dos participantes e nunca as consultaram entre os momentos de escrita.

Propusemos às crianças que escrevessem da melhor maneira possível um conjunto de palavras apresentadas oralmente. As palavras foram ditadas uma a uma e com tempo suficiente para que as crianças conseguissem escrever. Por vezes as crianças solicitavam informações sobre as letras a escrever e nunca foi prestada qualquer resposta explícita sobre o nome ou o som das letras.

Durante a recolha dos dados fomos solicitando que as crianças dessem algumas justificações sobre as decisões que tomavam na escrita das palavras. Paralelamente, solicitámos sempre que as crianças assinalassem e lessem cada palavra depois de finalizada (por exemplo, “mostra-me onde está escrito vinho. Lê e aponta com o dedo o que estás a ler”).

Foram seleccionados um conjunto de substantivos comuns pertencentes aos mesmo campo pragmático (lista de compras para realizar num hipermercado) sem referência a modelos externos, ou seja, todas as palavras escolhidas nunca foram ensinadas previamente, nem mostradas por escrito nas situações de produção.

As palavras tinham um número variável de sílabas (entre 2 a 4 sílabas), com predomínio de palavras dissilábicas e trissilábicas. Quanto à estrutura das sílabas, estas eram CV, CCV e CVC. As palavras seleccionadas foram partilhadas num estudo internacional que incluía a língua Italiana e Espanhola, sendo ditadas às crianças pela seguinte ordem:

SALAME (trissílabo com sílabas CV);

VINHO (dissilábico com estrutura CV e digrafo na segunda sílaba);

CARNE (dissílabo com estrutura CV na segunda sílaba e estrutura CVC na primeira);

POLENTA (trissílabo com estrutura CV na primeira e terceira sílaba e estrutura CVC na segunda sílaba com vogal nasal);

RAVIOLI (polissílabo com estrutura CV na primeira, segunda e quarta sílabas e estrutura V na terceira sílaba);

FRUTA (dissílabo com estrutura CCV na primeira sílaba e estrutura CV na segunda sílaba);

BRÓCOLOS (trissílabo com estrutura CCV na segunda sílaba, estrutura CV na segunda sílaba, e estrutura CVC na terceira sílaba);

CADERNO (trissílabo com estrutura CV na primeira e terceira sílabas e estrutura CVC na segunda sílaba);

4.3. Análise e Classificação dos Dados

Trabalhámos sobre 240 pares de palavras escritas, primeiro manualmente e posteriormente a computador. Em cada grupo de crianças (definido em função do nível conceptual) foram escritos 80 pares de palavras, todas iguais nos diferentes grupos experimentais.

Na análise dos pares considerámos aspectos gráficos, grafo-fonéticos e ortográficos. De acordo com Gak (1976, cit. Molinari 2007) o sistema gráfico refere-se ao meio de que uma língua dispõe para expressar os sons, estabelecendo relações abstractas entre sons e letras, enquanto o sistema ortográfico se relaciona com regras que determinam o emprego de letras segundo as circunstâncias. As possibilidades de selecção entre grafias diferentes para expressar um mesmo som estão determinadas pelo sistema gráfico mas, os casos em que uma determinada grafia se impõe, impedindo a escolha de outras igualmente possíveis, é do domínio ortográfico.

Nas definições propostas por Gak, o sistema gráfico inclui tanto aspectos gráficos como grafo-fonéticos da escrita. Para a análise dos nossos dados - seguindo Ferreira (2001) - optámos pela diferenciação de ambos os termos. Desta forma, quando nos referimos a aspectos gráficos da escrita, aludimos ao conjunto de formas-letras utilizadas pelas crianças nas suas produções. Quando nos referimos a aspectos grafo-fonéticos da escrita, aludimos às regras de correspondência entre sequências gráficas e sequências sonoras, onde se reorganiza o aspecto gráfico com referência ao outro sistema (o das unidade sonoras) (Ferreira, 2001). Assim, teremos, potencialmente, pares sem identidade, pares com identidade parcial, pares com identidade total e, pares com alternância grafo-fonética (Molinari, 2007).

Relembremos as classificações possíveis quanto à identidade dos pares (Molinari, 2007): pares sem identidade; pares com identidade parcial; pares com identidade total; pares com alternância grafo-fonética; e as classificações possíveis para os participantes quanto aos níveis conceptuais (Alves Martins, 1996): silábicos com fonetização; silábico-alfabéticos; e, alfabéticos.

5. Resultados

De forma a melhor fazer uma leitura dos dados realizou-se uma análise estatística com uma ANOVA (distribuição normal e variância > 0,05) onde foram comparados os diferentes tipos de identidade na lista de variáveis dependentes e os grupos de participantes como factor. Os resultados que se apresentam de seguida são referentes a essa análise e posterior post-hoc (tabela 1).

Tabela 1 - Média, desvio padrão, máximos e mínimos do tipo de identidade por grupo de participantes.

Tipo de Identidade	Grupo	N	Média	D.P.	Máximo	Mínimo	Total
					Limite Inferior	Limite Superior	
Identidade Total	Silábico com fonetização	10	4,40	1,713	2	7	44
	Silábico – Alfabético	10	3,10	0,876	2	5	31
	Alfabético	10	5,50	1,354	2	7	55
	Total	30	4,33	1,647	2	7	130
Identidade Parcial	Silábico com fonetização	10	0,90	1,287	0	4	9
	Silábico – Alfabético	10	0,80	0,632	0	2	8
	Alfabético	10	1,20	0,919	0	3	12
	Total	30	0,97	0,964	0	4	29
Alternância Grafo-Fonética	Silábico com fonetização	10	2,70	1,252	1	5	27
	Silábico – Alfabético	10	4,10	0,568	3	5	41
	Alfabético	10	1,30	0,823	0	3	13
	Total	30	2,70	1,466	0	5	81

Relativamente aos pares com identidade total, verifica-se que existem diferenças significativas entres os grupos [$F(2,27) = 7,83, p = 0,002$]. Uma análise mais detalhada através do *post hoc* permite verificar que essas diferenças são significativas apenas entre os participantes dos grupos silábico-alfabético e alfabético ($p = 0,001$). No fundo, estes dados mostram que os participantes de nível conceptual alfabético produzem significativamente mais pares com identidade total do que os participantes de nível conceptual silábico-alfabético.

Entre os restantes grupos não se encontram diferenças estatisticamente significativas, embora o número de pares com identidade total seja superior nos participantes de nível conceptual silábico, quando comparados com os participantes de nível conceptual silábico alfabético e, inferior, quando comparados com os participantes de nível conceptual alfabético.

Considerando os pares com identidade parcial, verifica-se que não existem diferenças significativas entre os grupos [$F(2,27) = 0,43, p = 0,45$].

Quanto aos pares com alternância grafo-fonética, voltam a encontrar-se

diferenças estatisticamente significativas entre os grupos [$F(2,27) = 22,91, p < 0,001$]. Estas diferenças verificam-se entre todos os grupos, sendo que os participantes com nível conceptual silábico-alfabético produziram significativamente mais pares deste tipo quando comparados com os participantes dos níveis conceptuais silábico ($p = 0,006$) e alfabético ($p < 0,001$). Também os participantes dos grupo silábico efectuaram significativamente mais pares com alternância grafo-fonética do que os participantes de nível conceptual alfabético ($p = 0,006$).

6. Discussão

O que se verifica é que os participantes do nível silábico com fonetização parecem ter maior estabilidade gráfica nas produções escritas que os participantes do nível conceptual silábico-alfabético. Por outro lado, uma vez adquirido o conhecimento necessário para começarem a escrever palavras alfabéticas, o nível de estabilidade aumenta. Neste contexto, surge, um pensamento mais estruturado e, conseqüentemente, menos duvidoso quanto às letras a mobilizar para escrever as palavras.

O que parece estar por trás da instabilidade verificada no nível silábico-alfabético é precisamente a dificuldade em articular e coordenar a análise metalinguística com as letras a mobilizar. Por isso mesmo se reforça a ideia que, embora se verifiquem mudanças qualitativas significativas entre os diferentes níveis conceptuais, as escritas de nível silábico-alfabético parecem sugerir a existência de oscilações nos procedimentos de escrita. Estes resultados estão assim de acordo com a primeira questão de estudo colocada, **confirmando que a estabilidade da escrita de nomes comuns está relacionada com os níveis conceptuais de escrita**. Contudo, não se verifica que **estabilidade gráfica da escrita de nomes comuns seja maior quanto mais avançado for o nível conceptual**, evidência suportada pelos resultados obtidos pelos participantes do nível conceptual silábico-alfabético.

As outras duas questões de investigação (c e d) também são respondidas afirmativamente, pois verifica-se que a **evolução das produções com estabilidade não se caracteriza como uma acumulação gradual de letras com valor sonoro pertinente** e que **a estabilidade grafo-fonética tende a ser plena no início do período alfabético**. Todas as questões de estudo seguem os resultados obtidos por Molinari (2007).

Relativamente ao número de letras verifica-se os participantes do nível conceptual silábico-alfabético mobilizaram significativamente mais letras do que as crianças do grupo silábico. No entanto, embora o número de letras correctamente mobilizadas seja muito superior ao verificado pelos participantes do nível silábico o

que se verifica, relativamente à estabilidade das produções escritas é o inverso, ou seja, o número de pares com alternância grafo-fonética no nível silábico-alfabético é superior enquanto no nível silábico com fonetização o que prevalece são os pares com identidade total. Portanto, podemos considerar que, de facto, a criança ao mobilizar um maior número de letras pertinentes para escrever as palavras, não implica necessariamente que a estabilidade das suas produções aumente (Molinari, 2007). Tais resultados parecem corroborar o trabalho de Ferreiro (2004) ao sugerir que, mais importante do que a capacidade da criança em mobilizar as letras pertinentes para as palavras que tenta escrever, é a forma como relaciona estes dois sistemas autónomos (linguagem escrita e linguagem oral). Ou seja, não é apenas a identificação dos componentes do oral que importa, mas também a relação que a criança estabelece entre a escrita e a oralidade e, a posterior transição que a criança faz da análise do oral para os procedimentos de escrita (Byrne & Fielding-Barnley, 1990).

Os resultados obtidos parecem sugerir que o avanço e o desenvolvimento das hipóteses infantis sobre a escrita não se dá pelo simples acréscimo de sons convencionais na produção escrita de palavras, que vai no mesmo sentido dos dados obtidos por Molinari (2007). A autora (op.cit) considera que a ideia dum desenvolvimento linear, por acréscimo de valores convencionais até cobrir a identidade total das palavras, não constitui uma descrição consistente com o que de facto se verifica no processo de apropriação da lógica subjacente à codificação escrita.

Pelo contrário, parece existir um processo de exploração cuja expressão máxima são as escrita com alternâncias grafo-fonéticas no nível silábico-alfabético. De facto, parece que a frequência de alternâncias grafo-fonéticas nas produções escritas da criança, dentro da sua hipótese conceptual, permite que esta se consciencialize da possibilidade de codificar a escrita de forma diferente, mas igualmente pertinente.

Estas alternâncias grafo-fonéticas sugerem as dificuldades infantis em coordenar as habilidades metalinguísticas com as letras a mobilizar. Parece ser um procedimento pelo qual a criança explora as diferenças entre as representações gráficas dos componentes consonantais e vocálicos das unidades silábicas pertinentes, evoluindo não só numa perspectiva conceptual mas também no sentido da gradual apropriação do princípio alfabético. Dá-se a confrontação entre habilidades particularmente difíceis de coordenar entre si, nomeadamente entre as competências de análise e as noções infantis sobre a estrutura da escrita.

Teaching Strategies for individual development of reading literacy

Erika Altenburg
Germany

It is very important for children and all young people in our schools, to become very competent in reading literacy. We can build their competence up by making them interested in reading, so that they like to pick up a book etc. All sorts of texts which are presented, must be meaningful to them, because motivation is very important to develop reading competence. But besides this there are some linguistic aspects about texts which help us to find interesting tasks for reading, to find a new approach to the understanding of a text. That means, we can transform some linguistic aspects into teaching strategies. These strategies can help us to develop the individual reading competence of pupils with a special training.

First I want to remind you of the meaning of “reading literacy”, then I want to show you what makes a text and afterwards I want to explain to you, how teachers can use this knowledge at school to initiate special methods fitting to all texts.

What does “Reading literacy” mean?

This expression is internationally used. It is the expression which is basically set for the international and national reading studies such as PIRLS, PISA and IGLU.

It is a pragmatic definition, which means, that you need this competence, this ability, for your whole life, for many different activities. You don't only need it to join every thing about literacy, you need it to understand all texts, to get along with your everyday life.

What does “reading” mean in this context for actual school lessons?

I want to try a small experiment with you. I would like to ask somebody to start reading this text aloud.

Vulpes et uva
Fame coacta vulpes alta in vinea.
Uvam petebat summis saliens viribus.
Quam tangerent non potuit,
discedens ait :
« Non dum matura est ;
nolo acerbam sumere. »

You can read this text aloud and it sounds quite correct. For the people who know some Latin it sounds like an acceptable reading of a story. But maybe you cannot tell the story. The reason is, that you could do the pronunciation, but you

don't know the words, the way to build a sentence etc. (By the way, it is the story of the fox and the grapes which hang too high and therefore the fox says, that they are too sour.)

In our country the concept of "reading literacy" is not accepted by all teachers. Some teachers even think, that there is a technical aspect to reading on the one side and on the other side there is the meaning of a text, the sense. Goodman mentioned this in America a long time ago (and notes it nowadays again). He wrote:

reading is construction of meaning during a transaction between the reader and the text. It is making sense of print. But some people define reading "as rapid accurate, automatic word recognition with meaning the by-product." (Goodman 1986/2005, S. 89).

When children read without any idea of the sense of the text, some people call this "barking at prints". It is significant, that teachers who always tell children to read aloud, to read an unknown text aloud, are making a great mistake. Every child reading a text must get to the sense. Therefore everybody starts reading silently, because everybody has a different demand of time. "Children need time to mature; rushing them is counter-productive." (Goodman 1986/2005, S. 38). Therefore the method of reading at school should be the individual silent reading (as you do it at home).

To find interesting tasks for silent reading, to develop reading competence, some knowledge of linguistics can be helpful.

What makes a text?

Although there are many theories, we could use a simplified text model to get some interesting methods of training.

It is a fact that every text has a beginning and an end. And all sentences within are connected. The way they are connected is quite different. The three types of connections are:

- syntactic connections like words and their representatives (pronouns) or the articles like "a" and "the". (*A man* drives a car. *The man* is quite old. *He* loves driving.)
- semantic connections like "to swim" and "lake" (I want to *swim*. I will go to the nearby *lake*.)
- pragmatic connections. That means the different parts of a text must also be connected.

When you connect on the semantic or pragmatic level, you must also imagine, that you must get an idea of the meaning. And the meaning of one word can be quite different. That depends on the context.

If you, as a reader, did all this connecting and imaging, you will find out what the text means, you get to the consequence, to the consistency, of the text. Is it a text to laugh about or to think about or ...

Text as a structure of instructions for a reader

	Connections	References	Consequence
Syntax	X		
Semantics	X	X	
Pragmatics	X	X	X

You could try to find the right sequence of these sentences :

They went to the swimming pool.

Come out of the water, immediately!

A mouse and an elephant were good friends.

I want to see if you are wearing my swimsuit!

When the mouse could not find it's swimsuit,
it shouted to the elephant:

You will find the beginning immediately. And then you can connect the other sentences. In the end, there must be the last sentence "...if you are wearing my swimsuit!" because it is a funny story, a joke. And the point makes the end!

A mouse and an elephant were *good friends*.
They *went together* to the *swimming* pool.

When the mouse could not find it's *swimsuit*,
it *shouted* to the elephant:
"*Come* out of the *water*, immediately!

I want to see if you are wearing my *swimsuit!*"

Which methodical ways can be used as a training for reading competence?

There are some methods to « open up » a text.

Methods of training, methods to "open up" a text

Reconstruction of a text

When we look at the **text-model**, we find out that the methods are situated at different places. If we **reconstruct** a text, we look at the **connections** of a text.

Teacher's preparation

The teacher has to choose a short text of 5 to 12 sentences (depending on the age of the children) or a poem and mix the sentences or the verses. Then the children cut the pieces out of a copy and try to put them together in the right way. It is useful to work in pairs, so the students can discuss their ideas.

Student's work

The students will think a lot about the connections of a text.

When they read the small parts or the sentences, they get an idea which general information the text will give them. Then they have to choose and to decide, which sentence is the beginning, which sentence follows next and so on to the end.

There is only one right decision. There is no creative moment in it, because you reconstruct the text, you go the way backwards, which the writer went forward.

Example of a worksheet

The task is to find out the right sequence of the verses

Aren't we lucky the seasons are four?

Think of a year with one less ...or one more!

One is the Springmouse who turns on the showers.

Then comes the Summer who paints in the flowers.

The Fallmouse is next with walnuts and wheat.

And Winter is lastwith little cold feet.

Who scatters snowflakes? Who melts the ice?

Who spoils the weather? Who makes it nice?

Who grows the four-leaf clovers in June?

Who dims the daylight? Who lights the moon?

Four little field mice who live in the sky,

Four little field mice.....like you and I.

The solution

The right sequence is: At first the questions, then the answer:

Who scatters snowflakes? Who melts the ice?

Who spoils the weather? Who makes it nice?

Who grows the four-leaf clovers in June?

Who dims the daylight? Who lights the moon?

Four little field mice who live in the sky,

Four little field micelike you and I.

Then follows the explanation and the end:

One is the Springmouse who turns on the showers.

Then comes the Summer who paints in the flowers.

The Fallmouse is next with walnuts and wheat.

And Winter is lastwith little cold feet.

Aren't we lucky the seasons are four?

Think of a year with one less ...or one more!

Method: Filling in a missing word

When we look at the **text-model**, we find out, that we get to the text-**consequence** if we realise all instructions given by the connections and the references. If we have understood a text or most parts of it, we could fill in a missing word. It must not be the real word of this text, but it must be a word with a similar meaning, it must fit in.

Teacher's preparation

The teacher makes a copy, blots out a word and gets a worksheet to copy. In our example we took the end of the poem. If you use a picture book you could use a little piece of paper, a "pose it", and put it on the word which should be found out. It's very easy and you get a special task when you present picture-books for reading.

Student's work

The pupils have to read more than one time and they have to think about the whole text and what it means.

Reading task: Find the missing word and discuss the solution

"Aren't we lucky the seasons are four?
Think of a year with one less ...or one _____!"

And the answer of Frederick:
"But Frederick", they said, "you are a poet!"
Fredrick blushed, took a bow, and said shyly, "I _____ it."

To prepare for different tasks you could chose a higher or lower level.
For example:
"Aren't we lucky the seasons are four?
Think of a year with one less ...or _____!"

Thinking about a key-word

Words have different meanings. The decision which special meaning is placed in this special text depends on the context. I believe in every language there are some words that you immediately think about.

Teacher's preparation

At first the teacher chooses a word of the text and presents it.

Student's work

After this the pupils gather all the meanings they can think of. They could do it in small groups or as a couple. And after this real work on language the students get the text to read by themselves. And the task is to find out what the word means in this context or which variety will be found.

Example

I chose "to run". What does it mean?
You can run quickly, I know a running gag.....

In our text we find
"For the winter days are long and many
we'll run out of things to say."
(Picture book Frederick written by Leo Lionni)

If we didn't think of "to run out" we learned something new. Our knowledge of language was extended.

Example

We could think about the meaning of "to turn", there are lots of:
Turn into, turn from; he has turned 50; to turn a corner; he can turn his hand to anything; to turn tail; to turn s.o. against; to turn away; to turn down; to turn in; to turn off; **to turn on**; to turn out; to turn over; to turn up; to turn about.....

In our text it is

"One is the Springmouse who **turns on** the showers.

Summary

When we fill in a missing word, we must have understood a text, we must have perceived its intention, we got to the consequence of it. When we gather the various meanings of a word, when we reflect the meanings of a key-word of a text, we reflect some aspects of language interpretation. The students will develop their language-learning. We get a task for the individual silent reading: The pupils have to search the key-word in the text while reading. Then they have to find out which meaning they find in this context.

You can use all these methods for lots of texts. I will show one text to you. For this text we can use different methods, that means, there might be different methods fitting one text. Maybe you think about different methods for one text for different children, for their individual development.

New Literacy and Academic Literacy in Higher Education

Rita Baleiro

ESGHT, Universidade do Algarve

This paper focuses on presenting a program - the New Literacy – that aims at creating an alternative path for the instruction of reading and writing in the academic community. I follow John Willinsky's proposal as it is presented in his book *The New Literacy: Redefining Reading and Writing in Schools*, first published in 1990. The main motivation for choosing to introduce this program lies strongly on the fact that, although it was written almost twenty years ago, it is extremely current/up-to-date as its principles share some common ground with the Bologna Declaration signed on the 19th June 1999. Overall, the New Literacy proposes to offer a set of reading and writing methods that will shift «the education authority from without, from the experience and knowledge of the teacher, to within, to those qualities of the students» (Willinsky, 1990: 192) with the purpose of promoting a more autonomous and critical attitude from students, which is one of the most important tenets of the Bologna Declaration. According to the New Literacy arguments, the student is conceived as an active maker of meaning rather than a passive receiver. That is why John Willinsky supports his program extensively on Louise M. Rosenblatt's transactional theory (1938), a theory one can find under the umbrella term of reader-response criticism. Reader-response criticism can be briefly described as the ensemble of those theories of literature which give a central role to the reader as an active agent in the meaning construction process. Reader-response criticism, however, remained largely underdeveloped and unknown until the 1970s (Tompkins, 1980), when the new critical tradition dominated, insisting on the study of the texts for their internal tensions and organic structures and labeling as an «affective fallacy» any attention to the effects of a literary text on readers (Beach, 1993). Recently, however, it has gained more visibility as some researchers have acknowledged the importance of the reader's role in the process of meaning making; in fact, without a reader, a text does not come into existence, does not have meaning nor invoke feelings (Karolides, 2000:5).

The choice of presenting Willinsky's New Literacy was also strongly propelled by the results of a questionnaire survey on reading and studying literature practices that I developed and applied, in 2006, within my PhD research on literary reading at university, which revealed that a large number of these students are still too much

dependent on their teacher's interpretation of the literary texts, and struggling with critically reading and writing as I will disclose later.

Driven by the survey results, I will claim that the application of some of the New Literacy strategies, namely, the emphasis placed on the importance of students to develop more independent work and critical thinking, may contribute to enhance their ability to acquire and develop the necessary skills to achieve academic success, i.e., reading and writing skills, critical skills and cultural skills – which are commonly presented as some of the most relevant for students' academic accomplishment, and eventually, professional success .

I will focus on the following points: firstly, I present the results of the survey mentioned above, secondly, I discuss the links between literacy and university on the grounds of some of the goals of the Bologna Declaration, thirdly, I address the New Literacy program and the issue of academic literacy in higher education, and finally, I suggest how some of the strategies offered by the «New Literacy» can contribute to promote academic literacy in higher education.

Method

Before introducing the 2006 survey results, I will describe in short its aims, its participants and how I applied it. The questionnaire survey was applied to nearly 100 undergraduates of Languages, Literatures and Cultures - Portuguese and English Studies - at Universidade Nova de Lisboa, and it was completed in their English language classes. The questionnaire was designed to identify the respondents' i) extra-curricular reading habits, ii) study and research methods of the literary texts, both inside and outside the classroom, iii) perceptions and convictions about literature, iv) favourite literary genres, and lastly, the students' v) knowledge and appreciation of English and Portuguese classic literary works. In this paper, I will not focus on the answers given to every question in the questionnaire. Instead I will concentrate on the answers that reveal the students' study and research methods because these are the findings that underpin my suggestion of applying some of the New Literacy strategies as we will later on.

Results

The answers to the question «Which methods do you consider most important to study literature in the classroom» unveiled that a large majority of the students - 87% - think that the most important method to study literature is «writing down the lecturer's comments and/or interpretations about the literary texts», and that only half of the students - 52% - considered important to «discuss the reference bibliography on the literary text that they are studying». These answers reflect not

only the students' too strong dependence on the teacher's comments, but also what John Willinsky said about the way literature is usually taught in schools and colleges: «The study of literature [...] has often meant a reverential deference and silence before the mysteries of the great work; at best, one might emulate the teacher's critical comments on the text's meaning and significance» (Willinsky, 1990: 96). The author of *The New Literacy* concludes that this tradition has not contributed much to transform the student's role from «suppliant to advocate in search of what has not been expressed or found before» (Willinsky, 1990: 22).

The students were also asked about their study methods of a literary text. The most common answer was «reading my own notebooks» - an answer supplied by 71% of the respondents, a higher percentage than the answer «reading the whole literary text» which was given by 67% of the respondents. The answers to this question also revealed that 37% of students still study a literary text by reading book summaries. Similar to the answers supplied to the previous question, only approximately a third of the students - 36% - study a literary text by reading reference bibliography on it.

The survey also showed that 76% of the students considered the «replica of the lecturer's ideas on the literary texts» one the five most decisive items to assure a positive mark in the literature subjects and 72% agreed that «to understand what the lecturers expect the students to know about the literary texts» was a key factor to be successful in literature subjects.

These results not only reflect the students' dependent attitude on the lecturers' comments and interpretations of the literary texts, but they also reflect the communication practices in the classroom. In fact, research has disclosed that the conventions of schooling largely determine what students see as appropriate and even normal methods of responding to literature (Marshall, 1996: 393).

Gerald Graff has thoroughly researched this last issue (1987, 2000, 2003), and has concluded that in most situations students respond what they think teachers expect from them, i.e., they write their answers and, ultimately, their interpretations of the literary text according to what they think their teachers want and not according to what they really think. That is probably the main reason why 76% of students answered that the «replica of the lecturer's ideas on the literary texts» is one the top five most decisive items to assure a positive mark in the literature subjects, as it was shown above.

Additionally, 90% of the students agreed that in order to be successful in literature subjects they should «understand what the lecturer says about the literary texts», and 76% consider more important «what the lecturer says about the literary text» than reading and studying the «reference bibliography on the literary text»

(24%). The problem is that in the midst of the task of pleasing the teachers, most students forget what really counts: the creation of an autonomous and mature personal speech – two basic pre-conditions to the development of literacy in general and literary literacy in particular.

Discussion

A decade has passed since the signing of the Bologna Declaration in June 1999 and it is still very common to hear teachers say there is a resistance to active learning among the students especially because they do not act as independent learners and do not develop neither solid critical skills nor self-regulatory behaviours which will not help them to become academically literate students. Moreover, most students are not yet adjusted to the new teaching and learning model proposed by this Declaration. From my own sixteen-year-practice as a lecturer at Algarve University, I have realised that even the recently set tutorial sessions, where students are encouraged to reflect on their individual work and share their readings and questions, do not have regular attendance from students who reject this kind of extra-classroom activities.

According to the Bologna Declaration, students who have completed first cycle qualifications must «have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy». Furthermore, students must «have the ability to gather and interpret relevant data (usually within their field of study) to inform judgements that include reflection on relevant social, scientific or ethical issues». Comparing these two expected outcomes set by the Bologna Declaration with my 2006 survey, the results are not very optimistic. Most of the students' answers reveal neither a high degree of autonomy nor an ability to gather relevant data within their field of study to inform their critical judgements of literary texts. In fact, the majority of the answers related to study and research methods show that students are still too much dependent on the lecturer's interpretation of the text, and that is exactly what the New Literacy program wishes to change by fostering autonomy and reflection, in other words, academic literacy.

Academic literacy can be defined as a situated social literacy that involves three interrelated aspects, or dimensions: the operational, the cultural and the critical (Green, 1999: 43). These three dimensions should be understood as a whole as each one of them overlaps with the other (Green, 1999: 43) as it is illustrated in Figure 1:

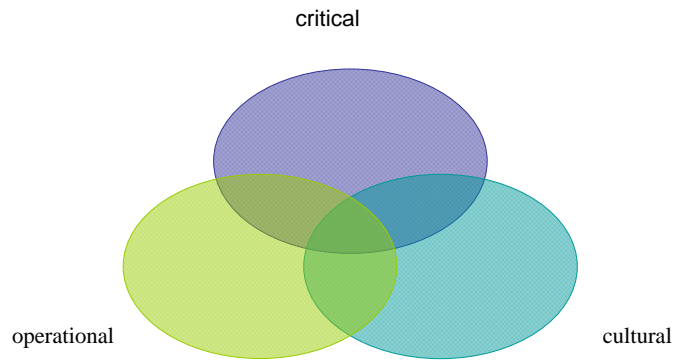

Fig. 1: The three dimensions of academic literacy (Green, 1999: 43)

In simple terms, the «operational» dimension is related with language skills, the «cultural» dimension with the ability to learn and reproduce the academic community discourse, and the «critical» dimension with the ability to read texts knowing that they reflect a specific agenda or/and a particular cultural/historical context.

Overall, the focus on the control over the acquisition of academic literacy shifts between teachers and students. On the one hand, it can be perceived as a challenge for educators because they are the ones who must prepare students for the current and the future society (Green, 1999: 36); on the other hand programs, such as the New Literacy claim that the strategies applied to the teaching of reading and writing should shift control from the teacher to the student (Willinsky, 1990: 8).

The New Literacy wishes to promote this shift by introducing a program of studies that works within two dimensions: the one changing the customary teaching methods that tend to overvalue the teachers' input and the other modifying the students' acquired habits of a neutral and passive recipient (Willinsky, 1990: 22). In other words, the New Literacy proposes a different form of education in reading and writing, shaped as an empowering literacy that aims at stimulating a more individual voice from the student, and to establish a sense of community inside the classroom. And that can be done by implementing a more active and collaborative construction of meaning, where students are seen as a «strong source of meaning in the classroom» (Willinsky, 1990: xviii, 29).

If we compare the main goals of the New Literacy program with the ones set by the Bologna Declaration, where it states that universities must aim at: «preparing students for future careers and for life as active citizens in democratic societies, and support their personal development.» we can observe some common ground

between the Bologna Declaration principles and the New Literacy proposals, namely, because the New Literacy program argues that literacy should be understood not as an isolated skill the student can apply on demand, but as a «social practice that takes certain materials and turns them to certain ends in a given setting, an activity that takes up a place in life, as working on something does» (Willinsky, 1990: 6). The New Literacy program intends to promote students' individual growth and to prepare them for future careers and for life as active citizens in democratic societies by giving the students' control over the text and its meaning, and above all promoting a more independent attitude towards reading and writing.

By reshaping the work in the classroom «around a different form of reading and writing», as Willinsky states (1990: 7), the New Literacy wishes students to become the sources of meaning and experience, and «the teacher, [...] an authority on what needs to be known and done, begins to turn over more of this responsibility to the student and to the meaning that comes from somewhere within the students' work with literacy» (Willinsky, 1990:7).

This leads us to the last point of this paper: how can some of the strategies of the «New Literacy» program contribute to promote academic literacy in higher education?

The New Literacy's proposal to improve and/or develop academic literacy is to make students more self-engaged in literacy, firmly assuming that «[students] are what [they] read and write» and by critically pursuing these acts they can «bring themselves to the text integrating their own meaning and sense with the story or argument that they find there» (Willinsky, 1990: 217). The aim is to end the division between reading and writing as skills students must master and the reverential study of literature.

This New Literacy key-statement is strongly supported by reader-response criticism - namely by Louise M. Rosenblatt's transactional theory, as I have stated above. The New Literacy and the reader-response criticism share the belief in the importance of the reader in the meaning making process. As in the reader-response criticism, in the New Literacy program students are regarded as authors and meaning makers. Thus, students are encouraged to call on their previous knowledge to question and make sense of the text, to make connections between the text and their own understanding of the world and to analytically focus on the form and theme of the text itself, making judgments of value and connections to other texts (Marshall, 1996: 391). Bearing this in mind, I recall, one again, the results of the 2006 survey where only 15% of the students mentioned that «connecting the

text with other texts» was an important factor to get a positive mark in the literature class.

Studying reading and writing in this perspective is to take into account that meaning is created by the interaction of the reader with the text, in a given moment and location, which implies that meaning also results from the interaction of the reader with the community she/he belongs to, e.g. the classroom, that is: «we “make sense” of a new situation or transaction and make new meanings by applying, reorganizing, revising, or extending public and private elements selected from our personal linguistic-experiential reservoir.» (Rosenblatt, [1938] 2005: 5).

It is important to emphasize that this «linguistic-experiential reservoir», similar to what with literacy is a changeable and continuous process. And this echoes what Willinsky's claims that «literacy is not a series of subskills that are mastered and applied in isolated exercises» and that literacy «will not exist in a universal state equally applicable to all situations» (1990: 153). Instead, literacy must be understood as the ability to use language in its written form either in «reading a novel of a favorite author» or «writing a resignation letter» (Willinsky, 1999: 9).

Therefore, the New Literacy program, following on the footsteps of Louise M. Rosenblatt, argues that one of the best ways to promote academic literacy is to let the student improve his or her individual capacity to evoke meaning from the text by leading the students to reflect self-critically on the meaning making process.

Like the reader-response criticism, the New Literacy proposes an alternative sense of reading that rests upon two dimensions of meaning making:

- a) the first one is rooted in the student's experience with the text;
- b) the second is set within the sociability of the classroom setting.

Within this framework, literacy is something to share and language a means for connecting with others, always with the main goal of creating meaning, i.e. understanding the written text (Willinsky, 1990: 79).

Which New Literacy strategies can be applied in the classroom to promote academic literacy?

Reading strategies

- Pre-reading activities – clearly identifying and giving students a sense of purpose and intent for reading and analysing text structure; students should be encouraged to develop an authentic reason to read or write a text (answering a specific question or solving a specific problem within their academic environment). The aim is that instead of reproducing the agenda of problems, issues and questions with respect to specific authors and texts and culture that lecturers mention in class, students develop their own critical interpretation of the texts, even though they should always acknowledge the existence of what was already written about a specific text.
- «During»-reading activities – reviewing and clarifying ideas through questioning in oral and written forms.

- Post-reading activities – summarising and applying information in papers and class-journals to be shared with the class or even with the academic community at large (e.g. conveying their texts and ideas through blogs, posting their texts on shared e-portfolios, publishing their essays on university’s newsletters, posting their texts on the campus placards). These activities, besides showing students that «there is a writing and reading with a meaning that runs beyond the end-of-class bell» (Willinsky, 1990: 210), give them a sense of belongingness as they are sharing in public their thoughts, concerns and opinions (Karolidis, 2000: 283).

Writing

Before presenting the New Literacy’s writing strategies, I must recall that Willinsky claims that writing has often been neglected in classrooms: «Composition was on the edge of the school timetable, and it was at the bottom of the job roster in the English department at the university.» (1990: 28). According to the New Literacy, when students arrive at university they have already developed profitable forms of communication and as they show up with a variety of cultural resources «these diverse forms of capital become a rich source of learning and literacy» (Willinsky, 1990: 32), and their cultural capital should be expressed through writing.

Gerald Graff, already quoted in this paper, shares the same conviction. According to Graff, college students are not taught how to write. Therefore, they learn how to write essays, a very common form of writing at university, through a process of osmosis that starts by listening and reproducing what teachers say in class (2000: 47). I believe this process to be sound and valid, however it should be complemented with the experience of writing essays that result from their personal transaction with the text.

Writing strategies

- Pre-writing activities:
 - a) Brainstorming, i.e., loose thinking and rough writing. According to the New Literacy advocates this is enough to alter the structure of the classroom in the most subtle manners. Concerning this specific strategy, it is worth noting that in my 2006 survey carried out at Universidade Nova, when asked about the best methods to understand and interpret a literary text, students revealed just the opposite of what is suggested by the New Literacy program, as 79% of the students prefer «reading the text on their own», rather than «discussing the text with colleagues and friends.» (21%);
 - b) Teachers should themselves be writers, and provide students with examples of their own writing: «the teachers of writing should write» (Willinsky, 1990: 35).
 - c) Writing should be introduced as an effective way of thinking out problems either in Maths or Literature classes, where literacy serves as both an «expressive» and an «interpretative» vehicle (Willinsky, 1990: 30).
- «During»-writing activities: placing the emphasis on the need to write several essays and texts throughout the academic year, conveys clearly the message that students are primarily engaged in the construction of meaning, «rather than serving as empty jugs waiting to be filled.» (Willinsky, 1990: 30).
- Post-writing activities: going back to the beginning, that is, «after completing a full draft, students should return to a prewriting search for new materials to bolster the piece» (Willinsky, 1990: 39); collaborative conferencing over the students’ written work, after which the students should improve their texts and at last making public the private writing.

To conclude, I start by saying that I fully agree with what J. Zhang says when he states that the problem with students is not «lack of ability, but lack of preparedness» (2003: 14). I will add to Zhang's statement that the problem lies as well in the *lack of critical independent thinking* which I believe may help them become better students. Therefore, some of the premises of the New Literacy program – namely, the emphasis on several and continuous reading and writing activities – may be useful not only for students' academic achievements but for their lives as independent critical thinkers. By being encouraged to write their own meaning of the text, the New Literacy program promotes a more active voice from the students. This however does not mean that students should read and write neglecting the existing reference bibliography. In fact, more than ever, students must be encouraged to read well written and articulated pieces of academic writing (an often neglected practice as the 2006 survey results clearly show), and start from there to build their own interpretations of texts. The aim is to establish a non-neutral, therefore, critical transaction with the text.

As a final remark, I must also add that from my own experience of teaching Portuguese language and culture to a class of undergraduates at the University of Algarve, I have found out that making public the private writing, one of the New Literacy strategies, is an extremely motivating practice for students. In fact, as Willinsky states: «Publication is the principal post-writing activity for the serious writing programs; it is intended to demonstrate a regard for students' work, treating their word as if it counted in the world.» (1990: 187). I discovered and experienced this first handily through the experience of creating a class blog where students could post their texts, and get comments on their texts not only from me, but from their peers. According to some of my students: «the blog was an excellent idea, because it gave us the opportunity to express ourselves through words, and to tell and share our stories with others»; «The idea of creating a blog was very good and having the opportunity to read or reread our texts and our colleagues' texts was enriching», «I think it is important to get to know the ideas of my colleagues, their texts and also other types of information (documents) and have the possibility to show our own ideas, because having feedback from our colleagues gives us strength to continue [writing]», «In my case, it helped to find out that after all writing is not as bad or as difficult as I had imagined, I just had to feel motivated, to be patient and to have ideas.».

Besides the blog experience, I applied another New Literacy strategy: bringing the students' personal experiences to the interpretations of the texts, which gave them the chance, as one of my students wrote, to deal with some of their own personal issues: «After writing my text, and after reading it in class, I felt relieved,

because I conveyed my personal experience and that freed me from a situation that I had to solve, and I solved it in class, so...thank you!»

I conclude by saying that, although the New Literacy pays close attention to the reader's personal interpretation of the text by placing an emphasis on the fact that the meaning results from the reader's transaction with the text, applying the New Literacy's strategies is not the same thing as simply asking students: «How does the poem make you feel?». In my opinion, this would be too simplistic and unrealistic. The New Literacy does not neglect the hard work of selection and reorganization that every text demands from a reader, either while reading it or writing about it. The point is that emphasising the student's response to the text can be a means to diminish the barrier between student and literature and a fruitful practice to motivate students to connect with the texts and be willing to explore different writing strategies.

Opportunities to learn literacy: children's interpretations of teacher practices

Sara Ann Beach

University of Oklahoma, USA

Julie Collins

University of Central Oklahoma, USA

Angela Ward

University of Saskatchewan, CA

Schools are the primary settings where children develop literacy proficiency. One aspect of schools that is hypothesized as leading to that proficiency is opportunity to learn literacy. In recent literature (cf. Boscardin & Aguirre-Munoz, et al 2008) opportunity to learn in classrooms has been defined narrowly to only include curricular coverage, time, topic emphasis, and teaching strategies. When classrooms are viewed as communities for literacy learning, opportunity to learn becomes more complex, encompassing the literacy events and practices that are privileged and the materials that are available during those events, the amount of challenge, the teacher's expectations, and how much choice learners have.

The research journey

We became interested in children's opportunities to learn literacy through several previous studies. Young and Beach (1998) in an intensive classroom-based study of first grade children, noted how participation in multiple literacy events and practices at home, in school and in the community, either supported or interrupted children's sense of being literate. This work led to a further study (in both Oklahoma and Saskatchewan), where focal children in fourth grade classrooms were observed in both home and school settings, and then engaged in conversation about their literacy practices. Kevin, one of the boys in the Saskatchewan study, participated in a somewhat unconventional home literacy environment where he wrote stories for three younger siblings, and helped them read his creative narratives that featured them as characters in medieval dramas. In school, however, Kevin barely participated in most language arts activities that mostly featured worksheets and comprehension questions. Kevin's literacy life at home clearly eclipsed his engagement with school. The focal girls were more committed to 'doing school', demonstrating eagerness to take on teacher-assigned tasks. We became interested in the ways children perceived literacy activities as either tasks or invitations, and especially in the different opportunities to learn literacy at home and school. Students' sense of their own literate identity was a mediator of their engagement

and opportunity to learn literacy. We became interested in exploring further the perceptions of upper elementary school children about their own engagement and opportunities to learn in classrooms.

Opportunity to learn and engagement

The traditional view of *opportunity to learn* considers content coverage and exposure, emphasis and level of thinking, resources, and the quality of instructional delivery. Content coverage refers to the instruction of the core curriculum as outlined in the curriculum documents. Content exposure refers to the time allotted for instruction and the depth of exposure to the topics within the curriculum. Content emphasis includes the topics which are emphasized during instruction, as well as the level of thinking, which refers to whether the emphasis during instruction is at the rote level or the abstract and conceptual level. The resources used for instruction include the resources available to the teacher from their teacher preparation, affecting their preparedness to teach the subjects that they are teaching. Resources also include the suitability of the materials used for instruction for the learning tasks and to meet the instructional goals, as well as the availability of the materials to the students. Finally, the quality of the instruction refers to the teaching practices that are evident, the frequency of the learning events, and the types of tasks and experiences that are provided in the classroom.

We reconceptualize opportunity to learn by considering the following factors:

- The learner
 - literate identity
 - literacy background
- The classroom context
 - Privileged literacy practices
 - Degree of challenge
 - Teacher expectations
 - Available literacy material
- The learner's engagement
 - Multi-faceted
 - Persistent
 - Behavioral, cognitive and social involvement in activity scaffolded by teacher practices (Lutz, Guthrie & Davis, 2006)

The learner's engagement is multi-faceted in that it includes cognition, strategy use, and the learner's attitude (Furrer & Skinner, 2003). This engagement is characterized by persistence and focused interaction with the social environment (Furrer & Skinner, 2003), and the student's ability to be able to ask and answer questions within the learning environment (Lutz, Guthrie & Davis, 2006). The learner's engagement is cognitive, affected by their mental investment and their potential and ability to use effortful strategy use and deep thinking during the literacy

process. The engagement is also affective, involving the learner's positive feelings and physical display of emotion in the learning environment; and social, with the learning context allowing the exchange of ideas and interpretations with peers (Lutz, Guthrie and Davis, 2006). Opportunity to learn depends on student's engagement, and is mediated by literate identity and literacy events and practices in a particular learning setting. This intersection of OTL and engagement is demonstrated in student's choice to accept or decline an invitation to participate in literacy events and practices, regarding activities as either meaningful or inauthentic tasks. Engagement becomes a learner's choice to accept or decline an invitation to participate in literacy events and activities. This choice, we assert, is predicated on the learner's interpretation of the literacy activities offered in a classroom.

This research explores the interpretations of children in fourth and sixth grades of the literacy events and practices that they were offered during reading and writing instruction. Teachers completed a survey of the reading and writing lessons, activities, structures, and materials that they use to support literacy learning. Children in those classrooms were interviewed in focus groups about the purpose of those practices and which practices engage them the most, as well as being asked to describe how they believe their teachers identify good readers and writers. This paper will discuss the findings of this research, offer some suggestions about what classroom practices offer opportunities to learn from the perspective of students, and focus on implications for teacher preparation.

Research questions

Children's perceptions and interpretations of the literacy activities in their classrooms provided the data for this paper. Our research questions were:

- How do 4th and 6th grade students interpret the literacy activities that they are offered in their classrooms?
- Which activities do they say are engaging activities or practices?
- How do they say their teachers identify good readers and writers?

Findings

Approximately 160 Oklahoma children in fourth and sixth grades participated in surveys and focus groups. In general, their responses indicated that they perceived that teachers saw literacy as a series of skill-based performances. The nine participating teachers, when asked, stated grand goals for their students, including that the students would love to read and write, understand the English language, improve their literacy skills, and become competent communicators. However, the students themselves believed that teachers were mainly interested in the students'

good handwriting, learning word definitions and high scores on tests. There were important differences between the 'stories' of classroom practice in the language arts classes told by the teachers in the study, and the students' perceptions of their classroom activities and teachers' expectations of them. It may well be that there was a lack of congruence between teachers' beliefs about literacy and their actual classroom practices. Students whose families valued the 'products' of school, such as spelling tests and neatly completed workbook sheets might also assume that these activities define reading and writing. The students, though, had clear ideas about literacy invitations that engaged their interest. Students in the study were engaged when they had opportunities to select their own reading and writing topics, and appreciated time to research on the internet. Interestingly, they also valued "learning conversations" with their teachers, and felt that they had insufficient time to engage in dialogue about their work. The students expressed a desire to read from multiple genres that would broaden their horizons. Additionally, the students looked for challenge and new knowledge in their classroom literacy activities; one assumes from this finding that many students did not find sufficient depth in their literate lives at school.

Implications for teacher education

For us as teacher educators, the implications from this study for our practice are salient. It is evident that we need to support preservice teachers in two broad areas – understanding and connecting with literacy learners, and designing literacy activities that are meaningful beyond classroom walls.

Connecting with learners

Although most teachers would understand the necessity of recognizing the *funds of knowledge* (Gonzalez, Moll & Amanti, 2005) students bring to school with them, it's perhaps less obvious how to gather and build on home experiences, including literacy events and practices. In a recent study, Ward and Epp (2008) encouraged teachers to gather knowledge of students' literacy practices at home and in the community. This was examined through a mixture of surveys, interviews and observations. However, participants in the study were somewhat puzzled as to what to do with this knowledge. Although they found their students' home literacies interesting, there was little evidence that teachers in the study changed their instructional practices. As teacher educators, we need to support preservice teachers in planning literacy events that encourage students to build on their existing interests, skills and competencies. So in the case of Kevin (described earlier in the paper), his teacher, knowing about his deep interest in medieval times and in writing plays and stories, might set up a project where he could research

medieval heraldry, or perhaps write plays which a group of fellow students could perform. Building directly on knowledge of children as competent learners is an excellent first step towards authenticity in classroom activities.

Recognizing authenticity in school literacy practices

The touchstone for authenticity is connection with real world applications. In a socio-cultural view of literacy, where literacy is studied in everyday contexts (for example, Barton, Hamilton & Ivanic, 2000), literacy events and practices always fulfill a function for those involved in them. In the real world, people read and write to get information, persuade others, entertain, access help, and perhaps to escape from the humdrum. In many classrooms, the range of literacy functions is artificially narrowed, so that the audience for all writing becomes the teacher, and purposes for reading do not authentically evolve from the needs and interests of students. School literacies often include genres that have very little connection with literacies in the real world or with students' own choices. Preservice teachers should have the opportunity to practice authentic literacy activities in their own teacher education, perhaps through "invitations to learn" (Van Sluys, 2005) that challenge their own thinking and enable them to follow their own interests.

How do Hungarian adults read aloud?

Judit Bóna

Angéla Imre

Eötvös Loránd University, Hungary

Introduction

In everyday life it often happens that we have to read something out aloud. The success with which we accomplish this task shows how fluently we can read, how proficient readers we are, whether we can interpret a written text and to what extent we are able to transpose it into the spoken medium.

Reading proficiency is based partly on the particular reader's general language comprehension skills and partly on her expertise in decoding a written text (cf. Tóth 2002). Understanding a written text presupposes speaking the relevant language and being familiar with its formal structure. Phonological awareness means the ability of accurately perceiving the speech flow and of discriminating the phonological segments of the given language in it. Knowledge of the relevant syntactic rules makes it possible that words of the various grammatical classes be used in the appropriate order within the clause, whereas their meaning is taken care of by semantic awareness. These three levels of linguistic skills are complemented by background knowledge, the mass of information and experience accumulated in the interactions that one has carried out in one's life. Decoding requires familiarity with the code (letter-to-phoneme correspondences) and an appropriate amount of lexical knowledge. In the case of letter-based writing systems, reading also requires recognition of the alphabetic principle (cf. Perfetti 1999). Psycholinguistic research has confirmed that there are important differences between beginners' and experienced readers' decoding strategies (Ehri & Wilce 1987, Samuels 1994). In the case of the latter, deliberate phonological decoding is preceded by the use of visual and phonological stimuli, and the process also crucially involves automatisms. Furthermore, the two groups also differ in their eye movements (Nodine & Simmons 1974), in their performance in cloze tests (in which they have to supply certain words that have been removed from a text, Mackworth 1977), as well as in the way they utilize graphic information and context (Tóth 2002).. In addition to cognitive factors, the process of reading also crucially involves memory and attention. It is important to note that linguistic comprehension and decoding mutually support one another and neither is sufficient, in itself, for the mechanism of reading to work properly. Consequently, we can state that people who have difficulty in

understanding what they read also necessarily have problems with linguistic comprehension, or decoding, or both.

The comprehension of a text and the quality of reading are influenced by a number of factors. The aim of the actual reading session is one of them. Other relevant factors include the amount of new vs. known information that the text contains (Shebilske & Fischer 1981), the extent to which the reader is able to cover larger chunks of text at a time, the level of conventional order in the text and contextual effects (Erich & Rayner 1981), and the typographical layout of the text to be read (Frase & Schwartz 1979). It is also far from being irrelevant whether the text is read silently or aloud. What is the difference between these two cases? In silent reading, it is primarily the areas of visual processing that are activated, whereas in oral reading, primary activation takes place in the areas of speech processing (Berninger 1996). It has been observed that reading without moving one's lips is an acquired habit; the natural behavior is for the lips to keep moving while the person is reading. Children first learn to read aloud in school, and the phase of silent reading only comes subsequently. Nevertheless, it can often be observed that even older speakers are unable to read aloud routinely and well. Green (1998) observed in children between 10 and 14 years of age that many of them feel uneasy when they have to take turns in reading something out aloud and understand the whole of the text poorly or less well, given that they tend to concentrate on the portions they have to read out themselves, in order to avoid making mistakes in them. Children who are poor readers in general find reading aloud to be an enormous challenge. The author tried to diminish the negative experience of reading by using the RRI (Rapid Retrieval of Information) technique and by having pupils acquire various reading and task solving strategies.

One of the earliest experiments concerning errors committed in reading aloud was conducted by Fairbanks (1937, cited by Tóth 2002: 49). In the research university students were divided into good and poor readers on the basis of their performance in comprehension tasks based on their silent reading. It turned out that, in reading aloud, poor readers committed almost three times as many errors as good readers did (the former committed 5.8 errors per 100 words on average whereas the latter committed 2.1), and the actual errors exhibited a characteristic pattern. In both groups, word replacement was the most frequently occurring error type, but while 51% of poor readers replaced the target word by a word that meant something quite different, none of the good readers did so. Self-correction, on the other hand, occurred with good readers more often than it did with poor readers. Other investigations reported in the literature study reading aloud either in terms of errors committed as a function of the use of contextual information (Biemiller 1970,

Weber 1970, Cohen 1974-1975) or in terms of self-corrections and reading strategies used for avoiding errors (Willows & Ryan 1981, Juel 1980).

Apparently, very few surveys of oral reading have been conducted so far with the participation of adult native speakers of Hungarian, and even those few studies primarily analyzed the success of reading aloud in students of teacher training colleges (cf. Adamikné Jászó 2000). In the present paper, we investigate how Hungarian natives of various ages and occupations can read out a simple text of popular science. Our hypothesis is that most subjects would commit, along with reading errors, also several uncertainty-based errors and interpretation errors. Furthermore, we hypothesize that the quality of reading aloud would depend on the subject's age and occupation/level of education.

Method, material, subjects

Our study is based on fifty samples of speech recording from the Hungarian Spoken Language Database (BEA, cf. <http://www.nytud.hu/dbases/bea/index.html>). The recordings selected come from 25 female and 25 male subjects; their ages range between 20 and 77 years (the youngest woman is 22, the oldest is 77 years old, the youngest man is 20, the oldest man is 71). In terms of their occupation, 25 subjects are teachers/faculty of arts graduates, and 25 subjects do something else for a living.

The subjects' task was to read out a text of popular science that they were allowed to privately read and understand beforehand. The reading sessions took place in a soundproof chamber and were recorded digitally.

In the recordings, we analyzed reading errors; speech rate and articulation rate; the location and length of pauses; stress and intonation; and we evaluated the "quality" of reading, that is, the extent to which the subject was able to read comprehensibly.

We processed a total of 108 minutes (6471123 ms) of recording. Acoustic analyses were performed using Praat 5.0 (Boersma & Weenink 1998); statistical analyses (Pearson's correlation) were performed by SPSS 13.0.

Results

In our subjective evaluation, a mere 42% of the subjects were able to read out the text "comprehendingly and comprehensibly". None of them produced error-free reading; there was a single person (a speech therapist by profession) who committed just a single error, and two subjects committed two each. In the speech production of the other readers, several reading errors, uncertainties, and/or interpretation errors were attested.

A total of 256 reading errors were found in the recording. The proportions of error types can be found in Figure 1.

Figure 1
Proportions of various types of reading errors

The largest group of reading errors involved sound/syllable omissions. Of these, the most frequent cases were in which the reader skipped the plural marker (e.g., *piacon* ‘at (the) market’ for *piacokon* ‘at (the) markets’); or the derivational suffix *-hat/-het* ‘may’ was left out (e.g., *károsítja* ‘harms’ for *károsíthatja* ‘may harm’). One plural item was misread by 60% of the subjects (30 persons): they pronounced *mutathatók* ‘ones that can be shown’ for *mutathatók* (a morphophonological variant of the former, meaning the same thing). The reason must have been the frequency of the misread item and the fact that both forms are grammatical in Hungarian.

We found relatively many sound replacements in the recording. In these, the reader replaced a single sound of the target word by some other sound. In most cases, the subject produced a word of either identical or very closely related meaning (for instance, *nem* ‘not’ for *sem* ‘nor’). We have also attested a number of sound replacements in foreignisms like *primőr* ‘primeur, hasting’ or *importált* ‘imported’.

In general, the most numerous errors were found for *mutathatók* (see above) and *megbetegedéseket* ‘morbidities-accusative’. Only 19.9% of the errors (51 items) were subsequently corrected by the speakers.

The subjects produced a total of 73 cases of uncertainty-based disfluency. Their distribution can be seen in Figure 2. The most frequently occurring errors of this type (43% of all cases) were restarts. These occurred primarily in pronouncing lengthier items (e.g., *muta mutatható* □ *mutathatók ki, ahol i ahol immunrendszerei* ‘...can be shown, where immunity...’).

and speech rate ($r = -0,524$; $p \leq 0,001$), that is, older speakers' tempo was significantly slower than that of younger speakers (this squares well with literature data saying that speech tempo becomes slower in old age). Similar results were found for articulation rate ($r = -0,596$; $p \leq 0,001$). However, the single speaker exhibiting the slowest speech rate and articulation rate was not one of the oldest subjects; she was 49 years old.

On average, subjects paused in 15% of their speech time (SD: 8–24%). The number of pauses was between 23 and 75. The highest number of pauses was produced by the speaker who also committed the largest number of errors. The shortest pause lasted 34 ms, the longest lasted 4220 ms. Given that the lung's vital capacity lessens with the progress of age, we thought that the oldest subjects would produce the most and the longest pauses. However, the statistical data did not confirm this hypothesis (neither age and the number of pauses, nor age and the proportion of pauses were significantly correlated). The highest number of pauses (both in absolute numbers and proportionately) was produced by a 27-year-old man whose lack of experience in reading was also signaled by the large number of errors he committed.

The fluency parameter shows how fluent a sample of speech is, that is, how many words are pronounced between two pauses (on average). The higher this number, the more fluent the speech sample is. The fluency parameter of the most fluent sample was 10.3; that of the least fluent speech production was 3.3.

Incorrect pausing (where the speaker pauses at a point where there is no grammatical reason for it and hence the aural comprehension of the text is made more difficult) is taken to be a segmentation error based on failure to comprehend the text, on reading uncertainty, or on being inexperienced in reading aloud. We found a total of 94 segmentation errors. In 43% of these, there was a pause between a possessive noun or an adjective and the noun it modified (e.g., *a környező területek élővilágát* 'the plants and animals of the surrounding area', *daganatos megbetegedéseket okozhatnak* 'they may cause tumorous illnesses'); in 11%, between a definite article and a noun (e.g., *a szezonális termékekétől* 'from that of the seasonal products'); in 6%, within a word (e.g., *kártevők kártevők re* 'for pests pests'); and in 40% of all cases the segmentation error occurred at the clausal level (for instance, there was a pause after a conjunction or before the particle *is* 'too', etc.).

We have found a total of 16 stressing errors. 56% of those (9 errors) occurred in adjective-noun constructions; the speakers stressed the noun rather than the adjective (e.g., **növényvédő SZErek* for *NÖvényvédő szerek* 'pesticide sprays', **fejes SALáta* for *FEjes saláta* 'lettuce'). Stressing errors also occurred in compounds

(e.g., **növényvédőszer-TAR*talmát for *NÖvényvédőszer-tartal*mát ‘its pesticide content-acc’, **vitaminFOR*rás for *Vitaminfor*rás ‘vitamin source’), and even in simple (case-marked) words (e.g., **boltokBAN* for *BOL*tokban ‘in shops’).

In terms of intonation, we classified the samples into four groups of correctly intoned, incorrectly intoned, over-intoned (singsong), and monotonous speech, respectively. The incorrectly intoned samples were neither monotonous nor over-intoned but included cases in which the speaker used an intonation pattern that was not appropriate to the content. In terms of our subjective evaluation, 38% of the speakers used correct intonation throughout, 20% committed some intonation errors, 36% read monotonously, and 6% produced singsong intonation.

Segmentation, stressing, and intonation errors reveal inaccurate comprehension and/or lack of sufficient experience in reading aloud. We have tried to find correlations between occupation (including expected level of reading proficiency) and prosodic features of the samples. The results suggest that roughly three times as many of the teachers or faculty of arts graduates were able to read a text comprehendingly and comprehensibly than of people with other jobs. On the other hand, a high proportion (ca. 32%) of even the former group also failed to solve the task to the expected extent.

Summary and conclusions

In the present study, we tried to find out how well Hungarian adults can read aloud. The results show that many adults have problems already in decoding the text they have to read. Decoding difficulties (reading errors) occur significantly less often if the adult is an experienced speaker/reader; however, such experience does not necessarily entail that the speaker is capable of “comprehending and comprehensible” reading. In many cases, the quality of reading suggests boredom, or it shows that the speaker wants to squeeze through the reading task as quickly as possible.

We had expected that age and occupation (experience) would also influence the quality of reading. As the data reveal, with respect to age, it is only in temporal characteristics that differences can be found. Occupation influenced speech production in that a higher proportion of teachers etc. were able to read correctly. On the other hand, several of them committed quite a few errors and/or produced a poorly interpreted spoken text.

In conclusion, we can say that many Hungarian adults are at the level of less-than-ten-year-olds when it comes to reading out a text aloud.

Construction de la représentation de l'acte lexique chez le jeune enfant en Petite Section de maternelle

Véronique Bourhis

CREAD - IUFM U.B.O, France

Introduction

La notion de littéracie contribue à considérer les apprentissages de l'enfant de manière dynamique, en envisageant la complémentarité des quatre grandes habiletés linguistiques que sont le 'parler', le 'lire', l' 'écrire' et le 'comprendre': il s'agit de traiter l'information de manière à apprendre à maîtriser l'écrit dans ses différentes pratiques, ses différents contextes, en tenant compte de l'ensemble des dimensions psychoaffective, développementale, ou encore socioculturelle de l'enfant.

Le parcours de chaque enfant pour accéder à l'écrit est singulier, depuis l'étape où il sait voir s'il y a quelque chose d'écrit quelque part, sur un livre, à celle où, sans savoir vraiment lire, il est capable de saisir bon nombres de messages, du seul fait qu'il est familier du contexte dans lequel ceux-ci apparaissent, notamment à l'école.

Les pratiques de littéracie du très jeune enfant ont été décrites dans la littérature française principalement sous trois angles :

- l'angle socioculturel (Bernardin 1994, Barré de Miniac 2000) C. Barré-de Miniac précise que la notion de rapport à l'écrit suggère « l'idée d'une orientation de la personne à l'égard de l'objet , en l'occurrence d'un objet social, historiquement construit en ce qui concerne l'écriture et à l'égard de la mise en œuvre pratique de cet objet dans la vie personnelle, culturelle, sociale et professionnelle. »

Dans les milieux non culturellement défavorisés (au sens large), le livre est vecteur d'écrit, et ce sans préjuger de la qualité des écrits que les enfants abordent. Très souvent ont lieu dans les familles des situations de lecture partagées : moments de rencontre entre un enfant, un parent et un récit, ou encore entre les membres d'une fratrie. La construction de la représentation de l'écrit passe pour partie par le livre, support physique de trace écrite. Et cette culture de l'écrit détermine la scolarité ultérieure de l'enfant.

- celui de la culture scolaire (Devanne et alii 2000) : Le rôle de l'enseignant est d'organiser culturellement les apprentissages : il doit amener l'enfant à penser en réseaux « dans l'espace - livres » afin d'explorer les différents fonctionnements

narratifs, « dans l'espace - table » afin de développer les interactions lecture - écriture pour construire le sens et produire de écrits.

- celui de la psychologie cognitive, c'est à dire des représentations (entendues comme codages internes de représentations externes) et des processus qui interviennent sur les représentations pour les modifier.

C'est en lien avec les activités d'écriture que les conceptions précoces de l'écrit chez l'enfant sont décrites. Les travaux d'Emilia Ferreiro (1988), de Jaffré (1985) et de Fijalkow (1986, 1992) pour la langue française, ont permis de différencier les étapes qui correspondent à la mise en place du système orthographique chez l'enfant. Pour résumer, l'apparition des tout premiers tracés varie entre 10 mois et 2 ans. Ils sont moteurs et apparaissent avec la marche et avec la première trace signifiante : les fèces correspondant à la maîtrise sphinctérienne. À partir de ce moment, l'entourage donnant à cette activité une dimension relationnelle, l'enfant prend conscience de la trace symbolique. L'aspect représentatif de la trace écrite apparaît entre 2 et 3 ans. L'acte graphique devient intentionnel et à la fin de ce stade apparaissent des dessins plus ou moins reconnaissables dont les "bonhommes tétards" sont parmi les premiers. Entre 3 et 4 ans, c'est l'étape présyllabique iconique puis celle caractérisée par un simulacre d'écriture. L'enfant saisit la différence écriture - dessin et noircit ses pages de lignes irrégulières, boucles et autres zigzags en n'établissant aucune relation entre la longueur du message oral et celle de la chaîne écrite. Les conceptions de l'enfant évolueront vers un stade idéographique pour enfin vers 4/ 5 ans entrer dans l'étape syllabique : la trace produite est relative à la chaîne sonore, des pseudo-lettres apparaissent. L'enfant affine sa conception en faisant correspondre une trace graphique à chaque mot, puis à chaque syllabe, dans les étapes syllabico-alphabétique et enfin alphabétique.

Cependant, peu de travaux se sont intéressés à la manière dont le jeune enfant investissait l'écrit en production avant 5 ans, avant même qu'il ait suffisamment développé sa conscience phonétique pour commencer à acquérir le principe alphabétique.

Le travail présenté correspond à une étude qualitative de l'entrée précoce dans l'écrit et est issu d'une recherche- action menée à l'IUFM de Bretagne dans le département du Morbihan, département pilote pour la scolarisation précoce des enfants de deux ans (classes de TPS, Toute Petite Section de l'école maternelle, 2/3 ans). Son objet principal est l'étude des attitudes et pratiques spontanées des jeunes enfants en classe à partir d'un suivi longitudinal dans une classe de TPS.

I. Cadre de travail et méthode

Notre cadre de travail est au carrefour de plusieurs théories :

- celles issues des travaux relatifs à l'entrée précoce dans l'écrit comme on vient de le voir (Fijalkow, Ferreiro).

- la théorie de l'action conjointe en didactique (Sensevy, Mercier et al 2005, 2007, 2008), didactique entendue au sens large à savoir toute situation dont l'objet est l'enseignement / apprentissage d'un savoir.

La communication en milieu didactique est une spécification de la communication humaine. La théorie de l'action conjointe en didactique (TACD) considère la production des discours du professeur et des élèves comme la manifestation de transactions didactiques dont le savoir est l'objet transactionnel. Ces transactions permettent à la fois la reconnaissance mutuelle des interlocuteurs et la participation à un jeu conjoint, qui consiste à construire et changer le monde au travers de jeux d'apprentissage plus ou moins spécifiques.

- l'interactionnisme social, dans la mouvance des travaux de Vygotski (1934, 1966 édition française).

- les travaux sur la prosodie, dont les chercheurs ont montré qu'elle était porteuse de signification et ce bien avant les premières formes de langage articulé, et plus particulièrement ceux concernant la prosodie et le développement du langage de l'enfant (Halliday, Crystal, Konopczynski 2000, 2003), et ceux concernant la prosodie et l'intersubjectivité (Morel, Danon-Boileau 1998 et la 'Grammaire de l'intonation' : on envisage la manière dont le locuteur s'approprie le dire de l'interlocuteur, l'investit, le fait sien et y répond).

La prosodie

La prosodie se réfère à l'aspect suprasegmental du discours. Elle comprend 4 paramètres :

1) le signal, ou fréquence fondamentale (notée F_0), c'est-à-dire la mélodie de la voix. Selon Morel et Danon Boileau, le signal correspond à la façon dont celui, en tant qu'énonciateur, se représente la pensée de celui auquel il s'adresse.

2) l'intensité, forte versus faible, avec toute la variabilité des degrés intermédiaires. Elle marque la façon dont le locuteur entend gérer son tour de parole et agir sur l'interlocuteur.

3) la durée (durée segmentale et durée syllabique). Les variations de durée traduisent la façon dont la pensée de celui qui parle s'apprête à se dire.

4) la pause, qui permet au parleur d'homogénéiser son propos précédent et à l'écouteur de construire le sens de ce qu'il vent d'entendre.

Les paramètres temporels donnent rythme des échanges et/ou de la lecture et traduisent différents effets tels que le stress.

Méthode

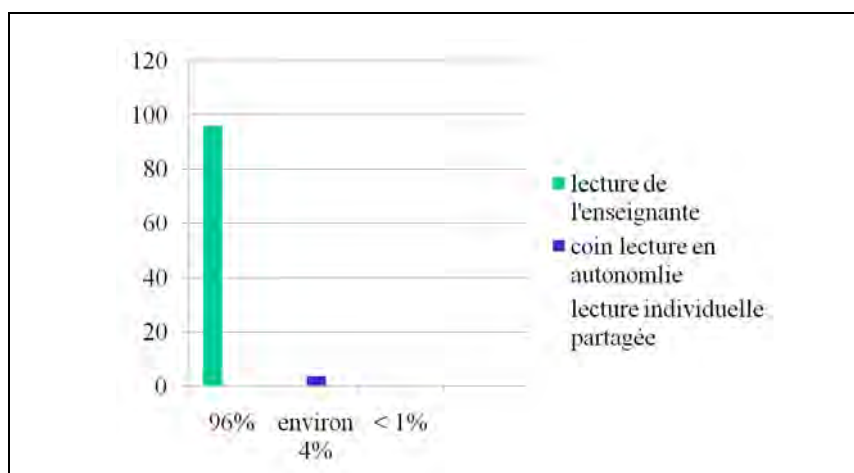

La classe a été filmée chaque mois en situation naturelle. L'enseignante a également tenu pendant deux semaines un cahier de bord où elle a relevé systématiquement le nombre, la durée et l'objet des pratiques de lecture.

Puis les films ont été visionnés et les enregistrements écoutés. La plupart ont fait l'objet d'une transcription écrite « acoustique ». Seuls certains scénarios ont été numérisés et analysés par le logiciel Praat, le traitement étant excessivement complexe et coûteux en temps.

II. Résultats

Les pratiques de classe

Une semaine d'observation en continu de pratiques en lecture d'une classe de Petite section donne des indications sur ce qui se passe hic et nunc, même si ces résultats ne sont qu'un exemple de pratiques : ils sont ponctuels et n'ont pas de valeur en soi ni vocation à la généralisation.

1) On constate que 96% des activités de lecture correspondent à la **lecture de l'enseignante**.

Cette lecture est essentiellement une **lecture offerte**, une lecture plaisir : les enseignements sont nombreux et implicites : acculturation, pratiques sociales de la lecture, sens de la lecture, sens du récit, manière de tenir l'objet livre pour réaliser l'activité...

Dans environ 80% de cette forme de lecture, l'enseignante **enseigne explicitement la compréhension**, sous forme de questions orales auxquelles les enfants doivent répondre en justifiant de leur choix. Si tel n'est pas le cas, c'est

l'enseignante elle-même qui justifie la réponse donnée en se référant aux éléments du texte lus qui permettent la réponse. Les compétences en compréhension travaillées concernent :

- la trame narrative : personnages, déroulement chronologique, déroulement causal, rappel de récit et reformulation ... (Bruner, Fayol, Fijalkow 1992, 1996, Brigaudiot 2000)

- le lexique : explication, synonymie, paraphrase, définition (Plane 2006)

Au plan prosodique: la prosodie participe au travail de compréhension du texte lu. On note nombre de phénomènes déjà décrits dans la littérature, et notamment :

- des **focus** sur les syllabes ou les mots sur lesquels l'enseignant veut faire porter l'attention (Fox 2001)

- le **rôle des pauses** dans la lecture (Candea 2000). La pause permet au parleur d'homogénéiser son propos précédent et de rhématiser ce qui va suivre. Elle permet à l'écouteur de construire le sens de ce qu'il vient d'entendre, de se le représenter.

- la prosodie est également le **vecteur des émotions** (Whitehead et al 2000), particulièrement dans le discours direct du récit lu.

- d'une manière générale, elle traduit permet **expressivité** et **dramatisation** pour améliorer la compréhension (Hudson et al 2005)

2) Les pratiques de lecture des enfants

Pratiques spontanées, elles constituent pour cette classe environ 4% des activités de lecture et se répartissent en 3 groupes :

- Pratiques en autonomie,

sans production textuelle orale de l'enfant. Ces temps de lecture ont généralement lieu dans le coin-bibliothèque de la classe, abondamment fourni, accueillant et bien décoré. L'enseignante expose les livres lus collectivement en classe, ceux dont on parle ou éventuellement ceux qu'elle aimerait faire découvrir , sur un support vertical prévu à cet effet. Les enfants s'installent sur les coussins à différents moment et feuilletent les livres, les « lisent », se racontent l'histoire déjà entendue... On sait que ces pratiques scolaires permettent de réaliser des apprentissages implicites (Gombert 2005, Fayol 2006, Goigoux 2006). Ce sont les plus fréquentes.

- o Pratiques en autonomie avec production textuelle orale

Elles ont très rares, nous n'en avons que deux occurrences. L'enfant prend un livre et le lit spontanément à haute voix.

- Lecture individuelle partagée enfant / enseignante.

C'est une pratique également peu fréquente en classe. L'enseignante et l'enfant construisent ensemble le récit, dans une relation duelle.

Ce sont ces deux pratiques auxquelles nous allons nous intéresser.

Les caractéristiques communes aux deux situations de lecture analysées

- Au plan de la méthodologie, elles ont été enregistrées en situation naturelle, puis numérisées et analysées avec Praat.

Un test de perception basé sur 4 critères : compréhension, objet, débit et comparaison a été ensuite réalisé sur des personnes n'ayant pas assisté à l'enregistrement.

- Ce sont des activités de production textuelle orale :

Produire un discours, c'est linéariser une représentation conceptuelle en une suite organisée. Cette planification aboutit à une mise en mots.

- Ce sont des activités tripolaires :

Dans la perspective de l'interactionnisme social : enfant - outil - action, « l'action est médiatisée par un objet spécifique, socialement élaboré, fruit d'expériences précédentes par lequel l'enfant va pouvoir faire ses expériences »

Le livre médiateur est le lieu de la transformation du comportement : explorer ses possibilités, les enrichir, les transformer, s'engager dans différents schèmes d'utilisation : l'enfant articule ses possibilités avec des situations d'action telle que la tâche à résoudre. Cette appropriation lui permet d'acquérir de nouveaux savoirs.

- Elles correspondent à un changement de mode communicationnel :

Dans un cas, l'enseignante propose la lecture de *Petit Ours Brun* (POB) : c'est un moment de partage, le texte est matériellement présent.

L'autre cas est la lecture « spontanée » de *Spot, le petit chien* (SPOT) : un enfant de CE1 prend le livre et demande au petit enfant « qu'est-ce que c'est ? », puis la maîtresse dit à son jeune élève : « lis le, toi ».

L'histoire existe par les mots de l'enfant, et l'on pourrait s'attendre à un récit narrativisé comme sont capables de la faire les enfants à partir de 3 ans.

• Analyse discursive des productions

Petit Ours Brun (POB) cf annexe 1

- Ancrage de la production : on peut reconstituer le texte complet lors du scénario de lecture partagée. La production est compréhensible par tous (cf test de perception annexe 3)
- Ancrage énonciatif (il/je) : récit + discours direct (en 76 c)
- Alternance des tours de parole : Quel est le point de vue adopté ? celui de la mère, de l'enfant ? de POB, du papa ? On est dans le mouvement du discours – récit, dans la co-construction.
- Ancrage temporel (moment de l'évènement par rapport au moment de l'énonciation.)

- Emploi des formes verbales : écrit oralisé dans le récit jeune enfant avec emploi du passé composé, à la fois temps de discours et également marque l'accompli par rapport au moment de l'énonciation. Le temps employé est donc bien adaptée au récit dialogué, (l'imparfait aurait été employé dans un récit).

Spot (cf annexe 2)

Spot est un « simulacre » de lecture, entendu comme production orale textuelle : l'enfant prend un livre et construit l'histoire à haute voix.

- ancrage de la production au plan de la réception : situation de production textuelle orale, pas de texte de base. La production n'est pas compréhensible par tous (cf test de perception, annexe 3).
- ancrage énonciatif : récit
- ancrage temporel : présent de narration : c'est un chien qui fait un câlin + passé composé (33Cd : il est parti)

(Le test de perception vise à recueillir l'appréciation de plusieurs écouteurs des deux situations de lecture mère-enfant. 4 critères sont évalués : la compréhension des productions, l'objet supposé, le débit et la longueur des productions.

Le test a été réalisé auprès de 6 adultes dans un contexte extra-familial. L'écoute des 2 extraits a été réalisée à partir des fichiers audio sous wave. Il a été précisé aux participants qu'ils allaient écouter deux extraits de production orale.)

- **Analyse instrumentale des paramètres prosodiques :**

La question se pose de savoir quelles sont les stratégies prosodiques de l'enfant en situation de lecture autonome ou partagée. Sont-elles identiques à celles de l'enseignante qui lit une histoire à la classe ou différentes ?

Les tableaux comparatifs ci-dessous présentent l'étude des 4 paramètres intonatifs.

1) **Fréquence fondamentale :**

POB	SPOT
<p>1/ La mélodie porte des effets de contraste qui correspondent à des non régularités par rapport à l'intonation de base :</p> <p>2/ les tours de parole 73, 75, 76, qui représentent 3 tours de parole sur 10 soit 30 % présentent une caractéristique particulière : la fréquence fondamentale est non modulée, l'intensité est élevée : or l'oreille interprète une modulation de la mélodie alors que la courbe est plate.</p> <p>→ Ces situations prosodiques recouvrent les situations où l'adulte pose à l'enfant des questions de compréhension.</p> <p>Contraste entre Fo plat = travail de compréhension en train de se faire</p> <p>Fo modulé = lecture expressive (allongement, focalisation)</p> <p>Centration sur l'activité de production.</p> <p>3) répétitions de patterns prosodiques :</p> <p>m 71 : oui</p> <p>c 71 : oui</p> <p>sous forme de répétition écholalique</p> <p>on remarque donc une centration sur l'activité de production : la répétition permet à l'enfant de marquer son retrait du dialogue en relançant la discussion.</p>	<p>1/ En interaction (début du scénario), on note une utilisation différenciée de la prosodie avec expression de focalisations (c 30), semblable à celles d'une lecture adulte.</p> <p>2/ En production de texte oral : tout au long de la production Fo très modulée avec nombre de focalisations.</p> <p>→ production vocale caractérisée par l+ Fo +. Celle ci signifie chez l'adulte l'opposition convergence / discordance (le locuteur entend conserver la parole et bannir toute velléité d'interruption de la part d'un écouteur dont il anticipe le désaccord ou l'ignorance)</p> <p>Ici, elle signifie la rupture, le repliement sur soi pour résoudre la tâche langagière et complexifier la représentation sous jacente.</p> <p>Il y a focalisation sur l'analyse de la tâche, centration sur l'objet d'apprentissage. (relève des métaprocessus).</p>

2) La durée

Durée moyenne des énoncés	POB	SPOT
m	141.41 cs	141.11 cs
c	119 cs	138.85 cs
Durée moyenne des syllabes		
m	28.7	25.91
c	32	37.2

La durée moyenne des énoncés est sensiblement identique dans les deux productions de l'adulte. Elle est plus longue chez l'enfant lors de la situation SPOT. La durée syllabique est sensiblement plus courte chez l'adulte lors de la situation Spot et plus longue chez l'enfant. Cependant, à l'audition, le débit paraît plus rapide dans la situation SPOT que dans POB.

3) Les pauses

	POB	SPOT
pauses de passation de parole	11 occurrences : 10 tours de parole (dont 2 allongements syllabiques et 2 pauses d'appel sans réponse)	5 occurrences (dont 3 allongements syllabiques)
<p>Ces pauses correspondent à la mise en place d'un espace intersubjectif marqué par la dévolution de la parole à l'autre. Elles varient en fonction de l'acte de langage produit : Allongement final = assertif, Pause : directif</p> <p>La centration est sur la production en tant qu'activité. (ce qui se fait en se disant).</p>		
pauses homogénéisation	POB	SPOT
Pauses unificatrices :	10 occurrences	1 occurrence (33c.m)<204>
Pauses de rupture	1 occurrence	aucune
<p>Les pauses unificatrices ont une fonction énonciative : elles unifient ce qui précède en une sorte de continuum thématique et rhématise ce qui va suivre.</p> <p>Les pauses de rupture marquent le changement radical de construction syntaxique ou d'orientation argumentative. Elles annulent la valeur de ce qui précède.</p> <p>Elles correspondent à une centration sur le produit de l'activité. (ce qui se dit).</p>		
Pauses non structurantes de l'énoncé oral	POB	SPOT
	aucune	Toutes en 33c (sauf cf 153)
<p>Ces pauses marquent le travail de formulation dans une perspective énonciative. L'utilisation en discours de cette stratégie suggère un changement de focalisation qui fait passer d'une centration sur l'activité de production à une centration sur la production en tant qu'objet (relève des métaprocessus : ce qui se pense, se construit sur ce qui se fait).</p>		

4) L'intensité (I)

POB

SPOT

Registre mère : médium

Registre très élevé I +++

Registre enfant : supérieur

mais peu de variations.

Valeur peu significative au plan de la production textuelle.

III. Analyse

En lecture partagée (POB), on note une centration sur l'activité de lecture et la formulation : pauses de passation de parole, pauses d'homogénéisation, F0 plat + intensité élevée.) Lorsque l'enfant construit le récit et exerce sa compréhension, les courbes de Fo sont plates tandis que l'intensité est dans une plage élevée. La compréhension du récit se produit ainsi à plusieurs voix.

Pendant le « simulacre de lecture » (SPOT), l'enfant élabore mentalement ce qu'il va dire en conscientisant les fonctions et la nature de l'écrit : présences de pauses non structurantes de l'énoncé oral, Fo élevée et I moyenne non modulée.

Quand la production textuelle est caractérisée par I forte, Fo modulée, il y a travail réflexif sur une représentation en train de se modifier.

Déjà, à deux ans et demi, les variations de durée, les pauses et les variations du fondamental permettent de caractériser les 3 niveaux de centration lors du travail de production : une centration sur le produit de l'activité (le texte), une centration sur la production et enfin une centration sur l'objet « production ». On est dans ce cas dans la construction d'un dispositif métalangagier.

L'analyse prosodique de deux productions textuelles orales issues d'une transposition exigeant un changement de mode communicationnel nous renseigne donc sur quelques stratégies de l'enfant qui commence à maîtriser le langage articulé pour entrer dans le monde de l'écrit. Loin de s'exclure, ces stratégies se complètent.

Les variations prosodiques montrent que l'activité de production verbale orale se différencie notamment en fonction de la nature de la tâche langagière que le jeune enfant montre qu'il veut accomplir. Autrement dit, la production verbale proprement dite met en œuvre une activité de catégorisation implicite de la situation de production, et comporte donc un niveau métadiscursif ou métacommunicationnel.

La comparaison des paramètres prosodiques des deux situations fait apparaître que la situation SPOT constitue, par ses caractéristiques intonatives et prosodiques, un simulacre de lecture. Nous voyons dans ce simulacre de lecture une stratégie d'auto-apprentissage analogue à celle que les enfants utilisent spontanément pour s'approprier la production d'écrit (simulacres d'écriture).

Dans la mesure où nous postulons que les paramètres prosodiques renseignent sur la construction de compétences lectorales, un parallèle peut être suggéré avec le langage égocentrique, entendu au sens de Vygotski : le langage est dès la naissance communication avec autrui, pour devenir un instrument de communication avec soi-même, dont la forme la plus aboutie est le langage intériorisé de l'adulte, et dont le langage égocentrique n'est qu'une étape intermédiaire : « la fonction du langage intérieur conduit inexorablement et systématiquement à ce que le langage égocentrique, qui au début ne se distingue du langage social que sous le rapport fonctionnel, peu à peu, à mesure que progresse la différenciation fonctionnelle, se modifie aussi dans sa structure, aboutissant à terme à l'élimination complète de la syntaxe du langage oral. [...] Il manifeste une tendance toujours plus grande au raccourci, à l'affaiblissement de l'articulation syntaxique, à la condensation.[...] Dans le langage intérieur, il n'est jamais besoin de prononcer intégralement les mots. Nous saisissons à l'intention même que nous en avons le mot que nous devons prononcer.(PL p 477 - 479) »

Le simulacre de lecture est un soliloque : il procède d'une autonomisation permettant que se construisent les capacités réflexives propres à la pensée consciente. Cette conscience métadiscursive impose à l'enfant une double tâche requérant d'une part l'analyse de la tâche à accomplir et d'autre part le contrôle cognitif de l'utilisation de cette connaissance, son résultat (la mise en mots). Se centrant sur la première tâche, ni la mise en mots ni la structure prosodique de l'énoncé ne sont préservées, au profit de la construction de la représentation de l'acte lexique.

Conclusion

En classe, la diversification des modalités de lecture est susceptible de favoriser tel ou tel comportement. Les jeunes enfants s'investissent dans différentes pratiques, et les liens noués avec le texte sont multiples. Si les plus fréquents sont les liens personnels avec le texte lu (les connexions entre leur vie et l'histoire racontée), les liens affectifs (les sentiments provoqués par l'histoire), les liens méta discursifs (cognitifs) sont à favoriser : il s'agit donc de stimuler en classe la plus grande diversité des pratiques et de solliciter notamment chez les tout petits les dispositifs de lecture en autonomie et de lecture interactive à deux. Car ce n'est pas parce qu'on ne la comprend pas que la parole du jeune enfant n'est pas porteuse de signification.

Life-long Learning and Literacy Development: what role does children's literature play?

Trish Brooking

University of Otago College of Education, New Zealand

New Zealand along with many other countries, aims to provide an education system which will meet the needs of future citizens. Today's children are tomorrow's leaders. A cliché admittedly, but nonetheless, a vibrant education is an essential early pathway for later success. Learning is not confined to the school years yet the concept of oft quoted life-long learning remains somewhat nebulous. Preparing children for a world where the pace of social and economic change is rapid, presents significant challenges for educators and requires a pedagogical shift in practice.

What will a life-long learner look like?

Literacy development is an essential tool for learner empowerment. Our abilities in literacy enable us to apply our learning and address the challenges of technological and social change. Future literacy requirements befitting a life-long learner, will include the following: the ability to be curious and reflective; creative; empathetic and confident; self-directed and ethical. Effective communication skills are the vehicle in which these attributes of life-long learning are developed. Creative, curious and critical thinkers will be in a position to respond to the exponential capacity of computing technology to double (currently) every two years. In contrast to the digital immigrant, Generation X, the digital native, demonstrates a high degree of technological flexibility. Flexible

New Zealand Response

In recognition of the personal and interpersonal qualities needed for future success, the New Zealand Ministry of Education issued its revised curriculum in 2007 with the primary aim of developing learners who realize their potential. The New Zealand curriculum places an emphasis on learners who will develop their potential to be confident, creative, connected, actively involved, and life-long learners. The document acknowledges a world of rapidly changing technologies where globalization and cultural

What can a literature based curriculum offer?

Literature plays a significant role in situating one's life in the broader social context. A literature based curriculum offers both challenge and enjoyment. Regular literature related discussion not only develops oral literacy but contributes to a classroom of thoughtful student discourse; such a classroom environment values student agency and makes connections with students' lives. Examination of multicultural and postcolonial literature invites exposure to a variety of viewpoints and challenge to one's own world view. As students engage with rich multicultural text they begin to develop appreciation both for their own culture and the cultures of other students. (Craft, Al-Hazza, Bucher, K. 2008). In its capacity to encourage readers to experiment with new types of text, literature relies on imaginative engagement on the part of students and astute text selection on the part of the teacher. Individuals who can continue to exercise their imagination are those who will be better prepared for future challenges. Teachers play a significant role in developing the motivation for life-long learning by providing a stimulating learning environment where children are encouraged to explore their creativity and develop responsibility.

Dispositions for learning and children's literature

As teachers mediate literature to children, the Key Competencies can be foregrounded in the learning process. Teachers capitalize on students' early literacy experiences of nursery rhymes and storytelling. They recognize the enjoyment children's literature imbues in discovering new worlds of literacy accomplishment. For example the picture books of well known British author Anthony Browne reveal rich verbal and visual interplay which assist children of all ages to discover new and challenging adventures in thinking. Rich text selection offers readers valuable learning experiences in critical literacy, empathy, and vocabulary development. Children's literature is a vehicle for engaging with new literacies as the reader/viewer is often required to examine different meanings of multi-layered narratives. A critical and problem solving approach to reading, enhances opportunities for developing into a confident learner, one who can own, express and critique opinions, and one who is well positioned for life-long learning. Furthermore, literature serves as a springboard for consolidating future reading habits and engaging with a variety of texts.

The opportunities teachers provide for learners to engage with digital media promote literacy engagement. Book club blogs and podcasting book reviews enhance

peer review and individual responsibility. Larson's study (2009) on empowering readers in on-line learning communities demonstrated how within the technology-rich environment students were invited to think more deeply about literature by relying on each other for 'guidance, support and construction of knowledge'. (p. 648). Promoting positive attitudes to reading enhances dispositions for learning. Research studies suggest significant correlation between attitude to reading and literacy achievement. The NZCER longitudinal study involving five hundred children *Competent Children, Competent Learners* provides a comprehensive picture of how children learn. One key finding concluded that *the enjoyment of reading - not just being able to read - is a really good indicator of life-long learning, over and above the usual suspects related to socio-economic well-being.* (Wylie, C. 2009, p.9). The National Education Monitoring Project (NEMP) provides subject rotational assessments using national samples of schools and students to show what Year 4 and Year 8 students know and can do. In support of a literature based curriculum, it is interesting to note that in 2004 the two favourite reading activities in school were silent reading and listening to the teacher reading. Year 4 students viewed reading as a technical task, whereas Year 8 students placed greater emphasis on enjoying reading and choosing the right book. Teacher selection or recommendation of, appropriate texts is central to the sustained integration of children's literature as a means of strengthening competency growth.

Further research studies yield relevant data. The PIRLS mean reading score for New Zealand students (532) was significantly higher than the international PIRLS scale mean (500). Students, who report reading for enjoyment and reading stories or novels every day, generally achieved higher reading scores. (www.educationcounts.govt.nz) In the Best Evidence Synthesis (BES) on effective pedagogy (2008) Sinnema and Aitken identified four mechanisms for effective teaching, all of which can be incorporated in a programme which foregrounds literature as a catalyst for complex literacy progression. The four mechanisms identified are: making connections to student lives; aligning experiences to important outcomes; building and sustaining a learning community; and designing experiences that interest students. What better place than the learning community which constitutes the classroom, to forge learning experiences -experiences which exercise students' imagination and empower them to become critical, creative and caring adults who will confidently engage with the Multiliteracies of the future. Juliet Twist urges teachers to help readers pay attention to detail in order to engage with big ideas. That microcosm of society, our classroom 'is one where students believe in the beauty of literature, believe in its potential to

illuminate their understanding of what goes on in the social sphere, and to change lives and even societies'. (2008, p. 32).

Literature and the Imagination

The imaginative power of story has always, and will continue to, colonise the 'country' of the mind. Albert Einstein stated *I am enough of an artist to draw freely upon my imagination. Imagination is more important than knowledge. Knowledge is limited. Imagination encircles the world.* This paper will refer to a selection of texts which illustrate how literature helps expand students' thinking and provides enjoyable interaction with text. The first two, published mid-way through the twentieth century, are imbued by their contemporary norms relating to family structure, gender and culture. In Russell Hoban's *The Mouse and His Child*, memory and desire underscore this narrative about a clockwork mouse and his child and their search, via many perilous encounters, for sanctuary in the beautiful dolls' house they had once known. The internal logic of the fantasy is convincingly established so that when the action transfers to the junkyard and the tramp moves into the frame once more, it is not just for the repair of the toy, but for its restoration of spirit. Language constructs meaning and assists the reader's imaginative response through use of repetition and the encoding of class and gender signifiers. The poetic and playful nature of the prose, coupled with the juxtaposition of sounds, lends chilling intensity to the narrative. The beauty of the snow and the sounds of Christmas bells are accompanied by the ominous cawing of crows. Such images probe and heighten awareness of constructions of beauty and squalor. The balance between dependence and self-reliance is explored through the mouse child's experiences and the motifs of fragmentation and reinvention which are developed. The law of motion as it pertains to the wind-ups is subject to adjustment with the circular, exchanged for the 'lurch' forward. The mouse child progresses backwards into the future, facing the past. Qualities of perseverance, kindness and self-awareness are encoded within the narrative discourse, all qualities needed by twenty-first century literate individuals.

Like Russell Hoban, the New Zealand writer Witi Ihimaera is a powerful story teller. Dorothy Butler, a recognized New Zealand writer and critic stresses the central role of storying....*we cannot make sense of our lives except by devising narratives to explain and construct, to deliberate on the past, consider the present and speculate on the future, and that our dreams and daydreams reflect, modify, reinforce and are part of this purpose. Storying is, indeed, a primary function of mind.* (1992, p.13).Witi Ihimaera

is a Maori New Zealand writer whose novella *The Halcyon Summer* is set against a background of political unrest over land issues. Three children are sent to stay with their grand-aunt who lives in a remote part of New Zealand – the year is 1950. The narrative is focalized through Tama so that his discovery of *this* history being *his* legacy and *this* place being *his* place positions the reader towards an awareness of the protagonist's inner conflict. (Ihimaera, 1994, p.120). The fabled kingfisher connotation of the title with the suggestion of calm weather during the bird's incubation mirrors the exhilarating summer before Tama moves beyond the edge of childhood. Tama's own horizons undergo subtle shifts in perspective including initiation into traditional cultural practices such as fishing without rods and sustainability of food source by returning the first catch. A story such as *The Halcyon Summer* with its bucolic overtones offers a layered and nuanced discourse which conveys the sense of exploration at its core. The nature of the search encompasses both challenge and lament.

Each of these texts can be utilized to probe thinking and do what Hipkins (2008) suggests when she poses the question *how do we help students transform what they can already do, so that a much wider and deeper repertoire of thinking competencies comes within their reach?* (p.36). Literature offers the opportunity for deep learning. Like readers themselves, reader interpretation is varied. Using a critical literacy approach enables readers to take an active involvement in text to allow for multiple interpretations. Researchers acknowledge that students' interpretations of text will be influenced by their cultural and social backgrounds, something a critical literacy approach endorses. (Au, K. 1998). Postmodern theory and cultural relativism rely on a diversity of response and interpretation. Guy Claxon's (2008) latest book with its advice to replace "is" statements with "could" statements is in alignment with literature's goal of helping students 'weave nets of deeper meaning as they make new connections between ideas or strengthen existing connections' and develop more complex ways of using language, symbols and texts. (Hipkins, 2008, p. 37)

Success in literacy is contingent upon knowing how texts work. The competencies of managing self and relating to others are enhanced when students are encouraged to develop questions thereby bringing an inquiring perspective to their reading, an ability to problematise, and a willingness to share personal responses and insights. Text related conversations alert readers to characters' perceived motivations, background experiences and relationships. These conversations can sometimes disrupt our own ways of thinking and encourage us to examine our beliefs and values. Literature challenges us to reflect on why we think and respond the way we do. Dame Marie Clay

has stressed the importance of focused conversations which support students in developing autonomy in their literacy progress. She observed *if we use something like the conversation model in our teaching and think about how to link into the listener's knowledge every time we hold a conversation, we might be more helpful to children, and from our model they might learn how to make connections for themselves. Encouraging young people to talk more about their understandings is one way of helping them make connections.* (Clay, 1998, p.32).

Three recent New Zealand publications promote lively conversations, and for many readers they have prompted explicit engagement with the competency Participating and Contributing. ***Sting*** by Raymond Huber is an animal fantasy written from the point of view of a young honey bee named Ziggy. His mission is to discover how other bees live and to unravel his identity. Although a fantasy adventure, like all notable fantasy it succeeds in weaving reality through the text. Nonetheless the narrative imparts significant bee knowledge (without being didactic) which reveals a complex GPS navigational system and a language of symbols. The honey provides insights into their flight patterns producing a unique geochemical footprint of the area it was produced. Bee facts along with a spelling bee are situated at the end of the narrative but still inhabiting it under the guise of Dr Sophie Domisse's Guide to Bees. The writing style uses humour to illuminate tensions and create ways of exposing conflict within safe perimeters. Manipulation of language through word play and puns intensifies the verbal humour. The incongruity of a talking bee creates a range of comic effects. Ziggy, a verbal as well as a physical acrobat, wants to exert some independence and control over his life. In constructing a first person narrative, Huber directs the discourse towards a cautionary view of adults, and empathy with Ziggy. In addition to its robust yet fun-filled narrative structure, this text lends itself to conversations related to environmental awareness and the decline of bees as the planet's ultimate pollinators. Further research can inspire active community engagement with projects such as tree and flower planting. Local community resources form an invaluable asset in literacy exploration as each school develops its own unique ways of involving members of the local community in children's learning. Maintaining a productive, shared relationship with families helps to cement reading interest and literacy progression.

Space Gum by Tania Roxborough is a contemporary adventure mystery narrative punctuated with nuanced humour ranging from melodrama to pithy interior monologue. Protagonist Carl lives with his mum (counselor), dad (science teacher) and big sister.

The fast-paced narrative moves from an ex-NASA scientist giving Carl a mystery gift to issues surrounding corporate power, commercial sensitivities and environmental concerns. The plot grows intrigue in a skillfully crafted manner. Written in the present tense, it conveys immediacy and uses complex plot devices to foreshadow danger. Space, with its associated themes of exploration, mystery and pushing the limits of human endeavour, works as a metaphor for Carl's personal quest for understanding, challenge and adventure. He is adept at pushing boundaries, and his family may sometimes be cast in *his* production of events as alien life forms. But he is enterprising and intuitive, all qualities which stand him in good stead for dealing with the range of situations he will encounter. As a text it offers potential for engaging children's interest and sharpening their ability to articulate their ideas about thematic content.

Another text which entices readers to think in more complex ways is *Recycled* by Sandy McKay. The first person narration propels eco-warrior Colin's mantra 'reduce, re-use, re-cycle' into the reader's consciousness. Colin is committed and persuasive and these character attributes provide a high spirited and playfully constructed narrative which succeeds in exploring the dynamic of family relationships in a compelling way. As the Key Competencies are intended to have personal relevance by being situated in authentic contexts, a text such as *Recycled* integrates learning with its factual information 'clip-on' at the beginning of each chapter. The explicit positioning of facts and the beguiling elements of story combine to heighten emotionally engaged learning as they discover new doorways to literacy.

Educator David Sobel (2008) argues that linking curriculum with an engagement in the real world not only provides students with thinking skills, but also helps them grow into responsible citizens and stewards of the earth. *Recycled* with its recipes for construction of a worm farm and how to make recycled paper, and a host of other stories play their part in motivating students' awareness of the environment. Local schools have developed school gardens and planted native trees. One student from Otago Girls High School noted *Young people are so important in environmental issues because they've got so much creativity. And they take action, whereas adults just talk about it.*

Exposure to literature builds agency and encourages students to voice and justify their opinions. *Effective Literacy Practice* (2003) advises that in order to foster independent and recreational reading and writing, teachers need to offer plenty of variety and guide students towards selecting wisely, with picture books at all levels being included. Picture books contain their own set of conceptual challenges in written

and visual communication and are ideal sites for sharpening perceptions of socio-political structures. Debate on what constitutes authentic representation of culture provides opportunities for research and increased awareness of author / illustrator bias. *You and Me: Our Place* by Leonie Norrington and Dee Huxley depicts Aboriginal cultural practice in terms of ecological knowledge. All the marine creatures mentioned in the book are used as food sources by indigenous peoples. The pastel and coloured pencil medium conveys energy. Detail related to traditional cultural fishing practices (spear, netting) extends the written text and creates a world in which the old and new cultures co-exist and where the children move seamlessly between the two. As Sipe (1998, p.107) has pointed out 'Picture books allow children to have multiple experiences as they engage in creating new meanings and constructing new worlds.'

Offering a rich site for experimentation in its representation of pictorial, cultural and linguistic codes, the picture book continues to re-define itself in relation to its audience. Re-workings of fairytale and elements of intertextuality reside in *Goldilocks* by David Jones, *The Three Fishing Brothers* by Ben Galbraith, and *The Little Kowhai Tree* by Witi Ihimaera. Each of these texts challenges the reader through playful transaction between text and image. Colour symbolism, graphic style of illustration and visual metaphors all contribute to dialogue which privileges imagination and raises questions about the nature of the world we live in. Implicit in both texts by Galbraith and Ihimaera are ecological considerations, yet story quality and the artistic aesthetic are never compromised. Galbraith's collage artwork and die-cut, peep-through portholes open the way for analysis of the illustrative 'grammar' (colour, line, texture, balance, medium/mixed media.....) and its interplay with the verbal code.

This duality of the picture book, with its verbal and visual representations, coupled with the use of ironic tone and ruptured narrative, imply a reader who is visually literate and willing to take an active role in constructing meaning. Margaret Mahy, winner of the Hans Christian Andersen Award in 2006 writes in a highly visual way, with her picture book stories featuring larger than life characters and great dramatic potential. *The Great White Man Eating Shark* is a variant on the boy who cried wolf. Norvin is like an archetypal mythical trickster, intent on keeping the tasty Caramel Cove to himself. He succeeds in upsetting the established order of humans and animals – for a time. Like a child to a lollypop, the 'real' shark is attracted to wannabe shark Norvin. Mahy's wry humour and whimsical extravagance signal her mastery of a complex medium. In her words *I think that a story travels along an arc, in that it begins as a private speculation in the writer's head; it goes out into the world and gets published and it becomes a*

public thing and somewhere along the line the reader picks up the book and takes the story into their head; and so it goes from one particular sort of privacy into another. The story the reader reads is probably never quite the story the writer felt they were writing, because the reader will bring all sorts of judgments and experiences which the writer can't anticipate. (Mahy, M. 2006).

This paper has argued that children's literature offers a rich site for discovering worlds of literacy. Literacy as social practice, situated in social contexts is a definition shared by contemporary researchers in the field of literacy (Luke 1993, Gee 1990). As children's books reflect the culture and time of their production, they offer wide scope for exploration and growth in the competencies required for the twenty-first century. Multi-layered meanings are constructed by readers in distinctive ways. Interrogation of text enhances analytical capability and challenges thinking practices. Empathy and an ability to relate to others and confidence in the way we express ourselves, will help in our efforts to participate and contribute to society. Responding to the challenges of the future will require individuals who can think with imagination and purpose. In opening doors to all the learning areas, the key competencies lay the foundation for discovering worlds of literacy. As children's literature can be utilized throughout the curriculum, it can serve as a lively vehicle for competency enrichment, prepare children for the variety of texts they will encounter in the future, and pave the way for mature students to display motivation for life-long learning. Integration of children's literature within the classroom programme can offer explicit alignment with the future focused dispositions for learning reflected in the essential learning competencies. The challenge for educators is to make children's literature a core pedagogical component of their literacy toolbox.

Discovering how to be critical readers in varied content subjects

Elaine M. Bukowiecki

Bridgewater State College, Massachusetts USA

In today's world, people of all ages are confronted with vast amounts of information, both in print and electronic formats, they need to read and understand. Thus, it is most important for educators of all content subjects to teach their students how to critically analyze, evaluate, and discuss the varied texts they are reading in order to "disrupt the commonplace by examining the written source from multiple perspectives" (McLaughlin & DeVogd, 2004, p. 14). In this way, the reader will move beyond the text's message to "question, examine, and dispute power relations that may exist between readers and authors" (McLaughlin & DeVogd, p. 14).

I will now describe the content of a graduate reading course in which 30 teachers and school administrators discovered how to become critical readers themselves and, in turn, were taught the skills to impart critical literacy practices to the students with whom they work. These novice and experienced educators worked in a preschool, two elementary schools, and in a combined middle/secondary school. Many of the teachers taught all subjects in self-contained classrooms, while others instructed their students in specific content subjects – mathematics, science, social studies, foreign languages, and the creative arts.

The Setting for This Graduate Course

This 3-credit graduate reading course was part of a 30-credit Master's Degree in Education Program that was offered through a well established and large state college, located in the northeastern United States. All of courses in this Master's Degree Program were taught at one of the campuses of a private, international school, situated in an expansive capital city of a Latin American country. The school consisted of three separate campuses and four schools: Campus 1, a preschool (infants to age four); Campus 2, an elementary school (kindergarten-grade 5); and Campus 3, an elementary school (kindergarten-grade 5) and a middle-secondary school (grades 6-12).

Many of the students who attended this international school were from upper socioeconomic class families. These students' families paid a high annual tuition for their children to attend this non-residential school. Other students were from lower socioeconomic class homes and attended this school on full scholarships. A third group of children who attended this school were ambassadors' children and

represented various countries in the world. These students' families also paid an annual tuition for their children to attend this school.

The educators who worked at this international school were as diverse as the students they taught. Some were natives of this Latin American country, while others were originally from the United States, South America, Canada, and the Caribbean. Each educator brought his/her own teaching style, culture, and language to daily interactions with his/her students and to his/her interplay with each other and me, the instructor of this graduate reading course. It was this diverse graduate student composition that caused our class to be most interesting and enjoyable.

While the educators at this international school had to follow the educational standards of this Latin American country, they could create their own curriculum and choose their own texts for their students to use. Therefore, these educators were very enthusiastic to learn new and innovative critical reading and content-area literacy strategies they could incorporate into their daily instruction. Since three languages were spoken at this school (Spanish, French, and English), quite often the teachers' lessons were tri-lingual. It was most interesting to watch these educators, both in our graduate class and in their own teaching assignments, converse very easily in these three languages.

This Graduate Reading Course

This graduate reading course entitled "A Critical View of Reading Across the Content Areas" took place for nine days, with a five-hour class each evening and an eight-hour session each Saturday and Sunday for two weekends. The course objectives involved the educators practicing how to critically read, analyze, and evaluate different text genres; learning various strategies for teaching literacy skills in all content subjects; and applying the critical reading and literacy skills they were learning and practicing in class to their own work in the schools. Each class was quite interactive as the educators participated in, first-hand, the critical reading and content-area literacy activities they would be eventually teaching to the students in their own classrooms and schools. The educators concluded each class by writing an electronic journal reflection regarding the new learning they acquired during the particular class and by orally sharing these journal entries with each other. The final, culminating project for this course was an integrated thematic unit, in which the educators developed a series of connected lessons that reflected a particular content subject and a certain grade level. At our last class, these educators demonstrated their students' learning during the thematic lessons as they shared actual examples of the students' work as well as presented highlights of the units by means of PowerPoint presentations.

Defining Critical Literacy

The educators in this graduate course and I began our work together by discussing varied definitions of critical literacy. Each graduate student thought about this question: “What is critical literacy, and how can it be included in content area literacy teaching?” After individually thinking about the answer to this question for a few minutes, pairs of educators shared their single thoughts with each other and then their paired discussion with the whole class. Next, we talked about what various literacy experts have written about critical literacy. We discovered that “becoming critically literate means developing a sense that literacy is for taking social action, and awareness of how people use literacy for their own ends” (Dozier, Johnston, & Rogers, 2006, p. 18). We learned that readers should not accept the printed word without questioning the author’s purpose for writing the text, the particular perspective the author is representing, and any other voices or perspectives that are not expressed in the text. The reader becomes a “text critic” and views the text “as a tool of institutional shaping of discourses and social practices” (Freebody & Luke, 1990 as cited in Stevens & Bean, 2007). Therefore, in order to teach their students how to become critical readers, “teachers must become critically literate themselves, value social justice, and have a sense of the cultural contexts in which they work” (Dozier, Johnston, & Rogers, p. 18). When both teachers and students engage in critically examining and discussing different texts, they begin to ask questions about language and power, about people and lifestyles, about morality and ethics, and about the advantaged and disadvantaged (McLaughlin & DeVogd, 2004, p. 16).

Critical Literacy Practices

Besides discussing expert definitions regarding critical literacy, the educators in this course also read and talked about the text, *Critical Literacy: Enhancing Students’ Comprehension of Texts* (McLaughlin & DeVogd, 2004), as well as participated in a critical literacy practice during each class session. The educators interacted with fiction, traditional literature (fairy tales), newspaper editorials, magazines, and short stories. They responded to this literature orally through discussions and in writing through co-authored texts. They worked with the whole class together, individually, with partners, and in small groups. Through participation in these class activities, each educator gradually viewed him/herself as a critical reader and began to see that a reader of any age should not accept a text in the manner which it is written but should question the action/information in the text as well as the author’s purpose, point of view, and language. The educators appeared to enjoy taking part in these critical literacy practices and looked forward to implementing grade-level appropriate

versions of these activities in their own work settings. (Table 1 includes four examples of critical literacy activities in which these educators participated during class sessions.)

Table 1
Examples of Critical Literacy Practices

Problem Posing (McLaughlin & DeVogd, 2004): The course instructor read a fiction picture book to the class. In small groups, the educators discussed this book using these questions. Who is in the text situation? Who is missing? Whose voices are represented? Who is the hero of the book? Whose perspective does the author favor? Whose voices are marginalized or discounted? What are the intentions of the author? What does the author want the reader to think? What would an alternative text say? How can the reader use the text information to promote equity?

Switching (McLaughlin & DeVogd, 2004): The educators worked in small groups. Each group chose a different fairy tale to read and discuss. Next, each group rewrote the fairy tale by using one or more of the following “switches” or changes to the original text: Gender, theme, setting, body-style, clothing, emotion, ethnicity/race, language, relationship/organization. Then the group discussed both the revised and original texts by means of these questions. How did the text change with the switch? Why did the author of the original fairy tale choose not to report certain information? What did the author of the original fairy tale want us to believe? What can we do to promote a just understanding of this topic? Finally, each group presented their revised version of the fairy tale to the whole class.

Books That Disrupt the Common Place and Provide Multiple Points of View (McLaughlin & DeVogd, 2004): The educators worked in small groups. Each group read and discussed a book that “disrupts the commonplace” and provides multiple points of view, using the following questions. How does the book disrupt the commonplace? How many points of view are represented in the book? How are these points of view represented? What is the theme presented in this book? How is this theme presented? What must the reader do in order to understand the book? Are there any points of view eliminated from this book? Then each group shared their book and discussion with the whole class. Sample books that disrupt the commonplace and provide multiple points of view are: *Click, Clack, Moo – Cows That Type* (Cronin, 2000); *Black and White* (Macaulay, 1990); *The Stinky Cheese Man and Other Fairly Stupid Tales* (Sieczka & Smith, 1992).

Juxtapositioning (McLaughlin & DeVogd, 2004): Each educator worked with one other educator. Each pair was given two editorials from *USA Today*, which were written about the same topic but reflected two different points of view. After each educator read his/her editorial, the partners analyzed the editorials, pointing out any author bias, and how each author represented his/her point of view. Each pair of students then shared their editorials and discussion with the whole class.

Relevant literacy practices for content area teaching and learning

Along with learning about, practicing, and subsequently implementing various critical literacy activities, the educators in this graduate course also had the opportunity to be engaged with different literacy strategies they could ultimately employ in all content subjects in their own classrooms and schools. Thus, each of our course sessions involved instruction and learning regarding both critical and content-area literacy practices. The educators soon discovered that “providing students with

multiple opportunities to construct meaning in [content subjects] enhances their content knowledge and promotes a deeper conceptual understanding of it” (Stephens & Brown, 2005, p. 2). Many of these content-area practices were found in one of our course texts, *A Handbook of Content Literacy Strategies* by Elaine Stephens and Jean Brown, while others were from varied professional sources introduced by me, the course instructor. Since many of these literacy strategies were new to these course participants, these teachers and administrators were eager to incorporate these literacy activities into their own daily content-subject lessons.

The first course activity regarding content-area literacy instruction involved the examination of the structures and features of nonfiction texts. Each educator brought to class either a content-area textbook or a nonfiction book used in his/her own teaching. They examined these texts for features to determine accuracy such as the dust jacket, copyright date, and author’s credentials; organization structures (enumerative, sequential, chronological, compare/contrast, cause/effect, question/answer, narrative); writing style including clarity, coherence, organization, language, voice, and tone; access features such as table of contents, headings/subheadings, glossaries, and indexes; and visual information (diagrams, graphs, tables, maps, for example) (Kristo & Bamford, 2004, pp.54-55). The educators soon discovered a variety of text genres can form the basis for content-area teaching and learning. These text genres include, but are not limited to, concept books, photographic essays, life cycle books, biographies, how-to books, survey books, journals/diaries, reference books, and informational picture books (Kristo & Bamford, pp. 58-59). Once this examination and discussion of various content-area texts were complete, the course participants were ready to learn about various literacy strategies regarding prior knowledge activation, vocabulary instruction, comprehension, and discussion.

Using grade-level appropriate textbooks and fiction/nonfiction texts from their own classrooms, these educators practiced first-hand various literacy strategies to include in content-area instruction. First, these educators discovered the value of activating students’ prior knowledge and using their prior experiences with different topics, concepts, and text genres as aids to understanding the new texts they are reading. Second, since the vocabulary found in content textbooks and nonfiction texts can be difficult, dense, and unfamiliar to many students, various vocabulary instructional activities were modeled, presented, and practiced by the graduate students in this course. Third, these educators were introduced to varied graphic organizers, self-questioning techniques, visualization strategies, and discussion formats in order to enhance text meaning and insure understanding of the texts their students are reading and the topics their students are studying. After actively

learning about and participating in these different literacy techniques that could be easily incorporated into all content subjects, these educators quickly discovered that “teachers who make content literacy a priority understand how students learn...[and] help students learn content while developing the literacy and thinking skills necessary to become independent, lifelong learners” (Stephens & Brown, 2005, p. 2). (Examples of varied prior knowledge, vocabulary, comprehension, and discussion strategies presented and practiced in class are found in Table 2.)

Table 2

Examples of Prior Knowledge, Vocabulary, Comprehension, and Discussion Techniques

Selected Prior Knowledge Techniques:

- KWL Strategy (Ogle, 1986): Students brainstorm information on a three-columned chart regarding what they know and what they want to learn about a particular topic. After studying/reading about the topic, the students add information to the third column on the chart about what they learned about the topic.

What I Know	What I Want to Find Out	What I Learned

- Semantic Mapping (Heimlich & Pittleman, 1986): Students complete a chart before and after reading/studying a topic, with a main concept in the center of the chart and information categories regarding the topic in various sections of the chart.

<u>Information Category</u>	<u>Information Category</u>
_____	_____
_____	_____
<u>Main Topic</u>	
<u>Information Category</u>	<u>Information Category</u>
_____	_____

- Anticipation/Reaction Guide (Tierney, Readence, & Dishner, 1995): The teacher writes five/six statements regarding a topic the students will be studying. The students read and respond to each statement before/after reading.

<u>Before Reading</u>	<u>After Reading</u>
_____	_____
_____	_____
_____	_____
_____	_____
1. Statement	
2. Statement	
3. Statement	
4. Statement	

Write “T” for true and “F” for false.

Table 2 (Continued)

Examples of Prior Knowledge, Vocabulary, Comprehension, and Discussion Techniques

Selected Vocabulary Techniques:

- Concept of Definition Map (McLaughlin & Allen, 2002): Students will complete a chart before, during, or after reading, defining and stating examples of a particular concept.

	<u>What is it?</u>	
<u>A Comparison</u>	_____	<u>What is it like?</u>
_____		_____
_____		_____
 <u>Concept</u> _____		
 <u>What are some examples?</u> _____		

- Sensory Language Chart (Allen, 1999): After reading a text, students will find phrases, word, and/or sentences that evoke each of the five senses.

<u>Sight:</u>	_____
<u>Sound:</u>	_____
<u>Smell:</u>	_____
<u>Taste:</u>	_____
<u>Touch:</u>	_____

- List-Group-Label (Maring, Furman, & Blum-Anderson, 1985): Students will brainstorm a list of words associated with a particular topic. Students will put these words into related categories and label the categories.

Brainstormed List of Words:

<u>Category One</u>	<u>Category Two</u>	<u>Category Three</u>
_____	_____	_____
_____	_____	_____
_____	_____	_____

Selected Reading Comprehension Strategies:

- Story Maps: During and/or after the reading of a narrative text, students add information from the text to this story grammar map. Students could create a predictive story map before reading and compare this to the actual text after reading. Categories for this story map are: Setting, Characters, Problem, Goal, Plot, Resolution.
- Story Frames: During and/or after reading, students will create a chart with relevant information from the text. Students use this information from the chart to summarize the text. Story frames can be created for both fiction and nonfiction texts.

Selected Reading Comprehension Strategies (Continued):

- Story Frame for Fiction:

Somebody	Wanted	But	So

- Story Frame for Nonfiction:

Something	Happened	So	Then

- Self-Questioning (Harvey & Goudvis, 2000): Before reading fiction or nonfiction texts, students look at the text cover/title and record any questions they may have. While reading, students use a highlighter or Post-It notes to mark parts of the text where their questions occurred. The students then can record their questions and possible answers.

Table 2 (Continued)

Examples of Prior Knowledge, Vocabulary, Comprehension, and Discussion Techniques

- Visualization Techniques:
 - 4 Drawing Connections (McLaughlin & Allen, 2002): Students draw and write about a connection they had while reading a text.
 - 4 Open-Mind Portraits (Tompkins, 2001): Students create a portrait of a character from a text or a famous person from a biography. The students will write key information from the text about the character/famous person.
 - 4 Sketch-to-Stretch (Short, Harste, & Burke, 1996): After reading or listening to a text, students draw what the text means to them. The students share their drawings in small groups.
- Discussion Techniques:
 - 4 Content Circles: In small groups, students discuss the nonfiction text they have read. Students can write about this text first and share this writing in the Content Circle.
 - 4 Discussion Continuum (Stephen & Brown, 1994 as cited in Stephens & Brown, 2005): This technique provides a structured format for a whole-class discussion. A controversial topic is chosen, and the students place their initials somewhere along the continuum to represent their opinions of this topic. This continuum is then used to guide the class discussion.
 - 4 Save the Last Word for Me

Study Skills Strategies:

After learning about, taking part in, and discussing different prior knowledge, vocabulary, comprehension, and discussion techniques, the educators in this course and I turned our focus on selected study skills strategies. While study skills are associated more with middle- and secondary-school learners, varied skills for garnering information from a text are also important for primary- and intermediate-grade students to know as well since “for years..., students...have been asked to pick out the most important information..., to highlight essential ideas, to isolate supporting details, and to read for specific information” (Harvey & Goudvis, 2007, p. 155). As a graduate class, we brainstormed a list of relevant studying techniques which included note-taking, skimming/scanning, text highlighting, and outlining. The middle-school and secondary-school teachers added test-taking strategies to the list as cumulative tests at the conclusion of particular units of study were included in their content curricula. We also discussed individual text reading and the value of coding texts in order to self-monitor comprehension (Harvey, 1998, p. 73). Harvey suggests the following codes: “* [asterisk] for interesting, BK for background knowledge, ? for a question, C for confused, I for important, L for learning something new, W for wondering something, and S for surprising information” (pp. 73-74). I emphasized that while different study skills are used independently by intermediate-grade to secondary students, children in the primary grades can engage in many of these same study skills by means of teacher-facilitated, whole-class activities, often with enlarged texts (big books). The teachers in this graduate course and I

concluded our focus on study skills with a small-group, grade level activity, in which the educators planned possible study skills strategies they could employ with their own students.

Post-Reading Activities

“Extending [content-area] reading through writing, art, drama, an(empp, an(empp, amakt,)-6(.0012

What the students learned from this graduate reading course

Each of the 30 educators enrolled in this graduate reading course had the opportunity through course activities and class sessions to learn first-hand about the importance of including literacy skills in different content-area instruction. Likewise, for subsequent course assignments, these teachers, administrators, and school specialists were able to create classroom/school lessons which integrated literacy strategies into the varied content subjects they teach and/or supervise/support. For the preschool and elementary school educators involved in this course, this inclusion of literacy skills into content teaching and learning was rather automatic and natural as they were accustomed to teaching all content subjects during one school day. However, for the middle- and secondary-school educators, especially those who teach mathematics, history, music, economics, French, and psychology, the inclusion of literacy tasks into a specific content area was something they never actually thought about doing before taking this course. Here are examples of lessons three middle-school/secondary-school educators planned and taught to their students after participating in similar course activities. First, a tenth-grade mathematics instructor had his students write/solve their own math problems as well create individual concept maps in order to understand and learn the Pythagorean Theorem. Second, the middle/secondary school principal went into a world history class in his school and taught the students how to complete a word bank and make different connections (Harvey & Goudvis, 2000, 2007) in order to better comprehend the cultural contributions of the ancient Greeks. Finally, a middle/secondary school French teacher employed the brainstorming technique (Brown, Phillips, & Stephens, 1993) and the K-W-L Plus strategy (Carr & Ogle, 1997) as he activated his students' prior knowledge regarding different forms of government practiced in France throughout history. Each of these educators as well as the primary- and elementary-grade teachers now agreed with Stephens and Brown (2005) that listening, speaking, and viewing contribute significantly to learning subject matter" (p. 4). (Table 4 depicts other examples of literacy activities being incorporated into content subject instruction.)

Table 4**Selected Literacy Skills Integrated into Content-Area Instruction**

Grade	Content Area	Topic	Literacy Activity
Second Grade	Music	Music Composition	Prior Knowledge Activation: KWL Chart, Quick Write
Kindergarten	Science	Dinosaurs	Oral and Written Explanations of Different Dinosaur Eras
Tenth Grade	Mathematics	Parabolas	Writing and Solving Own Parabola Problems
Sixth Grade	Science	Global Warming	Prior Knowledge Activation: Anticipation/Reaction Guide
Eighth Grade	Spanish	Immigration	Question of the Day; Paired Guided Reading; Writing letters to book characters
High School	Economics	Principles of Marketing	Concept Map; Venn Diagram; Analogies
Third Grade	Language Arts	Reciprocity	Concept of Definition Map; Readers Theatre; Comparing Two Stories
Seventh Grade	Mathematics	Algebra	KWL Chart; Concept Circle

In addition to discovering the educational value of incorporating literacy practices into different content subjects, these 30 educators learned how to be critical readers of varied texts and to teach their students how to critically read and question texts and authors. These educators quickly realized “part of critical literacy requires stepping outside one’s self and the social and linguistic structures in which one is immersed...[in order to] view their current...views of learners, teaching, and parent involvement as temporary” (Dozier, Johnston, & Rogers, 2006, p. 18). Since these teachers, administrators, and specialists enrolled in this course spoke a variety of languages and had differing cultural backgrounds, our class discussions were rich with diverse thoughts and points of view. Throughout our nine-day course, the educators’ ideas of reading, texts, and literacy changed as they gradually discovered the true meaning of the text is not found in the words of the author alone but rather includes an interaction between the reader, the text, and the author. At the conclusion of each of our nine class sessions, each educator wrote an electronic journal response regarding the new learning their acquired from that class. As these educators became more critical readers themselves, they truly saw the value of teaching their students to be critical readers as well. Thus, these educators’ growth as critical readers was clearly reflected in their daily journal entries. These educators now had a redefined knowledge of what teaching, learning, and literacy are all about. (Table 5 illustrates these educators changing views of literacy and learning throughout this nine-day course.)

Table 5

Representative Educators' Journal Responses From Our First and Last Course Sessions

First Journal Entry	Last Journal Entry
"From our introductory opening discussion, I learned it is important for all of us as readers to consider all points of view....Behind all reading is background knowledge. A large part of our mission from now on will be to guide...the student for the reading."	"At the beginning of the course, it was really hard for me to understand the point of view of the author. But in the last strategy we did today, I found out it was easier for me. This course made me think beyond."
"The information I learned about in today's class is very interesting and useful for my teaching. This first class gave me a new perspective about the way to teach reading comprehension in my French class."	"As an administrator it is great to hear the excitement for the staff, anxious to transition some of our new materials into their classrooms. Our group has already met and started putting together critical strategies...for a 10 th grade math class."
"To enforce critical reading, I believe it is important to educate the reader into reading between the lines and really get a grasp of where the author is coming from, sort of a brief history lesson."	"I feel like in this course I learned a lot of helpful information. I will definitely be taking with me many useful strategies to help my students look at a text from a more critical perspective."

Final thoughts

Taking part in this graduate reading course was a wonderful learning experience for me and for the 30 educators who participated in this course. It was exciting for me to watch the instructional skills and pedagogical knowledge of these course participants truly be transformed as they planned and integrated various literacy practices into the different content subjects they teach. Additionally, these educators appeared to discover the value of critical reading and thus invited their students to have insightful interactions with the texts they were reading and discussing. Each educator appeared to change into a more thoughtful reader, thinker, and teacher. The class activities and discussions we participated in brought us all to a new level of literacy learning and teaching. As the course instructor, I couldn't ask for more!

Viewing literacy through a 3-D lens: A ‘four resources’ model for multi-dimensional and multi-contextual readers of the 21st century

Terry Campbell

Michelann Parr

Nipissing University, North Bay, Canada

Freebody & Luke’s (1990) four resources model identifies four key abilities exemplified by a fully literate citizen: competence in coding and decoding, semantics or meaning-making, pragmatics or everyday literacy, and finally, competence in criticism. This paper builds upon this model as represented by the corresponding “four roles of the reader” and redesigns it in ways that fit multi-dimensional literate persons, including those who are in the process of becoming literate. This is done in the context of a multi-dimensional, multi-contextual ‘world’ conception of literacy whereby it is not enough to possess the aptitudes of coding, decoding, meaning-making, concept-building, and criticism, but we must also consider what it is that we do in terms of our own worlds and those of others. At the core of literacy, in our conceptualization, is the ability to re-vision, transform, design, and build your own world and that of others.

The background setting for this revisionary undertaking is the ever-changing landscape of how we conceptualize literacy. It is no longer sufficient to define literacy in two-dimensional terms, as in the reception and expression of information through reading and writing. When we consider what counts as being fully literate in the 21st century, it clearly amounts to more than being able to read and write individual words on a page. Literacy, for today’s generation of literacy learners includes the ability to make meaning from, and communicate through, a wide variety of texts from the experiential to the printed to the digital. “Literacy is about reading, making sense of, and transforming events, art, expression, life, essentially the world” (Parr & Campbell, 2007, p. 65). As we see it, the third dimension essentially extends the reception and expression of information into re-vision and transformation.

Luke and Freebody’s four resources model has gained substantial acceptance both in the research and in the classroom. It is comprehensive and recognizes the diversity of strategies, roles, and skills required of readers. As we made use of the model and reviewed curriculum documents grounded in its model, we began to question how it fit with our conceptualization of literacy. This study was motivated by the following types of questions:

- How are the realities of new literacies redefining our conceptualizations of what counts as literacy?
- How are new literacies influencing the way new members of our communities become literate?
- How does this, in turn, inform how we teach literacies?
- What are the implications for the preparation of literacy teachers?

Although this paper does not explicitly answer all of the above questions, it can be viewed establishing some groundwork. The approach suggested here is to consider how to adapt the four resources model in order to investigate these questions. The idea is to recognize ways in which new literacies may influence how new members of our communities become literate, and how this, in turn, should inform how we teach literacies. Building on the Freebody & Luke model, ways of refashioning it are suggested, while attempting to remain true to its original spirit.

Luke & Freebody have stated that their four resources have taken on a “life of their own”: “Foucault reminds us that texts and discourses have a way of taking on a life of their own.... So it isn’t surprising that the four categories have taken on such a life of their own through teachers’, teacher educators’, and researchers’ work...” (Luke & Freebody, 1999). It is not surprising, therefore, that we would see the roles from a different slant, responsive to the way that we teach and the way that we view literacy. In our view, the four roles are ever-present, drawn upon as needed when needed, regardless of whether we are listening, speaking, reading, writing, viewing, or representing. Each role is continually influenced by who we are as literate beings, the experiences that we have had, the worlds and contexts within which we live.

Over the years, we have made use of the model in our research, our writing, and our practice. And just as Freebody and Luke (1999) applied, modified, and explicated the model, so too did we, in our minds transforming the model into a three-dimensional model that made use of the role of text architect.

At this time, we were unaware that Luke and Freebody, in an online chat (1999) discussed replacing ‘role’ (which implies a pre-existing something someone ‘fits into’) with ‘family of practices.’ ‘Family’ is interpreted as something dynamic, where the members are constantly being redeveloped, recombined, and articulated in relation to one another on an ongoing basis, and ‘practices’ are seen as being “performed, negotiated, achieved or ‘done’.” Luke and Freebody’s ‘family of practices’ deals predominantly with reading and writing, where the model we propose extends across the six language arts, seeing transformation, design, creation, and re-vision as the goals of literacy learner, thus the metaphorical view of literacy learner as text architect. Viewing the literacy learner as text architect allows us to acknowledge a repertoire or menu of practices required of three-dimensional and even multi-dimensional, multi-tasking, multi-contextual literacy learners.

Before we proceed any further, let us present our conceptualization of literacy upon which this 3-D model is built. In our view, literacy is composed of **W**ords, which represent our traditional inheritances; **O**rality, reflecting the nature of oral language; **R**e-vision or transformation which is the ability to envision a world slightly different than the one within which you are engaged; **L**iteracies which include the complexity of texts and practices we require as literate beings; and **D**iscourses which acknowledge the diversity of literate beings and the contexts within which they live and breathe texts. Literacy, therefore, is a W.O.R.L.D. view (Parr & Campbell, 2007).

This view is not new to this century, as it is based in part on Freire's (1987) view of words as symbols of value, power, and freedom for real individuals in real situations, where literacy is more than reading. This perspective is summed up clearly in the following statement.

"Literacy ...is about how we communicate in society. It is about social practices and relationships, about knowledge, language, and culture. Literacy... finds its place in our lives alongside other ways of communicating. Indeed, literacy itself takes many forms on paper, on the computer screen, on TV, on posters and signs. Those who use literacy take it for granted, but those who cannot use it are excluded from much communication in today's world. Indeed, it is the excluded who can best appreciate the notion of "literacy as freedom." (UNESCO, 2003, p. 1)

Words

According to Freire (1987), words come from the "'word universe' of people who are leaning, expressing their language, their anxieties, fears, demands, and dreams" (p. 35). Literacy develops by reading the word and the world simultaneously, each one influencing the other; reading and writing words enable learners to read and write their worlds. Literacy cannot be reduced to words; words are used as reflections of reality and as transforming that reality.

Orality

Oral literacy is no longer thought to be distinct from 'letter literacy.' Listening to and speaking the word are natural precursors and accompaniments to reading and writing, viewing and representing the word. Hearing and saying the word and the ability to communicate effectively in a wide variety of cultural and social contexts are part and parcel of being fully literate beings.

Re-Vision

Consider "re-visioning" as the centre of reading beyond the word, where revision is the ability to critically see the past and the present and imagine a different future. It involves another way of seeing and doing, grounded in historical practices of the past and present and looking toward a different and better future (Kellner, 2004, p. 10).

Learners who do not have the “cultural capital” (Bourdieu & Passeron, 1977), “funds of knowledge” (Moll, Amanta, Geff, & Gonzalez, 1992), or “ways with words” (Heath, 1983) are often oppressed and their voices silenced in the process of education and therefore the development of literacy. “This dimension of re-vision is one of social action and empowerment of individuals through literacy” (Parr & Campbell, 2007, pp. 71-73).

Literacies

The concepts of multiple literacies and multiple modalities (New London Group, 2000), as well as multiple intelligences (Gardner, 1999) fit with a conceptualization of literacy as involving the multiple language arts of listening, speaking, reading, writing, viewing, representing, and navigating. This is a view that recognizes that there is no one conceptualization of literacy. There are multiple literacies just as there are multiple ways of knowing and showing what one knows. Multiple realities are reflected in the diversity of learners, classrooms, schools, and social and cultural contexts for the teaching and learning of literacy practices. Readers and writers construct and create meanings from and through a variety of texts: through story and information, in print, media, music, sound effects, and digital texts. There are complex interrelationships in these ever-changing contexts. The connections made through multiliteracies interface with our social realities. This leads to the next dimension of the World view, Discourses.

Discourses

The dimension referred to as ‘discourses’ is based on the idea that language as communication is embedded in social interactions, in “ways of being in the world, or forms of life which integrate words, acts, values, beliefs, attitudes, social identities, as well as gestures, glances, body positions, and clothes” (Gee, 1990, in Wilkinson, 1999, p. 142). This concept recognizes that understanding learners, texts, and contexts are critical when teaching language and literacies. Localized and contextualized communication and dialogue are always at the core of meaning making. What does this multi-dimensional, W.O.R.L.D. conceptualization of literacy mean in the context of literacy practices? How does this inform our knowledge of how young learners become literate? In other words, how does this inform our teaching? This is where a closer look at the four resources model in consideration of Luke and Freebody’s re-visioning (1999) taken in the context of a W.O.R.L.D. view of literacy can be helpful.

In Luke and Freebody’s 1999 re-vision (online document), they made reference to a repertoire of practices that allow learners, as they engage in reading and writing activities, to

- break the code of written texts by recognizing and using their fundamental features, including alphabet, sounds in words, spelling, and structural conventions and patterns;
- participate in understanding and composing meaningful written, visual, and spoken texts, taking into account each text's interior meaning systems in relation to their available knowledge and their experiences of other cultural discourses, texts, and meaning systems;
- use texts functionally by traversing and negotiating the labor and social relations around them -- that is, by knowing about and acting on the different cultural and social functions that various texts perform inside and outside school, and understanding that these functions shape the way texts are structured, their tone, their degree of formality, and their sequence of components;
- critically analyze and transform texts by acting on knowledge that texts are not ideologically natural or neutral -- that they represent particular points of views while silencing others and influence people's ideas -- and that their designs and discourses can be critiqued and redesigned in novel and hybrid ways.

We are not disputing what Luke and Freebody have offered. In fact, we are more than agreeable, particularly as we see the practices of transforming and designing in the fourth bullet. What we are instead suggesting is that these roles are not unique to reading and writing; given the changing nature of literacy, it is critical to re-vision what this family of practices means within the context of the other four language arts – listening, speaking, viewing, and representing, as these are increasingly competing with reading and writing. In our view, therefore, the literacy learner is a text architect.

Re-visioning the literacy learner as text architect

Let's assume that as young learners emerge into literacy in their diverse communities, they do not learn one role at time in a linear fashion. As they learn code-breaking or word-solving skills, they are simultaneously making meaning from texts of all types, building knowledge and concepts based on previous knowledge. As well, they are creating their own texts, using what they know and are able to do with texts, and learning about how and why texts are created. All of these processes occur through complex interconnections with other learners and teachers in a wide variety of contexts from very informal social settings to formal 'school' instruction. Connections between listening, speaking, reading, writing, viewing, and representing are implicit and seamless. The view that early literacy develops in a non-linear, recursive fashion takes into account the multimodal nature of much emergent reading and writing (Labbo, 1996, Kress, 1997), and is widely supported by research on literature-based instruction (Morrow & Gambrell, 2000). If learners are to become fully literate beings by engaging in literacy practices, they must from the outset be creators and designers, thus the necessity to have the role of text architect at the core of all instruction.

Architects, in our view, simultaneously and seamlessly gather and express information through listening, speaking, reading, writing, viewing, and representing. Not one art is valued and privileged more than any other. Architects envision in the world in three dimensions, but represent it in two; this is no different from what we

typically require of literacy learners, particularly within the context of standardized assessment that values reading and writing. Architects are creators and designers, capable of transforming the landscape of the world as they absorb, interpret, manipulate, and integrate multiple sources of information, not unlike literacy learners who must be creators and designers of multiple and diverse texts, natural extensions of text critics.

We view text architects as the fundamental goal of all literacy learning. Due to the changing nature of literacy, literacy learners of the 21st century will require the skills of a text architect, quickly learning, assimilating, critiquing, and making sense of “new technical stuff” (Lankshear & Knobel, 2006) in conjunction with basic code breaking in increasingly diverse landscapes. Re-vision and transformation should not simply be one of the roles of the literacy learner, they should be at the heart of literacy learning and development. Text architects coordinate in a fluent way a range of practices extended from those of Luke and Freebody (1990); these include, and are likely not limited to code-breaker, concept builder, meaning-maker, and critical inquirer (see Figure 1 for a detailed description of the practices associated with each role).

Figure 1: Roles of the Text Architect

<p>The Text Architect as Code-Breaker</p> <ul style="list-style-type: none"> • Draws on a repertoire of known and familiar texts when solving codes • Continuously develops a coded vocabulary that allows access into a variety of texts • Uses a variety of code-breaking practices (word solving, media, experiential, social, etc.) appropriate to a variety of texts • Recognizes and uses diverse information to aid comprehension • Demonstrates continuous awareness of personal code-breaking practices 	<p>The Text Architect as Concept Builder</p> <ul style="list-style-type: none"> • Selects texts for a variety of purposes • Identifies purposes and goals for text encounters • Adjusts strategies and rate to match the text form and the purpose of text encounter • Knows and uses the structures and features of a variety of text forms to aid comprehension • Uses language conventions (for example, punctuation) and text features to aid in comprehension • Recognizes the text creator’s voice in a text • Thinks meta-cognitively to make meaning • Demonstrates a continuous awareness of one’s own concept building practices
<p>The Text Architect as Meaning-Maker</p> <ul style="list-style-type: none"> • Establishes a purpose for text encounters • Recognizes that encounters with text always involve a search for meaning • Knows and applies a variety of comprehension strategies • Self-monitors while encountering text, recognizing when comprehension breaks down, and taking steps to restore it and taking steps to restore it • Sustains comprehension and maintains interest over extended periods of time • Responds to texts in a variety of ways • Demonstrates a continuous awareness of one’s own meaning-making practices 	<p>The Text Architect as Critical Inquirer</p> <ul style="list-style-type: none"> • Recognizes literacy as a transaction between text consumer, text creator, and literacy community • Builds on and revises ideas, information, and perspectives in texts • Engages in critical thinking, critical consciousness, critical literacy/inquiry • Recognizes points of view, omissions, and multiple perspectives • Recognizes the impact of context, experience, and discourse • Makes judgments regarding the reasonableness, appropriateness, and validity of language and information within texts • Demonstrates a continuous and critical awareness of personal subjectivities, points of view, perspectives, and practices

(adapted from Parr & Campbell, 2007. p. 236)

The “family of practices” outlined in this chart is adapted from Freebody and Luke (1990; 1999) and the Ontario Ministry of Education (2004). We have built upon both sources, adjusting the roles of literacy learners to fit a multi-dimensional vision of reading and a W.O.R.L.D. view of literacy. These four roles intersect dynamically and develop recursively through engagement and encounters with a variety of texts in a multitude of contexts where literacy learners interact with teachers and other literacy learners.

Conclusion

New literacies have changed the landscape to extend the language arts of reading, writing, listening, speaking, viewing, and representing to include that of ‘navigating’. Traditional conceptualizations of comprehending, when interpreted as being able to recall events and understand information extracted from texts, do not sufficiently capture the skills and strategies required when navigating websites or complex visual instructions for a computer program, video game, features on a mobile phone, even lived experiences. Literacy learners must be navigators, critical inquirers, and text architect in addition to decoders, concept builders, and meaning-makers. In addition, they must be able to make quick critical judgments about the validity of information presented.

“Little comprehension is likely to result if an individual wanders aimlessly through a piece of text. Instead adequate comprehension is the product of a journey guided by a pre-specified destination. Like travelers, successful [literacy learners] sometimes slow down or even stop, perhaps to think about something of interest. Like travelers, too, they may encounter problems that need to be remedied before their reading proceeds. Throughout all this, the destination – that is, the purpose of the [text encounter] – is not forgotten.” (Durkin, 2004, p. 295)

Comparaison du degré de compréhension à l'écran et sur papier chez des élèves du secondaire

Isabelle Carignan

CRIE, IRPÉ, CRIFPE, LUTIN (Paris), Université de Sherbrooke, Canada

Annabelle Caron

Université de Sherbrooke, Canada

Problématique

L'intérêt pour les technologies de l'information et de la communication (TIC) continue de transformer le monde de l'éducation (Lou, Abrami et d'Apollonia, 2001), malgré lui. Ce changement dans le domaine éducatif incite à parler de plus en plus de la littératie médiatique, c'est-à-dire l'habileté de lire, d'analyser, d'évaluer et de communiquer à l'aide de divers médias (télévision, texte papier, radio, ordinateur). En effet, il importe maintenant de connaître le mode de fonctionnement des élèves lors de l'utilisation des technologies afin qu'ils puissent réellement tirer profit de leur apprentissage et développer, par le fait même, un jugement critique qui les aidera à devenir des citoyens du monde (Kellner, 2000).

En 1996, au Canada, le ministère de l'Éducation du Québec (MEQ) a mis sur pied un projet pour l'introduction des TIC dans les écoles; il s'agissait de la mesure 50590. Lors de l'avènement de cette mesure, les enseignants ont dû accepter, malgré eux, des changements dans leur façon de voir l'enseignement pour suivre la vague technologique, mais également pour s'ajuster à l'évolution des jeunes auxquels ils enseignent. Selon Boyer et Lebrun (2004), les adolescents passeraient maintenant « 33,24 heures par semaine devant un ordinateur, incluant les heures consacrées au téléchargement de fichiers » (p. 135). Il s'agit d'un fait important à considérer car, avec l'existence des TIC dans les écoles, les enseignants auront éventuellement comme mandat non seulement d'enseigner la lecture-compréhension sur papier, mais aussi celles à l'écran afin que les élèves puissent devenir des cyberlecteurs plus efficaces.

Par contre, même si les élèves semblent lire de plus en plus à l'écran (Carignan, 2007), les enseignants n'ont aucun document en main, aucune ressource disponible pour enseigner la lecture-compréhension à l'écran. Il semble donc important d'en connaître davantage au sujet du mode de fonctionnement des élèves lors de la lecture-compréhension à l'écran et sur papier. Fonctionnent-ils de la même façon sur les deux formes de documents? Puisque les élèves semblent lire davantage à l'écran, ont-ils une meilleure compréhension lors de la lecture sur cette forme de document? À l'instar de Rouet (1993), il est possible de croire que la lecture à l'écran, et plus

particulièrement d'un hypertexte, « exige des stratégies de lecture spécifiques, dont la maîtrise demande du temps » (p. 36). En effet, les élèves ne procèdent pas nécessairement de la même façon lors de la lecture sur le texte papier et lors de la lecture à l'écran.

Dans un autre ordre d'idées, de nombreuses recherches ont été réalisées concernant le texte argumentatif en général. Il est cependant possible de remarquer que les recherches portant sur la compréhension du texte argumentatif en soit, peu importe la forme de documents lue, sont plutôt rares. De surcroit, ces recherches ont été plus particulièrement menées au niveau universitaire. C'est le cas de l'étude de Larson, Britt et Larson (2004) qui s'est intéressée à la capacité des étudiants universitaires à comprendre des textes argumentatifs et aux facteurs qui influencent la mise en pratique de cette compétence.

Dans le but d'en connaître davantage à propos de la compréhension des textes argumentatifs, l'objectif de cette recherche sera donc d'évaluer et de comparer le degré de compréhension en lecture de documents textuels de type argumentatif à l'écran et sur papier chez des élèves de 1^{re} et de 3^e secondaire. La réalisation de cet objectif permettra de savoir s'il existe une évolution du degré de compréhension en lecture à l'écran chez les élèves du secondaire.

Cadre de référence

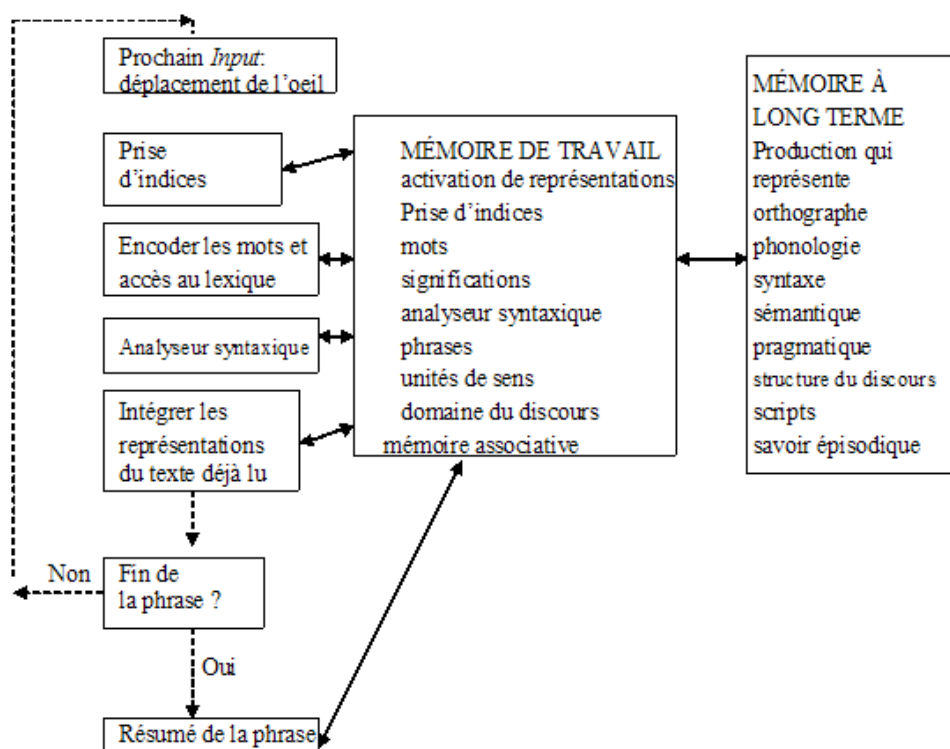

Le terme « lecture-compréhension » est utilisé par Eme et Rouet (2001, 2002) et par Gombert et Fayol (1995). C'est ce terme qui sera privilégié, mais nous considérons tout de même « lecture-compréhension » et « compréhension en lecture » comme étant des synonymes. Voici donc une définition de ce concept d'un angle inspiré du cognitivisme ainsi que la description de ce qu'est un texte à composante argumentative.

La lecture-compréhension ou la compréhension en lecture

La lecture est un acte de création permanente. (Pennac, 1992). Le lecteur novice doit développer ses stratégies de compréhension (car il est en phase d'acquisition) et le lecteur expert doit constamment les évaluer et les réguler. La lecture-compréhension est un processus actif de construction de sens qui favorise l'interaction entre les connaissances antérieures du lecteur, ses connaissances sur le monde (scripts), les processus de lecture et les stratégies mobilisés, la structure des textes et ses composantes, etc. De surcroit, la lecture-compréhension est possible grâce à la construction des significations possibles d'un texte grâce au lecteur qui interprète et effectue un calcul syntaxique et sémantique intraphrastique et interphrastique

(Gombert et Fayol, 1995). Conséquemment, sans compréhension, il n'y a pas de lecture signifiante possible (Korabiak et Mete, 2004).

Le modèle de compréhension en lecture privilégié ici est celui de Just et Carpenter (1980). Ceux-ci ont été les premiers à analyser les mouvements oculaires au début des années 1980 pour déterminer ce que le lecteur expert fait lorsqu'il lit. Leur modèle est d'ailleurs l'un des plus cités dans les écrits à propos de la compréhension en lecture, car il est interactif et présente les processus de lecture au niveau des mots, des unités de sens et des phrases. Nous ne ferons pas de présentation détaillée du modèle dans cet article. Toutefois, voici le modèle en question :

Texte argumentatif (ou à composante argumentative)

Le texte argumentatif poursuit le but de défendre une thèse à l'aide d'arguments et d'exemples (Adam, 1992). Nous optons donc pour un texte argumentatif lorsque nous désirons persuader le lecteur d'adopter un point de vue (Adam, 1992; Chartrand, 1993; Ntirampeba, 2003; Petitjean, 1989; Tutescu, 2003), l'encourager à agir d'une certaine façon ou justifier sa propre manière de penser ou d'agir. Un « discours argumentatif vise donc à intervenir sur les opinions, attitudes, comportements d'un interlocuteur ou d'un auditoire en rendant crédible ou acceptable un énoncé

(conclusion) appuyé selon des modalités diverses sur un autre (argument/donnée/raison) » (Adam, 1992, p. 104).

Il existe plusieurs schémas pouvant représenter le texte argumentatif. En voici quelques exemples :

- 1) le texte peut comporter une thèse, une antithèse et une synthèse permettant de conclure en adoptant un point de vue X (De Koninck, 2005).
- 2) le texte peut comporter un problème, sa solution ainsi qu'une prise de position soutenue par au moins un argument (Chartrand, 1993).
- 3) l'organisation textuelle du texte argumentatif peut être construite comme suit : Raisons → Conclusion (Apothéloz, Brandt et Quiroz, 1989).

Méthodologie

Dans cette section, nous allons aborder la façon dont les sujets ont été sélectionnés, les deux formes de documents lues par les sujets, l'outil méthodologique utilisé ainsi que l'analyse des données.

Sélection des sujets

Dans le but de choisir les sujets, trois groupes de première secondaire (12-13 ans) et quatre groupes de troisième secondaire (14-15 ans) ont dû remplir un questionnaire. Notamment, nous tentions de connaître les habiletés des sujets à travailler à l'écran. À partir des questionnaires, il a été possible de sélectionner 12 sujets de première secondaire (groupe 1) et 12 sujets de 3^e secondaire (groupe 2) 1) ayant été scolarisés en français depuis le primaire; 2) ayant un ordinateur PC et Internet à la maison; 3) passant plusieurs heures par semaine devant l'ordinateur; 4) se considérant à l'aise avec l'ordinateur; 5) étant considérés forts en compréhension en lecture par leur enseignante de français.

Formes de documents de type argumentatif

Deux formes de documents ont été lues par les deux groupes de sujets, soit le texte papier et l'hypertexte. En quelques mots, du point de vue structurel, le texte papier est un document textuel non numérisé ayant une structure linéaire (Carignan, 2007). L'hypertexte, quant à lui, est un document textuel numérisé non linéaire composé de nœuds et d'hyperliens qu'il est possible d'activer sur différents niveaux pour avoir accès à l'information (Bélisle, 1998; Briatte, 1997; Clément, 1994; Rouet, 1993; Slatin, 1990). Les hypertextes créés possèdent deux niveaux : le niveau du texte de base et le niveau 1. Le niveau 1 est l'information contenue après avoir activé un hyperlien.

Les formes de documents étaient de type argumentatif et respectaient la structure argumentative prototypique minimale : thèse, antithèse et synthèse (Adam, 1992). Trois thèmes étaient possibles, soit l'avortement, l'euthanasie et la peine de

mort. Ces thèmes ont été choisis, car ils sont toujours actuels et ne demandent pas nécessairement de connaissances spécifiques. Chaque sujet a lu deux formes de documents différentes (texte papier et hypertexte) sur deux thèmes différents, au hasard.

Degré de complexité des formes de documents

Une validation préalable du niveau de difficulté des trois textes a été réalisée grâce à l'analyse propositionnelle de Kintsch et van Dijk (1978). La moyenne des trois documents a été de 267 micropropositions (plus ou moins 14 %). Plus le nombre de micropropositions est élevé, plus le texte risque d'être complexe et de comporter des éléments de détails. De surcroît, la moyenne du nombre de mots pour les trois documents était de 773 mots (plus ou moins 33 mots).

Outil méthodologique : la technique de rappel

Dans cette recherche descriptive et exploratoire, un outil méthodologique a été utilisé, soit la technique de rappel. Il a été demandé aux sujets de faire un résumé écrit de 200 mots du texte papier et de l'hypertexte qu'ils ont lus. Le résumé écrit a été choisi (et non le résumé oral), car l'écriture favorise le contrôle de la longueur du résumé et ne requiert pas la transcription écrite du verbatim. Selon Johnson (1983), la technique de rappel serait la méthode la plus intéressante pour mesurer la compréhension. Nous constatons que de nombreux auteurs ont utilisé la tâche de rappel dans leur recherche pour évaluer la compréhension en lecture (notamment Bransford et Johnson, 1972; Coirier et Passerault, 1990; Kardash et Scholes, 1995; Brassart, 1996; Golder et Coirier, 1996). Le résumé écrit permet d'obtenir des énoncés tirés littéralement du texte, des énoncés non littéraux et des ajouts en lien avec les connaissances antérieures (Coirier, Gaonac'h et Passerault, 1996).

Analyse des données

L'analyse des données a été réalisée grâce à l'analyse macropropositionnelle (van Dijk et Kintsch, 1983). Ce type d'analyse permet de réduire la microstructure des textes (donc de retirer les éléments textuels qui sont trop détaillés) et de créer des macropropositions (en somme, les idées les plus importantes du texte).

Nous avons demandé à des lecteurs experts de surligner les idées les plus importantes des trois textes (avortement, euthanasie et peine de mort), selon eux. Dans ce cas, nous avons pu créer, pour chaque thème abordé, un résumé-modèle (Brassart, 1996) et une grille des idées principales. Par la suite, chaque résumé écrit par les sujets a été examiné à l'aide de la grille d'analyse des idées principales. Cette grille a permis de déterminer le degré de compréhension de chacun des sujets sur les deux formes de documents.

Résultats et discussion

Dans un premier temps, le degré de compréhension des sujets sur le texte papier sera abordé. Dans un deuxième temps, il sera question du degré de compréhension des sujets sur l'hypertexte. Enfin, le temps de lecture, sur les deux formes de documents sera évoqué.

Degré de compréhension sur le texte papier

Le degré de compréhension du groupe 1 (12-13 ans) a été, en moyenne, de 55,8 % avec un écart-type de 14,4. Quant au groupe 2 (14-15 ans), la moyenne est de 59,2 % avec un écart-type de 14,4. Le degré de compréhension semble meilleur chez les sujets du groupe 2. Il est possible de faire un lien avec le fait que les sujets ont deux années de scolarité de plus. Pourtant, les résultats suivants empêchent de croire en cette supposition.

Degré de compréhension sur l'hypertexte

Le degré de compréhension sur l'hypertexte est de 57,5 %, en moyenne, pour le groupe 1 (12-13 ans), avec un écart-type de 17,1. En ce qui a trait au groupe 2 (14-15 ans), la moyenne est de 57,5 % avec un écart-type de 16,03). Le degré de compréhension est donc équivalent lors de la lecture sur l'hypertexte pour les 2 groupes. Voici un graphique représentant les résultats du degré de compréhension sur le texte papier et sur l'hypertexte :

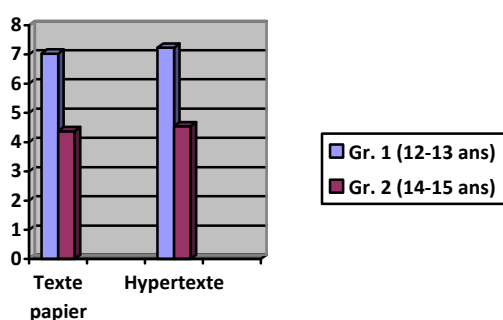

Constats et explications

À la lumière des résultats, il est possible de constater que les sujets du groupe 1 (12-13 ans) semblent mieux comprendre à l'écran (lecture hypertextuelle). Il peut s'agir alors d'un transfert de stratégies du papier à l'hypertexte. Une autre explication possible : les sujets ont créé leurs propres stratégies de compensation à l'écran. Il s'agit cependant de possibilités. D'un autre côté, les sujets du groupe 2 (14-15 ans) semblent mieux comprendre sur le texte papier. Il semble possible de comprendre ce résultat par le fait que les sujets ont peut-être développé de meilleures stratégies de lecture sur le texte papier, car elles sont enseignées explicitement à l'école. En effet, le

texte papier (comme les manuels scolaires) fait partie de la vie de tous les jours dans les classes du secondaire.

Temps de lecture

Lors de la lecture du texte papier, le groupe 1 (12-13 ans) a obtenu un temps moyen de lecture de 7 minutes et 3 secondes avec un écart-type de 2,24. Quant au groupe 2 (14-15 ans), le temps moyen de lecture a été de 4 minutes et 37 secondes avec un écart-type de 1,07. Pour ce qui est de l'hypertexte, le temps de lecture moyen pour le groupe 1 (12-13 ans) a été de 7 minutes et 23 secondes (écart-type de 2,35) et de 4 minutes et 54 secondes (écart-type de 1,54) pour le groupe 2 (14-15 ans). Voici une comparaison des temps de lecture des deux groupes :

Constats et explications

Le temps de lecture est presque deux fois plus grand pour les sujets du groupe 1 (12-13 ans). Ceci peut s'expliquer par le fait qu'ils sont plus jeunes. Dans ce cas, il est bien entendu que leur fluidité en lecture est moins grande puisque leur vocabulaire n'est pas aussi développé et élaboré que les élèves ayant deux années de scolarité de plus (groupe 2). Il a été possible de le constater dans le résumé écrit puisque les sujets écrivaient parfois des mots inventés qui ressemblaient aux mots du texte (ex. : *eunathasie*). Ils ne se rappelaient tout simplement plus comment l'écrire ou ce que ce mot voulait dire; il s'agit cependant d'une possibilité. Par ailleurs, le temps de lecture, pour les deux groupes, est un peu plus grand sur l'hypertexte. Pour le groupe 1, la lecture est 3 % plus lente sur l'hypertexte; pour le groupe 2, elle est 4 % plus lente. Conséquemment, la lecture semble « un peu » plus lente à l'écran.

Ces résultats peuvent questionner ceux de Gosse, Gunn et Swinkels (2002) et de Nielsen (1997). Ces chercheurs ont constaté que la lecture à l'écran est de 25 à 30 % plus lente que celle sur papier. Il est bien entendu qu'il faut tenir compte du fait que les méthodologies utilisées sont différentes d'une recherche à l'autre et également que ces recherches ont eu lieu il y a plus de sept ans. Les enfants et les adolescents ont eu le temps depuis d'être davantage à l'aise et de développer diverses stratégies pour lire adéquatement à l'écran même s'ils n'ont pas encore d'enseignement explicite à l'école.

Quoi qu'il en soit, plusieurs chercheurs croient que la charge cognitive est plus grande à l'écran (Colombi et Baccino, 2004; Gosse *et al.*, 2002), ce qui est tout à fait plausible puisque, lorsque le lecteur active un hyperlien, il doit constamment garder en tête le contenu informationnel lu auparavant pour faire des liens et activer par le fait même les processus nécessaires à la compréhension.

Conclusion

Il a été possible de constater que, dans la majorité des cas, les élèves ne font pas de plan pour écrire leur résumé. Est-ce par paresse? Parce qu'ils ne l'ont pas appris? Parce qu'ils n'ont pas développé ce réflexe? Il est malheureusement impossible d'en être certain. Quoi qu'il en soit, le résumé écrit des sujets respecte une partie de la structure du texte argumentatif. En effet, dans la plupart des cas, le résumé comportait une partie pour les arguments « pour » et une partie pour les arguments « contre ». Toutefois, très souvent, il n'y avait ni introduction ni conclusion. Il semble plausible de croire que les sujets ont en quelque sorte « jeté en désordre » leurs idées sur papier de peur d'oublier les informations lues, car ils n'avaient plus accès au document textuel lors du rappel écrit.

En résumé, les résultats ont montré que les sujets du groupe 1 (12-13 ans) semblent avoir mieux compris sur l'hypertexte. Pour ce qui est du groupe 2 (14-15 ans), les sujets semblent avoir mieux compris sur le texte papier. En comparant les deux groupes, il est cependant possible de se rendre compte que l'hypertexte semble compris de façon équivalente, ce qui peut paraître surprenant étant donné le fait que les sujets des deux groupes ont deux ans d'écart relativement à l'âge. Quant au texte papier, il semble mieux compris par le groupe 2 (14-15 ans). Puisque ces résultats ne nous permettent aucunement de généraliser ces affirmations étant donné la petite taille de l'échantillon, il serait intéressant d'élaborer cette recherche auprès de sujets plus nombreux.

Limites de la recherche

Dans le cadre du déroulement de ces deux recherches, on peut noter certaines différences. Par exemple, lors de la deuxième recherche, la chercheuse a été accompagnée d'une auxiliaire de recherche contrairement à la première cueillette des données. Aussi, nous pourrions présumer que l'analyse macropropositionnelle a été un peu plus sévère lors de la première recherche, qui s'adressait à des élèves de troisième secondaire. Finalement, dans le cadre des deux recherches, il y eut des accords interjuges, mais en ayant recours à des juges différents.

Plus de deux années se sont écoulées entre les deux recherches. Aussi, nous ignorons si ce laps de temps est assez important pour influencer en quelque sorte les résultats de notre recherche. Toutefois, étant donné le nombre restreint de recherches qui s'intéressent à notre objet, nous ne pouvons pas mesurer précisément cet effet. Aussi, nous ne pouvons qu'évoquer ce fait.

De plus, les sujets de cette recherche sont exclusivement de sexe féminin. Il pourrait être intéressant de comparer nos résultats à un échantillon d'individus de sexe masculin. Cela permettrait de vérifier s'il existe une différence entre les deux sexes à propos du degré de compréhension à l'écran et sur papier chez des élèves du secondaire.

De surcroît, étant donné le caractère relativement courant de la lecture à l'écran, il peut sembler surprenant de voir si peu de recherches actuelles à propos de cet objet. Certains résultats sont maintenant publiés, mais ne sont pas légions. Toutefois, il est très stimulant pour un chercheur d'innover et de pousser ses recherches dans une voie aussi particulière.

En conclusion, cette recherche évolue et soulève de nombreux questionnements au fur et à mesure que nous colligeons les résultats. Il pourrait être intéressant de relever des données selon le degré de compréhension à l'écran et sur papier chez des élèves du primaire et du secondaire selon les sexes, mais aussi de comparer le degré de compréhension de différents types de textes narratifs, explicatifs, argumentatifs à l'écran et sur papier.

Introduction

This paper includes part of a research project that is being developed under the general theme of *Reading literacy – a comparative study between Portuguese and Finish schools*. The main objective of this research is to reflect about the differences in educational achievement between Portuguese and Finish students of the 6th and the 9th grade of schooling, trying to identify the Finish educational conditions that are most important for this success. At the same time, we intend to identify those ones that can be replicated in Portugal to fight illiteracy and underachievement.

We intend also to give a special place to literary literacy, presupposing that literature includes and gives significance to the procedures of literacy (Azevedo, 2006), and we intend also to investigate if the levels of literacy of Portugal and Finland are related to teachers qualifications and literacy practices in the classroom.

For this purpose we selected several schools in Portugal and in Finland and applied different questionnaires to teachers, students, parents and schools to understand what perspectives and differences are at play between Portuguese and Finish educational systems.

What we will discuss today is a preliminary study that is allowing us to find out ways and gestures, pathways and crossroads assumed by the different teachers of a school in the north of Portugal and another in the north of Finland that will lead us to other perspectives and strands in pursuing the general objective of the entire study.

We focused our research on the backgrounds for high literacy achievements such as teachers' qualifications and competences for teaching literature, reading habits and attitudes towards reading, instructional reading practices and with these tools we started this comparison hoping to bring greater clarity and insight to educational policies and practices through a process of critical questioning.

At the beginning of our research we hypothesized reasons for the high literacy levels of the finish students compared with the Portuguese ones. Some of these assumptions were:

1. Finish teachers possess higher qualifications for teaching literacy and literary literacy.
2. Finish teachers' attitudes towards reading are different from the Portuguese ones.
3. The amount of time spent in reading activities is different in the schools of the study.
4. The reading practices and methods are different in the two schools.

Our research indicated that our assumptions were right however insufficient to give us an exact idea of the Finish students' success in the PISA studies. Therefore we have to continue collecting more data broadening the scope of the study, joining more schools, teachers and students to strengthen the conclusions.

Theoretical framework

The importance of international comparisons

Governments all over the world recognize that education has a central role to play in building nations and sustaining countries' economic, social and cultural development. We also know now that good performance in literacy is a strong predictor of employment prospects and of a good quality of life (Duru- Bellat, 2004).

As such, an important concern is to be able to identify children who reach differential levels of achievement and what is the profile of those who do achieve at an adequate level and why. (Postlethwaite, 2004:27)

This concern was taking into practice by OECD (Organization for Economic Co-operation and Development) and IEA (International Association for the Evaluation of Educational Achievement) that started several years ago a systematic measurement of students' achievement in different subjects including reading literacy through two important international surveys PISA and PIRLS.

The importance of reading and reading literacy has been demonstrated by these studies and this importance is measured by the quantity of countries that more and more join these studies.

This importance is based also in the recognition that the different governments of OECD countries and their education ministries have given to the fight against educational failure, through the promotion of literacy, being reading literacy, as central in the curriculum, one of the literacies that give considerable competences to personal and society development (Durut-Bellat, 2004; Neves, & Borges, 2007; Willows, 2002).

However, the challenges of comparing individuals, groups and nations are overwhelming. What is learned by these comparisons depends in no small measure on how researchers understand what makes each individual or group unique, and what makes each cultural context different from the others: "(...) *without these*

understandings, data can be easily misunderstand and generalizations sometimes oversimplified.” (Topping, 2006:588).

Nevertheless international comparisons are a field of study in expansion and “(...) cannot be limited to one particular discipline, such as philosophy of education, the sociology of education or the history of education. Rather it draws on concerns and methods of the humanities and the social sciences in the study of diverse geographical regions.” (Kubow & Fossum, 2007:19)

Therefore, studying education in a multi perspective will help us interpret the educational phenomena more fully in order to analyse and explain educational polices and practices.

The Programme for International Student Assessment (PISA) in which Portugal has been participating since 2000 showed that Portuguese students stand below the OECD average and far below Finland students who stand in the first places in 2000 and 2003 and in the second place in 2006.

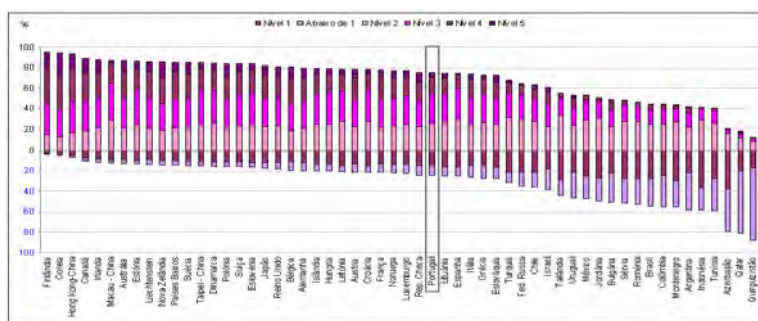

Fig.1 – Website Portuguese Education Ministry, 2008

Summing up the values of underachievement in Portugal and in Finland we realize that Portugal scored 48% in levels -1, 1 and 2 and Finland only 21%. In OECD countries, on average, 10% of students achieved proficiency level which means level 5.

	Level – 1	Level 1	Level 2	Level 3	Level 4	Level 5
Portugal	8%	14%	26%	30%	18%	4%
Finland	1%	5%	15%	32%	33%	15%

Fig.2 – Distribution of students per literacy level OECD, 2004 (adapted)

Teachers as promoters of high achievement

Research shows that children do better with better educated teachers. (Brozo, & Simpson, 2003; Fitzharris, Blake, & Crawford, 2008; Flynt & Brozo, 2009).

Intensive instruction of teachers can prepare them to teach reading comprehension strategically and such teaching can lead students to greater

awareness of what it means to be a strategic reader and to the goal of improved comprehension.

Also, researchers consistently report that teacher preparation in programs with an integrated vision does indeed have a positive effect in students' achievement. (Commission on Excellence in Elementary Teacher Preparation for Reading Instruction, 2007:2)

Williams (2002:255) stated also that

Teaching comprehension strategies effectively in the natural setting of the classroom involves a level of proficiency and flexibility that often requires substantial and intensive teacher preparation.

Other researchers as Anderson (2002); Boyle et al. (2003); Craig, Kraft & du Plessis (1998); Hanushek (1992); Lewin & Stuart (2003); Ndoye (2004); Rivkin et al (1998); Sedel (2004); Verspoor (2006) and organizations as well as research projects such as UNESCO (2004); UNESCO (2006); UNICEF (2000); USAID (2002); USAID/EQUIP1 (2004) stated that teacher quality is a predictor of learner achievement and that the effects of teacher quality on educational outcomes can be more important than learners' background characteristics, such as economic position, reduced class sizes or even teacher salaries.

The same opinion has the Iowa Department of Education, (2005 – 2006:1):

Teachers with (...) qualifications have more responsive interactions with children, provide richer language and cognitive experiences and are less authoritarian.

Also, it is stressed by academics that the importance teachers give to reading literacy, (Cunningham & Stanovich, 2003) expressed in the time devoted to reading is as well a condition for high student achievement. Children need to read a lot to become good readers and if teachers don't provide time and space to read in the classroom or as homework and if they don't expand the reading activities beyond the obvious they are not being promoters of high achievement.

Teachers must consider reading activities the most important part in the classroom curriculum. However research shows that less than 10% of the time students are in school today is actually spent in reading (Allington, 2006). Grabe & Stoller (2002:35) emphasise also that "*Students learn to read by reading A LOT, yet reading a lot is not the emphasis of most reading curricula*". These ideas are followed by Cunningham (2005:88) who states that:

(...) you don't get good at anything unless you do a lot of it. You don't become a good musician if you only play at your weekly lesson when someone is standing over you making you practice. No one has ever become a good athlete who didn't practice regularly. Likewise, children who read only when they have no choice will not become good readers.

Research also shows that when different types of students at various grade levels are given authentic literature as the core of their reading program, their achievement is higher and they have more positive attitudes about reading and writing (Morrow, 1992; Tunnell & Jacobs, 1989).

The use of literary texts is then a positive influence in student's achievement and they as readers respond in a less naïf position obtaining competences of high order thinking that Ortega (2003:34) points out to be a useful tool to provide more competent readers.

The evidence suggests also that comparing a text-book approach to the study of the language and a literature-based approach the results revealed that the last one has a statistically significant gain in achievement either in the acquisition of social studies concepts as well as in science (Guthrie & Wigfield, 1997) and is a positive inductor of reading motivation with developmental readers, remedial readers, as well as with ordinary readers.

Also the results of several studies indicate the positive effect that story book reading and contact with the literary texts as a regular classroom practice has on children's achievement in various aspects of literacy development (Azevedo, 1996; Bus, Van Ijzendoorn, & Pellegrini, 1995; Kirsch, de Jong, Lafontaine, McQueen, Mendelovits, & Monseur, 2002; Snow, 2002).

Furthermore, research shows a direct link between teaching reading practices and children's learning (National Institute of Child Health and Human Development, 2000). Similarly the National Center to Improve the Tools of Educators (1996:1) referred some strategies to develop fluent and reflexive reading which include:

“ (...) help children learn to read fluently by requiring them to read new stories and reread old stories every day; help children extend their experience with the words, language, and ideas in books by interactively reading harder texts with them and to them every day; relate information in books to other events of interest to children, such as holidays, pets, siblings, and games; engage children in discussion of the topics; help students identify the main ideas presented in the text, as well as the supporting detail.”

Finally in this research project we explored the relations between teachers' attitudes, their expectations and the love for books. Mathewson (2004); Fisher, Frey & Lapp (2009) tell us that teachers' attitudes and motivation are central in students' positive reading habits.

Research methods and findings

The study was conducted in one Portuguese school from the north of Portugal in a city called Vila Real and in one Finish school from Rovaniemi, in the North of Finland. Both schools have similar environments. They are situated in small cities

and have students from the Kindergarten to the 9th grade. However, they have a different number of students and teachers because Portuguese schools tend to be bigger than Finish schools.

The collection of data was made through a questionnaire which drew items from the PIRLS 2006 Study (Mullis, Kennedy, Martin, & Sainsbury, 2006) and was given to the teachers of mother tongue of the two schools. We managed to obtain responses from all the teachers (7 Finish and 8 Portuguese teachers) which was a good result. The questionnaire collected data about teachers' qualifications, especially for teaching literacy, about their attitudes towards reading, about the time students spend in reading activities and about instructional activities for teaching literature.

Data collection	Number of questions	Questions content
Teachers' qualifications	3	<ol style="list-style-type: none"> 1. Teachers' qualifications 2. Teachers qualifications for teaching literature 3. Teachers' qualifications in Children and youth literature
Attitudes towards reading	5	<ol style="list-style-type: none"> 1. Information given to students about the latest books 2. Information given to parents about the importance of reading 3. Teachers' personal reading 4. Teachers' knowledge about children and youth literature 5. Teachers' expectations on students' becoming good readers
Time students spend in reading activities	4	<ol style="list-style-type: none"> 1. Class time spent in developing reading competences 2. Reading assignment as homework 3. How often teachers goes/sends students to the library 4. How many books students read at school
Instructional activities for teaching literature	3	<ol style="list-style-type: none"> 1. Presentation of literary texts through books and/or school books 2. Reading practices in the classroom 3. Information to parents about importance of reading

Fig. 3 - Overview of the Teacher Questionnaire

The major goal of our research was to discover reasons for the high literacy levels of the finish students compared with the Portuguese ones. The first assumption was that Finish teachers possess higher qualifications for teaching literacy and literary literacy. Like other researchers, we thought that quality teachers would result in a better educational achievement and we were right in our

assumption. All Finish teachers have a master level for teaching and Portuguese teachers have only a graduate level.

We discovered also that all Finish teachers questioned put a strong emphasis in the study of Literature and Children and Youth Literature in their academic studies. On the other hand, there were some Portuguese teachers who didn't study Literature and Children and Youth Literature in their academic studies. When we asked them about their attendance to Seminars or Conferences, the majority of Finish teachers said they attended at least one conference/Seminar on Literature/Children and Youth Literature in the last two years. All the Teachers of the Portuguese school had no attendance at all.

The second assumption we established was that Finish teachers' attitudes towards reading were different from the Portuguese ones. We hoped that these questions would give some insight into the respondents' ideological perspectives on which they might build their approach to the use of children's literature in the classroom and to its importance. We discovered that Finish teachers possess a higher knowledge about contemporary Children and Youth literature; they regularly inform their students' parents about the importance of reading and most of them read everyday. Unfortunately, Portuguese teachers give less attention to these details and only one of them made an approach to their students' parents. Also, the majority of Finish teachers have high expectations on students becoming good readers contrasting with Portuguese teachers who expect less from their students and presume that only half of them will become good readers.

The amount of time spent in reading activities at school was the third of our assumptions. We were right again on our presumption that Finish teachers give a lot more time and space to reading: Finish teachers spend more class time in developing reading competences, assign more reading as homework and go with students or send them to the library more often. In addition, the Finish school students read between 5 to 8 books a year and Portuguese students read between 2 and 5 books a year.

Finally our last assumption was that reading practices and methods are different in the two schools. Our assumption was confirmed and we discovered that when studying a text Finish teachers use more, as teaching practices, the identification of the main ideas, inference, motivation activities to reading and silent reading. On the contrary, Portuguese teachers use more reading aloud and written comprehension activities. Finish teachers tend to offer students literary texts through the reading of books contrasting with Portuguese teachers who tend to use more texts from the school book when reading.

Conclusions

These findings raised some questions about teacher education, in Portugal, in what concerns the importance of expanding teachers' knowledge of Children's and Youth Literature and literary theory. As the study showed many Portuguese teachers admitted a limited knowledge of literature for children and youth and this fact call the attention to the necessity of filling this vacuum by reviewing undergraduate programs.

At the same time teachers should be encouraged to improve their standards to establish quality and excellence in their teaching, through the acquisition of higher degrees and giving a stronger emphasis on continuing education and life-long learning.

Not only would this acquisition develop new significative competences in teachers and positive attitudes towards reading and to literature in many ways, but would also have a strong impact in students' achievement expressed in test scores and on children's' motivation to read.

The importance of investing in teacher quality for improving national achievement is then the major conclusion of this preliminary study also validated by Villegas-Reimer, (2003:29) from UNESCO when states that:

“Successful professional development opportunities for teachers have a significant positive effect on students' performance and learning. (...) the professional development of teachers should be considered as a key factor, and this at the same time must feature as an element in a larger reform.”

Le rôle du contexte dans la psychogenèse de l'écrit – Variété interfigurale ou autocopie?

Jocelyne Cussac-Pomel

Université de Toulouse 2 – le Mirail, France

Quand on demande au jeune enfant d'écrire alors qu'il n'a pas encore compris qu'il doit coder l'oral, il invente des écritures, il forme des suites aléatoires avec les lettres qu'il connaît (Besse, 1988 ; Chomsky, 1975 ; Fijalkow et Fijalkow, 1991 ; Ferreiro et Gomez Palacio, 1988 ; Jaffré, 1989). On appelle cette conception de l'écrit, conception visuelle car l'enfant cherche à symboliser directement le sens. Ces premières découvertes à propos de l'écrit relèvent à la fois de son développement psychologique (psychogenèse) et de la sollicitation de son environnement familial ou scolaire. L'impact du contexte est déterminant car c'est lui qui procure à l'enfant le matériau pour écrire et les interactions avec les pairs ou les adultes pour élaborer des hypothèses sur le fonctionnement de l'écrit. Ce sont les recherches socioconstructivistes qui nous apprennent que les conditions dans lesquelles se trouve l'enfant qui apprend à écrire sont tout aussi importantes que la psychogenèse.

Problématique

Dans la lignée des thèses socioconstructivistes EURED¹, nous étudions le développement de la langue écrite chez l'enfant dans sa complexité dans le but « [...] de voir si l'entrée dans l'écrit est un processus unique ou est susceptible de varier en fonction du contexte. » (Fijalkow, 1998, pp.78).

Illustration 1: Julio, corpus Ferreiro

Voici la production de Julio, issu du corpus de Ferreiro (Illustration 1). Si on analyse sa production à l'aide des concepts psychogénétiques de Ferreiro, voici ce que cela pourrait donner :

Julio écrit la phrase *el gato bebe leche* (le chat boit du lait) plus longue que le mot *gato* (chat). De plus, il reprend pour ainsi dire les mêmes lettres pour écrire *gato* que pour le début de la phrase qui commence

par *el gato*. Julio semble donc savoir faire référence à l'oral au moins en ce qui

¹ Équipe Universitaire de Recherche en Éducation et Didactique de l'Université de Toulouse Le Mirail 2

concerne la quantité de lettres (beaucoup de lettres pour un énoncé long et peu de lettres pour un énoncé court). Puis, il écrit le mot *mariposa* (*papillon*) en reprenant exactement les mêmes lettres que pour *gato* plus une. Pour ce mot, nous pouvons faire l'hypothèse que Julio fait encore référence à l'oral (davantage de lettres parce que l'énoncé est plus long). Par contre l'hypothèse du référent ne tient pas : un papillon n'est pas plus grand qu'un chat. Puis, il écrit le mot *caballo* (*cheval*) en reprenant les mêmes lettres que pour *mariposa*, plus deux. Ici, c'est l'hypothèse orale qui ne tient plus, alors que l'hypothèse du référent devient plausible : un cheval est bien plus grand qu'un papillon. Enfin, il écrit le mot *pez* (*poisson*) en reprenant cette fois exactement les mêmes lettres que pour *caballo*, mais en changeant l'ordre des trois dernières. Aucune des deux hypothèses ne tient plus. Nous pouvons alors nous référer à la notion de variation interfigurale (Ferreiro, 1988) : Julio reprend les mêmes lettres dans des positions différentes pour signifier que le mot est différent du précédent.

Un tel patchwork de traitements s'accommode mal avec l'impression première que donne la production de Julio qui est dans son ensemble relativement homogène (les graphies successives ont tendance à s'allonger, la quantité de lettres augmentant d'un mot à l'autre) et suscite alors une autre interprétation. Julio n'appliquerait qu'une seule règle d'écriture pour différencier les mots : le mot suivant est plus long que le précédent. Ce type de règle ne met l'écrit en relation ni avec l'oral, ni avec la signification du mot, mais avec une tâche où toutes les conditions sont réunies pour que l'enfant puisse se référer à ce qu'il a déjà écrit afin d'écrire le mot suivant, puisqu'on lui demande d'écrire les mots sur une même feuille, les uns en dessous. Si bien que les graphies de Julio auraient sans doute, une toute autre apparence s'il devait les écrire sans voir les précédentes.

C'est précisément l'effet de la nature de la tâche d'écriture que nous nous proposons d'étudier afin d'élargir le champ explicatif des procédés d'écriture des jeunes enfants. Partant de l'hypothèse que les graphies enfantines ne sont pas composées de lettres totalement aléatoires et qu'elles varient quand la tâche change, nous pensons qu'un des procédés d'écriture que l'enfant utilise consiste à s'autocopier, c'est-à-dire à s'appuyer uniquement sur l'écrit antérieur qu'il a sous les yeux, conformément à une démarche reposant sur l'information visuelle. Autrement dit, les variations pour différencier les graphies ne sont pas réalisées uniquement en fonction de leur signification, mais elles peuvent être également dépendantes du contexte dans lequel elles sont produites. Nous développons ici l'une des questions que nous nous sommes posées : Quand il peut voir les mots qu'il vient d'écrire, le mot suivant est-il écrit avec des lettres qu'il a déjà écrites ?

Méthodologie

L'échantillon

L'échantillon est constitué à partir de 176 enfants de 4 et 5 ans, scolarisés en moyenne et grande section de maternelle, dans trois écoles (en milieu semi-urbain et urbain). Les 117 élèves retenus sont sélectionnés à l'aide d'un pré-test (écriture de 4 mots) qui vise à repérer les enfants faisant un traitement visuel majoritaire de l'écrit et utilisant principalement des lettres conventionnelles. Les 117 enfants de l'échantillon font donc soit un traitement visuel total, soit un traitement visuel majoritaire.

Le test d'écriture inventée

Les enfants écrivent une série de 4 mots appartenant au même champ sémantique et dont la longueur de la chaîne orale ne varie pas. Pour cela, nous disposons de photos d'animaux en couleur, les plus réalistes possible (avec rapport de taille approché) et illustrant 4 mots bisyllabiques. Nous demandons à l'enfant d'écrire son prénom, puis les quatre noms d'animaux proposés par l'intermédiaire des photos. Nous lui demandons d'identifier (verbalisation) l'animal et d'écrire son nom : *Ecris lapin*. Il s'agit donc d'un seul mot, non accompagné du déterminant.

Le plan expérimental

tâche	mots en liste	mots en ligne	mots isolés
mots isolés	condition exp. 1 isolés / liste 26 GS/13 MS		
mots en liste		condition exp. 2 liste / ligne 26 GS/13 MS	
mots en ligne			condition exp. 3 ligne / isolés 26 GS/13 MS

Illustration 2: Plan expérimental

l'écriture en liste est supposée favoriser l'autocopie et l'écriture en ligne est supposée neutre, n'interdisant pas l'autocopie et ne la facilitant pas non plus. Les 117 enfants sont distribués en 3 groupes composés chacun de 26 enfants de grande section et 13 enfants de moyenne section, chacun des groupes effectuant deux tâches à quelques jours de distance : un groupe écrit les mots en liste, puis en ligne, un groupe écrit les mots en liste, puis en isolé, un groupe écrit les mots en isolé, puis en ligne. Pour contrôler des éventuels effets d'ordre et d'apprentissage, l'ordre de passation des tâches est aléatoire, ainsi que l'ordre d'écriture des mots. A ces trois tâches, correspondent ainsi trois conditions expérimentales : Condition expérimentale 1 / L'enfant écrit une série de 4 mots, en liste sur une même feuille

Nous demandons aux enfants d'écrire les mots dans trois conditions expérimentales (en liste, en ligne et en mots isolés, Illustration 2). L'écriture en mots isolés exclut l'autocopie,

(consigne : *les uns en dessous des autres*). L'enfant a donc la possibilité de s'appuyer sur le voisinage visuel, dans l'axe vertical. Condition expérimentale 2 / L'enfant écrit une série de 4 mots, en ligne sur une même feuille (consigne : *les uns à côté des autres*), si l'enfant n'a pas assez d'une feuille, une nouvelle feuille est ajoutée à la suite. L'enfant a donc la possibilité de s'appuyer sur le voisinage visuel, dans l'axe horizontal. Condition expérimentale 3 / L'enfant écrit une série de 4 mots, sur une feuille différente pour chaque mot. L'enfant n'a donc pas la possibilité de s'appuyer sur le voisinage visuel. Six enfants passent des tests plus nombreux, avec d'autres mots et des entretiens plus complets afin d'étayer les procédés observés, les entretiens sont enregistrés en audio, puis retranscrits. Certains sont filmés et permettent d'analyser méthodiquement les gestes et les regards.

Résultats

De façon générale, les observations faites lors des passations nous montrent que le comportement de copie est fréquent chez les enfants qui, ne sachant comment écrire, sont à la recherche d'un modèle. Ils cherchent alors dans leur environnement proche : les affichages, les productions de leurs pairs et... leur propre production.

Les reprises de lettres

Illustration 3: Moyenne de reprises de lettres

On observe tout d'abord une tendance à davantage de reprises de lettres en liste qu'en mots isolés (liste : moy. =0,58, ligne : moy.=0,57, mots isolés : moy. =0,53 ($F(3, N=768) = 2,370$; tendance, Illustration 3). Ce résultat devient significatif pour le quatrième mot (liste : moy. =0,82, ligne : 0,75, mots isolés : moy. =0,68). Les résultats montrent donc que les enfants reprennent des lettres

déjà écrites quand ils écrivent en liste, particulièrement en fin de tâche (et particulièrement pour ceux qui font un traitement visuel de l'écrit). Ces résultats peuvent s'expliquer par le fait que l'enfant qui a une conception visuelle de l'écrit écrit selon des règles de variation interne et inter-relationnelle (Ferreiro, 1988). En éloignement visuel, il serait contraint de rechercher sans cesse de nouvelles lettres, tandis qu'en voisinage visuel et particulièrement en liste, il peut facilement varier la position des lettres déjà utilisées.

Les productions de Sajipan nous éclairent sur la façon dont la tâche influence la variation qualitative (Illustration 4).

Illustration 4: Sajipan, écriture en liste

En liste, Sajipan utilise un corpus de 9 lettres CTDVJUIPQ. Il assure la différenciation entre les écritures principalement en variations interfigurales. Pour la 1ère graphie, il écrit 5 lettres différentes CTDVJ, pour la 2ème, il reprend 2 lettres et en introduit 2 nouvelles UI, pour la 3ème, il reprend 5 lettres et en introduit une, le P et pour la 4ème, il reprend 6 lettres et en introduit encore une, le Q. A mesure que Sajipan écrit, il introduit donc moins de lettres (5-2-1-1).

En mots isolés, Sajipan utilise un corpus de 13 lettres UTVQOPRSAN dont 3 pseudo-lettres (Illustration 5). Il assure la différenciation entre les

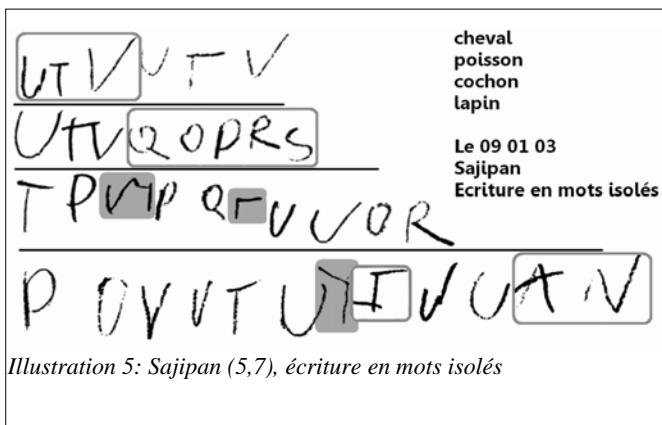

Illustration 5: Sajipan (5,7), écriture en mots isolés

écritures en changeant de procédé pour chaque graphie. Pour la 1ère, il écrit 3 lettres UTV qu'il écrit une seconde fois. Pour la 2ème, il reprend encore la suite de 3 lettres et introduit une suite alphabétique de 5 lettres. Pour la 3ème, il reprend 8 lettres et

introduit 2 pseudo-lettres. Enfin pour la 4ème, il reprend 8 lettres et introduit 1 autre pseudo-lettre et 3 lettres de son prénom JAN. A mesure que Sajipan écrit, il introduit donc régulièrement des nouvelles lettres (3-5-2-4).

L'écriture en liste lui permet de jouer avec la position des lettres alors que l'écriture en mots isolés l'incite à introduire de nouvelles lettres, au risque de produire des pseudo-lettres. Cet ajout de nouveaux signes plus ou moins maîtrisés graphiquement témoignent de la difficulté de l'enfant, en éloignement visuel, de savoir quelle lettre il peut ou non reprendre. L'enfant préfère écrire un nouveau signe pour être sûr de différencier les écritures.

Les reprises de suite de lettres

Nous observons encore davantage de reprises en liste pour les suites d'au moins 4

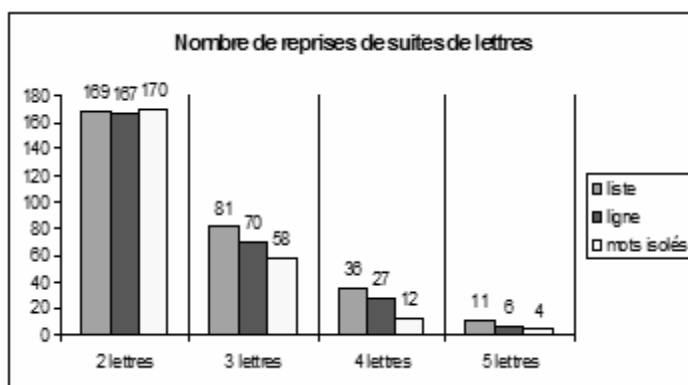

Illustration 6: Nombre de reprises de suites de lettres

lettres (liste =36, ligne = 24, mots isolés =12 (F (3, N=768) =4,406 ; $p < .05$)), (Illustration 6). L'écriture en liste favorise donc le procédé de variation qualitative qui consiste à reprendre une suite en permutant les lettres. Ce résultat peut s'expliquer

également par l'effet du champ visuel qui permet à l'enfant de reprendre facilement des lettres des graphies précédentes quand il écrit en liste. Nous pouvons également supposer que l'enfant qui reprend une suite de lettres en les changeant de position, le fait dans l'intention de différencier les graphies.

Pour illustrer ce résultat, voici la production en liste de Djamilia (Illustration 7).

Illustration 7: Djamilia (5,0), écriture en liste

Elle fait un traitement visuel majoritaire des mots, hormis pour le 1er (*cochon*) pour lequel elle écrit deux lettres/son CO, puis une suite de lettres : ARLP. Pour la 2ème graphie, elle introduit 5 lettres et reprend la suite RLP en la permutant LRP. Pour la 3ème graphie, elle introduit 1 nouvelle lettre H et écrit HZACRCCA. Pour la 4ème graphie, elle introduit 2 nouvelles lettres BD et reprend encore une suite qu'elle permute : CAHZ.

L'enfant peut aussi reprendre des suites de lettres des graphies précédentes pour composer une nouvelle graphie.

Illustration 8: Léna (5,2), écriture en liste

Par exemple, Léna profite du voisinage visuel pour fabriquer un mot uniquement avec des suites de lettres prélevées dans les graphies précédentes (Illustration 8). Elle reprend ainsi la suite de lettres QMI de la 2ème graphie et la suite EMOA de la 3ème pour composer la 4ème. Ici le procédé d'autocopie témoigne d'un niveau de conscience avancé. C'est un moyen pour Léna de répondre à l'exigence de variété

qualitative, tout en faisant l'économie de recherche de nouvelles lettres.

Les procédés d'autocopie

Quand il écrit en liste, l'enfant dispose d'une grande variété de procédés d'autocopie pour différencier les graphies.

Illustration 9: Steve (5,7), écriture en liste

La production de Steve montre à quel point le voisinage visuel peut être exploité par l'enfant en copiant sa propre production (Illustration 9). En liste, Steve produit des variations interfigurales finement différenciées en combinant les procédés d'autocopie. Les graphies sont toutes les quatre constituées du même nombre de lettres (4) et terminées par un point, mais la différence de taille crée l'illusion de 2 mots courts et 2 mots longs. Steve utilise les 3 mêmes signes ONI pour écrire les 2 premières graphies et les différencie en permutant NI en IN. Puis il utilise seulement 2 signes NU pour écrire les 2 graphies

suivantes en jouant également sur leur position pour ne pas produire la même suite. Steve recourt à toutes les ressources du voisinage visuel dans l'axe vertical : reprises de lettres et permutations, nombre égal de lettres et même longueur 2 à 2 des graphies.

Notre dernier exemple illustre la propension des enfants à écrire en liste et à s'autocopier. Samuel doit écrire les 4 mots en ligne. Il écrit la suite UVOEYYY pour la 1ère graphie. Puis, probablement à court d'idée, il pioche des lettres repérées sur une affiche de la salle *Le Bal des Animaux* pour la seconde graphie BALIDESUANM. Il écrit ensuite SUILEBDBO pour la 3ème graphie. C'est alors que Samuel écrit la 4ème graphie en dessous de la 3ème alors qu'il ne manque pas de

place pour l'écrire à côté. Il écrit les 2 lettres VO et termine la graphie en autocopie : il reprend les 7 dernières lettres de la graphie précédente en changeant leur position. Il permute les 3 premières lettres ILE en LEI, reproduit la lettre B à la même place et permute à nouveau les trois dernières lettres DBO en BDO. On voit que Samuel glisse lui-même de la ligne à la liste et que cette modification du contexte l'incite à s'autocopier. Il est vraisemblable que le comportement de Samuel soit de nouveau lié à sa difficulté pour trouver de nouvelles lettres.

Conclusion

Que les productions enfantines varient autant quand le contexte varie, relativise l'explication psychogénétique du développement de l'écriture pour des notions comme la variation interfigurale décrites par Ferreiro (1988) car nous ne l'observons pour certains enfants uniquement quand ils écrivent en liste. Ils utilisent les mêmes lettres dans un ordre différent parce que les deux graphies sont à écrire en liste, l'une en dessous de l'autre et qu'ils profitent de ce voisinage visuel pour s'autocopier. De façon générale, nos observations plaident en faveur d'un processus cognitif d'entrée dans l'écrit plus contextuel et individuel (Fijalkow et Fijalkow, 1991) qu'étapiste. Elles ont aussi des implications pour les méthodologies basées sur un protocole d'écriture inventée. En effet, la plupart de ces études privilégient, sans intention particulière, l'écriture des mots en liste, tâche qui, nous l'avons montré, favorise les comportements d'autocopie. Il y a donc nécessité d'une grande prudence dans l'interprétation de ces écritures.

Social Contextualisation Matters: Supporting Literacy with the Help of *Mentor e.V.*

Wiebke Dannecker

Ulrike Buchmann

Leibniz University Hanover, Germany

Introduction – Sharing Reading Experiences

Reading a thrilling book together, talking about words or sentences, discussing the topic of a story or simply feeling confident about understanding a text - these are fundamental experiences every young reader should encounter while learning to read. With changing family structures and media use over the past few years, this cannot, however, be taken for granted anymore.

The German results of the PISA study indicate that the social background of a child is decisive for his or her overall success at school (Artelt et.al. 2001, 127). Consequently, the question arises how to counter these unequal learning opportunities and how to move forwards with literacy as a matter of pedagogical philosophy and practice. Since this problem also pertains to other OECD-states, this is a topic teachers, politicians and researchers from countries around the world might be interested in. For instance, in April 2009, Prince Charles met with *Mentor e.V.* founder Otto Stender in Berlin to learn more about the concept behind this innovative reading programme.

Mentor e.V. is a charitable organisation that supports literacy development. The programme depends on volunteers who are willing to help socially disadvantaged pupils. Based upon the ambitious idea of one man from Hanover, the programme combines several theoretical approaches to the development of reading competence. By pairing a reading expert with a student, this programme confers the benefits associated with collaborative learning. The concept also involves embedding reading in a social context. Observations indicate that almost every child improves his or her reading competence and learning abilities in general. In addition, the children develop self-confidence in their own reading abilities.

This article gives an overview of the theoretical concepts behind *Mentor e.V.* as well as of organisational matters and the practical issues of this successful programme.

***Mentor e.V.* – from a Sparking Idea to an Innovative Concept**

Mentor e.V. was founded seven years ago by Otto Stender, a bookseller from Hanover, following findings from the PISA study that more than 40 percent of the German fifteen-year-olds do not read for pleasure. *Mentor e.V.* aims at the compensation of social disadvantages and their influence on learning abilities. During an interview in his book shop in June 2009, Otto Stender proudly told us that *Mentor e.V.* currently counts 950 members. In Hanover alone, participation rates stand at 159 schools and approximately 1350 children between the ages of 7 and 16 who are accompanied by trained mentors on their path to literacy. The concept has been taken up in other parts of Germany leading to the recent institution of a national umbrella organisation.

Mentor e.V. follows the concept of one-by-one teaching. Teachers choose those pupils who have difficulties in reading and need special support. A basic prerequisite is that the particular pupil is eager to improve his or her reading competence. Each mentor works with the given child for one hour per week for the duration of approximately six months. During this time, children receive individual responses to their reading difficulties and benefit from the time spent reading interesting books, listening to stories read out loud to them, or discussing the topic of a certain book.

For an example of a mentoring session, visit the following link: <http://www3.ndr.de/sendungen/kulturjournal/videos/kjlesehelfer100.html> (29.06.09). This video provides insights into the practical work of *Mentor e.V.*. Samir, an eight-year-old student from Albania, has reading difficulties in class. His parents do not have time to read with him in his spare time. Gerlind Fenner, a former primary school teacher, decided to volunteer in the *Mentor e.V.* programme and now meets with Samir once a week for about an hour. They meet in Samir's classroom and spend the time reading and talking. Samir may ask questions about the meaning of individual words or whole sentences, or they talk about the subject matter or problems discussed in the text. In doing so, Mrs. Fenner assists the process of reading and understanding the text. The discussions about the text reveal to Mrs. Fenner if Samir understood the text correctly, enabling her to deal with Samir's individual reading problems.

Social Contextualisation Matters

Even before children learn to read, they experience reading: in the shape of bed-time-stories, picture books or nursery rhymes they sing with their playmates. The importance of such communication prior to and during the acquisition of literary competencies (*prä- und paraliterarische Kommunikation*) (Hurrelmann 2003, 9) lies

in it being embedded in a social context. Parents talk with their children about what they just read and may discuss the meaning of a word or a sentence. During this phase of reading socialisation, reading processes are closely bound to personal relationships (Elias 2003, 59). Thus, communication about picture books, texts or songs embodies an interactive process that can be seen as an exchange of cultural knowledge, especially as far as literary stories or traditional songs are concerned. Thus, it may be argued that even children participate in the cultural discourse of a society (Hurrelmann 2002b, 14).

Similarly, post-reading communication (*Anschlusskommunikation*, a term coined by Bettina Hurrelmann), is important because it supports children's reading experiences through attention and appreciation (Hurrelmann 2004, 49). This in turn is likely to lead to an increase in the willingness to read in general. That's why, according to Hurrelmann (2004), the social contextualisation of reading can be seen as the most important parameter to influence the motivation to read and the frequency of reading. Hence, *post-reading communication* intensifies reading comprehension and motivates children to read (Rosebrock & Nix 2008, 23).

Consequently, the activity of reading may be envisaged as more than simply a cognitive process. Instead, it must be looked at in its entirety - as a personal experience on the one hand and a socially embedded activity on the other. Reading involves both affective components and the integration of world-knowledge. Therefore, reading may be understood as a combined top-down and bottom-up process (Rosebrock 2003, 170). The reader's mental construction of a text consists of his or her knowledge, experiences and emotions as well as of the information given in the text (Rosebrock & Nix 2008, 21). Additionally, readers contribute the ability to reflect upon the experiences of themselves and others.

Given that the social contextualisation of reading experiences correlates with the social background of a child, especially with regard to the appreciation of books and reading in general and the amount of books available to a child, it seems necessary that the education at school strives to compensate social disadvantages (Hurrelmann 2004, 50). However, against the background of financial cuts and growing classroom sizes, this is often too great a demand on teachers and schools. Although *Mentor e.V.* does not conceive of itself as a provider of private tuition, the *Mentor* programme does try to close the gap left behind by institutional education, through the work of ambitious individuals who take on social responsibility.

Reciprocal Teaching – Leading the Way to Reading Competence

In Greek mythology, Mentor was a friend of Ulysses helping the struggling seafarer to survive his wanderings. Nowadays, a mentor is someone who advises and helps an entrusted novice. Since learning to read can occasionally be something of an odyssey, it is quite helpful to have someone at one's side for advice and support.

Starting from the principle of reciprocal teaching and learning, *Mentor e.V.* brings together a reading expert and a novice who collaborate in order to understand a particular text, may it be a newspaper article or a children's book. The expert initiates, organizes and arranges the setting of the reading procedure and assist whenever questions or uncertainties arise by employing the techniques of questioning, summarizing or anticipating (Baurmann & Müller 2002, 45).

Based upon the assumption that collaborative learning influences the process and the outcomes of learning positively, Brown & Palincsar invented reciprocal teaching in 1982. The concept aims at the self-monitoring of the pupils' reading comprehension process (Streblow 2004, 291). The experts function as reading-masters, who show how they read and what kind of activities and strategies they use in order to understand a text. Additionally, the experts may accompany their own reading process by thinking out loud (Rosebrock & Nix 2008, 68). Reciprocal teaching is just one example out of several possible collaborative learning strategies. *Reading-pilots* (Lese-piloten) or *reading-scouts* (Lese-Scouts) similarly refer to the idea of reciprocal reading, or paired reading. However, in these cases, beginners or pupils with reading difficulties work with advanced pupils instead of trained mentors (Rupp & Boelmann 2007, 143).

To summarize, through engagement in collaborative reading activities struggling readers may increase their reading competence while experiencing the social contextualisation of reading. This is very important for the development of reading motivation and socialisation because of the appreciation of reading as a social practice in general and the development of personal reading abilities and experiences in particular. Thus, *Mentor e.V.* does not only focus on the development of reading skills. Instead, the programme takes into account the reading process as a whole, i.e. includes the personal and social aspects of it. These aspects are part of the reading competence models by Bettina Hurrelmann (2002, 2004) and Cornelia Rosebrock (2003, 2008) which were designed in response to the PISA model. While the PISA model focuses on the competencies a child should acquire in order to cope with life's future demands adequately (Artelt/Stanat/et.al. 2004, 141), Hurrelmann and Rosebrock's models stress the importance of the social contextualisation of reading. The authors argue that reading has to be seen as an important social practice every child has the right to participate in. Accordingly, *Mentor e.V.* stresses

the support and integration of socially disadvantaged children in Germany by increasing their competence in reading, followed by an increase of their learning opportunities in general.

Reading Motivation – Intrigued by Reading

Research into reading motivation indicates that the gratification of having understood a text outweighs any other gratification one might hope to achieve from reading a text, such as gathering information, or the emotional involvement in a story (Möller & Schiefele 2004, 116). Thus, the confidence in being able to read and understand a text is decisive for the motivation to read a text. The confidence in succeeding to understand a text and the self-concept of oneself as a good reader leads to better results in reading competence. By improving reading confidence, this self-concept becomes habitual and therefore a stable determinant of reading motivation.

Because the understanding of oneself as a reader influences reading motivation and the frequency of reading in general, all pupils should encounter the experience of 'I can succeed in reading and understanding a text'. Therefore, by helping pupils with their reading difficulties, mentors enable struggling readers to experience the success of understanding a sentence or a whole story. These experiences are crucial for the students' reading socialisation and contribute to the development of a habitual reading motivation.

When children become 'bookworms'...

When children become 'bookworms', they develop in language, knowledge and self-confidence (Otto Stender).

Some of the children participating in the Mentor programme encounter books on a library shelf or the enjoyment of owning a book for the first time in their life. Additionally, they experience reading not just as a task in class but as a leisure-time pursuit.

Often, the books read at school differ from the books the pupils would choose for private reading (Elias & Hurrelmann 1998, 6). It can be seen as an enormous advantage that the mentors can take the individual interests of the mentees into account. As an empirical study shows, when pupils are free to choose whatever story they like to read most, girls and boys alike would opt for texts that convey suspense or deal with adventure (Plath & Richter 2005, 74). When choosing books that are interesting to the children, their motivation to read ought to increase.

There has been no systematic collection of empirical data on the *Mentor e.V.* programme to date. However, observations based on mentors' and schools' reports indicate a substantial increase in the mentees' reading competence. Nearly all

children enrolled in the programme achieve better school grades. For instance, Vanessa (19) started from a lower education level (secondary modern school) and is now preparing to do her A-Levels. Furthermore, they develop a positive self-concept with regard to their reading abilities. The experience of reading and understanding a text on your own strengthens the understanding of yourself as a competent reader (Rosebrock & Nix 2008, 22), and the children in the programme start feeling more self-confident about their own reading competence. Thus, the concept can be referred to the reading competence model designed by Rosebrock & Nix in 2008. By accompanying the process of reading in a paired reading situation, the mentors help the students in identifying words and sentences. They guide the procedure of making sense on the level of local and global coherence of a text. With the help of additional reading tasks or by talking about the text the students learn to perceive the way a text is written on the level of super-structures. Their cognitive understanding is supported which may influence the individual reading motivation of a certain child by experiencing that he or she is able to understand a text. Gradually, the children learn to rely on their own reading abilities and develop a positive self-concept with regard to their reading competence. Finally, since the reading situation is embedded in a social context, young readers become familiar with reading as a social practice (Rosebrock & Nix 2008, 16).

Organisational Matters – Things to Keep in Mind

The *Mentor* programme for helping students from poor social backgrounds by developing literacy is financed by *Mentor e.V.* through the members' charitable contributions, and by individual sponsors. The region of Hanover funds the secretary's work. The contact between schools and mentors is coordinated by volunteers. *Mentor e.V.* also collaborates with the public libraries in Hanover, affording participants of the *Mentor* programme the opportunity to hold books for a longer period of time.

In order to increase the public visibility of the organisation and the programme, Otto Stender has asked prominent figures in public culture for their support. Thus, for example, Doris Dörrie, a famous film director, became one of the patrons of this programme. The programme recently won the Family Award of the Ministry for Working and Social Affairs.

The mentors in the programme work on a voluntary basis in close collaboration with the teachers. They are interested in helping socially disadvantaged children and are willing to take on responsibility for the literary development and the reading competence of the children entrusted to them. Working as a mentor does not require much time. Mentors are asked to be available

to meet once a week with their mentees for about 45-60 minutes. The mentoring continues for at least six months. Mentors are trained at special seminars that are offered by the Academy for Reading Development (*Akademie für Leseförderung*) in Hanover. These workshops focus on the theoretical background of the reading process and recommend appropriate texts as well as providing exercises, work sheets and other materials.

A brochure entitled *Eine Idee macht Schule* and a flyer (both in German), as well as a dedicated website (www.mentor-leselernhelfer.de) can provide further information about the project's aims, results so far and organisational matters .

Conclusion – Spreading *Mentor e.V.* around the World

Starting from the ambition of a single man to support struggling readers the concept behind *Mentor e.V.* can be regarded as very convincing since it is firmly based on current theory. As argued above, the social contextualisation of reading in particular seems to be an important factor for the improvement of the children's reading abilities. Time spent reading also contributes to children's understanding of being embedded in society's cultural knowledge and practice. Almost incidentally, young readers also gain a habitual motivation to read. The empirical data gathered so far indicate that the reading programme is indeed very successful.

Although the problem of low literacy does not apply to all OECD countries in equal measure, it seems beneficial to spread the concept of *Mentor e.V.*. The idea of volunteers working in schools to help children learn to read could be worth disseminating against the background of financial cuts in the education system. With the help of charitable organizations such as *Mentor e.V.*, education can become accessible and affordable for all children. This serves to equalise the learning opportunities of every pupil independent of his or her social background.

To date, there are few empirical data about the success of this concept available. Given the *empirical turn* in the field of teaching and learning, society's demands with regard to the effectiveness of theoretical implications have increased. Thus, further academic research could provide empirical data that proves the theoretical claims discussed in this article.

Playing with phonics fast and first: mixed messages in the teaching of early reading in England's primary schools

Henrietta Dombey
University of Brighton, UK

Introduction

England used to be noted for the variety of its practice in the teaching of young children, particularly in the teaching of reading. But for the last twelve years the teaching of reading and writing in England's primary schools has been tightly prescribed. Governmental agencies have not just laid down what children should learn in general terms but have closely specified, term by term what children shall be taught, at each of three levels of word, sentence and text, in lists containing as many as 23 items per term for a single level.

The testing that goes with this 'Primary National Strategy' has created high levels of anxiety in both teachers and children, particular in poor urban areas, where children's scores stubbornly refuse to rise. Concern has been voiced about such matters as the teaching focus on extracts rather than whole texts and the loss of creativity in primary classrooms. Those in charge of the Primary National Strategy have responded by loosening the prescription somewhat, and asking for teachers' classroom plans to extend over a longer timeframe.

This paper explores the effects of these pressures on two classrooms in a school in the south of England. It opens with a snapshot of literacy teaching in a Reception classroom in June 2008, then sets this against the bigger picture of England's PIRLS scores. Government moves since 2001 are then presented and their effects on Foundation Stage Classrooms, such as those examined in this paper, are discussed. The paper then turns to the inherently problematic nature of learning to read in English, before presenting a possible way forward.

Snapshot 1: working with letters and sounds in Reception

We are in the Reception class of a primary school in a between 4 and 5 years old. This is the last year of the Foundation Stage, which spans the voluntary nursery years (from 3 up) and Reception. It is conceived of as a separate stage from the rest of primary education, in principle to ensure that these very young children are taught in an age-appropriate way.

This school is not in a wealthy area and it scores high on the official index of social deprivation. It has also seen much immigration in recent years: the children in the school have 33 home languages between them. But it has a stable staff. It is

now early June, just after the summer half-term, and these Reception children have been in school since September, so they have had time to get to know each other and their teacher and her concerns. The children are well practiced in phonics, which, for this school as for most others in England, is a major cause of concern.

As we look around the classroom, we can see that it is well supplied with electronic equipment: the electronic whiteboard is a central feature and two computers are available for use by the children. Books are less evident, although there is a small bookshelf in a corner.

Figure 1: Reading words from the seashore

In the two and a half terms, which have stretched over some nine months, that these children have been in school, they have been taught:

- three letters a week in the autumn term
- blends and digraphs since the new year (e.g. 'cl' and 'sh')
- to blend the phonemes the letters represent to form words (e.g. sh-e-ll)
- to split spoken words into phonemes and spell them
- to recognise on sight 30 'tricky words' – high frequency words with irregular spelling (e.g. 'the' and 'said').

Yesterday they had a trip to the beach, so today their teacher has been reading them a 'big book' about the beach. The focus is on word identification. As we watch, they are working with the words 'stick', 'stone', 'starfish', 'shell', 'seaweed' and 'feather'. Despite all their phonics training, they seem to be having problems and need considerable prompting to identify these words.

Figure 2: Writing words from the seashore

Miss X announces that it's time for writing. The children are split into groups of five, with each group sitting round a table, although the children work individually. They do not appear to have a purpose for this writing, other than pleasing their teacher. Each child has to list at least two objects the waves bring to the shore, on a sheet where the teacher's writing says: "The waves come in. They bring me ...". With some prompting and reference to words on the board, they all manage to do this.

So what have these children learned?

- They children are 'further on' in their phonics learning than their predecessors were at a similar age, only a few years ago.
- They are confidently handling consonant digraphs, and some can blend consonants to 'read' and write words such as 'glad' and 'trip'.
- They have also learned a number of 'tricky words', such as 'the' and 'was'.
- They have not been taught to look for rhyming patterns in words, or to guess from context.
- They have learned that reading and writing are more about getting it right than about making meaning from text.

But they have also had other experience of reading and writing. They have heard their teacher read a story each day and have taken at least three books home every week to share with family members. They have not made much use of the books in the classroom book corner. Nor have they made much use of the writing table, in principle open for them to use in their free time. Perhaps they have not learned that reading and writing can be used for their own purposes. But there has been some spontaneous writing – in the role play area, which is currently a café, we can see notices saying 'open' and 'no smocig'.

The bigger picture: PIRLS 2006 results

England did not do well in the PIRLS 2006 survey. England's average scale score for reading dropped to 539 (from 553 in 2001) and her rank order fell to 13/29 (from 3/36 in 2001). In percentage terms England's drop in reading score was exceeded only by Romania and Morocco, while 13 countries improved their scores. The fall in England's performance was evident across the ability range (Twist et al., 2007).

The figures for attitudes to reading of England's children are particularly shocking. Only 40% had a positive attitude to reading, while 15% had a negative attitude (a decline from 44% and 13% in 2001). This meant that England came 23rd from the top, out of the 29 countries. Attitudes matter. As Twist et al. observe: "... there is a positive association between attitude to reading and reading attainment." (Twist et al., 2007, p.v).

Governmental initiatives

Yet there have been governmental moves to respond to earlier indications of problems of attitude and narrowness of expectations. Since 2001 there have been official moves to: place more emphasis on creativity in education, urging schools to "be creative and innovative in how they teach and run the school." (PNS, 2003, p.4) and also to persuade children to read more through the promotion of reading for pleasure and development of a reading culture (www.literacytrust.org.uk/readingconnects/).

But the Government has also placed an increasing focus on the technical aspects of learning to read in the early stages. It commissioned and accepted *The Rose Report*, a review of the teaching of early reading, led by Jim Rose HMI (Rose, 2006). This concludes that by the time children are five years old they should have experienced "high quality, systematic phonic work...preceded by pre-reading activities". *The Rose Report* also states that "The knowledge, skills and understanding that constitute high quality phonic work should be taught as the prime approach in learning to decode (to read) and to encode (to write/spell)." So the governmental messages have been mixed.

A detailed guide to phonics teaching for children aged 4 and up, *Letters and Sounds* (PNS, 2007), has been sent to every primary school. This has been supported by extensive In-Service work on how to implement it in the classroom. Phonic knowledge has been included in the *Early Learning Goals* for children in the Foundation Stage (aged 3 – 5 years). These 'goals' specify, for example that children at the end of the primary school Reception Year (i.e. from 4 years 11 months to 5 years 10 months old) should:

- hear and say sounds in words in the order in which they occur,
- link sounds to letters, naming and sounding the letters of the alphabet.

Now the government seems to be changing direction:

“the next stage in improving schools will be based on a much more tailored approach” (DCFS, 2009).

This means that they propose to close down the Primary National Strategy. However, every primary school will still be expected to teach daily ‘literacy hours’. And “in the early years, centrally funded support may need to continue.” (DCFS 2009)

The effects of these developments on Foundation Stage classrooms

These days, reading and writing are primarily taught and learned as technical exercises. ‘Sounding out’ unknown words letter by letter is the only permitted approach to identifying words. To do this, English spelling is presented as a complex set of sound-symbol relations at the level of the phoneme, with some additional ‘tricky words’. And becoming an independent reader is presented as a matter of learning and following the phonic rules (and some ‘tricky words’).

Is this the way to reverse the falling PIRLS scores?

Contrary views

The last analysis of the 1997-1999 data of the large EPPE study has shown no positive association between lessons in reading and writing for 3 to 5 year olds and their subsequent scores on literacy tests at 6-7 (Curtis 14.7.08). Strong protests have been voiced by professionals in Early Years education asking for these compulsory learning requirements to be changed to voluntary guidance.

“Young children should also have the right to be protected from an imposed system which harnesses their development to prescribed targets, and which may well force them into inappropriate early learning.” (Letter signed by over 30 individuals distinguished in the fields of early education, children’s literature and children’s mental health. *The Times* 24.7,08)

Learning to read in English is problematic

One possible reason for the governmental emphasis on early literacy learning could be a recognition that learning to read in English is not easy. If it takes longer than learning to read in Italian, for example, it could be right to start earlier. But we should first examine what is special about English. There are two principal aspects to this difficulty. The first is the phonological complexity of English. Where Spanish and Italian syllables tend to be C+V in structure (e.g. ‘ca/sa’, ‘vi/no’), English syllables

(like German and Polish) tend to be complex (e.g. 'string', 'glimpse'). This means that it is harder for children to develop the phonemic awareness that is necessary for learning to read.

The second difficulty is the orthographic inconsistency of English. Common words use:

- multiple spellings of the same phoneme: 'sh' in 'sheep', 's' in 'sure', 'ss' in 'passion', 'ch' in 'chef', 'c' in 'ocean', 'ti' in 'station'
- multiple pronunciations of the same spelling: 'a' in 'tap' and 'tall' 'one' in 'lone', 'gone' and 'one', 'read' in 'read' and 'read'

You might consider how many the letter 'a' represents in the sentence "*Many cats were falling past another gate.*"

The implications for teaching young children to read in English

The orthographic inconsistency of English is recognised in the government's *Letters and Sounds*, which has a helpful set of tables to show the major sound/symbol variations. But the implications for teaching are not explored. Like many others around the world, Spanish and Italian children develop awareness of phonemes easily and have a consistent spelling system to learn. So in Spain and Italy, when you are teaching children to identify written words, it makes sense to focus chiefly on matching letters and sounds.

But in England, we need to think carefully about how we teach children to read English, not pretend it's like Italian.

Snapshot 2: 'sounding out' words in Year

Let's visit the Year 1 class next to Miss X's Reception class. The children are a year older, between five and six. Their teacher has a poem for them to read on a large piece of paper, also about treasures from the sea, this week's school theme. With the perhaps misguided intention of making the task easier, their teacher, Mrs Y, is taking them through the hard words before they attempt the poem as a whole. She's helping them to 'sound out' the word 'treasure'. As becomes painfully clear, the vowel letters break the rules the children have learned and the 's' represents neither the /s/ of 'sit' nor the /z/ of 'is'. So after correctly identifying the /tr/ sound, they stumble through this hugely difficult word, corrected at every stage by Mrs Y, who ends the process by declaring despairingly of the final 'e' "I don't know why that's there!".

Figure 3: Tackling difficult words grapheme by grapheme

You have to know very many complex rules before you can work out 'treasure', if you rely on synthetic phonics to do it. But these children are familiar with the word 'measure' from their activities in numeracy. If they had been allowed to use analogy with this familiar word, 'treasure' would have been much less problematic.

Such problems are far from unique to this classroom or this school. Throughout England, children are being taught to the many ways in which individual phonemes can be represented in graphemes (e.g. the phoneme /f/ can be represented by the graphemes 'f', 'ph' and 'gh' for example). They are taught to identify written words grapheme by grapheme. Teachers and children who stick rigidly to this recommended approach find themselves in the kind of mess shown in Mrs Y's classroom

Ways forward

Rhyme and analogy as a supplementary strategy

Many of the regularities in English orthography operate at the level of rhyme. Many words that can't be 'sounded out' in classic fashion, phoneme by phoneme fall into rhyming groups, with consistent spelling patterns, such as 'fast' and 'past', 'cold' and 'sold', 'measure' and 'treasure'.

'Flexible unit size'

Unless they are very obedient, children learning to read in English wisely use more strategies than 'sounding out'. Brown and Deavers (1999) claim that, unlike those learning to read in more consistent orthographies, children who learn to read effectively in English adopt 'flexible unit size' strategies. They work some words out letter by letter, and others using larger units, such as the rimes 'ast', 'old and 'easure'. But most children in England have to do this for themselves: they are not taught it in school. Goswami argues that "English children might ... benefit from 'flexible unit size' teaching". (Goswami 2008 p. 71)

Guessing in context

A young reader may be defeated by a word such as 'lose', since 'sounding it out' doesn't work and there's no appropriate analogy. A careful guess in context is likely to help. Re-reading up to the problem word with an expectant intonation, and articulation of the initial letter can often help. So can reading past the problem word, before returning to it. However, guessing should be guided by the beginning letters of the word and by careful consideration of the fit with the established context. But, as decades of work by Ken and Yetta Goodman have shown, guessing is essential to learning to read in English (Goodman, 1967; Goodman and Goodman, 1977; Goodman et al., 2005).

Tackling the problem of attitude

England's *Sure Start* and *Book Start* programmes for pre-school children have put books into the homes of all involved. Their parents have learned to enjoy sharing books with their children. We have an abundance of wonderful books for children – old and new. But our ten year olds increasingly dislike reading (and probably writing)

We need to make our primary classrooms places where young children read for their own purposes and extend their enjoyment of life, their knowledge of the world, the lives and dreams of others, the hopes and fears we share and their sense of their own identity, as well as their technical skills.

Young children should experience literacy as a means of enjoying life, communicating with others on matters important to them, finding out about the world and how it works, organising their path through it and engaging with imaginative worlds.

Otherwise England's three, four and five year olds will learn that:

- Learning to read and write is a process of learning rules rather than thinking for yourself.

- Reading and writing are a set of skills and activities you master to make your teacher and parents happy.
- Written texts exist to exemplify phonic rules and test your knowledge of them.
- Meaning, imagination and pleasure have little place in literacy learning.
- School is a boring and confusing place, where you are burdened with tedious and sometimes very difficult tasks.

This adds up to a need to develop 'engaged readers'. These are intrinsically motivated to read for knowledge and enjoyment. They read frequently and widely. They read purposefully and for meaning, believe in their own capability, taking responsibility for their understanding and learning (Guthrie and Cox, 2001). High levels of reading engagement can mitigate the effect of socioeconomic status on attainment, particularly impacts on the attainment of pupils from the lowest socioeconomic groups (Topping et al., 2003). Reading engagement also affects academic attainment across the curriculum. Avid readers develop a better vocabulary, a wider general knowledge and better verbal skills. They 'punch above their weight' across the whole curriculum, outperforming peers with the same basic cognitive ability but who read less widely. (Cunningham and Stanovich, 1998).

Final words

We must support children in a way that fits English spelling. We must also work to help our children become engaged readers and writers, for whom literacy is an integral part of their lives. Otherwise England's ten-year-olds are doomed to slide down the international league tables in terms of both their competence and their attitude to literacy.

Explorations of teacher educators forming a community of inquiry.

Susan E. Elliott-Johns

Faculty of Education, Nipissing University, Canada

“A shared vision is not an idea...rather, it is a force in people’s hearts... at its simplest level a shared vision is the answer to the question, “What do we want to create?””

Senge (1994) (p. 206).

Understanding Collaboration in the University Context (Faculty of Education)

Duffy (2002) identifies teacher education in the university setting as presenting some specifically contextual constraints that impact on the work of teacher educators. For example, he cites the need for different professors teaching courses within and across teacher education programs to present cohesion and to be “on the same page” in terms of approaches to philosophy, theory, and ideology. This became evident to each of us, albeit informally, early on in our experience as a language arts teaching ‘team’. We quickly recognized that the kinds of opportunities to work collaboratively, which we had previously taken for granted in our former professional lives, were not nearly as prevalent at the faculty of education.

Being three very experienced teachers and school administrators turned full-time teacher educators, it is perhaps fair to say we consciously straddle two cultures – that of K-12 school systems and that of higher education (Goodlad, 1990). The ongoing evolution of our professional identities, and some of the related dilemmas, is something with which we continue to struggle (and grow). Dilemmas for teacher educators include problematic issues inherent in collaboration and the building of consensus about purpose and goals. Kagan (1990) identifies these problematic issues, for example, the pluralistic nature of the professoriate, the importance of academic freedom, and concerns around loss of autonomy for individual teacher educators. Tensions of this nature have occurred in our own work. However, they have not presented serious concerns in that we consider we are able to *choose* to collaborate. Working together, we have willingly *shared* responsibility for the design and implementation of our common course outline. It is probably fair to state that Kagan’s observations also make a lot of sense to us in the ‘bigger picture’:

If we are to reform teacher education, embedding it in coherent programs, education faculty may have to merge their subjective definitions of teaching and learning; collaboration rather than isolation may have to become the norm

(Kagan, 1990, p. 50)

Over time, we began to acknowledge, more formally, that increased cohesion through collaboration also provided ways for us to promote and facilitate the construction of our pre-service teachers' *own* coherent models of how *they* might teach in schools. We wholeheartedly agree that, "Cohesion doesn't just happen. It takes faculty time and energy" (Duffy, 2002, p.231). By taking a collaborative approach to closely examining not only *what* we were teaching in our language arts courses, but *how* we were teaching, we have been able to (i) foster increased program coherence in our language arts course and (ii) to begin promoting the kind of 'cohesion' between ourselves as members of faculty that Duffy talks about. Our collaboration continues to support the investigation of questions that assist us in understanding much more about our development of pedagogy (as individuals and collectively), i.e., "*teaching and learning about teaching*" (Loughran, 2006, p. 6).

Our individual professional histories include multiple opportunities to work collaboratively with others in a variety of school contexts in communal stewardship of the language and literacy education of public school students (Graham et al, 2001). Furthermore, Darling-Hammond's (2000) understanding of the teacher educator's role resonates with 1) our own views of "developing the capacity to inquire sensitively and systematically into the nature of learning and the effects of teaching" (p. 170), and 2) our experiences of working in diverse "learning teams" where small, collaborative groups of teachers work together in a disciplined way to focus on a central issue over time (Hord, 1997). We each bring individual histories to working collaboratively in our "new" professional context at the university, and rich experiences as former teachers, school administrators, and part-time teacher educators have resulted in our sharing many of the following characteristics (adapted here from Friend and Cook, 2000):

1. A wide range of experience, prior knowledge and skills.
2. An acquired set of ideas, beliefs, values, passions about learning developed over years of successes, dealing with challenging issues and, at times, failure.
3. A need to set goals and find solutions.
4. A flexible learning style gained through the need to adapt to differing learning and teaching contexts, changing curricular and program directives, and varied personalities of colleagues.
5. High expectations for improvement of student learning and teaching methodologies.
6. A realization that we were already very busy, our time filled with planning, teaching, researching and service within the university community.

7. Motivation to continue learning and to be on the leading edge of contemporary educational practice, in order to be accountable for our students' learning.

As new members of a faculty of education, we share a common interest in pursuing the self-study of teacher education practices in the university context. Continuing our respective 'journeys of learning' is a priority; developing and enacting pedagogy for teacher education (Russell & Loughran, 2007), that *includes* collaboration, is integral to that priority.

How did our collaboration come about?

Initially, our decision to collaborate began with the revision of our course outline for a Junior/Intermediate language arts course (Junior/Intermediate, or 'J/I', being school-age students in grades 4-10 in Ontario). Collaboration also grew directly out of questions we had about best practices for teaching *and* 'learning about teaching' (Loughran, 2006). Fundamentally, we each held social-constructivist beliefs based on our knowledge and experiences as teachers and school administrators, and our continuously evolving pedagogy as teacher educators. We believed that a collaboration of this nature could only strengthen and enhance the J/I language arts course, in keeping with the university context of constructivist approaches to education. Therefore, our idiosyncratic expertise and skills were consistently utilized within a collaborative framework. Like Lyons and Pinnell (2001), we saw that:

“... our past experiences and beliefs influence how we interact with others, learn new ideas, and discard or refine old ones. Our personal perspectives are shaped and changed as we engage in cooperative social activity, conversation, and debate with others around common purposes, concerns, and interests. In the process we build new knowledge and extend our understanding” (p.4).

As a result of extensive discussions during our collaborative work, we each brought implicit understandings of collaborative processes from our collective knowledge and experience. Interestingly, we did not initially *plan* to collaborate beyond revisions to the course outline. Rather, our energy and enthusiasm for engaging in further collaboration surfaced and evolved as we progressed in our work together on a more extensively *re-created* course outline. It became increasingly evident that our diverse backgrounds, knowledge and experience, *and* our willingness to collaborate as teacher educators, provided invaluable resources for ongoing work of this nature as members of faculty. **Alison:**

“... Although we had met on occasion the year before to share lesson plans and individually write others, we had not developed a 'collaborative culture' – rather, I think, we were getting to know each other and share what we believed about pre-service education in language and literacy. At our first meeting to discuss collaborating, I think we were open

and willing to talk at a deeper level and reveal underlying beliefs. An atmosphere of trust and relative comfort with my colleagues emerged for me, and I felt we had risen above professional competitiveness, posturing and suspicion. For the first time since beginning to teach at the university level, I felt part of a group of educators, albeit small, who had expressed a common need to collaborate for the benefit of pre-service teachers in the language arts program. Through this collaboration with my colleagues I was part of something larger and more powerful than myself and my (individual) efforts; the collaborative process and its developing synergy broadened and deepened understandings of our responsibilities as teachers (and researchers); we identified essential learning about language arts for teachers entering contemporary J/I classrooms; and, perhaps most significantly, recognized that we were committed to presenting a cohesive and relevant course of study....

A priority was ensuring that pre-service teachers in our classes were receiving cohesive messages about language and literacy education (theory), and experiencing effective pedagogical instruction about language arts (practice) for contemporary classrooms. Furthermore, we wanted to facilitate more effective 'bridging' of theory and practice as they constructed their own knowledge, skills, and instructional strategies consistent with the approach of the Ministry of Education in Ontario:

"Literacy in the twenty-first century involves not a single skill, but a complex interaction of skills and resources that the literate learner draws upon to make meaning from texts of many types..."

Literacy for Learning: The Report of the Expert Panel on Literacy (2004), p. 8.

Therefore, our focus became working together on a reassessment of both content *and* implementation of the J/I language arts course. As a team we worked to foster and increase collegiality in order to a) collaborate, plan and develop a more cohesive course outline, specifying the essential content to be covered; b) include relevant resources and course readings; and c) explore a wide range of issues related to the implementation of an effective teacher education program (e.g., offer rigorous and contemporary course content, explore ways to motivate the disinterested adult learner, promote more effective teaching methods for language arts classes at the faculty, and incorporate more effective uses of technology for teaching and learning). The results of our inquiry, essentially framed by the collaborative processes that brought us together, resulted in a substantial revision of the entire course outline.

Social-constructivist theories of teaching and learning provide a firm foundation for *thinking* about teaching and learning language arts, and we believe experiential learning about current approaches to assessment and evaluation must be woven into topics presented throughout the year. Figure 1 represents an overview of our collaborative 'work in process' as we began to identify and discuss essential characteristics of the course – and how we might best present these essential understandings in our classes. Fig.1 (as adapted from colleague Alison Bell's work),

provided a focus for discussions about how we wanted to further understandings of *learning about teaching*. This framework was utilized throughout the year in order to assist our pre-service teachers in making more explicit ‘connections’ between *theories* and *practices* in teaching and learning.

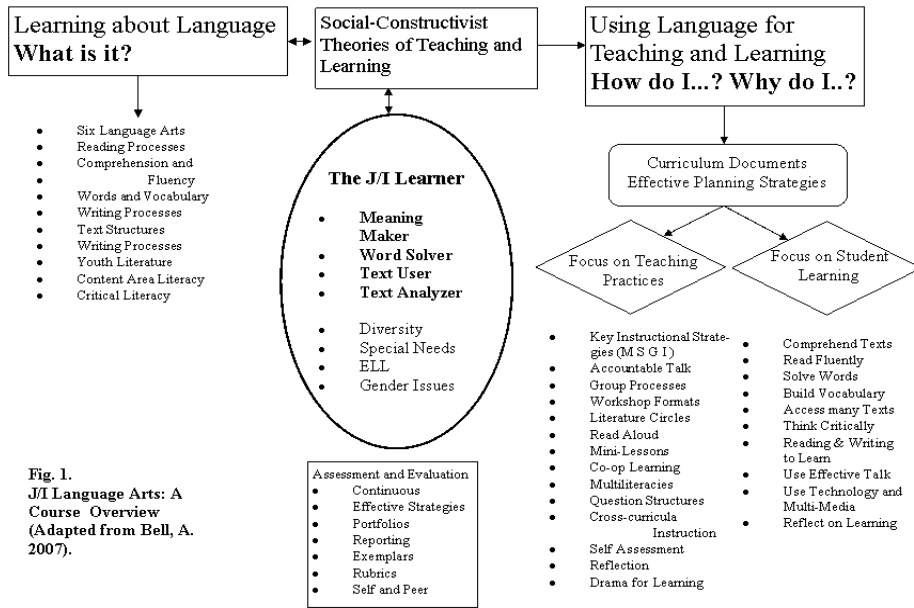

Fig. 1.
J/I Language Arts: A Course Overview (Adapted from Bell, A. 2007).

Fig. 1: Essentials of Teaching & Learning for J/I Language Arts: An Overview

Both dialogue and written reflections served to reveal our shared dissatisfaction with a number of areas in the course outline we had ‘inherited’ as new faculty and, most importantly, our shared interests in re-designing key elements of the course. Specifically, we saw the need to re-conceptualize the program and to teach a course of study that both reflected **current** perspectives *and* attended more closely to the preparation of teachers of J/I language arts for **contemporary** classrooms. For example, we wanted to create more frequent opportunities to spend time in class: a) developing participants’ explicit understandings of critical connections between research and practice; b) developing better understandings of the six essential language arts: reading, writing, speaking, listening, viewing and representing (The Ontario Curriculum, Grades 1-8, 2006); and c) developing repertoires of instructional strategies along with knowledge of related resources for teaching and learning at J/I

levels. As a result, we had to carefully consider what we might do differently in order to try to locate and 'free up' this time in our classes.

Two questions essentially guided and shaped this inquiry: 1) What kinds of issues/concerns are reflected in our collaborative work? and 2) What can we learn from this experience?

Methods

Overview

Our community of inquiry (three language arts professors working collaboratively), began quite informally as we worked together to revise and update the course outline for language arts education that we teach. We are responsible for seven J/I class sections (i.e., Junior/Intermediate, which means Grades 4-10 in Ontario), with between thirty-five and forty teacher candidates in each section. The pre-service teachers in our classes all hold an undergraduate degree, and are completing their B.Ed. degree in a 1-year 'consecutive' teacher education program. The J/I language arts course is a major component of the B.Ed. program, requiring 4 hours of classes per week over 15 weeks (a total of 60 hours during both Fall and Winter terms).

Participants

Taken together, our teaching and administrative experience in K-12 schools exceeds a total of fifty years. However, when conducting this inquiry, the three of us had only taught at the same faculty for less than five years (Anna-Marie, four years; Alison, three years; Susan, two years).

Data Collection & Analysis

During the academic year, 2007-2008, the three of us met regularly (usually 1-2 times a month), to discuss revisions to the course outline, and reasons why we felt these specific changes were necessary. Informal notes recorded the substance and direction of these meetings. Gradually, a 'community of inquiry' began to evolve, even though this had not been a formalized intent when we started meeting. As a result, towards the end of the year our conversations were also tape-recorded and transcribed for analysis, and we shared written vignettes that explored our individual perspectives as participants in, what became, the inquiry reported here.

Significant patterns and themes emerged in the data collected and analyzed for recurring concepts, phrases, connections to critical issues, and discoveries resulting

from our collaboration. Illustrative excerpts included in this article were drawn directly from the data in transcriptions of conversations and written vignettes.

Results

What kinds of issues and concerns were reflected in our inquiry?

Through discussion of our own practices it became evident that we wanted to ‘debrief’ and share ideas about what had gone well the previous year (i.e., when all three of us were teaching the same course simultaneously for the first time), and to explore ideas about what we’d like to change. **Susan:**

“We wanted to revise the course towards what we saw, individually and collectively, as both a relevant and manageable program of studies in the time available. For example, in designing and teaching a relevant and rigorous program of study tailored to prepare J/I teachers of language arts (Grades 4-10 in Ontario), what curriculum **content** constituted ‘essential learnings’? required ‘mastery’? was merely ‘worth knowing’? And how could we more consistently *engage* our students and bridge relationships between relevant research and practice in our language arts course?”

Frequent discussion took place regarding the selection of relevant assigned readings, and the promotion of increased engagement in more meaningful learning experiences related to those readings (L’Allier & Elish-Piper, 2007). While aware of the laments of many of our students who experienced difficulty finding time to read between classes, we also wanted to address their concerns in constructive, supportive ways that promoted what we saw as essential independent study (*beyond* the time available in class).

We delved further into shared perceptions of the need to increase opportunities for more interactive class activities and assignments. Working together as a team clarified our individual efforts to actively promote and encourage similar ‘communities of inquiry’ in our classes, through both the revised course design as a whole, *as well* as in our own approaches to teaching and learning. **Alison:**

“Synergy developed quickly. (We) identified common purposes in a) re-development of the course outline to reflect contemporary issues, the logical development of content knowledge, sequential readings and relevant assignments; and b) to promote and model appropriate teaching strategies in language arts classes at the faculty, to maximize learning for all of our students..... exploration of ideas revealed our individual beliefs and understandings about language learning in the J/I context, as we began to “search each other out” for common beliefs, knowledge, and attitudes. Over time, we discovered we had much in common during our productive exchange of ideas which, in turn, served to enhance re-development of the course outline, the assignments, evaluation criteria and processes, and new directions for implementation of content material...”

Pragmatics related to working collaboratively at the faculty were frequently front and centre in our discussions. **Anna-Marie:**

“One thing I really felt was missing from the J/I language arts department was discussion and sharing of ideas about the actual content of what was being taught in our course (and why)... Teaching is often a solitary endeavour, and it is especially easy to fall into that trap in the university setting as we all teach at different times and on different days. We don't have common times to meet for lunch or even a coffee break, and it's easy for weeks, even months, to pass without seeing each other. To me, the collaborative nature of this little group we've formed is exhilarating.”

Many creative, exciting and innovative aspects of our collaboration as teacher educators began to surface almost ‘intuitively’ as we worked to surmount these logistics (e.g., no common lunch breaks). We began making it a priority to set time aside to meet and talk. Goals set were far less likely to be accomplished without time and other important factors such as our individual self-discipline (e.g., commitment to task), and collective organizational skills (e.g., effective time management, availability to meet, abilities to meet deadlines). In our experience, shared leadership roles evolved over time – and, at times, almost naturally. **Alison:**

“Each member of the collaborative team emerged as a particular leader. Susan was the initiator, organizer and coordinator of our meetings, deadlines, email communications and the process in general. She brought forward important ideas to focus our thinking, researched relevant and current research articles to supplement the course text. She often played “devil's advocate”, raising pertinent questions and thus further challenging our thinking. Anna-Marie brought a longer history and experience with the J/I language arts course at our university. She focused on program delivery and how we could incorporate more effective instructional strategies into our practice. My own role evolved as that of clarifier/connector of ideas, and increased coherence and understanding.”

In retrospect, certain characteristics of our collaboration contributed to accomplishing success when we felt challenged by contextual constraints. For example, time to meet, talk, and plan together is *always* hard to find. So we agreed to do the best we could by making a firm commitment to our collaboration and, literally, allocated time at *regular* intervals to meet, talk, and listen to one another *in person*. We still had to utilize technology frequently (e.g., e-mail and telephone) to sustain communication and move the project forward when it was *not* possible to meet face-to-face. But being prepared to consistently problem-solve around those ever-present ‘logistics’ across busy personal and professional lives, *and* maintaining a priority on reaching consensus on issues/ideas/directions under discussion, emerged as very positive and collegial characteristics of the group. **Susan:**

“I think our ability to work so successfully as a team is, in part, generated by all three of us recognizing the value of reflective practices and teachers as researchers. We each bring diverse knowledge, insights and expertise, varied research interests, and distinct teaching/learning styles to our ‘community of inquiry’, and we continue to learn from, and about, each other. I perceive the shared commitment to working together as providing the foundation for our individual differences as strengths. The synergy present in our collegial approaches to researching our teaching generates rigorous thinking about ways to *continuously* improve our work as teacher educators. For example, respect for the

contributions each of us bring to the joint enterprise of inquiry makes working together far more (satisfying) than “re-inventing the wheel” separately. We regard working *together* as making much more sense to us. Beliefs and common interests in the need for enthusiastic teachers to *model* effective literacy practices in contemporary J/I classrooms clearly drives many of our own instructional decisions as teacher educators – and also results in efforts to explicitly model similar practices in our language arts classes at the faculty...

During our collaboration we drew on technical support from colleagues in our Faculty and Administrative Support Services (FASS), and took every opportunity to tap into their specific expertise. For example, experts in course web-site design became integral to ensuring access to teaching and learning *during and beyond* actual class contact time – something we saw as essential to effective revision and re-presentation of the course. Increased integration of technology into course content and design, with the creative and technical support of our colleagues, only enhances our knowledge, skills, abilities and attitudes as teacher educators.

What have we learned from this experience?

Susan:

“As a direct result of our collaboration this year, I have continued to learn a great deal about teaching and learning in general as well as, specifically, about processes of inquiry in teacher education. Personal/professional reflections contributed a great deal to challenging my thinking about learning and teaching and my pursuit of ‘self-study’. Suffice to say, I am really looking forward to continued dialogue with my colleagues next year as we ‘test-run’ the revised course design and *continue* to discuss refining it, especially in the light of feedback from our pre-service teachers.”

In addressing the question, “*What have we learned?*” as comprehensively as possible, while recognizing our collaborative work as teacher educators is still very much ‘in process’, we notice that patterns and themes in the data were highly consistent with key characteristics of collaborative learning groups (Lyons & Pinnell, 2001):

1. Trust. We developed an unexpressed trust – we believed what we were doing was important; that we were confident our knowledge and expertise would be recognized and appreciated by each group member; that what we had to contribute would be listened to and considered with a professional stance; and that new directions would be a collaborative effort (e.g., that we would successfully reach consensus after dialogue and debate). Initially, we worked together tentatively but, as time progressed, each member revealed specific thoughts, experiences and ideas that initiated deeper conversation in an increasingly tangible atmosphere of trust.

2. Flexible leadership. Leadership within the group revolved quite naturally, depending on who was presenting an idea or direction. While this worked effectively, there was a need for someone to initiate and maintain 'housekeeping' (e.g., times to meet, setting deadlines, bringing discussions to a conclusion, or stating a specific position for consensus building). This role usually fell to the individual who had the specific qualities and skills to sort through the ideas and themes to lead to a conclusion all could agree upon. In this way, leadership roles *fluctuated* according to whom, at different times, *had the clearest notion of what we wanted to accomplish*. This kind of flexible, diverse leadership was critical to the success of our group collaboration because it encouraged sharing and respect for individual ideas that emerged over time. In this way, singular perspectives seldom dominated discussion and/or direction of the project.

3. Shared Responsibility and Credit for Success. Due to busy personal and professional lives, it was often difficult to meet in-person to discuss, write, organize, collate, and revise our ideas and thinking. However, it was important to recognize contributions as being part of the whole regardless of the quantity of input from individual members. We recognized that input to collaborative efforts takes many forms and that 'tallying' perceived effort simply gets in the way of completing the collaborative task. Acknowledgement of the many *different* ways individuals contribute to collaborative processes was vital to our success, thus it was often helpful to review and discuss our notions of shared responsibility for effective collaboration.

4. Time to engage in the collaborative process. In our university milieu, time to meet is usually set aside for the traditional needs of departments and faculty. Time to collaborate on specifics of course content and implementation is generally left up to interested individuals to organize. Professors tend to plan around individual interpretations of course descriptions in the calendar, or rely upon the previous professor's course outline. So, while there are pockets of collaborative work within the faculty, it is not the norm. Many of our colleagues in the faculty regard collaborative course planning as infringing on 'academic freedom' and autonomy. Thus, collaboration often appears unwelcome within the traditional framework of the university community. In our experience, those who engage in collaborative processes consist of very small groups who believe in collaboration, constructivist educational theories, and wish to share in the development of common directions. Collaboration at the faculty requires time to work *with* colleagues (over and above other numerous demands on one's time).

To be successful, our collaboration required a firm time commitment and a common purpose to work towards achieving the goal we had established (i.e., a *collaborative* revision of a cohesive language arts course). For us, 'academic freedom' involves bringing our unique teaching styles and expertise to common, rigorous, and cohesive course content for pre-service teachers.

5. A language for communication. The atmosphere of trust that developed encouraged each member of our group to freely share past teaching experience with the language arts program. Conversations revealed important insights about course content, instructional strategies, purpose of assignments, criteria for assessment and evaluation, and student achievement. Shared values and beliefs about teaching, learning, and collegiality emerged, enabling us to build on shared understandings and clarify thinking. Collaboration also revealed issues that required further exploration, explanation and development. A shared language meant that we could extend our thinking around some problematic issues (e.g., our own effective uses of technology, ways to encourage our students to incorporate technologies into their learning and in demonstrations of knowledge; how best to engage our students in developing understandings of the role language and literacy plays in *all* learning). Once such common language was established, broader understandings of issues and concerns developed and 'synergy' continued to evolve.

6. Respect for diversity. We held many common beliefs and similar perspectives but there were, inevitably, occasions when differences emerged. Differences became an impetus for further exploration and thinking rather than being dismissed as insignificant or unimportant. Respect for diverse viewpoints frequently led to insights, understanding, consensus, and more effective decision-making. Successful collaborative processes require genuine openness to new or differing ideas. Without diverse ideas and alternate perspectives being seen as part of working towards common goals, our collaboration may not have been so successful.

7. Problem solving skills. We had each observed some less than positive student behaviours in language arts classes during our first year of teaching the course together (specifically, off-task behaviours, lack of interest in course content, reluctant participation in both large and small in-class group activities, and inadequate completion of assignments required for assessment). Collaborative processes enabled us to identify and discuss difficulties encountered by framing and illustrating the

problems based on data. We observed these student behaviours often appeared connected to a lack of confidence with language and literacy; negative experiences in previous learning situations; a lack of understanding of the role language and literacy plays in learning across the curriculum; and, at times, individual student teachers' difficulties were attributed to specific challenges with effective reading and/or writing processes.

Proactive steps to try and meet the diverse needs of learners involved reframing the course itself as well as beginning to think much more about our approaches to teaching and learning at the faculty. In hindsight, benefits of collaborating enabled each of us to identify and follow through on necessary changes for our respective classes, and still to be part of the 'team'.

8. A vision of what is possible. Perpetuating what we have always done without considered examination or 'action/reflection', leads to very little progress or change. Collaborative processes have allowed us to examine and make important changes to the J/I language arts course offered by our faculty. Using a team approach, we addressed tension between the realities of accepted practice, and the ideals we espoused (as revealed in our collaborative conversations). This tension encouraged further exploration of our own teaching, and our pre-service teachers' learning. Inquiry into more effective ways to prepare pre-service teachers was the result. Our objective was, initially, quite narrow: 'to review and revise the course outline to reflect the teaching of language arts in contemporary J/I classrooms'. As the collaboration evolved and progressed, this objective became increasingly broad. A shared vision continues to evolve as we work together to successfully implement the course resulting from our collaboration.

Conclusions

Participation in the collaborative process has led to the growing realization that we have embarked on a journey that has only just begun; this is an exciting journey, and one that leads us into deeper, more thoughtful territory as teacher educators. Our immersion in the collaborative process has supported and encouraged increased cohesion that resulted when "collaboration" took hold and re-directed our individual efforts towards a collective effort. Increased perceptions of cohesion have lead to our feeling more comfortable in sharing ideas, lessons, materials and other skills and strategies that strengthen our teaching – *and* our learning about teaching. On reflection, experience to date has also raised levels of confidence regarding numerous decisions we make as

language arts teacher educators. In turn, we are developing an even greater awareness of the need for rigor and relevance in the course we teach, and of the needs of our pre-service teachers in successful completion of both their coursework and teaching practice placements.

An important aspect of our role as teacher educators is to encourage pre-service teachers to develop learning alongside their colleagues in communities of inquiry too. We believe 'social constructivist' approaches to learning ultimately lead to more effective teaching, and emphasize modeling of these beliefs in our work at the faculty (Bainbridge, Heydon & Malicky, 2009).

This includes promoting positive attitudes in our pre-service teachers towards collaborating with their colleagues on teaching and learning in future school contexts. Therefore, we advocate they seek out many, and varied, opportunities to collaborate - and not merely to 'cooperate' – there *is* a difference! Seizing such opportunities will, in turn, lead to opportunities for them to experience full participation in learning communities as *practising* teachers.

Early in the new academic year, we are more focused on essential topics threaded throughout our revised course outline. When planning for class sessions, we carefully consider key concepts and strategies to be learned, but also think deeply about how our pre-service teachers might best learn and understand with relatively limited school experience at this early stage in their program. Perhaps the adage, "the whole is greater than the sum of the parts" best sums up, for us, what the collaborative process has really been about. At the conclusion of the initial collaborative task we set for ourselves (i.e., a general revision of the J/I language arts course), we discovered there was *much* more for us to think about and act upon.

More frequent discussions in class, combined with relevant and contemporary course readings, are providing motivation for collegial collaboration between participants in our classes and, we believe, enabling those pre-service teachers to at least *begin* grappling with many of the complexities inherent in teaching and learning of J/I language arts.

This article documents our own experience with collaboration at the faculty. While a small, collegial group of teacher educators, we are nonetheless passionate about the effective teaching and learning of language arts in the later elementary grades. Thus we continue to refine and enhance our instructional practices with pre-service teachers, and conduct further research into characteristics and contexts of successful collaboration for teaching and learning.

Many important factors contributed to the initial revisions of our course outline and, subsequently, to what became a more 'formalized' collaborative inquiry. The journey continues! In retrospect, perhaps the most energizing and delightful element of our emergent 'community of inquiry' was the powerful synergy created as we worked with, and continued to learn from, ourselves, our colleagues, and our pre-service teachers ... all of whom continue to challenge, question, confirm, and provoke our thinking about teaching and *learning about teaching*. In turn, our advocacy for collaborative work at the faculty has been further enriched and strengthened.

Understanding neologisms and where they come from

Marie Ernestová

Faculty of Education, University of South Bohemia, Czech Republic

Introduction

English is a complex language, with many loan words and great flexibility. It is also a global language. Consequently, new words are introduced to the English lexicon every day – there are even websites listing them. Knowing the right words – and the new words - means understanding, social acceptance and influence. It also means pleasure and satisfaction. But words - particularly new ones, old ones with new meanings and putting old ones in the wrong places - can be a source of confusion even among native English speakers.

This paper presents the main ways in which new words are currently coined for the English language and is based on experience with our own students, as well as on recent research by British linguists using native English speakers.

Knowing new words does not really mean just increasing word power – it means keeping in touch with modern society, understanding new terms and new applications of existing words (eg ‚leverage‘, used in a banking context), new constructions (‚wedded‘ instead of ‚wed‘ – part of the trend to regularise irregular verbs). Everyday English seems to be getting simpler (think of Shakespeare’s word power – or Dickens’s), but this may be an illusion: at the same time as words are falling into disuse, new ones are being added – perhaps it is the sentence constructions that are getting simpler (where sentences are used at all!). And incidentally, the average university lecturer today probably has a vocabulary twice the size of Shakespeare’s – but of course the English lexicon is now two or three times what it was in the 16th century and mechanical printing of English was only 100 years old when the bard started writing (Crystal, 2005).

New words

According to J. Ayto (*The Times*, 27 August, 2007), about 900 new words, i.e. neologisms, enter the English language every year. So that a word may become established, first, people in influential positions must use it. Then, people who want to get similar positions in their careers or lives try to adopt the same kind of language. After some time, so many people use such a new word ‘*that it suddenly spreads like wildfire*’. The media play a crucial role in the speed with which new words are spread. As soon as a word has been in existence for some time, and is

used by different sources, it enters public awareness and becomes a candidate for being listed in a dictionary and the language itself. The criteria for entry are not fixed, but, in any case, such a new word usually has to be around for a while before it becomes 'accepted' into the everyday lexicon.

New words come into the language every day, filling gaps and meeting needs that weren't in the extralinguistic reality before. They can be heard on the radio and television and read in the press.

Moreover, new words not only 'come', many also 'go', either because they fall out of fashion or, for many, because they never caught on in the first place. Thomas Nashe, for instance, Elizabethan playwright and wit (late 16th century), is known to have coined over 800 lexemes, many of which, such as *clientry*, *confectionate* and *oblivionize* didn't stand the test of time, although he did successfully contribute *conundrum*, *grandiloquent*, *Latinize*, *silver-tongued* and *Mediterranean*, among many others. David Crystal (2005) regrets the passing of some clever Nashisms, such as *chatmate* (maybe the Internet will bring this back from the dead!), *bodgery* (botched work) and *sparrow-blasting* (having a strange power to effect action-at-a-distance on small, defenseless birds)!

Move forward 450 years, google (there's another new one!) 'neologisms' and up pops the 'Word Spy' website, where the author 'has coined' words such as 'awkword' (a word that is difficult to pronounce), *slackademic* ('a lazy student') and 'anecdotage' (a hybrid of *anecdote* and *dotage* – 'the advanced age at which people endlessly tell boring stories about the good old days'). However, the author of the website then discovered that the word already existed (OED said as long ago as 1835), so he 'coined' the verb 'to self-coin', for the act of coining a word which already exists! Believe me, there are dozens of people out there who seem to have nothing better to do than invent strange new words and wait for them to be picked up by the masses. They don't. Poets may, but words have to be widely used before they earn their place in a respectable dictionary.

There is the on-line, open-source International Dictionary of Neologisms, but again this is largely a forum for contriving and sharing inventions rather than an archive of new words which are acknowledged to have entered the public lexicon. In fact, the vast majority of them will never be used by anyone else! For a more reliable selection of neologisms – ones that have persisted - consult the Oxford Dictionary of New Words.

Where do new words come from?

A thousand years ago, most new words would have come from Old Norse (through the Danish Viking invasions), Old French and (only very few) from Celtic. In the

Middle English period, up to the late sixteenth century, there was a 'lexical explosion' during which the English word pool more than tripled. The primary source was the huge influence of French (after the Norman invasion) on political, legal and cultural vocabularies, and of Latin through academia, science and medicine and the enormous power of the Church. This was the period during which English developed its rich vocabulary and choice of expressions. Consider, for instance, a few of the word alternatives which became available at this time (examples from Crystal, 1995:124):

Anglo-Saxon	French	Latin
ask	question	interrogate
fast	firm	secure
kingly	royal	regal
holy	sacred	consecrated
rise	mount	ascend

Each of these new words then began to collocate separately in particular ways with other words, so that they all developed their own slightly different meanings, nuances and contexts.

Even during the 16th – 17th centuries 'period of consolidation' when Standard English was being developed in response to the need to reduce variability in the written form of the language, the English lexicon, both vernacular and formal, was still growing rapidly. Industrialisation and the expansion of the empire during the 18th and 19th centuries maintained the flow of new words and the 20th century has seen another 'explosion' driven by the dominance of mass media, a huge entertainment industry, multi-national companies and institutions and the dominance of English, in a plethora of different forms, on a global basis.

New technology played a major part in providing neologisms during the last century, from the aviation, automobile, chemical, film and radio industries of the first 50 years, to the space industry of the 60s and 70s and the now dominating influence of computers and the Internet. More recently, youth culture, business, finance and politics have been rich sources of new words and phrases (Crystal, 2005).

Mechanisms of word formation

Most new words actually derive, in one way or another, from existing (either English or borrowed) word roots. One of the exceptions is *laser* (noun, adjective, verb) – one of the few instances in the English language where Americans are unable to replace an 's' with a 'zee' (z)! That's because it's a specialised scientific acronym –

basically a phrasal noun - and you can't therefore change any of the letters. In fact, it ought to be written ,LASER'.

There are seven main ways in which new words arise:

1. **Compounding**, i.e. joining an existing couple of words to make a compound, such as *snail mail*, *road rage*, *late plate*. Some of these patterns are quite productive, such as '...- *challenged*' has been used as a result of political correctness. People can now be

visually-challenged = with impaired sight

vertically-challenged = short, and even dwarfed

linguistically-challenged = prone to ,gaffs" or ,poor command of language'

Software was used from about 1850 to describe woollen and cotton goods, but this usage has virtually disappeared since 1960 when the word was first applied to computer programmes. Its counterpart compound, *hardware*, is much older, but attracted little usage until *hardware stores* (stocking all sorts of tools, and metal goods) sprang up in every American small town during the 19th century. In Britain, on the other hand, the word was rarely used at all until the American term replaced the traditional *ironmongers* from about the 1970s. *Hardware* was also a slang term for ,personal weapons' (guns) in frontier America, but soon entered the military lexicon as *military hardware*. But this story doesn't end there. The military wanted a more euphemistic word for hardware and they found it in the French loan word *materiel*. This was the counterpart of *personnel* and both were changed from adjectives to nouns and adopted by the American military, so that they could **mean** *military hardware* without actually **saying** it!

Compounding is not just a modern phenomenon. It goes back to OE and Old Norse. In fact , it was such a feature in ON poetry that there is a word for it ,to make kennings' (eg expressive ways of describing a ship: *water-wood*, *wave-floater*, *sea-goer*, *water-house*, *sea-steed*). They had over 50 expressions to describe the sea itself. Then in the 16th century, Shakespeare added over 2000 new words to the written lexicon, many of which were compounds (eg *out-craft*, *well-said*, *unimproved*, *rat-catcher*, *fancy-free*, *time-honoured*, *well-read*, *candle-holder*). Not all of Shakespeare's new words survived into the modern lexicon, of course. In fact, about 900 didn't (eg *adoptious*, *agued*, *aidance*, *allayment*, *annexment* (*annexation* is used now). The 17th century saw the coining of *knock-out*, *stand-by* (18th century), *stick-up*, *take-off* (19th), *check-up*, *fly-past*, *airmail*, *sex-discrimination*, *megastore* (20th). (Crystal, 2005)

Many of today's now-popular neologisms will also have used-by dates and will fall out of fashion or be replaced by something else. *Dotcom* is an interesting example (Crystal, 2005): a dotcom company is one that operates mainly through the Internet – eg *google.com* – it is therefore a compound of a punctuation mark and an abbreviation (for ,communication‘)!

Gas-guzzler is a very recent and very topical compound of *gas* (American ,petrol‘) a word which clearly refers to currently popular vehicles with large thirsty engines, such as SUVs (a new acronym) or sports-utility vehicles (a new compound or phrasal noun) (Crystal, 2005).

2. **Blending**, i.e. by joining parts of words together in order to make a new one, such as *I believe there were some **sexsational rockumentaries** about Glastonbury this year:*

sexsational (= sexual + sensational) In fact, it probably means just ,sex‘.

rockumentaries (= rock music + documentary film)

fantabulous (= fantastic + fabulous); i.e. beyond fabulous (Ayto, 1990).

Bollywood. A portmanteau of *Bombay* (the former name of Mumbai) and *Hollywood* to represent the largest film industry in India.

smog (from *smoke* and *fog*).

motel (from *motor* and *hotel*)

brunch (from *breakfast* and *lunch*).

Franglais (broken French spoken clumsily by a native English speaker)

Czenglish (broken English spoken clumsily by a Czech speaker)

As an example of a new word which is probably on the rise, *carmageddon*‘ has actually been around in a very small way for a few years as, for instance, a website name for a car sales yard, or the name of a popular video game, but it may be about to enter mainstream popular usage. The Weekly Guardian newspaper ran an editorial last month lamenting the obsession the British have with automobiles and in particular the environmental irresponsibility of people with big gas-guzzlers and the subtitle ,...carmageddon looms‘ said it all (Weekly Guardian, 20 July 2008)!

3. **Converting** words from one part of speech to another, which has been a popular technique since the Middle Ages, although new converted words may be objected to by some people.

Examples: *to office at home*, *to firewall a computer*, *to fax*, *to email* somebody, *spend* (as a noun), *out* and *surf* (as verbs), *to eyeball someone* (noun to verb).

Leverage. This is a particularly uncouth noun-to-verb conversion. As a noun for almost its entire life, this 13th century word simply means ‘the force applied by the use of a lever’. In the 18th century it was used in the context of ‘political leverage’ (=

influence) and then the word was captured by the business community, first as a noun (1930s) but much more spectacularly in the 1980s after transformation into its clumsy verb form, when 'leveraged buyouts' (speculating using borrowed money) of underperforming companies was rife. For instance, from Morrish (2001): '*The bank has a strong brand and our plans are to leverage this in all our communications*'. Ugh! Edwin Newman wrote a book with the perplexing title '*Strictly Speaking: Will America be the Death of English?*' (W.H. Allen, 1975)... no, I think not: but business and political conversions, derivations and recastings are already doing that very effectively indeed – and even without the intervention of the American tongue!

Nowadays, particularly in the vernacular, many English words now have forms which belong to five or even six of the eight word classes (parts of speech). David Crystal, in a recent blog (<http://david-crystal.blogspot.com/>), takes the example of *round*, which can be an adjective (*the round table*), a noun (*it's your round*), a verb (*we rounded the bend*), an adverb (*we went round*) and a preposition (*round the corner*). '*Whatever*', for instance, is normally used as a pronoun (*Whatever happened?; I'll eat whatever you cook*) but, in recent years, the *wh-* words, *whatever*, *wherever*, *whenever* have all developed independent lives, mainly among the young. So in the following exchange between two people, in which word class would you place *whatever?*....."*What do you want to do now?..."Oh, whatever!"* ! Maybe we need a new word class: 'rude, dismissive retort'! Such is youth-speak, but it's widely used by the oldies now as a put-down or conversation-stopper to replace 'Get lost!'

4. **Deriving** words by adding affixes, i.e. prefixes or suffixes to existing word roots. For instance, there are well over 100 affixes in common use in English (and more than 500 overall). There are suffixes such as *-ness*, *-er*, *-tion*, *-ment* and *-ship* to make nouns, *-al*, *-ive*, *-ous*, etc. to make adjectives, *-ize* or *-ify* to make verbs and *-ly* or *-wise* to make adverbs. Shakespeare was very partial to the *un-* prefix such as *unsorry*, *unyoung*; *uncurse*, *unsex* – a modern one would be *uncool*. Also *arty-crafty* (which is also reduplicative word formation), *vasty*, *plumpy*, *steepy*, or even: *I'm feeling all Olympicy*. Sometimes both the affixes are added at once: *untouristy*, *unChristmas-y* ('*Ted had only died in November, so she was feeling very unchristmassy when the guests arrived*'), *ungimmicky* ('*A large hammer was her distinctly ungimmicky way of getting into the locked drawer*').

This category also includes **new constructions**, where the meaning is retained, but affixes are added or removed. An example is *gotten* (American usage) and *got* (British usage): the meanings are identical and both spellings are acceptable. Neither of these are new words, of course, but one of them must have

been 'new' at some time in the past – and in fact it was *got!* The Middle English spelling was *gotten* and this was embraced in 1786 by Noah Webster in his *American Spelling Book* and, in 1806, by his *magnum opus*: '*A Compendious Dictionary of the English Language*', as one of many means by which he wanted to make the American 'dialect' distinct from British English.

A similar example of a new construction, but which is a **recent** neologism, is the past participle *wedded*. This means the same thing as the Standard English *wed* (as in '*He wed his schooldays sweetheart*'). This shift seems to be part of a current trend which is regularising a number of irregular English verbs. The motivation for this appears to be nothing more than the breakdown of strict editorial controls over spelling (and often grammar too). People use *wedded* because they don't know that *wed* is the 'correct' form of the verb in that context. Either that, or they just don't care (which seems to be increasingly the case)!

Words can also be derived in other ways: eg *doubt* comes from the Latin 'dubitare' (the silent 'b' was left in merely to show its etymology during the development of Standard English in the sixteenth/seventeenth centuries). There are thousands of examples of 'anglicised' Latin and French words in everyday language.

Also, deriving has been going on for centuries. The suffixed adverbs '*necessarily*' and '*prosperously*' date from the late fifteenth century: then Shakespeare derived several, such as '*amazement*' (originally a noun), '*assassination*' (from the already-existing Arabic word for 'hashish-eater'), *rascally*, *unshout*, *unimproved*, *bold-faced*, *cold-blooded*, *far-off*, *full-grown*, *dog-weary* (we now say dog-tired), etc.

Many of these affixes (*con-*, *pre-*, *-ment*, *-tion*, etc) are derived through French, from Latin. Thus, the French suffix *-able* combined with an OE root, eg *knowable*, *findable*, *speakable* or an OE prefix + an OE root and a French suffix, eg *unknowable*. English affixes, such as *-ing* are also used quite often. There are still a great number of root words which have not yet been 'affixed', so the potential for new derived words is still considerable (Crystal, 2005).

Many new verbs have resulted from **back-formation** (i.e. loss of an affix) – eg *edit*, *swindle* (18th century), *shoplift*, *housekeep* (19th century), *sleepwalk*, *namedrop* (20th century). New nouns and adjectives are also regularly coined from proper nouns, for example *Darwinism*, *Leninism*, *Beatlemania*, *Thatcherite*, *Shakespearian*, *Kafkaesque*.

And don't forget the more bizarre examples from Cockney rhyming slang, such as *germaine* (from Germaine Greer – rhymes with 'beer') e.g '*E's been on the germaines all night*'. Cockney rhyming slang is incorporating new 'words' all the time as celebrities come and go – eg "*I couldn't believe the look on his george bush*"

(rhymes with *mush* = face)". Other dialects are also rich sources of new words – and, of course, also old ones that are no longer part of Standard English (e.g. Scots *kirk* (church), *muckle* (big)).

5. **Shortening** words and phrases: quite a lot of new abbreviations, mainly acronyms, have been invented, such as:

asap = as soon as possible

BTW = by the way

yuppy = young upwardly-mobile professional

dinky = double income, no kids yet. This is a modern acronym, but the word has been in existence for a long time as *dinky* can also mean 'small, neat, pretty' eg '*what a dinky little hat*' (prob from Scots 'dink'). Also note Cockney rhyming slang's *dinky doo* (twenty two).

nilky = no income, lots of kids

glam = greying, leisured, affluent and married. *Glam* is more frequently used as a (modern – 1950s) abbreviation for 'glamorous' (although this word is now falling out of fashion)

lombard = lots of money, but rather a dickhead

woopies = well-off old people

There are also huge numbers of shortened words in common usage:

arvo (= afternoon – texting language)

veges/vegies (vegetables)

promos (promotions – as in TV advertisements for merchandise or programmes)

decaf (decaffeinated coffee)

fundie (religious or environmental fundamentalist – the latter more usually now called *greenie*). Take care in the former colonies, though: in Swahili a *fundu* is a 'respected expert'!

Xmas Thought by some to be an 'un-Christian' abbreviation, but it actually derives from the Greek *Xristos*. In 1100 the Anglo Saxon Chronicle records a *Xres maesse* (Morrish, 2001). So who thought it was a new pagan word dating from only about 1850!

wannabe (from want-to-be). Originally American, but now global. A fan who wants to be like their hero. *He's a wannabe rapper.*

Savvy (possibly from French *savez-vous* 'do you understand'). Known since the 18th century, but currently enjoying a resurgence of use in the business and political sectors (*He has political savvy. She doesn't have a degree, but she'd got business savvy.*)

rapt (delighted, or better). Youth-speak originating in Australia in the 1970s and now spreading in Britain and the US. Not to be confused with the 15th century meaning,

carried bodily to heaven', but feelings often run high when you're in a trip in a disco, man – *you'd be rapt*.

6. **Borrowing** words from foreign languages. English is believed to have incorporated loan words from more than 350 languages so far in its 1,500-year history and 80 per cent of English vocabulary is not Anglo-Saxon in origin (Ayto, 2007). Most of them are French (about 30,000) or Latin (about 70,000). However, most of the **grammatical** and **content** words are Old English and in fact, in terms of **frequency of usage**, the first hundred such words are OE (with only two exceptions, depending on who made the list!) and the first French word in this category is No 105!.

French: queue (15th century), bouquet, salon (18th century), acrobat, gourmet (19th century), au pair, questionnaire (20th century).

Other examples from the 20th century: *robot* (Czech), *putsch* (German), *slalom* (Norwegian), *espresso* (Italian), *macho* (Spanish), *sumo*, *sudoku* (Japanese).

And John Morrish (2001) reminds us of the verb *to grok* (to thoroughly understand) is from Martian! Yes, a Robert Heinlein science fiction book from the 1960s, when space-age fever was taking hold. This completely invented word is now firmly entrenched in computer language: *Do you grok this programme?*

To complete this brief survey of loan words, there are those that either have an inappropriate meaning, or else mean nothing at all. This is the world of marketing – of the Volkswagen Rabbit, and the Nissan Avenir Salut (=‘come again hello’), or the Nissan Largo (no, not meant to be Italian for ‘slow’ – they were aiming for ‘lots of space!’), or the Mitsubishi Pajero (which means something rude in Portuguese). ‘Media’ and ‘marketing’ is where words are used more as creative devices, rather than for their communicative value. The Japanese seem to like foreign words, particularly English ones – looks good and adds a touch of class – doesn't matter what they mean!

In Czech, my native tongue, there are also borrowed words like *dzus* (*juice*) and *dzez* (*jazz*) which have been adapted to Czech spelling like loans have been ‘anglicised’ for English (like the Arabic *hashshashin* to *assassin*).

7. **Recasting** existing words to give them new meanings and additional connotations.

For example (Ribes-Gil, 2002):

bad trip = old: an unsuccessful, unenjoyable journey
new: the unpleasant aftermath of a drug-induced state

sad = old: unhappy
new: inadequate or unfashionable

squeeze = old: press hard
new: girlfriend/boyfriend

to hack = old: to chop or kick
new: to access someone else's computer illegally

stand alone = old: to stand up by oneself
new: (*a standalone*) an independent computer not connected to a network

ultimate = old: last, final
new: newest, best

cool = old: tepid
new: in fashion; relaxed, good

shades = old: shadows or subtle colours (eg pastel shades)
new: sunglasses

mobile = old: dangling decoration
new: cellphone

next generation = old: offspring
new: upgraded operating system for computers, etc.

spam = old: tinned luncheon meat, subsequently cut into slices for eating
new: unsolicited commercial email, i.e. junk mail.

to address = old: write a destination and a name of the person to whom a letter is to be delivered on an envelope
new: speak about a particular issue

eggy - Most dictionaries define this as 'like an egg' or 'covered in egg'. But it has recently come to mean 'annoyed' - which is what you'd be if someone hit you with a raw egg! Maybe the explanation is as simple as that - or maybe the new meaning comes from the Old Norse *eggja*, meaning 'cutting edge' - very similar to *edgy* (unsettled, irritable). There again, maybe not! This example shows that it is sometimes difficult to pin down the etymology of neologisms, especially when they have been traced to possible dialect origins. Flavell & Flavell (2000) point out that there are thousands of words with unknown origins (eg *blab*, *beach*, *blight*, *blink*, *blouse*, *bludgeon*, *blunt*, etc, etc).

gay - From the 14th century, this French loan word meant 'happy, cheerful', but in the late 19th century it took on the additional meaning of 'womaniser', so the intended meaning was thereafter dependent on context. Then in the mid-20th century the word was abruptly adopted by homosexual males - and everyone else stopped using it! You can understand now why citizens of the Greek island of Lesbos have recently taken their copyright claim to the European Court!

French gave English many phrasal nouns, but recently English speakers have been doing extraordinarily well inventing their own:

to effect a regime change (= invade)
weapons of mass destruction (= nuclear bombs)
friendly fire or *collateral damage* (= to shoot at or kill your own troops instead of the enemy)

Some words have changed their meaning several times, such as ,silly' (see Flavell & Flavell, 2000). It started life as the Old English *gesoelig*, meaning ,happy'. It was still ,happy' as *seely* in the 13th century, but in the 14th cent. it became ,harmless' and, from the 16th century (as *silly*) it came to mean ,innocent', then ,helpless', then ,humble', ignorant' and finally ,foolish'. So all is not necessarily what it seems when you read Chaucer or Shakespeare!

Conclusion

English is now spoken so widely, and by so many cultures, that it is evolving probably faster than it has ever done before. It is a truly global language, the *lingua franca* of business, politics, education, entertainment and the internet the world over. It is therefore difficult to predict what the English vocabulary will look like 100 years from now – or even 50, but what seems to be certain is that new words will be coined, old words will be combined in new ways, meanings and word classes and will migrate, and obsolete words will sink into obscurity - because these are inherent characteristics of any living language.

It is paramount, therefore, especially for non-native-speaker teachers working outside an English-speaking environment to keep abreast of these changes through constant and systematic reading of the press and contemporary literature, through listening to the radio and watching undubbed films on TV and videos.

Evaluer la compréhension des textes d'élèves de 8-11 ans. Une approche linguistique de ce que les élèves écrivent pour montrer qu'ils comprennent.

Natacha Espinosa

Université Paris III, IUFM Centre val de Loire, France

Notre contribution se propose de mettre en évidence ce qu'il est possible de relever comme indices d'évaluation de la compréhension d'un texte à partir de ce que l'élève peut écrire lorsqu'on lui demande de raconter ce qu'il vient de lire.

Notre étude s'appuie sur la nature indivisible du langage oral et écrit, qui préside au processus d'accès à l'écrit (L. Lentin, C. Blanche-Benveniste). Nous défendons une conception du lire-écrire qui considère ces deux activités comme des activités langagières (L. Lentin, J. Hébard) et interactives (J. Giasson).

Notre approche se veut linguistique et nous permet de dégager différents indicateurs de la compréhension des élèves mais aussi de leur degré de littératie (D. Lafontaine) à partir de ce qu'ils font et non ce que nous en attendons pour nous montrer qu'ils ont compris un texte lu silencieusement.

Notre démarche d'analyse des données est qualitative. Nous ne cherchons pas à proposer un dispositif empirique mais à mettre en évidence ce qu'un enfant fait lorsqu'il répond à des questions de compréhension.

Les travaux épistémologiques sur ce terme ont mis notamment en évidence l'idée que le concept de littératie est un concept plus large que celui d'écriture ou encore celui de lecture. (Pierre, 2003). Tandis qu'Olson (1994) insiste sur l'idée que la littératie a un impact sur la cognition et plus particulièrement sur l'apprentissage de la langue, dont l'écrit est devenu le modèle, D. Lafontaine ajoute qu'elle a « *en outre le mérite de faire référence, de façon positive, à un processus continu de développement de compétences en lecture, ce que ne permet pas le terme d'alphabétisation.* » (2001 : 87-88). Les travaux francophones sur la littératie ont permis de mettre en exergue une nouvelle conception de notre rapport à l'écrit (J. Giasson, R. Pierre, F. Grossman). Pour F. Grossman (1999), le concept de littératie revêt un aspect culturel qui s'ajoute aux aspects sociaux et développementaux des individus. R. Pierre (2003) et G. Chauveau (1997) rappellent que l'apprentissage de la lecture n'a pas le même sens pour les enfants d'aujourd'hui et ceux du début du 20^e siècle pour lesquels la scolarisation n'était pas obligatoire. Pour R. Pierre, le concept de littératie exprime les moyens qu'a un individu pour maîtriser l'écrit qui lui permettra de s'intégrer dans la société, de penser, communiquer, acquérir de nouvelles compétences, partager sa

culture... Autrement dit il manifestera la façon dont un individu peut s'adapter à son environnement et/ou créer de nouvelles connaissances.

Notre étude s'intéresse à la compréhension des textes par de jeunes lecteurs. Comprendre un texte, c'est être capable de lier les informations linguistiques propres au texte avec ses connaissances individuelles. C'est faire appel à des stratégies de prédiction, de confirmation et d'intégration des informations contenues explicitement ou implicitement dans le texte. (Giasson, 1995). Il s'agit donc pour le lecteur de reconstruire un texte en mobilisant ses connaissances culturelles, langagières, faire des hypothèses et anticiper sur la signification du texte écrit.

Notre travail s'articule autour de deux hypothèses :

1. il existe une interaction entre ce que l'enfant lit, ce qu'il comprend/intègre et ce qu'il peut en dire par écrit. A partir de l'interaction qui existe entre ce que l'élève lit et ce qu'il écrit, nous pouvons dégager des indices linguistiques qui nous permettent d'évaluer leur compréhension des textes (Espinosa, 2009).
2. il existe différents indices linguistiques dans les réponses écrites des élèves qui permettent de repérer ce que l'élève comprend et retient du texte lu.

L'étude s'appuie sur une approche linguistique de l'évaluation. Nous étudions en particulier la reformulation écrite du texte par les élèves en observant le degré de reprise que le lecteur fait du texte dans sa propre reformulation. Pour cela, nous envisageons trois critères de proximité que sont :

- la reprise mot pour mot ;
- la reprise avec des modifications et/ou des ajouts
- la non-reprise comportant des ajouts personnels du lecteur.

Il s'agit de repérer les degrés de proximité pour identifier non pas **la** compréhension du texte mais **l'étendue** de la compréhension du texte par l'élève.

Nous avons mis en place un dispositif expérimental d'évaluation, le projet LECole-Logiciel d'Evaluation de la Compréhension en Lecture- (Espinosa, 2003, 2007) contenant :

- deux textes narratifs courts, conçus pour cette recherche, l'un étant la suite de l'autre. Pour pouvoir évaluer ce que les élèves font du texte pour montrer qu'ils ont compris, il est nécessaire d'analyser le texte (Espinosa 2009) :
 - le premier texte retenu pour l'étude, *La maladie de Maxence*, est un texte dont le contenu lexical et syntaxique est proche du fonctionnement langagier des élèves. Il a été conçu à partir de critères linguistiques identifiés par l'équipe du Centre de recherche sur l'acquisition du langage oral et écrit (CRALOE, fondé par L. Lentin en 1970 à l'université Paris III) comme des critères pouvant avoir une incidence sur la compréhension du texte (Aloé, 2001, n°46, p.86-88).
 - le second texte, Maxence (2), qui est une suite du précédent, contient selon les critères retenus, des éléments linguistiques plus éloignés du fonctionnement langagier des enfants.

La maladie de Maxence	Maxence (2)
<p><i>Chaque matin</i>, il met du gel pour faire tenir une houppette comme celle de Tintin dans les bandes dessinées.</p> <p>Maxence est un élève de CE2 de l'école des Bois jolis.</p> <p>Tous les enfants de l'école connaissent Maxence parce que Maxence adore chanter pendant la récréation.</p> <p><i>Mais Maxence</i> est devenu très triste.</p> <p>Aucun copain ne sait pourquoi Maxence ne parle plus beaucoup <i>depuis quelques jours</i>.</p> <p>En effet, un lundi matin, Maxence est arrivé en classe sans faire de sourire et sans sa petite houppette sur la tête.</p> <p>Maxence ne riait plus, il ne jouait plus avec ses copains et surtout il ne chantait plus. Les copains de la classe se posaient beaucoup de questions mais personne n'osait lui demander pourquoi il était triste.</p> <p><i>Alors Maxence</i> restait seul, il se mettait à l'écart, il s'isolait.</p> <p>[...]</p>	<p><i>Ce matin</i>, la maîtresse est quelque peu inquiète : Maxence effectue son retour en classe.</p> <p>Comment devait-elle l'accueillir après cette absence prolongée ?</p> <p><i>En rentrant dans la classe aux murs recouverts d'affichages d'orthographe, de documents géographiques et de chronologies historiques</i>, la jeune femme a eu un pincement au cœur. Le petit malade, ou plutôt le petit guéri, allait-il retrouver ses repères ?</p> <p>Elle s'est dressée sur la pointe des pieds mais n'a pas vu le moindre cheveu de la houppette de son élève tant attendu. <i>Sans attendre plus longtemps</i> elle a guidé les enfants vers la classe. Tous les garnements se sont installés sans bruits.</p> <p>Après avoir jeté un coup d'œil par la fenêtre et vérifié que le garçon n'était toujours pas là, elle mit ses élèves au travail.</p> <p><i>Durant un exercice de conjugaison</i>, elle s'approcha de Marième et lui posa une main chaleureuse sur l'épaule.</p> <p>[...]</p>

Figure 1 : Extraits des deux textes narratifs proposés

Dans ces extraits, nous avons noté en gras le système de référence évoquant le héros de l'histoire et, en plus pour le second texte, la maîtresse. Nous avons souligné les propositions antéposées afin de mettre en valeur l'organisation des phrases. Puis, en italique, nous avons identifié les compléments circonstanciels de temps ainsi que les connecteurs qui induisent l'enchaînement des actions.

Après une ou plusieurs lecture(s) silencieuse(s) du texte, les élèves ont été soumis à des questions qui font appel à différentes stratégies de traitements linguistiques mises en jeu dans la compréhension des textes telles que la recherche d'information (repérage du thème), la cohésion (repérage du système anaphorique, des connecteurs mettant en évidence l'enchaînement des actions), un travail d'inférences, etc. Les élèves avaient la possibilité d'accéder au texte pendant

le travail. Nous avons recueilli les réponses écrites auprès d'élèves du cycle 3 (8-11 ans) dans un contexte scolaire naturel.

Afin d'illustrer les trois degrés de proximité choisis, nous proposons d'étudier comment une élève s'appuie sur le texte lu mais aussi sur les questions qui précèdent la reformulation pour répondre à une question du type « raconte toute l'histoire ». Plusieurs critères linguistiques peuvent être observés (Espinosa, 2009). Pour cet article, nous retenons quatre entrées :

- a. l'étude du système de référence
- b. l'emploi des connecteurs d'une « liste ouverte » (au sens de Riegel et al., 1994)
- c. l'étude de constructions complexes
- d. l'étude des formes lexicales

Etude des réponses de Magali (8 ans 9 mois).

Pour cette communication, nous choisissons d'illustrer notre démarche d'évaluation à partir des corpus recueillis auprès d'une élève de CE2 qui a proposé des réponses assez longues qui nous permettent d'étudier ce qu'elle fait des textes pour montrer ce qu'elle comprend. Le choix n'a pas été motivé par une quelconque échelle de réussite mais par la quantité de réponse fournie afin de pouvoir développer notre démarche d'analyse.

Maxence est un petit garçon de cez qui a, une petite tete ronde de grands yeux verts et des cheveux noirs et cours. Il aime chanter pendant la récréation. Mais un jour maxence se senti seul, il s' isolait. Il avait le cancer du sang. Après les vacances de noel Maxence ne venait plus à l' école. Alors leurs maîtresse décida de leurs dire pourquoi Maxence est apsent. Une élève de la classe, Marième, la mascotte de la classe, décida d' emmener tout les devoirs à Maxence. c' est aussi la maman de la classe. Elle est un peu amoureuse de lui. Mais chuttttt! C' est un secret!

Figure 2 : Corpus 1 de Magali

La réponse de l'élève est longue pour une élève de CE2. L'élève raconte l'histoire en restituant un maximum d'informations. L'élève s'appuie sur l'organisation du texte de lecture pour proposer sa propre narration :

- d'abord elle présente le personnage principal selon les aspects physiques et en tant qu'élève comme cela est proposé dans le texte de lecture. Une fois le cadre posé, l'élève introduit l'élément déclencheur qui montre un changement d'état du personnage principal. Il est intéressant de remarquer que l'élève donne rapidement la cause du changement d'état en nommant explicitement la maladie du héros.

Dans le texte de lecture, cette information apparaît au 2/3 de l'histoire. Cette reformulation et cette réorganisation des idées du texte montrent que l'élève a relié les informations entre elles et a su recréer son propre schéma mental du texte.

- ensuite l'élève évoque le questionnement des élèves et présente le personnage de Marième en cumulant la description de ce personnage et son action vis-à-vis du héros alors que dans le texte de lecture ce sont deux passages distincts dans l'histoire. Ce regroupement semble là encore témoigner de la mise en relation des informations qui se recoupent.

Dans la proposition de reformulation de l'élève on retrouve toutes les idées évoquées par le texte, qui correspondent à la trame narrative. Mais on observe une personnalisation, une recréation de l'organisation de ces idées qui témoigne d'une compréhension globale du texte et de son autonomie par rapport au texte lu.

Concernant la proximité avec le texte, nous relevons de nombreuses reprises au texte :

- **le système de référence des personnages :**

- Maxence/garçon, il, lui : système présente dans le texte de lecture ;
- Marième, mascotte de la classe, elle, maman de la classe : système présent dans le texte de lecture mais aussi des ajouts (une élève de la classe) qui expriment le lien d'un personnage avec les autres personnages. Ce lien exprime le travail d'inférence effectué par Magali ;
- Les élèves de la classe ne sont pas mentionnés explicitement par Magali mais uniquement à l'aide du pronom leur (noté « *leurs* » au pluriel dans la réponse de l'élève, comme pour indiquer qu'ils sont plusieurs ?). Cette pronominalisation des personnages illustre un degré d'autonomie linguistique de l'élève par rapport au texte lu.

Le système de référence des personnages employé par l'élève est juste et très proche du texte de lecture dans la variété même des substituts proposés. Cette appropriation par l'élève dans d'autres contextes syntaxiques témoignent d'une prise en charge de l'élève et donc de sa compréhension de la place des personnages dans l'histoire mais aussi des liens qu'ils entretiennent les uns avec les autres.

- **les connecteurs :**

Nous relevons des connecteurs repris du texte de lecture :

- La conjonction de coordination mais qui évoque le déclencheur ;
- Le complément circonstanciel de temps « après les vacances de Noël » ;
- L'adverbe « alors » qui introduit l'action de la maîtresse qui va expliquer le changement d'état et évoquer la maladie du héros.

Nous observons aussi que l'élève a ajouté un connecteur « un jour » pour remplacer celui du texte « un lundi matin ».

L'élève s'appuie sur le texte pour organiser la trame narrative de l'histoire. Elle reprend les connecteurs principaux (logiques et temporels). Lorsqu'elle fait un ajout personnel, le connecteur proposé ne modifie pas le sens de l'histoire. D'ailleurs la précision du jour n'apporte aucune information supplémentaire à l'histoire. L'élève montre ici qu'elle a compris l'enchaînement des actions dans le temps et dans la relation causale.

- les constructions syntaxiques :

Cette étude porte sur les constructions complexes que L. Lentin (1977) a appelées *les Introduceurs de Complexité* (IC). Ils correspondent aux constructions syntaxiques repérées dans des corpus oraux, obtenus à partir d'enregistrements d'interactions individuelles entre un adulte et un enfant de 3 à 7 ans. Ces introduceurs ont été déterminés comme étant les éléments les plus révélateurs de la progression de la complexité syntaxique en français. Ils sont apparus comme « significatifs de la progression de la complexité syntaxique en liaison avec l'articulation du raisonnement dans le langage en voie d'acquisition » par l'équipe de recherche de L. Lentin (1984 : 23). Nous relevons 5 IC dans la réponse de l'élève avec 4 occurrences différentes. Une comparaison avec les IC du texte de lecture permet de remarquer que 3 IC sont présents dans des contextes sémantico-syntaxiques proches (Figure 3):

IC	Constructions dans la réponse de Magali	Constructions du texte
V+Vo	<i>aime chanter</i>	adore chanter
De+Vo	<i>de leurs dire</i>	de leur expliquer
Discours indirect	<i>Dire pourquoi</i>	expliquer pourquoi

Figure 3 : Etude comparative de trois constructions complexes présentes dans le texte de lecture (Texte 1) et dans la réponse de Magali (Corpus 1)

Le quatrième IC est le pronom relatif « qui » employé dans le même contexte sémantique que celui du texte pour décrire physiquement le personnage (Figure 4).

Réponse de Magali	Extrait du texte
<i>Maxence est un petit garçon de CE2 qui a, une petite tête ronde de grands yeux verts et des cheveux noirs et courts.</i>	Maxence est un garçon facile à reconnaître : il a une petite tête toute ronde avec de grands yeux verts et des cheveux noirs et courts.

Figure 4 : Etude comparative de l'emploi de l'IC 'qui' entre le texte de lecture (Texte 1) et la réponse de Magali (Corpus 1)

L'utilisation de l'IC « qui » par l'élève correspond à l'emploi de la virgule dans le texte. Cette étude de l'emploi des IC dans d'autres contextes sémantico-

syntaxiques par l'élève montre que Magali a su saisir les liens que les IC évoquaient dans le texte et a su saisir les enchaînements complexes entre les informations formulées par le texte. Cette « attitude linguistique » témoigne de la compréhension de la formulation langagière du texte mais aussi des compétences langagières de l'élève.

- **les formes lexicales :**

Nous avons relevé quatre exemples de proximité de l'emploi de formes lexicales dans les réponses de Magali avec celles employées dans le texte de lecture (Figure 5).

- | |
|--|
| <ol style="list-style-type: none">1. description physique du héros « <i>une petite tête ronde de grands yeux verts et des cheveux noirs et courts</i> »2. verbe caractéristique « <i>il s'isolait</i> »3. la maladie « <i>le cancer du sang</i> »4. les caractéristiques du personnage de Marième : « <i>mascotte, maman, amoureuse</i> » |
|--|

Figure 5 : Relevé de quatre exemples de formes lexicales employées par Magali (Corpus 1)

Pour tous ces exemples, nous posons l'hypothèse que les questions posées précédemment à la question qui a abouti à cette restitution de l'histoire ont permis de remobiliser les informations et notamment l'utilisation du lexique du texte.

En effet, ces informations ont été mobilisées dans plusieurs questions précédentes :

Apport lexical 1 : Trois questions ont permis d'effectuer un rappel dans une question de type fermé (relever d'information dans le texte, QCM)

Première question : *Relis ce passage et réponds aux questions.* L'élève pouvait relire l'extrait du texte sélectionné par le concepteur et répondait ensuite à trois questions : *Qui est Maxence ? Où se déroule l'histoire ? Pourquoi les enfants connaissent-ils Maxence ?*

Deuxième et troisième questions : *Maxence a (1 réponse) et Maxence est en (1 réponse)*

L'élève sélectionnait une réponse parmi quatre choix proposés.

Apport lexical 2 Une question porte sur une demande d'explication du verbe spécifique « s'isoler ».

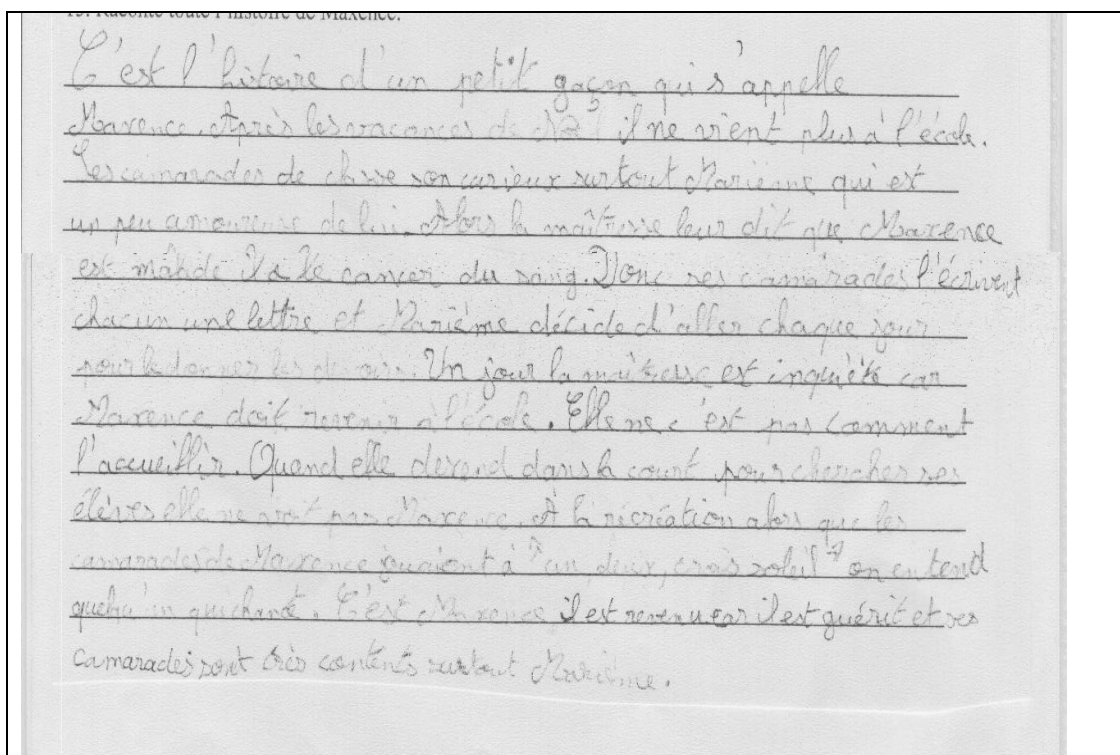

Apport lexical 3 Une question porte sur l'identification du nom de la maladie à partir d'un extrait du texte proposé à côté de la questions.

Apport lexical 4 Une question ouverte implique une description d'un personnage/

Ainsi les reprises lexicales formulées par Magali dans sa restitution du texte

en fin d'activité montrent qu'elle a compris les informations évoquées et a su s'appuyer sur le texte pour les employer dans sa propre narration. Il semblerait aussi que la remobilisation de certaines informations dans le cadre de l'activité d'évaluation permette une meilleure reprise par l'élève

L'étude des réponses de Magali dans le dispositif 2 nous permet d'observer d'une part la compréhension et la mémorisation du texte 1 (lu et travaillé deux semaines avant) et la compréhension du texte 2. Dans le second dispositif, Magali devait raconter toute l'histoire de Maxence. Elle devait donc reformuler les deux textes lus. Nous obtenons le corpus 2 :

C'est l'histoire d'un petit garçon qui s'appelle Maxence. Après les vacances de Noël il ne vient plus à l'école. Les camarades de classe son curieux surtout Marième qui est un peu amoureuse de lui. Alors la maîtresse leur dit que Maxence est malade il a le cancer du sang. Donc ses camarades l'écrivent chacun une lettre et Marième décide d'aller chaque jour pour les donner les devoirs. Un jour la maîtresse est inquiète car Maxence doit revenir à l'école. Elle ne c'est pas comment l'accueillir. Quand elle descend dans la court pour chercher ses élèves elle ne voit pas Maxence. A la récréation alors que les camarades de Maxence jouaient à « un, deux, trois soleil » on entend quelqu'un qui chante. C'est Maxence il est revenu car il est guérit et ses camarades sont très contents surtout Marième.

Figure 6 : Corpus 2 de Magali

La première remarque que nous formulons est que la réponse de l'élève est encore une fois plutôt longue et on note que 7 lignes sur 15 se rattachent au premier texte lu. La mobilisation de sa mémoire est donc forte.

La réponse de Magali dans ce second dispositif reprend la syntaxe de la consigne et des éléments mis en évidence par les questions précédentes comme elle l'avait fait dans le premier dispositif.

- **le système de référence des personnages :**

Le système de référence des personnages employé par Magali est assez proche des deux textes lus mais nous pouvons remarquer qu'elle emploie uniquement les prénoms et les pronoms personnels pour faire référence aux personnages alors que dans le texte 2 l'auteur a employé une plus grande variété de substituts lexicaux. Par exemple, Magali emploie le terme « camarade » à quatre reprises dans sa production alors que celui-ci est employé qu'une seule fois dans chacun des deux textes. Par contre elle n'emploie pas les termes de l'auteur du texte 2 comme : les enfants ou les garnements.

En revanche, elle ajoute un substitut employé dans aucun des textes « *quelqu'un* » qui permet de conserver la notion de surprise voulue par le texte en ne mentionnant pas directement de qu'il s'agit. Cette formulation de l'élève montre qu'elle a compris le texte mais aussi l'intention de l'auteur.

- **les connecteurs :**

Nous relevons un seul connecteur dans la réponse de Magali qui soit présent dans le texte 2, il s'agit de la conjonction de coordination « et ». Les autres connecteurs présents sont ceux déjà utilisés dans la réponse au dispositif 1 et présents dans le texte 1 (Figure 7) :

- après les vacances, alors, car, quand, à
- deux ajouts de l'élève :
 - le complément circonstanciel « un jour » qui évoque le complément circonstanciel du texte 1 « un lundi matin »
 - La conjonction de coordination « donc ». l'utilisation du connecteur « donc » témoigne de la compréhension des éléments mais aussi du lien entre les éléments qui constituent le message du texte et révèle une capacité d'intégration de l'information chez Magali : « **Donc** ses camarades l'écrivent chacun une lettre (...) ». Ce lien n'est pas explicite dans le texte lu mais la production de Magali laisse apparaître une logique des rituels sentimentaux.

	<i>La maladie de Maxence</i>		<i>Maxence (2)</i>	
connecteurs logiques	<i>alors</i>	adv.	<i>et</i>	conj. de coord.
	<i>en effet</i>		<i>puis</i>	
	<i>car</i>	conj. de coord.		
	<i>et</i>			
	<i>mais</i>			
	<i>parce que</i>	conj. de subordination		
	<i>pour que</i>			
	<i>pourquoi</i>	prép.		
<i>pour</i>				
connecteurs temporels	<i>maintenant</i>	adv.	<i>aujourd'hui</i>	adv.
	<i>chaque matin</i>	Compl. circonst.	<i>durant</i>	
	<i>tous les jours</i>		<i>tout à coup</i>	
	<i>un lundi matin</i>	conj. de sub.	<i>ce matin</i>	Compl. circonst.
	<i>jusqu'à ce que</i>		<i>lorsque</i>	conj. de subordination
	<i>quand</i>	prép.	<i>après +GV / après +GN</i>	prép.
	<i>après (les vacances)</i>		<i>en (voyant)</i>	
	<i>pendant</i>			
connecteurs spatiaux	<i>à</i>	prép.	<i>où</i>	conj. Sub.
	<i>dans</i>		<i>dans</i>	prép.
	<i>en</i>		<i>en</i>	
			<i>par</i>	gr. prép.
			<i>vers</i>	
		<i>au milieu de</i>		
occurrences	20		15	

Figure 7 : Relevé des connecteurs dans les deux textes du dispositif LECole

De plus, nous constatons que les nombreux compléments circonstanciels antéposés comme « durant un exercice » ou « en rentrant dans ... » ne sont pas repris par l'élève. Cette non-reprise ne signifie pas que l'élève n'a pas saisi l'information syntaxique de ces compléments puisqu'elle en a proposé d'autres dans sa réponse. Au contraire cette reformulation par l'élève témoigne d'une autonomie par rapport au texte qui correspond aux compétences langagières de l'élève.

- **les constructions syntaxiques :**

Elle contient trois relatives, du discours indirect, des propositions infinitives, une circonstancielle de but (pour + verbe à l'infinitif) et une proposition subordonnée introduite par « quand ». Nous relevons aussi l'ajout de « alors que » introduisant une simultanéité entre deux événements ainsi que des emboitements de

constructions complexes. Une étude comparative (Figure 8) des IC employés par l'élève et présents dans les textes de lecture fait apparaître que Magali emploie 5 IC dans sa réponse au dispositif 1 et 11 IC dans sa réponse au dispositif 2. Cette augmentation des IC montre une meilleure réappropriation du contenu linguistique et de l'organisation des idées des deux textes.

Introduceurs de complexité (IC)			Textes				
Type de constructions	N°	Forme	<i>La maladie de Maxence</i>	<i>Maxence (2)</i>	Réponse D1	Réponse D2	
Complétive dans la dépendance du verbe	Infinitives	10	Verbe + verbe à l'infinitif	9	9	1	1
		17	à + verbe à l'infinitif	2	1		
		18	de + verbe à l'infinitif	5	7	2	1

nombre d'IC différents			14	13	4	7	
Nombre total d'occurrences d'introduceurs de complexité			39	35	5	11	

Figure 8 : Etude comparative des IC employés par Magali et présents dans les deux textes.

- les formes lexicales

Comme pour la réponse au premier dispositif, nous observons que Magali reprend les formes lexicales des textes lus et les emploie dans de nouveaux contextes syntaxiques. Cela indique que l'élève ne restitue pas uniquement par mémorisation mais aussi par intégration. Nous relevons deux ajouts lexicaux qui

nous paraissent significatifs de la compréhension des informations non employées littéralement dans les textes et ont donc été compris grâce à un travail d'inférence effectué par Magali :

- emploi de l'adjectif « curieux » qui fait référence au questionnement des élèves par rapport à l'absence du personnage dans le premier texte ;
- emploi de la locution verbale « être guéri » qui n'est pas explicitement employée par le texte mais qui constitue le dénouement de l'histoire.

Pour conclure

A travers quelques exemples d'analyses, nous avons souhaité montrer que pour évaluer la compréhension en lecture d'un élève il était important d'étudier le texte choisi pour le travail. En effet c'est à partir de celui-ci que nous allons pouvoir repérer ce que l'élève a compris ; concernant les informations du texte dans un premier temps mais aussi, dans une approche linguistique, ce que l'élève fait du texte pour montrer ce qu'il a compris.

Ce travail nous semble nécessaire pour pouvoir évaluer au plus juste non pas la compréhension du texte mais l'étendue de la compréhension du texte par un élève.

Ainsi ce sont la pratique même de lecture par l'élève et la pratique de l'élève dans une activité d'évaluation scolaire qui sont interrogées. Les résultats de cette étude doivent permettre d'aider les enseignants à cerner au plus juste la pratique en lecture et pourquoi pas en écriture des élèves.

Books on Holidays: motivating people to read in a somewhat different way

Božena Kolman Finžgar

Anton Tomaž Linhart Library, Slovenia

I come from Slovenia. Slovenia has been an independent state since 1991 (before that it was part of the state of Yugoslavia). Now it is a member state of the European Union (since 2004), with euro as its currency (since 1. 1. 2007).

Thus, Slovenia is a country of quite recent origins, small but most beautiful (one of its fascinating features is that „love“ is integrated right there in its very name). Some useful (numerical) data (statistics): the total population 1.998.079; the capital city Ljubljana population: 265.881; total area in square kilometer: 20.273; the highest peak at Mount Triglav: 2.864; the length of the longest river: 211 kilometers; the total kilometers of coastline to the Adriatic Sea 46.

There is only one island to be found in Slovenia, and that is the Isle of Bled, located in the very neighbourhood of where the Anton Tomaž Linhart Library – the library I come from – is located. Altogether, there are nearly 60 public libraries (like our library) in Slovenia, all of them with numerous subdivisions (or branches) and library vans covering the area.

Anton Tomaž Linhart Library services the needs of the 35,000 local inhabitants of the Radovljica, Bled, Bohinj, and Gorje municipalities, and comprises 12 smaller branches throughout the area. Our library boasts some rather admirable results in what we do, as proved by the statistics, one of them being the circulation per capita: 16.19 of library units loaned by each inhabitant in 2008 (the Slovene average being 12.60). Obviously, our strategic orientation is to motivate everyone to read – for everyone to make reading not only their own need and habit but above all their own joy and pleasure, no matter where or when the occasion may arise.

And this is what we do in the Linhart library in all sorts of ways, for people of a variety of ages. To pre-school children we offer *fairy-tales rucksacks* (with books and sets of hand puppets related to individual fairy tales), we relate fairy tales and stories to them, and we also keep an ongoing cooperation with the local kindergartens. To pupils and highschool students we offer an array of various projects: award-winning quizzes, the *Superbook* contest, the reading campaign *Library – A Universe of Treasures*, the *Inside out* group meetings, the *Night With Andersen* and the *Growing Up Reading Books* projects, alongside with a wide variety of library lessons. For adults, evening events are organized at least once a

week. For the third-age population, monthly presentations of newly-acquired books and books of the month are held during morning hours along with cozy chats with coffee, tea and biscuits offered.

In addition to all that, there are two special features of this motivation programme of ours: *Books on Holidays* and *Summer Reading* reading campaigns.

It all started in August 2005. For a number of years, we had been looking at photos of Paris with the banks of the river Seine turned into a sand beach covered with deckchairs and sunshades ... where the people of Paris would spend their hot summer days. Reading, of course, as it is done on every beach throughout the world. Something similar was done in Ljubljana, the capital of Slovenia: cozy cushions were set on the banks of the river Ljubljanica for visitors to read in the shade of the willow trees there. So we said to ourselves: *Why, how nice it is to be reading stuff outside, in the open, just lying back on a towel, in a nice, cozy chair, somewhere by the sea or a lake, anywhere ...* Where could this be done at our place? True, there are no rivers running through the centres of the local towns, but there are swimming pool complexes, campsites, and lakes!

So the decision was made to send some of our books to the Radovljica Swimming Pool complex for their holidays for all the swimmers and other visitors there to read and thus make the time they spend there more colourful. No library card or ticket would be required, all one would have to do is to stroll up to the book shelves prepared on site. The books would just have to be returned before leaving the premises. If some books were left unfinished but proved to be too interesting not to be read through, they would remain there until the next day, and would still be available at our library, anyway. In this way, no one should have any problems in finishing their read either at the swimming pool or making a loan at the library.

And this is what we did. Our expectations were more than just met: the visitors to the Radovljica swimming pool were so delighted by this new form of reading that by the end of the summer only the summer pool closed for the season, while the books still remained on their holidays, they only »moved« to the indoor swimming pool.

The assortment of these books and magazines on holidays keeps rotating all the time. This kind of rotation takes place three times a year: once when the summer swimming pool is opened, and twice during winter. Who wants to read the same book over and over again! Moreover, the selection varies; in summer, for instance, more picture books are included because these come in handy to mummies (and sometimes even daddies) to read a story or two to their toddlers and make it easier for them to stay out of water long enough to get warm again before they hurry off again to paddle in the water ... Additionally, a number of books in non-Slovene

languages are added to the selection in summer for the sake of visitors from abroad. As a rule, a greater percentage of these collections on holidays is apportioned to books, beside a regular number of interesting magazine volumes. Care is also taken to make the selection of books interesting to all: cardboard and picture books for the youngest, tales of mystery and suspense for children and teenagers, and of course a variety of interesting reads for adults.

Since the books on holidays have been welcomed so enthusiastically by the visitors to the Radovljica swimming pool, they have been supplemented with other sets of books at the Park Hotel and the Grajsko kopališče (= Castle swimming pool complex) at Bled, at the Camping Šobec campsite at Lesce, Camping Danica campsite at Bohinj, Camping Zaka at Bled and Kavarna Kino coffee bar at Radovljica.

And the outdoor reading being such a pleasure, as we all know, deckchairs, upholstered chairs, stools, and small tables are now set in a pleasurable shade of a birch tree in front of the Anton Tomaž Linhart Library at Radovljica each year, starting in the beginning of June, inviting all passers-by to sit down and have a read. To make these sit-downs even more pleasurable to the youngest visitors, picture and colouring books are provided, together with boxes of crayons to draw on paper and coloured chalks to draw on the asphalt floor, with footballs and a pair of goals ... And this is what we call our *Summer Reading*.

As we all know, a picture – or a photo, for that matter – tells a thousand stories. You are all invited to take a look at many more of such photos at our website: www.rad.sik.si.

Restitution d'une histoire en PS de maternelle à partir d'une projection de diapositives : Mouvements discursifs et « difficile à dire »

Mireille Froment

MoDyCo, Université Paris Descartes, CNRS, Université Paris Ouest Nanterre La Défense, France

I - Introduction

L'album, comme l'a souligné F. Grossmann (2000, p. 94), est un objet spécifique et complexe qui « invente de nouveaux mariages entre le texte et l'image », selon une double polarité qui va de la redondance à l'autonomie des deux composantes.

L'article propose une analyse des échanges maîtresse-élèves au cours de la restitution d'une histoire, s'appuyant sur la notion de « mouvement » (François, 1989, 1998). Les mouvements, dans l'analyse, sont à entendre comme des processus interprétatifs des interactions verbales comme non verbales. Ils sont vus comme des processus *qui ont lieu*, sur la base de contenus discursifs manifestes ou d'arrière-fonds plus ou moins partagés. Non nécessairement intentionnels, ils n'ont d'existence que parce qu'ils se produisent chez un récepteur donné.

On s'attache à décrire les mouvements qui manifestent chez les enfants un « difficile à dire » (Gardin, 2005) lors de la restitution d'une histoire en images, pour suivre les demandes de la maîtresse et entrer dans un genre scolaire dont les normes et attendus sont spécifiques.

Après avoir précisé le cadre d'analyse du discours, la notion de mouvement et de difficile à dire, on présente quelques exemples de mouvements permettant de caractériser plus particulièrement ce dialogue didactique et les attentes scolaires qu'il sous-tend.

On commente simultanément le « difficile à dire » au sens de ce qui résiste à la mise en mots. Ce « difficile à dire » est considéré comme révélateur des « achoppements » dans ce processus d'acculturation à un genre donné.

II - Cadre théorique :

1- *La notion de « mouvement discursif » puise ses sources dans le dialogisme bakhtinien*

La notion de mouvement discursif permet d'interroger la question du sens et de sa circulation, en prenant en compte l'enchaînement des énoncés et non les énoncés isolés. En effet, comme l'écrit François (2005, p. 65), « ce qui va faire sens, ce n'est pas l'énoncé en tant que tel mais son *mouvement* par rapport à ce qui précède, dans le cas d'un enchaînement *in situ* à un interlocuteur réel comme dans le cas du

rapport à une tradition culturelle et à des lecteurs absents ». L'enchaînement peut, en effet, se faire sur l'énoncé d'un interlocuteur présent tout comme sur celui d'un locuteur absent, à distance ou à proximité. Le rapport dialogique, que Bakhtine (1979/1984) distingue de la parole dialogique, parce que plus ample, renvoie à cet ouvert du sens et de l'association dans l'enchaînement, qui est porteur d'un cadre interprétatif non délibérément *choisi*, ni par le locuteur ni par le récepteur. La façon dont un locuteur continue l'énoncé d'un autre (ou le sien propre) est doublement orientée, en tant que réception de l'énoncé d'autrui et en tant que production d'une réponse, ce que condense l'expression bakhtinienne de « compréhension responsive » (Bakhtine, M., [V.N. Volochinov] 1929/1977). En outre, selon Bakhtine, cette « compréhension responsive », comporte un *jugement de valeur*.

Le mouvement discursif rend compte justement de ce qui est repris de l'énoncé reçu et de ce qui est *déplacé* dans la réponse, sur un ou plusieurs plans : qu'il s'agisse du genre, du thème, aussi bien que des catégories lexicogrammaticales.

Précisons toutefois que les mouvements peuvent être des enchaînements sur du non verbal. Dans le cadre de cet article, certains mouvements se font, par exemple, sur l'image ou encore sur l'expérience indépendante de la mise en mots. La complexité du mouvement discursif et de son mode de fonctionnement se manifeste dans les différents types de dialogues, et il est possible de dire que si les situations concrètes sont différentes, c'est justement en fonction de la différence des mouvements qu'on y repère.

2- *Mouvements et différents « difficile à dire »*

Le « difficile à dire » renvoie au travail de B. Gardin (2005) sur les discours syndicaux, il fait état du mode de relation à l'interlocuteur et de la relation du langage à une réalité extra-linguistique qui résiste à la mise en mots. Il en décrit des causes, qui peuvent relever de la qualité de l'interaction ou de la langue elle-même, et des manifestations, comme par exemple, l'inachèvement, le bafouillage, le parler creux....

Dans notre cas, le changement de contexte, le rapport de places particulier maître-élèves, le très jeune âge des enfants et la spécificité de la tâche font que sans que les causes soient radicalement différentes les « difficiles à dire » ont leurs traits spécifiques.

On retient deux principaux lieux de manifestation de « difficile à dire » : le dialogue avec l'adulte qui fait faire (demande, induit) des mouvements *qui ne vont pas de soi* pour les enfants (Qu'est-ce que répondre à la question de la maîtresse ?

qu'est-ce que répondre dans le champ de la question ?). Et puis le difficile à dire qui est plus directement lié à la complexité du à *dire* .

III - Le *Corpus* de reference

L'histoire en diapos sélectionnée est celle d'un Petit Lapin (PL) qui désobéit à son père Lapin. Bien qu'il n'en ait pas le droit, il va jouer dans la forêt et est capturé par une sorcière. La suite de l'histoire est constituée par l'évasion de PL qui doit surmonter une série d'embûches, résoudre des énigmes, savoir utiliser certains éléments de la situation à son profit.

La situation scolaire de restitution a ceci de particulier que l'enfant est sollicité dans le cadre d'un dialogue dont une séance antérieure constitue l'arrière-fond sinon partagé du moins attesté. Précisons que les mouvements ne se font pas sur la seule base du contenu manifeste, mais également sur des arrière-fonds qui sont justement *plus ou moins* partagés.

La situation a un certain degré de contrainte, lié tout à la fois au fait qu'il s'agit d'une tâche scolaire et que la demande est de (re)raconter. Celle-ci ne peut être réduite à une question de conformité entre histoire redite et texte source, c'est une activité d'interprétation. Comment l'histoire (et sans doute plus largement l'histoire telle qu'elle a été racontée lors de la séance précédente avec son atmosphère et ses circonstances propres) et la demande de redire *font-ils sens* pour les élèves ? On souligne le plaisir des enfants par rapport au thème de l'histoire : jeu avec deux sortes de peur, celle qui est liée à la désobéissance et celle qui est liée au personnage « agresseur » de la sorcière.

Une tâche scolaire, au-delà de la demande formulée par la maîtresse (tâche dite), comporte des objectifs d'apprentissage (ou tâche cachée) non explicitement énoncés. Dans le cas de la lecture d'album, la visée de l'enseignant est d'*induire* un certain nombre de mouvements qui affectent une grande diversité de plans : du plan métalinguistique (recherche, définition de lexèmes), à celui du genre qui suppose des mouvements de séquentialisation, de désignation, d'explicitation....

Ces différents mouvements fondent la dynamique discursive et l'activité cognitivo-langagière spécifique du milieu scolaire.

Du point de vue de la maîtresse, il s'agit de re-raconter donc d'une tâche langagière dans laquelle il faut parler *de* l'image / *à partir de* l'image, et du *texte* dans le cadre de l'histoire, en essayant de se rapprocher des attentes du milieu scolaire quant au récit. En effet, le genre scolaire « raconter » est soumis à un certain nombre de contraintes.

Au fur et à mesure que l'histoire se construit, les échanges du dialogue constituent un arrière-fond à partir duquel les relations image-texte évoluent, et

avec elles les types dominants de mouvements et de places discursives. On peut parler de co-construction du sens entre les enfants et la maîtresse. Mais co-construction ne signifie pas convergence (Salazar-Orvig, 2008). D'une part, toute continuité est à la fois élection et exclusion, d'autre part les mouvements de place discursive dessinent une autre relation du locuteur au thème (donc aussi un changement de genre) et à ses interlocuteurs.

La continuité que la maîtresse dessine ne va pas de soi pour ses jeunes élèves. Regardons, à travers quelques exemples, de quel « difficile à dire » cette continuité est faite.

IV - Restitution d'une histoire, mouvements discursifs et difficile à dire

1- Complexité des mouvements entre image et texte pour re-raconter :

Les discours liés aux deux premières diapositives permettent d'observer des mouvements entre deux types d'activité langagière : lire l'image et raconter l'histoire, sans que l'on puisse nettement séparer les deux. Le « modèle » qui se dégage des mouvements effectués par la maîtresse consiste à apprendre aux élèves à ne pas seulement mettre en mots ce qui est montré par l'image (ce qui relèverait d'une description) mais à accentuer *du point de vue de l'histoire* certains éléments. Ce sont les personnages agents (réponse à l'une des questions (« qui ») relatives aux indications dans la terminologie de Labov, 1978), les événements, le nouveau (« et après ? ») et le plaisir du jeu avec la peur (« et alors », évaluation au sens de Labov). Ces mouvements locaux ont ainsi une *portée* globale et même générique dans le sens où ils vont au-delà de cette histoire-là : leur enjeu est le savoir raconter (en milieu scolaire) en proposant un certain type de mise en relation de l'image et du texte, dans une sorte de *narration descriptive* ou *description narrativisée*.

Les mouvements de la maîtresse sur le dire des enfants comme sur l'image nous montrent ainsi une conception du récit, lequel commence par les indications (que faut-il dire pour commencer un récit ?), avec une adaptation à l'âge des enfants de petite section (puisque que la demande ne porte que sur les personnages et non sur l'espace-temps). Cette demande ne va pas de soi pour les enfants. En effet, pour faire identifier les personnages (indications dans le début du récit), la maîtresse initie un échange qui compte 11 tours de parole et elle doit réitérer son questionnement 4 fois (8, 10, 13, 16, en gras dans l'exemple ci-dessous) :

Exemple 1 : *La première diapositive présente une famille lapin dans sa maison* (« Non, non et non ! », gronde papa Lapin, en fronçant les sourcils, « tu n'iras pas dans la forêt, c'est trop dangereux » (le papa lapin a l'index pointé sur PL) :

7-Nils-3 : « non tu vas pas aller dans la forêt + c'est trop dange- (dangereux), parce que y'a la sorcière »

8-Maî-3 : c'est quoi c'est qui là ? <en montrant le lapin>

9-Cle-2 : le loup

10-Maî-4 : qui est-ce qui est sur l'image là ?

11-Emm-1 : le lapin§

12-Nils-4 :§ le la- le papa lapin et ben et ben va pas aller dans la forêt non parce que c'est la sorcière§

13-Maî-5 : §je te demande qui est-ce qui est sur l'image là ?

14-Mat-1 : le lapin

15-Nils-5 : le lapin ++ le lapin

16-Maî-6 : LE lapin ?

17-Cas-1 : [inaudible] + le papa

18-Maî-7 : le papa lapin oui

Cette première diapositive *montre* l'espace-temps et les personnages dans une disposition spécifique que seul le texte permet de préciser. Les élèves reprennent majoritairement les paroles du papa lapin, l'affinité entre personnage et prise de parole étant prégnante pour de jeunes enfants.

La maîtresse fait un mouvement de genre (ou dénivellation) par rapport au discours des enfants. Elle propose, ce faisant, une mise en relation (minime mais indispensable) du texte et de l'image, en ce sens que l'image seule ne nous dit pas le nom des personnages.

Un certain « difficile à dire » se manifeste ici, d'une part, dans cette résistance (non délibérée) ou divergence des enfants, qui conduit la maîtresse à réitérer sa question, d'autre part dans le contenu des réponses (9-Clé-2 : le loup).

Exemple 2 : *la deuxième diapo montre le PL dans la forêt (1° plan de l'image), guetté par une sorcière dissimulée derrière un arbre (2° plan).*

37-Nils-11 : <inspiration d'exclamation> LA SORCIERE ! elle est derrière l'arbre

38-Maî-16 : <en chuchotant> la sorcière est cachée derrière l'arbre

39-Nils-12 : ah oui

40-Maî-17 : mais qu'est-ce que je vois là avec un ballon ?§

41-Nils-13 : §la sorcière

42-Mat-4 : la sorcière

43-Maî-18 : non, avec un petit ballon dans les mains

Brouhaha {lapin}

44-Mat-5 : le p(e)tit lapin

45-Maî-19 : <étonnée> le p(e)tit lapin ! mais qu'est-ce qu'i(l) fait là ?

Ici, les élèves enchaînent sur ce qui fait *événement*, la menace figurée par la sorcière, pourtant très peu visible sur la diapositive, mais actant de premier plan dans la *narration*. On a ici affaire à une autre affinité fréquente dans le récit enfantin : l'accentuation de l'élément nouveau qui s'appuie sur un schème bien connu, ici la transgression et le surgissement d'un danger.

La verbalisation des situations et le travail de séquentialisation sont à l'œuvre dans la suite du dialogue sur la diapo 2 : la maîtresse fait verbaliser la désobéissance et son résultat, en demandant d'explicitier le lien entre les images.

2- *Mouvements montrant des difficultés pour mettre en mots le fil narratif*

Exemple 3 :

48-Maï-20 : tu vas vite hein Nils, pour l'instant moi je vois un petit lapin avec un ballon + qu'est-ce qu'il fait là ce petit lapin avec un ballon ?

49-Nils-15 : ben il a

50-Cor-1 : parce que i(l) veut jouer au ballon hein + parce que moi je cours très vite hein

(...)

53-Cas-2 : il a pas écouté

En 50, Corentin fait un mouvement discursif explicatif concernant le ballon, suivi par association d'un mouvement sur la situation évoquée : l'enfant se laisse ici porter par ses associations *en laissant de côté la tâche* consistant à suivre le déroulement des événements du texte de base. Plus tard dans le déroulement de l'interaction, nous observons à nouveau cette difficulté chez les enfants pour conserver le fil narratif sans se laisser aller à des associations. Les travaux de François (1994) sur le récit enfantin nous montrent cette spécificité du genre fictif-accumulatif à partir de récits spontanés (en particulier récit d'enfants GS de maternelle). « L'enfant, écrit-il, continue l'histoire avec un autre personnage, et un autre thème, de plus en mélangeant les thématiques réalistes et celles de l'imaginaire codé. Du coup, la cohérence globale du texte (début-fin, maintien du personnage principal, résolution de la crise) n'est pas ce qui domine » (1994, p. 189).

Suite à cela, la maîtresse (54-Maï) fait un double mouvement :

- d'abord de rétrospection sur les paroles du papa lapin, qui prennent ainsi la valeur de marquage du début de l'épisode, et donc participent de la séquentialisation :

54-Maï-22 : il a pas écouté son papa, il l'a pas écouté, qu'est-ce qu'il lui avait dit son papa ?

55-Tous : non non non

56-Nils-16 : {la sorcière} [inaudible]

57-Maï-23 : son papa lui a dit ?§

58-Cle-5 : §non

59-Maï-24 : non non non

Ces micro-mouvements s'inscrivent dans un mouvement plus ample qui construit le schème *interdit-transgression*, lequel renvoie à des modalités d'interactions antérieures au langage et joue comme déclencheur et du récit et d'un nouvel épisode.

3- *Mouvements montrant un difficile à dire lié à l'objet de discours*

Exemple 4 (diapo 5) :

Pour s'évader PL a besoin d'une clef qui se trouve à proximité de la souris et la souris a fort envie du fromage auquel peut accéder PL : chaque personnage a un désir, chaque personnage a besoin de l'autre pour le réaliser. Le difficile à dire est lié à cette complexité de l'énonciation du désir des uns et des autres et à une certaine attente de la maîtresse, elle-même corrélée aux normes et attentes de l'école.

De même que dans l'exemple précédent (d'une certaine façon, se met en place une *routine* dans le dialogue scolaire), la maîtresse délimite l'événement (elle en marque le début et la fin) ; elle fait ici minutieusement détailler les différentes étapes du marché conclu entre les personnages et le mode de réalisation de ce marché. Elle initie un mouvement de rétrospection (102) sur le dire des enfants, visant à expliciter les mobiles de la demande de PL. On retrouve ici la notion de valeur attribuée à l'action (Ricœur, 1985) ou d'état mental (Bruner, 1991) à travers cette insistance sur les raisons de faire (but poursuivi, moyen local pour y parvenir) et sur le lien à l'intrigue principale (s'évader) comme sur le lien entre moyens et des buts :

98-Mat-8 : i(l) dit « donne moi la clef petite souris »

99-Nils-26 : i(l) dit donne la clef à le petit lapin +++ pour ouvrir la porte

100-Maî-39 : ouais

101-Tom-1 : le le le fromage

102-Maî-40 : le lapin demande à la p(e)tite souris de lui donner la clef. Bah ! pourquoi il veut la clef le p(e)tit lapin ?

103-Mat-9 : pour ouvrir

103-Nils-27 : parce que i(l) veut ouvrir a a le :

104-Mat-9 : la porte !

105-Maî-41 : ah il va ouvrir la porte!

106-Nils-28 : la porte

107-Cor-6 : oui la porte

Brouhaha

108-Luc-4 : pour sortir de là

109-Maî-42 : [inaudible] pour sortir de là oui, est-ce qu'elle est d'accord la p(e)tite souris pour lui donner la clef ?§

La maîtresse fait expliciter l'action et son corrélat (11 tours de parole). On peut paraphraser Barthes (1985, p 178), qui a détaillé les fonctions élaborées par Propp

(1965), en deux grandes classes de fonctions, les unes distributionnelles, les autres intégratives. « L'achat d'un revolver, écrit-il, a pour corrélat le moment où l'on s'en servira, décrocher le téléphone le moment où l'on raccroche... », et dire que recevoir une clef a comme *corrélat* l'ouverture d'une porte. La reprise théâtralisée du mode du dire des enfants a comme effet un mouvement de contextualisation : ouvrir la porte signifie *ici* sortir de là. La maîtresse fait alors faire un mouvement discursif qui est un changement de focalisation : sur le personnage souris et sur ce qu'elle veut :

Exemple 5 (15 tours de parole).

109-Maî-42 : [inaudible] pour sortir de là oui, est-ce qu'elle est d'accord la p(e)tite souris pour lui donner la clef ?§

110-Nils-29 : §oui

111-Maî-43 : oui

112-Luc-5 : [inaudible] mais que si+++ il lui donne le fromage

113-Mat-10 : [inaudible] il lui donne un bout de fromage après

114-Maî-44 : oui, mais: oui c'est bien Lucas oui [inaudible]

Le difficile à dire est, ici, non seulement l'alternance des personnages (laquelle s'ancre sur des modalités d'interaction antérieures au dialogue), mais la mise en mots de la condition émise par la souris.

V- Conclusion

Les différents types de mouvements apparaissent ainsi comme des façons d'interpréter les textes (ici le dialogue scolaire) et d'en montrer l'élaboration dynamique, telle qu'elle peut être interprétée par le récepteur. Nous pouvons finalement dégager -dans et par l'observation même de ces mouvements- un certain nombre de caractéristiques de l'activité langagière de restitution d'une histoire à partir d'images, en milieu scolaire.

a- Certains mouvements des enfants, en tant que conduites préférentielles ou affinités premières, sont spontanés : ces mouvements correspondent à la réaction verbale des enfants aux images et au(x) texte(s) qu'ils ont entendus antérieurement. Ces affinités premières dans la narration peuvent elles-mêmes être dépendantes d'interactions antérieures au langage, comme on l'a montré à travers l'actualisation du schème interdit-transgression.

b- La maîtresse réagit à son tour aux mouvements spontanés des enfants. Elle leur fait faire des mouvements corrélés au cadre institutionnel, dont la visée est de faire entrer les enfants dans une nouvelle relation aux histoires, dans de nouvelles conduites langagières autour de ces histoires. Cela participe certainement du processus de secondarisation tel que l'a décrit Bautier (2001). Les enfants ont des difficultés, on l'a vu, à poursuivre les mouvements de *genre* proposés par la maîtresse à partir de leurs propres réactions aux images (du récit initié par les enfants à la description de l'image) : nous lions cette difficulté au fait que le mouvement proposé par la maîtresse va contre certaines affinités premières remarquées habituellement dans les narrations des jeunes enfants. Le mouvement (difficile) proposé par la maîtresse consiste en effet ici à véritablement entrer dans le

jeu du dialogue didactique, puisqu'il s'agit de répondre dans le champ de la question et non plus de réagir spontanément à l'image. Ce type de mouvement peut porter tout autant sur de grandes unités (mouvements globaux) que sur des aspects plus locaux. Il met toujours en jeu une certaine conception du genre récit.

c- Les mouvements de thématization de la maîtresse manifestent les attentes de l'école : les enfants montrent, on l'a vu, certaines résistances à enchaîner sur ce type de mouvement. Ce travail langagier apparaît donc comme une élaboration qui suppose du temps ; il est porté par les micro-mouvements. C'est après ces formulations, reformulations, et tâtonnements que l'on arrive par exemple à l'épisode résumable de la désobéissance : un temps que l'on peut qualifier de discursif est nécessaire (l'explicitation occupe une soixantaine de tours de parole). Chacun de ces mouvements a un ancrage sur des modalités d'interaction antérieures au langage et/ou des affinités premières : les changements de genre discursifs peuvent être considérés ici comme des médiateurs entre culture adulte et culture enfantine

Les exemples contribuent à l'explicitation du travail cognitivo-langagier mené en classe. En effet, l'école attend que les élèves construisent une distance (effectuent un mouvement de « secondarisation » (Bautier & Goigoux, 2004) par rapport à leur expérience et leurs habitudes langagières, ce qui est proprement constitutif d'un processus d'apprentissage et d'appropriation des savoirs et de l'entrée de l'enfant-élève dans une nouvelle culture.

La notion de mouvement, simultanément mise en œuvre avec celle de « difficile à dire » permet d'éclairer le travail cognitivo-langagier engagé dans les dialogues en classe, d'en montrer le lent et patient cheminement.

Conventions de transcription :

Transcription orthographique.

Pour permettre un repérage rapide dans le corpus, les tours de parole sont numérotés, dans leur ordre de succession. Le chiffre qui suit les trois premières lettres du nom rend compte du nombre de tours de parole de ce locuteur, à ce moment du dialogue. Le signe + indique une pause, dont la longueur est proportionnelle au nombre de croix ; le soulignement indique un chevauchement ; entre parenthèses, les phonèmes non prononcés par les locuteurs ; entre crochets (<...>), des indications portant sur le non verbal.

Vom Event zum Leseprojekt – Vorleseaktivitäten in der Schule

Elisabeth Gessner

Germany

Vorlesen wird schick

„Lesen ist wieder in“ frohlockt ein erfahrener Aktivist der Leseförderung und bezieht sich dabei nicht zuletzt auf eine Reihe von erfolgreichen Vorleseaktivitäten in Schulen und Bibliotheken der Region (Pöller 2009). Galt das Vorlesen schon traditionell als ein Königsweg in die Welt der Bücher, so machte es nach PISA eine zusätzlich rasante Karriere. Vorlese-Events aller Art schossen wie Pilze aus dem Boden, nach amerikanischen Vorbild ‚lasen‘ ganze Städte, und zwar an möglichst extravaganten Orten. Politiker, Schauspieler und prominente Sportler wurden zu Vorlesern und Lesepaten, Schüler lasen sich gegenseitig, aber auch in Kindergärten und Altenheimen vor, und als der regelmäßige ‚Vorlesewettbewerb‘ des Deutschen Buchhandels sein 50-jähriges Bestehen feierte, war das dem Bundespräsidenten eine Einladung der 30 besten Vorleser ins Palais Bellevue wert. Bundesweite Kampagnen wie ‚Deutschland liest vor‘ unter Schirmherrschaft der damaligen Kanzlergattin Doris Schröder-Köpf sollten „Kinder und Jugendliche an das Lesen heranführen“ und entwickelten dabei erhebliche mediale Durchschlagkraft (vgl. www.deutschland-liest-vor.de)

Der ganz große Hype ist inzwischen vorbei, um die spektakulären Hochglanz-Kampagnen ist es ruhiger geworden. Die Welle der Vorlese-Begeisterung hat weder die jugendliche Freizeitwelt revolutioniert noch die Lesekompetenz unserer Schülerinnen und Schüler entscheidend gesteigert. Doch hat sie in der schulischen Praxis Spuren hinterlassen und Aktivitäten initiiert, die eine Würdigung und positive Weiterentwicklung verdienen. Lesenächte, Literaturcafés, Poetry-Slams und Autorenlesungen gehören in vielen Schulen inzwischen zum pädagogischen Repertoire, manchmal als singuläre ‚Events‘, zunehmend aber auch als gedachte Eckpunkte eines schulischen Lesekonzepts. Darüber hinaus gibt es ein ganzes Heer von mehr oder weniger gut geschulten, zumeist jedoch sehr engagierten ehrenamtlichen Vorlesern wie beispielsweise die ‚Lesepaten‘ und ‚Lesescouts‘ der Stiftung Lesen oder die nach einem Konzept von Gerd Bräuer ausgebildeten Schüler-Vorleser/innen (vgl. Bräuer, 2008).

Es braucht allerdings einen langen Atem, um aus solchen begrüßenswerten Ansätzen nachhaltige Konzepte zu entwickeln, es braucht eine systematische Bestandsaufnahme des Vorhandenen und vor allem eine substantielle Unterstützung der Akteure im pädagogischen Alltag. Denn auch der

lesebegeistertste Lehrer, die idealistischste Vorleserin werden irgendwann ‚ausbrennen‘, wenn sie im schulischen Alltagsbetrieb Einzelkämpfer bleiben und sich allein gelassen fühlen. Auch das Vorlesen benötigt verlässliche Strukturen und eine realistische Eingrenzung seiner Möglichkeiten, um das zu leisten, was im schulischen Rahmen vorrangige Zielrichtung jeglicher Leseförderung sein sollte: Dass möglichst viele unserer Schülerinnen und Schüler möglichst oft **aktiv** und **verstehend selbst lesen wollen** – und **können**.

Vom Zuhörer zum Leser – (k)ein einfacher Weg?

Viele Vorlese-Initiativen leiden noch immer an einem Theoriedefizit: Der Zusammenhang von Freude an Geschichten, Lesemotivation und Lesekompetenz scheint kaum hergeleitet, ebenso wenig die Verbindung zwischen der zunächst **passiven** Rezeptionshaltung der Kinder beim Vorlesen und der Bereitschaft sowie Fähigkeit zum **aktiven** Akt des Selbst-Lesens. Während gerade die voraussetzungslose Zuwendung des Vorlesenden, die nichts fordert, sondern nur ein kuscheliges Ambiente anbietet und das Abtauchen in fremde Geschichten erlaubt, für Kinder den primären Reiz der Vorlesesituation ausmacht, ist der aktive Leseakt erst einmal anstrengend und mit Mühe verbunden. Man braucht Unterstützung und viel Übung, um selbst flüssig lesen und die gelesenen Texte dann auch noch verstehen zu können. Aus eifrigen Zuhörern müssen nicht unbedingt gute Leser werden – von selbst und automatisch funktioniert das schon mal gar nicht.

Die Studie „Vorlesen im Kinderalltag“

Es gehört zu den Verdiensten der Studie „Vorlesen im Kinderalltag 2008“ (Stiftung Lesen u. a. 2008), dass sie die angestrebten Ziele vergleichsweise systematisch auffächert. Unter dem Motto ‚Vorlesen im Kinderalltag: ein fundamentaler Bildungsimpuls – für lebenslanges Lernen‘ werden zunächst drei eher unterrichtsnahe Aspekte benannt:

- die **Ausformung neuronaler Strukturen für Lernkompetenz**
- die Vermittlung von **Lesemotivation**
- die Förderung von **Sprach- und Ausdrucksfähigkeit**

Ganz sicher gehört die Entwicklung von **Lernkompetenz** zu den fundamentalsten Aufgaben der Schule – aber formen sich die entsprechenden neuronalen Strukturen sozusagen ganz von selbst durch das bloße Zuhören aus? Unabhängig von der Gestaltung der Vorlesestunden und den Inhalten des Vorgelesenen? Unabhängig auch von der Einbindung der Vorleserituale in den Unterrichtsalltag?

Dasselbe gilt für die Förderung der **Sprach- und Ausdrucksfähigkeit**. Erweitert sich der Wortschatz sozusagen automatisch, indem man beim Zuhören viele neue Wörter hört und sie dann gleich übernimmt? Durch Imitation? Ist das wie beim Vokabellernen in der Fremdsprache? Oder braucht der Aufbau von ‚Weltwissen‘, um den es letztlich hier geht, nicht viel mehr - an Anschauung, Erfahrung und Eigentätigkeit, die das ‚Vorlesen pur‘ nicht leisten kann?

Am einfachsten scheint der Zusammenhang zwischen dem Vorlesen und der **Lesemotivation** zu sein. Wenn Kinder erfahren, dass zwischen zwei Buchdeckeln spannende Geschichten stecken können, wenn sie gefesselt sind und neugierig auf den Ausgang einer Erzählung, werden sie eher freiwillig zu Büchern greifen, als wenn sie diese immer nur als dröge, verstaubte Bleiwüsten erleben, mit denen verständnislose Erwachsene drohen. Aber auch hier bleiben Fragen offen: Wenn das selbstständige Lesen für Kinder und Jugendliche zu mühsam bleibt, weil ihnen elementare Lesetechniken fehlen oder die Automatisierung, der ‚Erwerb des langen Leseatoms‘ (Rosebrock 2004) nicht systematisch begleitet wird, dann wird die Initialzündung durch die Vorleseaktion bald wieder erlöschen. Und wenn zu Hause und in der Schule nicht gleichzeitig mit den Vorlesestunden ein attraktives Bücherangebot bereit gehalten wird, kann ebenfalls keine nachhaltige Lesemotivation entstehen.

Liest man weiter in der oben genannten Untersuchung, wird sehr deutlich, dass neben dem erhofften **kognitiven Kompetenzzuwachs** vor allem die **sozialen Fähigkeiten** durch das Vorlesen gestärkt werden sollen. „Vorlese-Rituale machen nicht einfach ‚Kinder schlau‘“, konstatiert die Studie und fährt fort: „Sie stärken die Sozialkompetenz der Kinder, ...schaffen Geborgenheit und Nähe... vermitteln Impulse für Familien, Kita-Gruppen und Klassen“.

Beziehen sich solche Äußerungen zwar vorrangig auf das Vorschulalter und die familiäre Situation, so ist angesichts der wachsenden Anforderungen an den Erziehungsauftrag der öffentlichen Bildung doch unbestreitbar, dass die Schule auch hier eine zunehmende Kompensationsfunktion übernehmen muss und daher auf die identitäts- und gemeinschaftsstiftende Kraft des Vorlesens keinesfalls verzichten sollte. Und wer als Lehrperson jemals erlebt hat, dass es fast Wunder wirken kann, wenn man einer völlig ausgeflippten Lerngruppe im Nachmittagsunterricht zwischendurch eine spannende Geschichte vorliest, wird ab und zu gerne auf dieses scheinbar einfache Rezept zurückgreifen. Funktionieren kann das allerdings nur, wenn man das Vorlesen als Ritual persönlicher Nähe inszenieren und gleichzeitig gelassen mit Disziplinproblemen umgehen kann. Dazu brauchen die Vorleserinnen und Vorleser Erfahrung und Anleitung – oder eine sehr starke Persönlichkeit.

Vorlese-Events in der Schule

Sinnvoll erscheint an dieser Stelle eine Systematisierung schulischer Vorlese-Arrangements nach ihren jeweiligen Rollenzuweisungen. **Wer** liest vor? Was bedeutet das für die **Zuhörerschaft** und den geeigneten **Rahmen**? Grob unterteilt kann man im öffentlichen Bildungsbereich folgende Konstellationen unterscheiden:

- ‚Promis‘ (Autoren, bekannte Persönlichkeiten aus verschiedenen Bereichen des öffentlichen Lebens) lesen vor. Publikum können Erwachsene, Kinder und Jugendliche sein.
- Erwachsene ehrenamtliche Vorleser/innen wie die ‚Lesepaten‘ lesen vor. Adressaten sind Kinder und jüngere Schüler/innen.
- Kinder und Jugendliche als ehrenamtliche Vorleser/innen (z. B. ‚Lesescouts‘) lesen anderen Kindern und Jugendlichen vor.
- Schülerinnen und Schüler lesen sich gegenseitig oder einem Publikum vor (ritualisiert wie beim ‚Vorlesewettbewerb‘ (www.vorlesewettbewerb.de) oder zur Vorstellung eigener Texte, z. B. im ‚Literaturcafé‘ oder Schreibwerkstätten)

Je nach Arrangement können diese Vorleseaktivitäten unterschiedlichen Zielen dienen und brauchen dafür auch unterschiedliche Voraussetzungen. Ein Patentrezept, das die zeitweiligen Heilserwartungen erfüllen oder auf leichtem Weg zum Erfolg führen könnte, ist nicht darunter. Bei aller Unterschiedlichkeit in der kreativen Gestaltung gilt jedoch generell, dass die Vorleseaktivitäten keinesfalls Eintagsfliegen bleiben sollten. Singuläre Events bewirken im Bezug auf alle genannten Zielvorstellungen nur wenig. Gestaltetes Vorlesen in der Schule entwickelt nur dann nachhaltige Wirksamkeit, wenn es mit dem Unterrichtsalltag verbunden ist. Es braucht also Normalität und Verbindlichkeit. Gleichzeitig sollte man Vorleseaktivitäten aber auch den Reiz des Besonderen belassen – sie dürfen und sollen nicht im Alltagsbetrieb von Lehrplanerfüllung, Zensuren und geschäftsmäßiger ‚Textarbeit‘ untergehen. Dieses Spannungsfeld zwischen Einbindung und herausgehobenem Ereignis muss immer wieder neu ausbalanciert werden.

Ein Autor besucht die Schule

Autorenlesungen gehören eindeutig zu den Besonderheiten im Schulalltag, und von dieser Extravaganz leben sie. Denn *per se* repräsentieren die Autoren eine kulturelle Szene, die Jugendlichen aus bildungsfernen Schichten erst durch die Schule näher gebracht werden kann. Autoren sind gleichzeitig auch ‚Promis‘ mit entsprechender Aura – insbesondere dann, wenn sie sich mit besonders angesagten Themen beschäftigen. Und wenn sie dann noch ‚ganz normale Menschen wie du und ich sind‘, die auf den pädagogischen Zeigefinger verzichten

und einen guten Kontakt zu jugendlichen Zuhörern aufbauen können, werden solche Lesungen fast zum Selbstläufer.

Die gute Vorbereitung einer Autorenlesung beginnt also damit, dass man sich bei der Auswahl der Autoren mit Blick auf das jeweilige ‚Publikum‘ sachkundig beraten lässt. Welche Themen kommen gerade gut an? Was gefällt den Mädchen, was kommt bei den Jungen an? Buchhandlungen, die auf Jugendliteratur spezialisiert sind, aber auch Bibliotheken und einschlägige Initiativen wie der ‚Friedrich-Bödecker-Kreis e. V.‘ beraten gerne bei dieser Auswahl und vermitteln oft auch gleich geeignete Autoren. Der ‚Friedrich- Bödecker-Kreis‘ bietet darüber hinaus eine sehr praktikable ‚Checkliste für Veranstaltungen‘ als Download an, die alle wichtigen Aspekte berücksichtigt(www.boedecker-kreis.de).

Sind solche organisatorischen Vorbereitungen geklärt, kommt es darauf an, den Stellenwert einer Autorenlesung für das Schulleben herauszuarbeiten. Es muss deutlich werden, dass es um eine Veranstaltung der *ganzen Schule* geht, die von allen wahrgenommen und auch gewürdigt wird. Wenn man sich darüber hinaus nicht nur auf das Vorstellen ‚literarisch wertvoller‘ Bücher beschränkt, sondern auch gute Sachbuchautoren in die Auswahl mit einbezieht, wachsen die Chancen, dass sich auch die Physiklehrerin oder der Sportlehrer angesprochen fühlen und die Lesung unterstützen. Unter besonders glücklichen Voraussetzungen sind sogar kleine Informations- oder Fortbildungsveranstaltungen innerhalb des Kollegiums denkbar. Keinesfalls sollte man eine Information der Eltern vergessen.

Die Phasen des Leseprozesses als Planungshilfe

Wie man inzwischen weiß, hat gelingendes Lesen stets einen Prozesscharakter, bei dem sich verschiedene Phasen unterscheiden lassen: *vor, während, danach* – wobei die Aktionen vor und nach dem Lesen mindestens ebenso wichtig sind wie der ‚eigentliche‘ Leseakt. Dies gilt auch für das Vorlesen, und zwar in allen seinen Varianten. Was hier am Beispiel der Autorenlesung näher konkretisiert werden soll, lässt sich deshalb mit entsprechenden kleinen Modifikationen auch auf alle anderen Vorleseaktivitäten übertragen.

Betrachtet man die Erkenntnisse der neurophysiologischen Lernforschung, so ist die Hinführung auf das Neue, die Aktivierung des Vorwissens und der Aufbau einer primären Motivation fundamental für die konstruktive Verarbeitung neuer Eindrücke (vgl. z. B. Willenberg 2004). Genauso wichtig ist – auf das Lesen und Zuhören bezogen – die sog. ‚literarische Anschlusskommunikation‘, also die Möglichkeit sich über persönliche Eindrücke auszutauschen oder auftretende Fragen unmittelbar zu stellen. Das wünschen sich auch Kinder schon, wie die Studie ‚Vorlesen im Kinderalltag 2008‘ aufzeigt. Zu ähnlichen Ergebnissen kommt

auch eine Studie der Universität Erfurt aus dem Jahre 2002 (Richter&Plath 2007). Bei Jugendlichen verschiebt sich das Kommunikationsinteresse mehr in Richtung Diskurs oder kreative Eigentätigkeit, aber sich mit anderen über das Gehörte austauschen wollen auch sie. Für alle Leser/innen aller Altersgruppen sind Anschlussaktionen also wichtig, sie entsprechen emotionalen Bedürfnissen, wirken motivierend und helfen beim Aufbau von Wissensstrukturen.

Es gibt zahllose praktische Möglichkeiten für die Gestaltung der Phasen vor und nach einer Autorenlesung. *Vorher* kann man z. B. einen kleinen Büchertisch mit den Büchern des Autors oder zum Thema der Lesung zusammenstellen, man kann den Raum – festlich oder zum Sujet passend – gestalten, kleine Recherchen durchführen und die Ergebnisse ansprechend präsentieren, ein Interview mit dem Autor vorbereiten. Eine sehr kreative Möglichkeit, Zuhörer/innen unterschiedlichster Altersgruppen auf einen Autor einzustimmen, ist die ‚Wäscheleine‘, bei der Buchcover als Redeanlass über Bücher dienen. (Fritsche&Sulzenbacher 2003). Viele interessante Einfälle sind inzwischen praxiswirksam erprobt (siehe z. B. „Unsere Schüler lesen – zündende Ideen der Leseförderung an Schulen und Bibliotheken“ Rüsselsheim 2008) Wichtig ist allerdings, dass man stets die Schüler/innen in die Vorbereitung einbezieht und ihnen Raum zum *aktiven* Tun und selbstständigen Mitgestalten gibt.

Für die Phase *während* des (Vor-)Lesens bleibt dann noch, den passenden Rahmen und einen ansprechenden Raum zu finden, wobei es sowohl gute Argumente für den glanzvollen ‚großen Bahnhof‘ mit möglichst vielen Zuhörern gibt als auch für die kleine, überschaubare Lesung im vertrauten Rahmen einer Klasse. Entscheidend ist, dass die Atmosphäre stimmt und sowohl konzentriertes Zuhören als auch eine lebendige Auseinandersetzung mit dem Gehörten gesichert sind. Sofern eine Schulbibliothek vorhanden ist, ist sie in vielen Fällen der geeignetste Ort.

Gleiches gilt auch für die Phase *nach* der Lesung. Schlecht wäre es, wenn der Autor nach getaner Lesung gleich enteilt und die Schule übergangslos zum *business as usual* zurückkehrt. Mindestens sollte noch ein ausführlicher Austausch über das Gehörte, ein Feedback an den Autor und eine gezielte Nachbereitung im Unterricht erfolgen. Dies kann in Form von Rezensionen, kleinen Presstexten, kreativen Auseinandersetzungen mit dem vorgelesenen Text (schreiben, malen, sprechen) oder durch passende Anschlussprojekte erfolgen. Am spannendsten ist es natürlich, wenn der Autor selbst noch für Anschluss-Aktionen (etwa eine Schreibwerkstatt) zur Verfügung steht. Eine gelungene Autorenlesung in der Schule baut bewusst eine Brücke zwischen passiver Rezeptionshaltung und dem Interesse an selbstständiger Lektüre und Aktivität.

Die Lesepaten kommen

Ehrenamtliche Lesepaten sind aus der Praxis vieler Kindertagesstätten, Freizeiteinrichtungen und Grundschulen nicht mehr wegzudenken. Soweit es sich um erwachsene ‚Lesepaten‘ handelt, sind sie überwiegend weiblich, verfügen über viel pädagogischen Idealismus, haben oft einen bildungsbürgerlichen Hintergrund und sind häufig schon etwas fortgeschrittenen Alters. Die ‚typische Lesepatin‘ ist in vielen Fällen eine wohlmeinende ‚Lese-Omi‘: Männer sind in diesem Metier immer noch Mangelware.

Da das private ‚Vorlesen im Kinderalltag‘ anscheinend zunehmend Seltenheitswert hat, können ehrenamtliche Vorlesepaten eine wichtige Ergänzung zum vorwiegend kognitiven ‚Lernbetrieb‘ leisten. Sie schaffen damit auch ein Gegengewicht zu einer Freizeitwelt, die selbst für Kinder heute oft straff durchorganisiert oder durch passiven Medienkonsum, Leerlauf und Anrengungsarmut gekennzeichnet ist. Für Kinder aus bildungsfernen Schichten sind sie manchmal die ersten Wegbereiter für Literalität im weitesten Sinne.

Die Bedeutung ehrenamtlicher Vorlesepaten steht also außer Frage. Sie erfüllen eine entscheidende Kompensationsfunktion gerade im Hinblick auf die von Kindern gewünschte persönliche Zuwendung und ‚Geborgenheit‘ (vgl. Studie ‚Vorlesen im Kinderalltag 2008) und können so zum Aufbau einer stabilen Lesemotivation beitragen. Im Spannungsfeld zwischen ‚Normalbetrieb‘ und bewusst herausgehobenem ‚Event‘ ist die Arbeit der Lesepaten deutlich näher am schulischen Alltag angesiedelt als der punktuelle Besuch eines Autors; sie kann daher auch andere Funktionen erfüllen, vor allem im Hinblick auf den sozialen und identitätsstärkenden Wert des Vorlesens. Gerade deshalb müssen diese Aktivitäten allerdings regelmäßig und verlässlich sein. Die Angebote der Lesepaten brauchen in besonderem Maße Ritualisierung und eine erkennbare Einbindung in das curriculare Angebot der Schule.

Kreative Beispiele für Aktionsmöglichkeiten von Lesepaten kann man auf den Webseiten der einschlägigen Stiftungen einsehen (z. B. www.stiftunglesen.de). Oft bedeutet dies erst einmal Zusatzarbeit für die Schule, für die zwar ein Gegenwert, ein interessantes Angebot zurück kommt, die aber zunächst geleistet werden muss. Das beginnt mit der Regelung rein organisatorischer Fragen: Wann und wo sollen die Vorlesestunden stattfinden? Wer ist verantwortlicher Ansprechpartner an der Schule? Wie wird die notwendige Kommunikation mit den Klassenlehrern und der Schulleitung gesichert? Wer informiert die Eltern? Und wer ist zuständig, wenn es irgendwo ‚brennt‘?

Auch bei großer Wertschätzung der Lesepaten haben Lehrpersonen für solche Koordinationstätigkeiten nicht immer die Zeit, vor allem dann nicht, wenn die notwendige Unterstützung durch die Schulleitung fehlt. Umgekehrt stellt die erforderliche Integration in das Schulleben auch an die Lesepaten besondere Anforderungen, die in der ersten Begeisterung manchmal nicht genügend bedacht werden.

Exemplarisch soll hier ein Blick auf die Vorbereitung und Begleitung der von der ‚Stiftung Lesen‘ betreuten Vorlesepaten geworfen werden. Positiv ist zunächst einmal, dass es überhaupt eine kurze Ausbildung und ein Konzept dafür gibt. Dabei stehen vor allem „praktische Vorlesefähigkeiten“ im Vordergrund, außerdem Anregungen für die Auswahl geeigneter Literatur und für die Schaffung einer lesefreundlichen Atmosphäre (Stiftung Lesen 2008). Die Teilnahme an entsprechenden Workshops wird empfohlen, sie ist aber nicht obligatorisch. Davon abgesehen lassen sich in kurzen Einführungsseminaren auch nur elementare Grundfragen ansprechen. Vertiefende Informationsmöglichkeiten und vielleicht sogar Elemente eines persönlichen Trainings ließen sich sicher ergänzen.

Die Unterstützungsleistung der Stiftung besteht im Wesentlichen in der Bereitstellung von aktuellen Büchern, außerdem wird Hilfe bei der Suche nach einem ‚Vorleseort‘ angeboten. Falls gewünscht, können auch Kontakte zu anderen Vorlesepaten vermittelt werden. Es ist ein sehr offenes Konzept, das Impulse anbietet, ansonsten aber auf ein durchgeplantes Design und feste Strukturen verzichtet. Manchen Vorlesern und Vorleserinnen kommt das sicher entgegen, weil es viel Spielraum für individuelle Akzentuierungen bietet. Es kann aber auch dazu führen, dass sich der eine oder die andere dann mit dem Leitfaden ‚Vorlesen – kinderleicht‘ als einzigem Handwerkszeug doch recht allein gelassen fühlt.

Schülerinnen und Schüler lesen vor

Das Pendant zu den Lesepaten sind besonders ausgebildete Schülerinnen und Schüler, die Vorleseaktionen anbieten. In anderer Weise als erwachsene Lesepaten können diese jugendlichen Vorleser/innen als Lesevorbilder dienen und Identifikationsbedürfnisse erfüllen.

Wenn der coole Junge aus der Nachbarklasse Geschichten präsentiert, die er selbst nach seinen Interessen ausgesucht hat, lädt das in ganz anders zum Nachahmen – oder Nach-Lesen – ein. „Wenn mein Kumpel nicht liest, tu ich es auch nicht. Und wenn ich`s tu, geb ich es auf keinen Fall zu.“ beschreibt Katja Irlle in der Frankfurter Rundschau vom 01. 07. 2009 den Teufelskreis der fehlenden Lesemotivation männlicher Haupt- und Realschüler. Wenn es gelänge, diesen Kreislauf wenigstens in einigen Fällen umzukehren, wäre das ein großer Erfolg für

die Schüler-Vorleser, der durch kein anderes Setting erzielt werden kann. Da man inzwischen weiß, welchen Einfluss die Peers auf die Herausbildung von Gewohnheiten und Vorlieben haben, sind solche Hoffnungen durchaus angebracht.

Die jugendlichen Vorlese-,Profis' – oft heißen sie ‚Lesescouts‘, weil sie in den Bücherdschungel hineinführen wollen - sind in der Regel bereits gute und begeisterte Leserinnen und Leser. Trotzdem brauchen sie eine systematische Anleitung für ihre Tätigkeit. Wegen seines mit praxisnahen Materialien ausgestatteten Charakters ist hier das Ausbildungskonzept für Vorleser/innen von Gerd Bräuer zu nennen (Bräuer 2008). Es setzt auf ein ausdifferenziertes Multiplikatorenmodell und versteht sich dezidiert als ein Baustein zur Schulentwicklung. Die Ausbildungsmaterialien sind klar strukturiert und enthalten sehr viele Elemente der reflexiven Praxis, z. B. ein anregend gestaltetes Portfolio sowie Vorlagen für unterschiedliche Formen der Dokumentation und des Feedbacks. Die Schüler lernen, wie man Vorlese-Aktivitäten in der Schule bekannt macht und wie man Netzwerke aufbauen kann. Daneben werden sie auch sehr praktisch in ihre Arbeit eingeführt, z. B. im Ausbildungsbaustein ‚Ich lerne mit Texten umgehen‘ (‚Wie fasse ich eine Geschichte zusammen?‘, ‚Wie erkenne ich das Hauptmotiv einer Geschichte?‘, ‚Wie kann ich meinen Zuhörern das Hauptmotiv vorstellen?‘ etc).

Die Ausbildungsmaterialien sind insgesamt ausgereift und folgen einem planmäßigen methodischen Prinzip. Erfolgreich ist das Konzept offensichtlich dann, wenn die Ausbildung und die Arbeit der Vorleser/innen wirklich als Bestandteil eines Schulkonzeptes geschehen. Fehlt die bewusste Einbindung in ein klar definiertes Schulkonzept, lassen sich trotz des vorbildlichen Charakters der Ausbildungsmaterialien zumeist nicht alle Möglichkeiten ausschöpfen

Wir hatten die Gelegenheit, die erste Erprobung des Konzepts von Bräuer innerhalb des ‚Freiburger Lesenetzes‘ zu evaluieren (Gessner&Kuhley 2006). Das Projekt war durch hohe Anfangserwartungen insbesondere an den beteiligten Schulen gekennzeichnet, die jedoch nur partiell erfüllt werden konnten. Dazu trug einerseits die außerordentlich knappe Projektlaufzeit von nur einem halben Jahr bei. In so kurzer Zeit lassen sich aber weder Schüleraktivitäten verstetigen noch gar Multiplikatorenmodelle oder Netzwerke aufbauen. Und ob es bei den Zuhörern überhaupt eine Steigerung der **aktiven** Lesemotivation gegeben hat, konnte weder untersucht noch gar nachgewiesen werden. Diese letztgenannten Aspekte weisen auf grundsätzliche Fragen an das Vorlesen hin, deren empirisch abgesicherte Beantwortung noch aussteht.

... dann dürfen es auch eigene Texte sein

Neben solchen durch eine klare Rollenverteilung gekennzeichneten Vorleseaktionen gibt es natürlich viele andere Gelegenheiten im Schulleben, bei denen Schülerinnen und Schüler ihren Mitschülern Texte vortragen und bei denen sich Vorlesen und Zuhören auch abwechseln können. Außer vielfältigen Unterrichtssituationen, mit denen wir uns an anderer Stelle eingehend auseinandergesetzt haben (Gessner&Kuhley 2009), gehören dazu vor allem besondere kreative Angebote wie das Literaturcafé, die Schreibwerkstatt, der Geschichtenwettbewerb einer Klasse oder Schulstufe. Hier geht es zumeist um das Vorlesen eigener Texte: lesen, schreiben und über Texte reden können dabei eine glückliche Verbindung eingehen. Für das Arrangement solcher Veranstaltungen gelten ähnliche Regeln wie für das ‚Vorlesen pur‘: Sie brauchen einen angemessenen Rahmen und einen gesicherten Ort im Schulalltag, sie müssen durchdacht inszeniert werden, wobei immer die einschlägigen Phasen zu beachten sind (Vorbereitung/Hinführung, Präsentation, Anschlusskommunikation).

Es muss sich in diesem Zusammenhang nicht zwingend um fiktionale, literarisch orientierte Texte handeln. Auch pragmatische Schreibanlässe – Ausstellungen, Präsentationen und Referate zu Sachthemen, appellative Texte unterschiedlicher Art – können erhebliche Kreativität freisetzen, vor allem bei weniger ‚schöngestig‘ orientierten Jungen. Doch selbst dafür gilt: es sind die besseren Leser und Schreiber, die sich zu allererst davon angesprochen fühlen werden.

Der Vorlesewettbewerb

Man kann nicht über die Gestaltung zeitgemäßer Vorlese-Events reden, ohne auch den ‚Klassiker‘ des Vorlesens in der Schule zu erwähnen: den alljährlichen Vorlesewettbewerb des Börsenvereins des Deutschen Buchhandels. Seit 50 Jahren begleitet er das Schuljahr und da er in vielen Schulen zu den unumstößlichen Ritualen gehört, braucht man ihn kaum detaillierter vorzustellen.

Alle Jahre wieder beteiligen sich „mehr als 700.000 Kinder der 6. Klassen aller Schularten... an rund 8.000 Schulen daran“, wie der aktuelle Flyer verrät (Wettbewerbsflyer hrsg. vom Börsenverein des Deutschen Buchhandels e. V. Ffm. 2008/2009). Ob diese Zahlen sich im Laufe der Zeit reduziert haben, wie Berichte aus der Praxis vermuten lassen, erfährt man nicht. Die Verbreitung dieses Traditionsmodells der Leseförderung ist jedenfalls nach wie vor beeindruckend. Auch wenn er in die Jahre gekommen ist, hat der Wettbewerb mittlerweile an modischem Outfit zugelegt: neben dem flotten Werbeprospekt mit einem Bewertungsbogen sowie einer Hitliste der am häufigsten vorgelesenen Kinder- und

Jugendbücher gibt es inzwischen eine Webseite mit einem elektronischen ‚Gästebuch‘ sowie „Gewinnspielen und einem Live-Chat“. Kurze, aufmunternde Zitate aus diesem Live-Chat („Hey Leute. Alle die wieder ran geh’n an den Vorlesewettbewerb! Nur Mut! Traut euch!“) zeigen: man ist auf der Höhe der Zeit. Dazu gehört auch ein Hinweis, dass der Vorlesewettbewerb „nicht isoliert neben dem Schulalltag stehen“ muss, und eine Auflistung begleitender Aktionsmöglichkeiten – man denkt also durchaus an die die notwendige curriculare Einbindung. Organisiert werden müsste diese allerdings von den betreuenden Lehrkräften vor Ort, und die bekommen leider dazu wenig konkrete Umsetzungshilfen.

Im Übrigen soll laut Flyer „das Vorlesen – ebenso wie das Zuhören – vor allem Spaß machen. (...) Die Kinder sollen die Lektüre nicht als Pflicht, sondern als Vergnügen erleben“ und „unbefangenen Umgang mit Büchern“ erlernen. Im Mittelpunkt steht also auch hier die pure Lesefreude – und da fangen dann meist die Probleme schon an. Zwar mag dies Konzept bei ohnehin lesefreudigen und – geübten Schülern noch aufgehen, wer aber den Vorlesewettbewerb jemals in einer Klasse mit vielen leseschwachen Schülern erlebt hat, weiß, dass er ganz grundsätzliche Fragen aufwirft. Sie beginnen bei der Auswahl von Büchern. „Buch und Textabschnitt können die Teilnehmer frei nach ihren Interessen wählen“, legt die Ausschreibung fest. Schulbücher und kopierte Texte sind allerdings ausgeschlossen.

Was aber nun, wenn es zu Hause keine Bücher, sondern nur Videokassetten gibt? Wenn ‚Interessen‘ für Bücher noch gar nicht entwickelt werden konnten, weil die Eltern selbst nicht lesen und deshalb den Kindern auch keine Jugendbücher schenken? Wenn dann nicht die Lehrer diskret weiterhelfen und auch keine gut ausgestattete Schulbibliothek vorhanden ist, können hier Kinder in bester Absicht beschämt werden. Sie spüren ihre Benachteiligung, anstatt Neugier und Motivation zu entwickeln. Das kann sich während des Vorlesens noch verstärken. Während die guten Leser/innen schnell ihren Fanclub aufbauen und sich in Bewunderung sonnen können, stottern und stammeln sich andere hilflos durch Texte, die sie nur unzureichend verstehen und deshalb auch nicht gefällig vorlesen können. Auch in der 6. Klasse fehlt es manchen noch an elementarer Lesetechnik, von Lesekompetenz im Sinne verstehenden Lesen ganz zu schweigen. Das Vorlesen, gerade in dieser Konkurrenz- und Wettbewerbssituation, mutiert dann leicht zum Vorgeführt-Werden und wird für die Beteiligten quälend.

Die Leseforschung hat gezeigt, dass Wettbewerbselemente gerade für Jungen motivierend wirken können, und auch die demokratische Grundausrichtung des Verfahrens – alle sollen in gleicher Weise beteiligt sein – ist anerkennenswert.

Trotzdem braucht der Vorlesewettbewerb ein grundlegendes Lifting, das über modische Accessoires hinausgeht. Dies bedeutet auch hier vor allem praktische Umsetzungshilfe, insbesondere im Hinblick auf die bereits erwähnten Begleitaktionen. Sehr verdienstvoll wäre es darüber hinaus, wenn der Börsenverein des den Wettbewerb zum Anlass für einen substantiellen Nachteilsausgleich nehmen könnte, indem bedürftige Schulen bei der Einrichtung von Bibliotheken oder wenigstens mit einem gut sortierten Jugendbuchangebot unterstützt würden. Aber vielleicht gibt es das ja schon und es hat sich nur noch nicht zu uns herumgesprochen?

Das Vorgelesene weiterspinnen‘ – Mit Vorleseprojekten Weltwissen erweitern

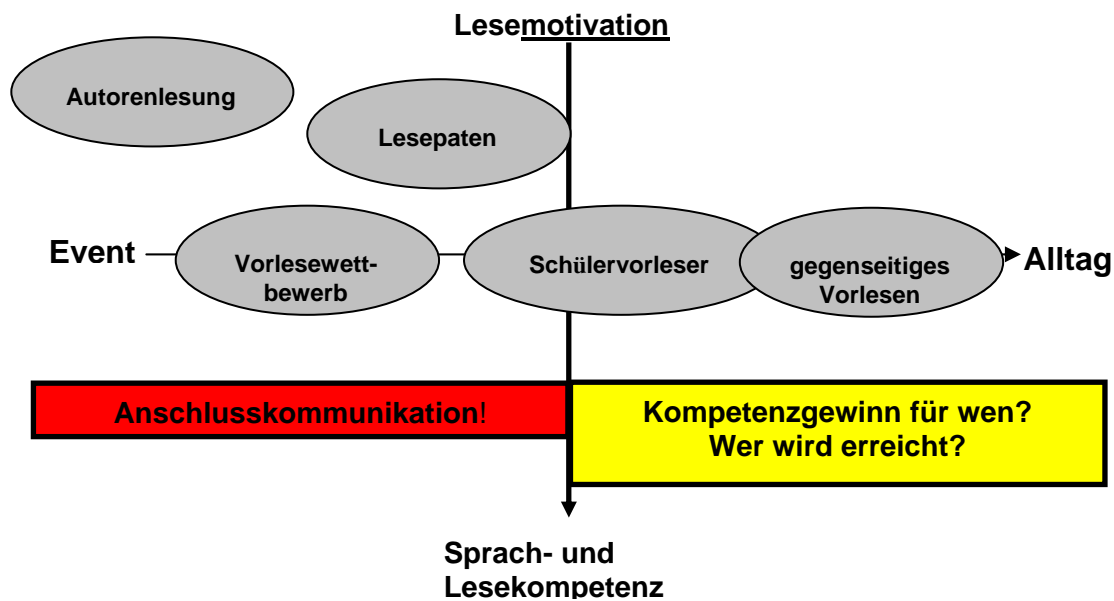

Zum Abschluss an dieser Stelle ein kurzer Blick auf ein Projekt, in dem sich wesentliche Erfolgsdeterminanten verbinden: Es handelt sich um das preisgekrönte Projekt ‚Lese-AGs in Kindergärten, Kitas und Schulen‘, das maßgeblich von der Umweltpädagogin Karin Dinter mitgestaltet wurde. Die Grundidee ist sehr einfach: „Den Preis haben wir bekommen, weil wir nach dem Lesen nicht Schluss machen. Wir spinnen das Gelesene weiter.“ konstatiert Frau Dinter dazu (Interview in der Frankfurter Rundschau vom 14. 10. 2006). Das bedeutet, dass sich aus dem Vorlesen eines Kinder- oder Jugendbuchs jedesmal ein kleines Projekt entwickelt, das thematisch an das Vorgelesene anknüpft: die Exkursion in den Wald oder das Tierheim nach einem Sachbuch über Tiere, die Auseinandersetzung mit Behinderung nach einem Buch über ein blindes Mädchen, Beschäftigung mit der Lebensgeschichte von realen Menschen, die Abenteuer erlebt haben, das Aufsuchen von unterschiedlichen Lebenswirklichkeiten und ‚Schauplätzen‘- „Wir verbinden das Gelesene mit der Wirklichkeit. Bücher werden dann mindestens so spannend wie ein Fernsehfilm.“

Hier wird das Vorlesen also systematisch genutzt, um Weltwissen zu erweitern – und das ist eine elementare Voraussetzung nicht nur für die erhoffte Verbesserung der Sprach- und Ausdrucksfähigkeit, sondern auch für die aktive Lesekompetenz schlechthin. Das Besondere an diesem Ansatz ist, dass neben kreativen Anregungen ganz bewusst auch kognitive Fähigkeiten angesprochen werden sollen.

Zum Verhältnis von Lesekompetenz und Lesemotivation beim Vorlesen

Betrachtet man die beschriebenen Vorleseaktivitäten innerhalb eines Koordinatensystems zwischen den Polen ‚besonderes Event‘ und ‚schulischer Alltag‘ einerseits sowie ‚Lesemotivation‘ und ‚Lesekompetenz‘, den Hauptzielen der schulischen Leseförderung, andererseits (s. Grafik), so fällt auf, dass sich die

betrachteten Arrangements in ihrer Mehrheit im linken oberen Quadranten verorten lassen. Eindeutig befinden sie sich näher beim ‚Event‘, dem Besonderen. Dies liegt sozusagen in der Natur der meisten Vorlesekonzepte, macht ihr ‚Alleinstellungsmerkmal‘ aus und ist insofern nicht zu kritisieren. Allerdings wird ebenso offensichtlich, dass eine zusätzliche Verankerung im schulischen Normalbetrieb erforderlich ist – sozusagen als notwendiges Gegengewicht, das den Events Nachhaltigkeit und ‚Bodenhaftung‘ verschafft.

Dem Alltagsbetrieb in der Schule am nächsten sind dagegen solche Arrangements, bei denen sich Schüler gegenseitig ihre Texte vorlesen. Diesem gegenseitigen Vorlesen, vielleicht auch dem Einsatz von ausgebildeten Schüler-Vorleserinnen, könnte es umgekehrt gut tun, wenn ihm ganz bewusst ein besonderer Platz im Schulleben eingeräumt und damit auch ein bisschen mehr an glanzvollem Event-Charakter verliehen würde. Kaum bemerkt und unauffällig im Gewohnten untergehen, wie es leider manchmal der Fall ist, sollten solche Schüleraktionen nun wirklich nicht.

Insgesamt geht es also darum, die Vorleseaktivitäten entlang der Achse ‚Event – Alltag‘ ihrem jeweiligen Charakter entsprechend auszubalancieren, wobei die Betonung mal stärker auf dem Einzigartigen, mal stärker auf dem Regulären liegen kann. Ganz vernachlässigt werden sollte aber keines dieser beiden Elemente. Das hier vorgestellte Strukturmodell könnte dabei eine Planungshilfe sein.

Noch deutlicher wird, dass sich die Vorleseaktivitäten fast ausschließlich dem Ziel der verbesserten ‚Lesemotivation‘ zuordnen lassen. Eindeutig und nachweisbar kompetenzfördernd ist keines der gängigen Arrangements, wie die Analyse ergeben hat. Ohne bewusst gestaltete ‚Anschlusskommunikation‘, oder noch besser: schüleraktivierende Anschlussprojekte, scheint das Vorlesen eher ‚bunter Lesezauber‘ zu bleiben, der vielleicht kurzzeitig erfreut, aber keine wahrnehmbaren Fördereffekte hat.

Dies führt zu zwei weiteren grundlegenden Fragen: Wen erreichen die gängigen Vorleseaktivitäten in erster Linie? Und wer erwirbt dadurch welche Kompetenz? Eindeutig (und einseitig) motivationsorientierte Strategien, wie es die meisten Vorlese-Events offensichtlich immer noch sind, sprechen vor allem die guten, sprachgewandten Lerner an und können hier zu weiterer Motivationssteigerung beitragen. Sie helfen also vor allem den ‚Guten‘, noch besser zu werden. Die schwachen und sprachungeübten Leser werden nicht im selben Maße erreicht, wie durch eine Vielzahl einschlägiger Untersuchungen bestätigt wird (z. B. Bertschi-Kaufmann & Schneider 2006 sowie Trenk-Hinterberger, Nix u. a. 2007). Diese Kinder und Jugendlichen brauchen zusätzliche Hilfe, die systematisches Training und den planvollen Aufbau von Weltwissen einschließt. Dies gilt sogar für schülerorientierte Settings wie das gegenseitige Vorlesen von Texten in Schreibwerkstätten und schulischen Literaturcafés, die noch am ehesten dem unmittelbaren Kompetenzgewinn dienen könnten.

Ein deutlicher Kompetenzgewinn ließ sich bei den Schüler-Vorlesern des vorgestellten Freiburger Projekts nachweisen; für die ‚Lesescouts‘ anderswo gilt das wahrscheinlich gleichermaßen. Die beteiligten Schüler/innen haben in ihrer Ausbildung nicht nur besser vorlesen gelernt, sondern auch Texterarbeitung, Präsentation und ‚Öffentlichkeitsarbeit‘. Dies gilt jedoch nur für die Vorleserinnen und Vorleser – die Wirkung beim Publikum wurde nicht untersucht.

Mit diesem Beitrag soll die Entwicklung einer praxisorientierten ‚Didaktik des Vorlesens‘, die an den aktuellen Wissensstand von Lernforschung und Lesedidaktik anschließt, unterstützt werden. Gefragt sind dabei vor allem die Akteure des Vorlesens: außerschulischen Institutionen, die ehrenamtlichen Vorleseaktivitäten initiieren, ebenso wie die vielen Praktiker, die sich in ihren Schulen engagieren. Aus der Vielzahl vorhandener Ideen und Erfahrungen lassen sich mit Sicherheit differenzierte Konzepte für eine zunehmend heterogene Schülerschaft herausdestillieren, die über das singuläre Event und das zeitlich begrenzte Erstrahlen einzelner Leuchttürme hinausreichen. Von der Entwicklung solcher Konzepte und einer wissenschaftlich fundierten Beantwortung der oben skizzierten

Fragen wird es abhängen, ob das Vorlesen auf Dauer in Mode bleibt – und zumindest einen Teil der damit verbundenen hohen Erwartungen erfüllen kann.

Literacy Practices in Secondary School: which learning opportunities do teachers and students create in everyday classroom?

Suzana dos Santos Gomes

Maria Lucia Castanheira

Universidade Federal de Minas Gerais, Brazil

Judith Lee Green

University of California, USA

The purpose of this paper is twofold. First, it aims to examine how literate practices are developed within and across 7 disciplines (Portuguese, English, Mathematics History, Geography, Natural Science and Arts classes) in a 8th grade classroom in a public school in Brazil. Second, it seeks to provide a basis for illustrating how Interactional Ethnography guides this process of study and constitutes a *philosophy of inquiry*, and how *theory is method* and *method is theory* within this approach (e.g., Birdwhistell, 1977; Green & Bloome, 1997). It also makes visible how, as a study develops over time, the *logic of inquiry* is constructed to make visible the decisions for data collection and analyses undertaken to identify what was socially, culturally and linguistically relevant to members of the local social group and thus analytically relevant (Green, Dixon & Zaharlick, 2001).

This approach, Interactional Ethnography, is grounded in theories from cultural anthropology (e.g., Agar, 1994; Birdwhistell, 1977; Geertz, 1983; Spradley, 1980), theories of discourse as social action (e.g., Vygotsky, 1934/1988; Bakhtin, 1986; Fairclough, 1992; Gumperz, 1991 e 2002), and sociological theories on the social construction of everyday life (e.g., Berger & Luckmann, 1967; Giddens, 1984; Erickson, 1986 e 2006). Building on Anderson-Levitt's argument that ethnography is not a method but a philosophy of inquiry, we seek to make visible how an Interactional Ethnographic perspective guides the ways in which we construct an analysis from the records in an ethnographic corpus (archive) to explore an unexamined issue or question made visible through previous analysis.

Developing logic of inquiry: the responsive and contrastive nature of data analysis process

In this section, we begin the presentation of our data analysis process through characterizing the logic of inquiry constructed for examining the proposed questions for this study. Drawing on Castanheira, Crawford, Dixon & Green (2001), we explore a set of analytical questions and theoretical and methodological procedures that guides this investigation. Figure 1 represents the initial phases of this analytical process.

OVERARCHING QUESTIONS: How are Literate Practices constructed in the daily events of classroom life? To which opportunities for learning do students have access across subject-area classes?

Proposing question: Which literacy events were constructed within and across subject-area classes in the first week of class?

Represented data: Construction of interactional event maps, registering participants' actions, time of activity, materials resources, and interactional spaces.

Data analyzed: Analysis of event maps to support a panoramic view of what was accomplished in the first week of class within and across disciplines and the onset of a referential perspective of literate practices within and across subject-area classes.

Proposing questions: What actions did the teachers and students take in initiating literate practices within and across subject-area classes?

Represented data: Production of domain analysis and taxonomies of initiating practices in organizing classroom interaction, proposing activities to students and using written materials.

Data analyzed: Analyzing taxonomies of initiating practices within and across subject-area classes, aiming to understand teachers' pedagogical perspective and to construct a panoramic view of the range of learning opportunities created within and across each academic discipline.

Proposing questions: What kinds of texts were explored within and across subject-area classes? What was the role of the text within and across subject-area classes?

Represented data: Taxonomy of kinds of texts used by participants in the different subject-area classes.

Data analyzed: Comparative analysis of taxonomy of kinds of text used in each subject-area classes.

Proposing questions: How did members participate in the interactions mediated by texts in these classrooms? Who could say and do what as texts were explored during process of interaction?

Represented Data: Producing transcripts of classroom interaction among participants in Portuguese and Geography classes.

Data analyzed: Microanalysis of transcripts examining how and which opportunities for learning and becoming literate were constructed within and across academic disciplines.

PROPOSING NEW OVERARCHING QUESTIONS: How were the Literate Practices initiated during the first week of classes explored within and across subject-area classes throughout the year? Were they expanded or abandoned? What consequences did these practices have for students learning?

Figure 1: Representing the logic of inquiry constructed in this study

As represented in Figure 1, through our analytic approach, we created a series of event maps, transcripts, data tables, and domain analyses and taxonomies that we later used contrastively to construct a grounded perspective on literate practices across the subject-area classes. The analytical process is developed through a series of actions - proposing, representing and analyzing data - that characterize its responsive and contrastive nature. Thus, a new set of questions emerged from each analysis that was undertaken and, in turn, these questions guided new analyses to be developed.

Thus, these structural maps form the basis for subsequent representations and analyses. Each was constructed by observing how time was spent, with whom, on what, for what purposes, when, where, under what conditions, and with what outcomes (Green & Wallat, 1981; Bloome, 1989; Green & Meyer, 1991; Santa Barbara Classroom Discourse Group, 1992a, 1992b) and represents a different level of differentiation of information. Event maps represent the ebb and flow of

activity, “constituting socially significant processes and practices within a given period of time, e.g., a school day or a class session” (Spradley, 1980, p. 78).

In the sections that follow, we will present a description of each structural map indicated in Figure 1 and discuss what each permitted us to understand, examine, and know. As part of the discussion, we will show how theory-method relationships guided our interactional ethnographic approach, and demonstrate the generative nature of question construction and data analysis practices and processes. Further, we will demonstrate how the contrastive analysis approach was central to identifying intertextual relationships within and across time and events, as well as other types of literate practices afforded by students in the classroom.

On what events were these classes constructed, where, under what conditions, with whom, and with what outcomes?

Table 1 represents our analysis of the interactional spaces, events jointly constructed, and the opportunities of learning identified for each of the first subject-area classes, through our moment-by-moment analysis of what members were being told to do, what their actions indicated they were doing collectively, and the chain of actions taken by students and teachers, individually and collectively. In constructing the table, we have adopted a double angle of vision in which we examine what is being constructed by focusing first on what the teacher is initiating, proposing and guiding and then shifting the angle to explore students’ contributions to the construction of events and actions.

We constructed the event maps (Table 1) so as to represent what the teacher was proposing, the types of spaces constructed for interaction, the sub-events and events being constructed through these actions, and the demands that these actions for literacy formulations within-the-group made available to students through the actions of both

TABLE 1
Events across subject-area classes during first week of school

Subject-area: Portuguese		Day: 02-07-07

07h10min	<i>Distributing text books</i>	Distributing textbooks to students provided by National Government Textbook Program (PNLD). [IS: T-WC]
07h18min	<i>Working with textbooks activities</i>	Comparing two pictures: one of Michelangelo's Pietá and another of a street boy sleeping in the lap of a female statue. [IS: T-WC/I-WC/T-I-WC]
07h25min		Reading news associated with street boy picture and doing text book activities. [IS: I-WC]
07h32min		Debating on picture and news. [IS: T-WC/ I-WC]
07h46min		Debating on social issues in Brazil: kids living on street and drugs. [IS: T-WC/ I-WC]
07h56min	<i>Writing a letter</i>	Proposing homework: writing a letter to an authority asking for a solution for social problems: kids living on street and drugs. [T-WC]
Subject-area: English		Day: 02-07-07
Time:	Events/subevents:	
09h35min	<i>Arriving in the classroom</i>	Receiving students and greeting students in English in the classroom. [IS: T-WC]
09h42min	<i>Defining class material</i>	Defining class material to be used during the year: Coleção Longman . [IS:T-WC]
09h46min	<i>Reading a letter</i>	Reading and translating a letter from English to Portuguese: Andy's letter to his pen pal in Brazil [IS: T-WC/I-WC]
10h00min		Working with word meanings: identifying cognate words and explaining new words. [IS: T-WC/I-working]
10h05min	<i>Writing a letter</i>	Writing a letter in English to Andy telling about personal characteristics, interests and dreams. Writing a letter to Andy about yourself [IS: I-Working]
10h14min		Reading students' letters at their table: teacher goes to each student and reads his/her letter. [IS: T-I]
Subject-area: Geography		Day: 02-08-07
Time:	Events/subevents:	
08h15min	<i>Arriving in the classroom</i>	Greeting students arriving in the classroom [IS:T- WC]
		Remembering the time teacher and class were together in fifth grade. [IS: T-WC/ WC-I]
08h30min	<i>Proposing a research</i>	Proposing research on Global Warming. [IS:T- WC]
08h48min		Answering students' questions about research sources, size of the report, organizational structure and deadline. [IS:T- WC]
08h50min	<i>Exploring textbook</i>	Distributing geography textbooks provided by National Government Textbook Program (PNLD); analyzing the textbook cover that deals with the subject of social inequality in Brazil. [IS: T-WC]
08h57min		Reading the textbook author's letter, commenting on the central focus of the discipline in this school year. [IS:T- WC]

Key: IS, interactional space; T-WC, teacher speaks to whole class; I-WC, individual student speaks to whole class; T-I, teacher interacts with individual student.

teachers and students. Actions of participants are presented as verbs (present continuous) to represent the dynamic structuring processes, and the textual

information available to hearers/observers (respectively, second and third column, from left to right in Table 1).

Central to the construction of this map was the examination of the ways in which time was spent by members, and how shifts in activity were interactionally marked by changes in common actions and types of interactional spaces constructed by members (Heras, 1993). Analysis of the shifts in actions led to the identification of a series of bounded unit and sub-events, which in turn, led to the identification of thematically and intertextually tied units of activity (Green & Wallat, 1981). For example, in Portuguese class, *Working with textbook* event was constituted by four subevents: *Comparing two pictures*, *Reading news*, *Debating on pictures and news*, *Debating on social issues in Brazil*.

What else does this panoramic view of classroom interaction allow us to learn about what was made available to students within and across the first day of class in each subject-area? What were the expectations for participation implied in the construction of these events? It is necessary to compare and contrast the different information presented in each event map to answer these questions. For example, if we consider the various interactional spaces - spatial configuration of the group, defined how participants are oriented to or how they are spatially organized for developing activities (Heras, 1993) - we can see that students and teachers developed activities in different organizational spaces. In all subject-areas students directed their attention to teacher as he coordinated participants' actions (T-WC). At these moments, teachers proposed activities to the class, answered questions to clarify how the activities should be done, or coordinated discussion and debates. In some classes (e.g., Portuguese and Geography), students were also expected to address the whole class (I-WC) to express their points of view about a particular issue being discussed. In English class, there were also moments in which students were expected to be able to work autonomously in the production of a text (I-Working) and students were asked to discuss the meaning of the rock lyrics in pairs in History class (I-I). This contrastive analysis of the event maps, then, evidences that students were presented to the expectation of and demand for engaging in activity developed in various participation structure (Erickson, 1986, 2006) within and across subject-area classes, since the first day of school.

The various choices made by teachers in relation to the use of material resources to be explored in the classroom makes visible the autonomy that each teacher has for planning, preparing, selecting and organizing materials which they will use in their teaching. It also makes visible the use of national policies and programs at school level and how the local school context is linked to broader educational contexts, in this case, to the Federal level of the school system.

In this section, we discussed various aspects of classroom life within and across subject-areas in a 8th grade classroom in which understanding was supported by the construction of a broad view of events constructed by classroom participants during the first week of classes. We also illustrated the analytical process that supported the examination of the flow of activities in the observed group. In the next section, we move towards a more micro-analytical level of analysis by highlighting some of the initiating practices that the teachers and students explored in the first week of classes.

Initiating practices for participating in literacy events in the classroom

From the theoretical view of classrooms-as-cultures-in-the-making (e.g., Baker & Green, 2007) that guides our work in Interactional Ethnography of classroom life, we cannot speak of literacy or literate practice as something that is known or that can be predetermined, but rather we must explore both of these constructs as ongoing developments of actors within a social group. Therefore, literacy refers to what can be part of a particular literacy event and who has access to what, when and where, under what conditions, for what purposes, and with what outcomes or consequences for current and future participation as a literate member of a particular group. Thus, the process of creating literacy events is an ongoing process and not simply a state of being in the class.

Literate practices, on the other hand, refer to the ways of knowing, being and doing, constructed in and through the actions of participants in a particular moment or across times and events in the classroom. Like the meaning of literacy for a particular group, from an Interactional Ethnographic perspective, literate practices are continually being constructed in local and situated events. Therefore, the use of literate practices enables us to focus more closely on *how* members of a group have opportunities for developing a particular academic or social practice and how these opportunities are constituted in and through local and situated processes of interaction among members.

From this perspective, we examined the teachers' and students' actions to identify and trace how these actions (spoken, written, physical and other) created a particular set of opportunities for participating, learning, and being a literate member of the local event or group and how what is constructed in one event is consequential for what students are able to know, do and understand in subsequent events or points in time (Tuyay, Jennings & Dixon, 1995; Soares, 1998, 2003). Thus, literate actions become literate practices as they are taken up and used within and across times and events. Such actions and practices, therefore, like the process of establishing what counts as literacy, are also local and situated actions that

support students in participating in, engaging in and working with the complex practices and processes of work in the different subject-area classes as developing communities of learning. These distinctions, therefore, provide different angles on what counts as literacy and literate practices and how these processes and practices are made available to and support students in building a dynamic and academically rich social world in the classroom.

Adopting this theoretical perspective, we examined teachers' and students' actions as a way of characterizing what counts as literate actions (ways of participating in the literacy event) and literate practices (literate actions taken up and used within and across times and events) in the various subject-area classes. Figure 2 represents the kinds of actions that were taken by teachers and students as they constructed literacy events in the classroom during the first week of class.

As represented in Figure 2, teachers and students developed various kinds of actions as they engaged in the construction of literacy events in the classroom. The first 8 actions indicated in Figure 2 (from top to bottom) refers to the actions that teachers took as they orchestrated (Bloome & Theodorou, 1988) classroom interaction. An analysis of Figure 2 shows which actions were common across subject-area classes. These actions are related to different types of classroom discourse and serve different functions in shaping classroom life. For example, the actions of *Greeting students*, *Explaining how the class will be organized*, and *Making explicit norms for participating in the subject-area class*.

Initiating Literate Practices	Subject-area class						
	Portuguese	English	Arts	Geography	History	Natural Science	Math
Greeting students	x	x	x	x	x	x	x
Explaining how the class will be organized	x	x	x	x	x	x	x
Making explicit norms for participation in the subject-area class			x	x	x	x	x
Proposing the reading of different kinds of texts	x	x	x	x	x	x	x
Proposing the production of a written text	x	x			x		
Coordinating discussion in a seminar format	x	x	x		x	x	x
Orienting how to develop proposed activities	x	x	x	x	x	x	x

Observing and following students' work		x	x		x		x
Assigning homework to be brought to the next class	x			x		x	x
Consulting colleagues		x	x	x			x
Consulting the teacher and asking for clarification		x	x	x			x
Reading texts provided by the teacher	x	x	x	x	x	x	x
Writing texts with specific purpose	x	x					
Presenting personal point of view to the whole class	x	x	x	x	x	x	x

Figure 2: Literate actions identified within and across subject-area classes in the first week of class.

At least two arguments can be supported by these analyses. One is that students had a varied range of literate actions to learn and to take up as they engaged in literacy events within and across the various subject-area classes. In this perspective, we can argue that students, since the first week of class, could begin to construct a particular view of what it means to engage in reading and writing activities in a 8th grade classroom or of what is required to be done in order to be a participant in school literacy events.

The other argument that can be made based on these analyses is related to the continuity of experiences across subject-area classes. Although there was a degree of variation of how participants (teachers and students) acted over time, we can argue that by taken up and using particular literate actions within and across times and events the participants were initiating and legitimating literacy practices. They were constructed through the continuity of actions a referential perspective of what would count as literacy, literate actions and literacy practices in a particular 8th grade classroom. Furthermore, a closer examination on how teachers and students engaged in the proposed activities may reveal that there was a continuity of schooling experience from previous years. This aspect will be illustrated in the next sections of this paper.

Kinds of text explored in literacy events

Research on academic literacy practices – reading and writing within disciplines – supports the argument that literacy practices constitute central processes through which students learn new subjects and develop their knowledge about new areas of study (Heath, 1982; Lea & Street, 1998). In the last decades, the teaching of

language (e.g., Portuguese) has moved from a grammar or metalinguistic oriented approach to a functional and epilinguistic approach, in Brazil and in other parts of the world. This new perspective brought to the center of teaching the variety of social uses and functions served by texts in our society. It is supported by the concept of language as social interaction and discursive activity. This perspective draws on a dialogic and discursive view of language (Bakhtin, 1981) and supports a broad definition of text. A text can be understood as any oral, written or visual piece used for meaning production by people in particular social settings. Teachers are challenged to explore different genres of texts in their teaching as a way to bring the “real writing world” to the classroom, thus, creating the possibility of connecting school literacy to the social practices in which students are expected to engage out of school (e.g., writing as citizen to authorities, reading and positioning in relation to news of various social spheres, reading for pleasure, etc.).

Given the centrality of the use of texts and varied genres of texts in the constitution of academic literacy events, we asked the following questions in our process of study: to what texts did students have access during the first week of school? Which texts were used within and across subject-area classes?

TABLE 2
Genres of text, subject-area and interactional spaces

Genre	Subject-area	Interactional Spaces			
		I	P	T-S	W C
Letter	Geography	x		x	
	English	x		x	x
Three-dimensional figure	Arts	x		x	
Picture	Portuguese	x		x	x
Textbook	Geography	x		x	
	Portuguese	x		x	x
Song lyrics	History		x	x	x
News	Portuguese	x		x	x
Research	Geography	x		x	
Abstract	Natural Sciences	x		x	
Math problems	Math	x		x	

Key: I, individual; P, pair; T-S, teacher-students; WC, whole-class.

Before moving into the analysis of Table 2, a caveat needs to be made. Given our view of learning as socially constructed and situated within local contexts, our premise that one’s activity is related to or is a response to social demands and conditions, and our view of classroom as constituted by simultaneous interactional spaces, we understand that any interactional space in the classroom is always situated in the larger context of the classroom, that is the whole class. For example, a teacher asking a question to a particular student is an event that can be seen and interpreted by other participants of the class. It is, then, situated within the whole class interactional space. The student’s answer to the teacher is also situated within this larger context. It can be constructed taking into consideration, for example,

subgroups to which the student is affiliated, his relationship to a particular group of friends or how he wants to be seen by his classmates (Bloome & Theodorou, 1988).

Analysis of information presented in Table 2 makes visible the varied textual genres that were explored in the academic literacy events across disciplines. It also makes visible patterned ways of using texts within these events across subject-area classes. In all disciplines, teachers proposed the reading of a text as an academic activity. In all subject-area classes but one (History), these texts were read first individually (individual) and, then, explored in teacher-student interactional spaces (T-I) or/and seminar. In History class, the activity began with students reading the text in pairs and moved to the discussion in teacher-individual and seminar interactional space.

The contrastive analysis of the event maps also make visible the variety of thematic topics that were addressed in the first day of class within and across subject-area classes: identity, social issues, classroom norms, subject area specific content and activity. However, it is necessary to explore a micro analytical level in order to know how participants engaged in the discussion of these topics, worked in the different interactional spaces as well as to know the role that textbook played in the classroom, among other aspects of classroom life.

A Creative Teacher and Methods of Teaching

Tanja Jelenko

Šolski center Celje, Slovenija

Didactic poster supporting oral presentation or why should we make it with great care – does anybody turn eyes to it at all?

The basic task of teachers who set the pupils/students (authors of the poster) a task of making a poster is certainly to »assure« them that the reply to the second part of the above heading is positive. Thus, a didactic poster represents a teaching aid, which helps students memorise and master the subjects, and above all, it helps the authors to gain knowledge and different skills in an active manner. The authors of the poster should have the feeling that making posters represents an important and useful occupation for them as well as for their schoolmates. They will find making posters an easy and reasonable task provided that their posters are later on applied in practice. Of course, the future authors of posters ought to be acquainted with the characteristics of a didactic posters and given precise instructions on how to make it. The authors of a didactic poster should include various materials on the poster: pictorial, graphic and illustrative non-verbal materials; a very important characteristics of a didactic poster is creativity in searching for various ways of expressing since the purpose of a poster is to primarily get attention of the readers; also the clarity of the poster's message is very important: its readers should get the message in two or three minutes. When you invite pupils/students to make a poster it is not enough to give them the topic and tell them to make a poster about the given topic. With a view of the authors of the posters and their mentors to become more concerned about the planning and making of a poster and to consider the methods of making posters, me and my co-worker Irena Sojč, who is a teacher of English and has been making posters with her students in the English workshop for several years, organized and started a Slovenian national competition The best didactic poster.

The concept of the competition »the best didactic poster«

The Slovenian national project called Creative learning, was founded in the school year 2008/2009; the first professional challenge within the project was to organize the national competition on the making of the best didactic poster. We officially published an invitation in which we invited all Slovenian primary and secondary

schools to enter the competition. Pupils/students in cooperation with their mentors made 143 posters.

The purpose of the project Creative learning is: to motivate students to gain knowledge creatively, to lay stress on the significance of mingling of verbal and non-verbal information, to teach pupils/students how to summarize professional texts, to transform verbal information into various other forms and to talk about professional topics in Slovene or foreign language. The making of a poster comprises all the above mentioned skills and abilities. A didactic poster can be classified as a type of writing with special characteristics (we could also name it a scientific poster), which is characterized by a logical link-up of verbal and non-verbal contents. The authors of didactic posters include pictorial, graphic and illustrative non-verbal materials; a very important characteristic of a didactic poster is creative searching for various ways of expressing for the purpose of a poster is to get attention of its readers; also the clarity of the message is of vital importance: the readers should get the message of a poster in two or three minutes.

The making of an effective didactic poster

Drago Bajt in his Handbook for writing: I write so I am defines a poster as a notice, namely, he considers it a superior form of writing and places it into the group to which also placards and leaflets belong. He states that the so called superior forms of advertisements »can extend also into the social-political happening (underlines) via their language elements (striking slogans, whereas with technological elements (tension between textual and graphic parts) they can revolutionize pictorial art (e.g. collage)« (Bajt 1994, 97). He does not mention the scientific or didactic posters as well as France Žagar does not point them out in The school types of writing. Some elements of a scientific poster are reminiscent of a textbook representing the publication for educational purposes, which » systematically explains a certain area in accordance with the syllabus, schooling level, psychological abilities of students. It surveyably treats essential facts and commonly accepted cognitions (without suppositions) and devotes special attention to the method of explanation and didactic viewpoints (brings face to face various thoughts and results, so that the user would plastically understand the essence, is written in a popular way, professionally and is rich in illustration« (Bajt 1994, 131). A scientific poster also represents commonly accepted cognitions: it represents them in serried form – as key words and is thus intended for the audience, who is already acquainted with the subject matter or is explained in details by the author of the poster in the presentation, which is an essential part of a poster. A didactic poster should follow didactic principles especially in the part of its oral presentation if this accompanies

the presentation of a poster. The pictorial art is not only a variegation but also represents a support to the presentation; therefore, the visual elements as well as graphic elements need to be carefully chosen; it is very important to find symbolic links with the contents; very important are also the colours, for example, when we talk about the spring we use the letters in green colour, better than red colour, for additional message we take a suitable foundation, which helps to convey the message using the symbolics of colours.

The creation of scientific posters, especially if we consider didactical posters, the authors of which are primary school pupils who are only getting to know the principles of this very special kind of writing and are only gaining the skills they need to make this kind of teaching aid ought to be vigilantly supervised by mentors. The authors should be given instructions on how to make a poster; written instructions should not be very precise (can be »looser«) as they can limit the authors in their creativity: thus the authors should be provided with more detailed instructions during the process of putting into words, or at the time, when we establish what kind of and how much help they really need.

It is reasonable to form a team consisting of three authors when making a poster. The authors share the tasks according to their abilities or talents they have. Together they perform the invention, which is the first stage in the creation of a poster (the stages are similar to those in the creation of other types of texts): they define the topic and subordinate topics, collect the materials (books, textbooks, Internet pages, consult people who know more about the chosen topic than they do). The second stage in the creation of a poster, selecting and editing materials, is also performed by the whole team of authors: they determine the sequence of presenting subordinate topics, for example, chronologically or from more important to less important. At this stage the authors lay great stress on more important information or supplement information connected with individual subordinate topic: statements and arguments, definitions and illustrations are linked together.

In the third stage – the elocution of materials – each author in the team is given his own task or is involved in the definite sphere of activity. This stage is very specific as it includes a lot of specialities and distinguishes the creation of a didactic poster from the elocution of other texts.

The science of writing considers this stage to be the most demanding: »Irrespective of good knowledge of the topic we write about the collected and classified materials ought to be put into words, the ideas transformed into sentences and linked into logical, comprehensible and integrated text« (Jerca Vogel and others 2007, 89). The notion of specific in the creation of didactic posters originates in special characteristics of this kind of writing, in which the content is defined by the

harmonious integrity, logical interlacing of verbal and non-verbal parts of a poster (reproductions, photos, graphs, tables, logos, various colours and letter size), which serve as attention-getters for the readers to stop at the poster, read it and remember the message in the shortest time possible.

For the poster is classified as didactic , its purpose is that the readers gain knowledge or revise the knowledge they have already acquired. Therefore, all the things on the poster should be clearly visible from distance: the size of the letters should be big enough, which means we cannot use the whole sentences; we use only key words and complete the verbal message with non-verbal.

A crucial process in the making of a didactic poster is summarizing of professional textual materials.

The authors of posters perform critical evaluation of sources already in the first and second stages of making a poster; they choose the sources, which are, to a great extent, suitable for the chosen topic and subordinate topics as well as for the readers (as with other types of writing the reader's pre-knowledge needs to be taken into account). The authors summarize the most important information from suitable sources, and then, in the stage of putting into words transform them into key words and expressions. All the members of the team should have the possibility to learn how to summarize texts; as during the process this is done only by one member of the team, the teacher-mentor should take care that next time also the other two members actively learn how to summarize textual materials. One member of the team also sees to the visual materials. It is of great value that the authors of posters make illustrations on the posters by themselves; for those who have a talent for painting or drawing it certainly represents a great challenge, which they accept with pleasure.

Transformations of verbal information into graphs or tables is also very important. This is the task for the third member of the team. The third stage of making an educational poster is also very special as it concentrates on the aesthetical forming of materials. If the team decides to make a poster in an electronic form they can apply electronic written record for the verbal information; in this case the letters or words should be accurately cut out and also carefully stuck on the poster; for this reason the material of the poster should be hard enough and subsistent.

The placement of verbal and non-verbal materials on the poster is also very important; the non-verbal materials should logically complete the verbal materials or vice versa. The authors of a poster ought to follow the rules of aesthetics and choose suitable and harmonized colours; they can decide on one colour and then variegate the poster either by applying various shades of the same colour or

contrasting colours; of course, the applied colours should symbolically support the content of the poster. From the pictorial standpoint, besides harmonical colours very important in the making of a poster are also: the composition of a poster (the placement of units of content on the poster, the use of golden cut , aesthetic use of margins and blank spaces) as well as technical accomplishment of a poster (material used on the poster, are the materials used properly, the general quality of the accomplishment of a poster).

In addition, effective posters are distinguished for their graphical appropriateness, which comprises appropriate type and size of letters, visibility or legibility of textual and visual materials and their placement on the whole format of the poster.

The purpose of a didactic poster, as mentioned before, is in the first place to attract attention of the readers: to stop at the poster and start reading it, which should not take them for a long time. Didactic posters differ from other type of posters because they need to be explained; therefore, the authors of a poster prepare the explanation of the contents on the poster. They write the text, which is an essential part of a poster. A text can be given as handouts to the readers of the poster, or to the audience when the poster is presented orally.

Evaluation of didactic posters

As the authors of the project Creative learning we stated some general instructions on making posters and include them in our official invitation, which was sent to the authors and their mentors to help them with the making of posters. At this point we also suggested that cooperation between the authors and their mentors as well as between the mentors of different subjects should be established. What is more, we recommended mentors to form teams of mentors (consisting of a teacher of a special subject, a teacher of pictorial arts and a teacher of graphic arts) as such cooperation can produce the effect of reciprocity: each mentor in the team can help the authors of the posters with his professional area.

The posters are evaluated from the professional standpoint – they are assessed by expert teachers according to the criteria, which is prepared in advance.

The posters are evaluated according to the following criteria:

The value of the professional part of a poster represents 50% of the entire assessment value.

Evaluation criteria and points

DESCRIPTIVE CRITERIA	POINTS	POINTS	POINTS	POINTS
<i>Title/Content of a poster</i>	0	1	2	3
<i>Professional integrity of a poster</i>	0	1	2	3
<i>Transformation/Variety in presenting of information and content</i>	0	1	2	3
<i>Conciseness of a poster</i>	0	1	2	3
<i>Appropriateness of the accompanying text</i>	0	1	2	3
<i>Sources</i>	0	1	2	3

Evaluation scale:

- 0 points: completely inappropriate (not in accordance with the instructions/no characteristics of a poster)
- 1 points: partly appropriate (some mistakes, incomplete)
- 2 points: appropriate (minor lapses)
- 3 points: completely appropriate (completely in accordance with the instructions)

25 % of the entire assessment value represents the value of the pictorial part of a poster.

Evaluation criteria and points

DESCRIPTIVE CRITERIA	POINTS	POINTS	POINTS	POINTS
<i>COMPOSITION (the placement of units of content, the use of golden cut, aesthetic application of margins and blank spaces/lines ...)</i>	0	1	2	3
<i>HARMONY OF COLOURS (harmony of the chosen colour composition system-harmonic or contrasting, colours supporting the message, colours contributing to clarity...)</i>	0	1	2	3
<i>TECHNICAL ACCOMPLISHMENT (the material used on a poster, proper use of materials, overall quality of the technical accomplishment...)</i>	0	1	2	3

Evaluation scale:

- 0 points: completely inappropriate (not in accordance with the instructions/no characteristics of a poster)
- 1 points: partly appropriate (some mistakes, incomplete)
- 2 points: appropriate (minor lapses)
- 3 points: completely appropriate (completely in accordance with the instructions)

25 % of the entire assessment value represents the value of the graphic part of a poster.

Evaluation criteria and points

DESCRIPTIVE CRITERIA	POINTS	POINTS	POINTS	POINTS
<i>Appropriate type and size of letters</i>	0	1	2	3
<i>Visibility/Legibility of textual and visual materials</i>	0	1	2	3
<i>Placement of elements on whole format of a poster</i>	0	1	2	3

Evaluation scale:

- 0 points: completely inappropriate (not in accordance with the instructions/no characteristics of a poster)
- 1 points: partly appropriate (some mistakes, incomplete)
- 2 points: appropriate (minor lapses)
- 3 points: completely appropriate (completely in accordance with the instructions)

The winning primary and secondary school posters to a great extent meet the requirements of the above mentioned evaluation criteria – they even represent an effective and qualitative teaching aid. Their special value is in the fact that they were made by pupils/students themselves and with the support and encouragement of their mentors.

Conclusion

The competition The best didactic poster certainly achieved its purpose: pupils/students created excellent teaching aids, cooperation between pupils/students and their mentors was established, even the team of mentors was formed. The idea of the competition and the making of posters as a way of creative learning and teaching was met with a positive response. The making of a didactic poster can be a pleasure for pupils/students: they can have a good time and at the same time develop demanding skills and abilities such as: summarizing, searching for essential information in the professional texts and its transformation into graphs and diagrams.

Making posters enables each pupil/student to get an active role in the working team, which usually cannot be done at lessons; and last but not least, a relaxed working atmosphere is created during the process of making posters.

Health and Reading: Building Literacy Together

Joanna R. Jones

Sandra Klarenbeek

Black Hills State University, USA

Within education, the importance of students developing reading skills is unquestioned. Learning to read is at the forefront in all schools' curricula today. The No Child Left Behind Act (NCLB) reinforced the central focus on the need to learn to read and sweepingly ensured that standards-based education would be implemented in all schools nationwide (National Reading Panel, 2000).

What about the importance of health education? Although health education does not address NCLB directly, comprehensive health education supports the intent of NCLB. Simplistically stated, healthy students learn better than unhealthy students. A student's ability to learn and to succeed is dependent on the student's physical, mental and emotional health (Deal, 2006; Kolbe, 2002).

More importantly, NCLB educators need to recognize that consistently across assessment measures, healthy students achieved higher academic outcomes than unhealthy students (Jennings, Pearson & Harris, 2000; Murphy, Pagano, Nachmani, et al., 1998; Nabors & Reynolds, 2000). Connecting health education with reading education is essential to achievement the optimum academic level within NCLB.

However, in the daily curriculum, teachers feel overwhelmed with the requirements needed to meet the expectations of high stakes testing of NCLB. The pressure for schools to focus on core subjects such as reading, writing, and math in order to meet the proficiency exam requirements has resulted in curriculum decisions and policy priorities that often eliminated or negatively impact health education programs. Often health education is delivered in fragmented pieces and without consistency in instruction.

Literature Review - Health

Most major health problems in the United States result from behaviors people adopt. Chronic diseases, such as cardiovascular disease, cancer, and diabetes, account for seven of every ten deaths in the United States and affect the quality of life of 90 million Americans according to the Centers for Disease Control (CDC) National Center for Disease Prevention and Health Promotion. The CDC, however, asserts that adopting healthy behaviors such as being physically active, eating healthy foods, and avoiding tobacco can prevent or control the destructive effects of these

diseases. The *Healthy People 2010* (US Department of Health and Human Services, 2000) initiative addresses the national issue for health literacy but has focused more on the needs of the adult population than those of children.

Health literacy among school age children needs to be shared and discussed in their critical thinking communities, within the classrooms of their schools. In the 2007 National Health Education Standards (NHES) publication, the authors recommended that students in Pre-K to second grade receive a minimum of 40 hours of health education instruction, while students in grades three through twelve receive 80 hours of instruction in health education per academic year. These minimums currently are not being met within the educational system (Summerfield, 2007). Health is seldom included in state assessments for NCLB thereby challenging schools to include comprehensive health education throughout the K-12 program. However, reading is included on state assessments for NCLB and schools throughout the country provide 90 minutes per day for reading instruction.

Health education curricula are taught primarily by regular classroom teachers at the elementary level, and by PE/health teachers at the secondary level. Nevertheless, every teacher can be a health teacher at the very minimum through modeling healthy behaviors. On the other hand, every teacher who teaches reading has an opportunity to teach reading and health during the same instruction time.

A health literate person is a critical thinker, a problem solver, a self-directed learner, an effective communicator, and a responsible, productive citizen. As defined by the Joint Committee on Health Education, health literacy is the capacity of individuals to obtain, interpret, and understand basic health information and services and the competence to use such information and services in ways which enhance health.⁹ People who are health literate: think problems through and make healthy choices in solving their own problems, are responsible and make choices that benefit themselves and others, are in charge of their own learning, and use communication skills in clear and respectful ways.

Knowledge of health concepts and development of skills to enhance health are critical to health literacy. The NHES support the scaffolding necessary for children and youth to become health literate. The NHES consist of one knowledge standard and seven skill standards. The NHES provide the foundation for aligning curriculum, instruction, and assessment. The goals of the NHES are to improve student academic achievement and support improved health in the United States (Joint Committee on NHES, 1995).

The foundations of health literacy are health knowledge and health skills. NHES consist of health knowledge in standard number one. It is not enough for students merely to learn health facts. Facts alone will not make a person health

literate nor provide the skills to change behaviors. Standards two through eight identify the health skills as: accessing information, analyzing influences, decision making, goal setting, self management, interpersonal communication, and advocacy. Students must be given opportunities to practice the health skills they utilize in their everyday lives so that they may become proficient in their learning and change or avoid unhealthy behaviors. The purpose of school health education curricula is to develop students who are equipped with the knowledge and skills they need to make responsible decisions that lead to healthy behaviors.

Surveying early adolescents, Brown indicated that students may not understand that their behaviors and decisions may impact their life (Brown, Teufel & Birch, 2007). The understandings of health skills need to be practiced by students. Brown advised that health prevention efforts start early in school in order to strengthen students' beliefs and understandings about health education issues.

When taught consistently within the curriculum, standards-based health education helps students develop the knowledge and the lifelong skills to become healthy, literate adults. In order to accomplish the needed consistency, Deal (2006) advised that during the reading time teachers use meaningful literature with students so that they may practice making decisions about their health and well-being. As a professional development resource for teachers who need to select appropriate, quality literature for their students, Deal compiled the Health Education Assessment Project (HEAP) text, *Aligning Health and Reading with a HEAP of Books* (2006).

Literature Review – Reading

Literature-based instruction is a methodology for teaching reading that focuses learning through literature; fiction and non-fiction books are the basis of the curriculum. A reading comprehension strategy technique applied within literature-based instruction is literature circles, a process in which students join small groups of five to seven members for the specific purpose of discussing books (Auger, 2003). During literature circles, students are actively engaged in discussions by reading for meaning with understanding so that conversations with critical thinking community members may transpire (Hoyt, 2005; Norton, 1992).

Researchers have recorded multiple benefits from implementing literature circles, including: learning communities are developed effectively, reading comprehension improves, and overall achievement promotes critical thinking, a level of thinking that is reflective as well as creative (Daniels, 2005b; Peterson & Eads, 1990; Wies-Long & Gove, 2004). After more than a decade of research on literature circles, Daniels (2006) stated, "The consistent outcome is that kids are falling in love with books they have chosen and talked about with their friends" (p. 11).

For literature circles to be successful within the classroom, Daniels (2006) recognized that students needed to be taught how to participate in intellectual discussions about books, how to ask thoughtful questions, how to listen intently, how to disagree appropriately, and how to deal with other students who do not take satisfactory responsibility for being a part of the learning community. Actively involved teachers chose literature with possibilities to help students make connections to themselves, other texts, the curriculum, and their surroundings (Wies-Long & Gove, 2004). But more importantly, Daniels (2005a) identified that the attainment of these communication skills by students required skilled teachers to actively provide modeling and feedback in multiple practice sessions.

When literature circles are introduced in a literature-based curriculum, teachers select five to six books that will develop a theme; the health skills are life focusing themes addressed in reading education. Then students self-select their circles by their choices of the literature. Group members meet to initially determine roles which allow the members to establish guidelines for discussions (Daniels, 2005a). Roles selected may be identified as: discussion director, passage illuminator, word wizard, summarizer, and connector.

Then students read the books and take notes about the material in order to jog their memories during later conversations about the books. Student discussions allow students to analyze the text in multiple ways and connect it to their personal lives. In Daniels' research, he found that the more students answer peer-developed, open-ended questions, comprehension about the text increases (Daniels, 2005b). As students become comfortable working in these constructed learning communities, they join in more and more elaborate and challenging conversations about the books and themes. From personal interactions in successful literature circles, students see themselves as members of critical thinking communities that willingly think and learn together (Day, Spiegel, McLellan & Brown, 2002).

Literature circles have been identified as an excellent method for gaining deeper meaning from texts (Wies-Long & Gove, 2004). Additional advantages from the implementation of literature circles were also recorded. Student comprehension was tracked from student-written notes. This enhanced focus on text dramatically increased comprehension and achievement scores (Auger, 2003; Daniels, 2005b; Wies-Long & Gove, 2004). Students who took part in authentic discussions about literature took more risks in their learning environments (Whatley & Canalis, 2002). They became engaged in personalizing and interpreting other student's view points. Through conversations, they better understood each other's thoughts and beliefs. "Creating a community of learners in the classroom is essential for optimum learning

as well as providing enjoyment of learning for students and teachers at any level” (Vogt & Shearer, 2007, p. 479).

Literature circles meet the needs of two curricula

In the 2006 fall semester at a small western university, the wellness teacher met with the children’s literature teacher to identify research that could partner health education with reading education. At the center of the initial discussion, the HEAP standards were highlighted with literature. Some of the same literature selected by HEAP was already a part of the selections read in the children’s literature course. Identifying this match in the curriculum initiated a collaborative partnership for teaching this natural linkage that existed between health literacy and the reading curriculum.

From that initial collaborative planning meeting, multiple avenues for public communication were drafted. For a requested conference presentation, the HEAP resource, *Aligning Health and Reading with a HEAP of Books* (Deal, 2006), was used to identify potential literature. While the initial collection of literature brought to the first conference presentation was more diverse than texts suggested on the resource list, the session participants, who were classroom teachers, indicated that they needed more opportunities to relate the health education skills to the literature. They recognize the seven health literacy skills, accessing information, analyzing influences, decision making, goal setting, self management, interpersonal communication, and advocacy, as themes constantly identified within children’s literature and young adult literature. The teachers at the session indicated that teaching health through the use of children’s and young adult literature was an effective strategy to improve health literacy of students when teachers are adequately trained in the health strategies and skills.

Following the conference presentation, the university teachers established three avenues to intentionally train preservice teachers and veteran teachers on how to integrate health education with reading education. First for preservice teachers, the college children’s literature class would conduct literature circles within their classes. Second for preservice teachers, the children’s literature class members would conduct literature circles with fifth and eighth grade students in the local school district. Third for veteran teachers, a summer workshop would be offered that would focus on literature circle experiences with health education literature.

In this paper, preservice teachers are students at the university who have self-selected teaching as their major. These undergraduate students generally take in their sophomore year both the health methods course and the children’s literature

course. The research described in this paper was followed through the reading instruction portion of the children's literature course.

For the literature circles with the college children's literature students, six titles from the HEAP literature list were selected to be used as the focus texts in the literature circles. The texts were: *Mick Harte Was Here* (Park, 1995), *Dear Mr. Henshaw* (Cleary, 1983), *18th Emergency* (Byars, 1981), *Sugar Isn't Everything* (Roberts, 1987), *Bridge to Terabithia* (Paterson, 1987), and *Graduation of Jake Moon* (Park, 2000). The adult literature circle members self-selected the titles from book talks presented by their teacher.

From research results from the literature circles, the university teachers identified that preservice teachers need to create purposeful, planned collaborations between the curricula. Prior to the literature circles, the college children's literature students were provided lecture information about the health standards and the literature circle technique for reading. Two examples from the literature circles are provided as typical examples of the research.

For *Mick Harte Was Here* (Park, 1995), students noted privately that while preparing for the literature circle, they both laughed and cried over the book. As adult readers, they were actively involved with the characters in the book. Then quite unexpectedly when the literature circle began, the conversational tone turned to one of career orientation. The adults began expressing censorship concerns about the book's content about the death of a younger brother. At the end of the discussion, the adults concluded that this book should not be left as an independent read for elementary school children and that teacher guidance would be needed for elementary children to understand the concept of death.

From this adult literature circle, the preservice teachers identified that it was their responsibility to protect fifth grade students from social issues. One adult stated that the topic of death needed to be broached by the children's parents so that family values might be transmitted to the children. A second issue in this book is bicycle safety. One student said that the brother should have worn a helmet; no further comments were developed to acknowledge the importance of bicycle safety.

Without making judgments about the college students' decisions as discussed in their literature circle, *Mick Harte Was Here* (Park, 1995) was given to a fifth grade literature circle. The elementary students surprised the adults by talking easily about the bicycle accident in the book. In fact, the students linked this book to other novels about the death of young people, *A Taste of Blackberries* (Smith, 1973) and *Bridge to Terabithia* (Paterson, 1987). The fifth grade students concluded that the sister should advocate about bicycle safety since many of their friends did not wear bicycle helmets.

Obviously, the preservice teachers engaged with this text did not anticipate the abilities of the young readers who could understand and interact with the literature and health issues. The fifth grader students dealt with the difficult topic of death, linked the situation to other book characters, considered the mistakes of the younger brother's physical activity, and developed ideas about advocating the safety of bicycle riding. The elementary students were able to embed the health skills into their reading comprehension. The preservice teachers needed to purposefully plan curriculum connections that supported both health literacy and reading comprehension strategies.

In a second example for the preservice teachers, the literature circle for the *Graduation of Jake Moon* (Park, 2000) was used. The adults again underestimated the abilities of the eighth grade students as readers and discussants of the text issues. During the adult literature circle, the adults engaged in personal conversations about their own grandparents and their experiences of working in nursing homes. They made connections to the movies: "The Notebook," "Tuesdays with Maurie," and "Seven People You'll Meet in Heaven." Finally, anticipating the elementary students' responses to the text, the adults planned to discuss feelings of guilt for making fun of grandfather's tragic situation and Jake's humbling experiences in regards to his grandfather's Alzheimer behavior.

The elementary students, however, personally understood Alzheimer characteristics as was recorded in this conversation: (B, C, D, and T are eighth grade students.)

C: "My grandma used to forget little things, it's like it was just..."

D: "Gone. My grandma was really bad in the end. She didn't know who I was, she didn't know my mom. She couldn't do anything for herself. I'm really glad it isn't like that anymore. I am glad she doesn't have to live like that anymore."

T: "It's really sad."

C: "It's like they are children all over again, learning..."

B: "Learning all those things over again. And you just go home so sad after you see them."

D: "Have you guys ever seen 'The Notebook'?"

C: "My uncle has it too, and you feel like they really need you, because maybe they won't forget as much if you are there, to help them."

With anticipated higher expectations on the part of the adults, the children could have enriched their conversations about health skills of self management (how do you interact with individuals who have Alzheimers), analyzing influences (how do you feel when your friends see you with an individual who has Alzheimers), interpersonal communication (how do you talk with an individual who has Alzheimers), and accessing information (identifying characteristics demonstrated by

an individual who has Alzheimers). Health education standards content concerning family life and mental health were additional possibilities for discussions within these literature circles. Thus the health curriculum embedded in the reading curriculum could provide avenues of authentic content and meaningful messages to help children make healthy choices about their behaviors. However, the preservice teachers again needed to prepare planned curriculum connections that supported both health literacy and reading comprehension strategies.

Within preservice teachers' literature circles, conversations transpired about the themes of the health skills. Yet, the need to plan for more in-depth literature circle conversations became evident. More specifically in the fifth grade literature circles, the students could discuss and vicariously practice the health skills that were demonstrated by the characters in the book. The adults in the college children's literature class, on the other hand, were very protective of the children and needed to expand their purposeful, planned connections between the content areas.

Using the results from the preservice teacher research, a summer workshop was developed to offer literature circle experiences that emphasized combining health education with reading education. Twenty veteran teachers participated in the professional development training. Each day in the seminar room, books from across genres and reading levels provided a library-type atmosphere. All the selected books supported at least one health skill. During a browsing time before the sessions began, teachers identified books in the seminar room as: ones in their personal classroom collections, ones they had read to their students, or ones they had used to teach reading strategies. Always their final comment sounded the same, "But I didn't think to teach health concepts with this book."

After an introduction to the health standards and skills, the teachers began participating in literature circles; one title discussed was *Miss Bindergarten Stays Home from Kindergarten* (Slate, 2004). Daniels' research indicated that literature circles promote a level of thinking that is both reflective as well as creative (Daniels, 2005b). So it was with the veteran teachers, they gleaned teaching ideas and health connections from one another. One teacher commented that when she taught this *Miss Bindergarten* book, she did not look at the bigger health issue. She had focused only on washing hands as a self management skill. Another member discussed the health skill of analyzing influences; how the kindergarteners responded to another's ideas. Yet, another member noticed that bed rest and juice helped with recovery, the health skill of accessing information. In the end, a plan was made to use this book to help set goals to eat healthy, get plenty of exercise and keep a positive attitude. Later in the workshop, *Miss Bindergarten Stays Home from Kindergarten* (Slate, 2004) was paired with the nonfiction book, *Germs Make*

Me Sick (Berger, 1995) in order to enhance the health skill of accessing information. As the teachers discussed these books, many more books were identified. Lists of books for each health skill filled their notebooks.

One of the teachers succinctly identified the transformation of the class members: "Health is the subject in the elementary school that we are encouraged to teach but do not schedule a specific time for it. I like knowing how we can incorporate health into reading. I can easily fit it into reading and storytime each day" (Schnell, raw data). Survey data collected from the veteran teachers in the summer workshop supported curricula collaboration between health education and reading education.

From conference presentation data and preservice teacher research, the two university teachers continue to strengthen their approach to the content partnership. Program development improved. First, information was presented, then application of the partnership was implemented, and finally, application with multiple opportunities for implementation practice was provided. Ongoing research within the 2007 school year continues to include preservice teachers in literature circles in undergraduate course work. Veteran teacher workshops are being scheduled both during the school year and in the summer. Research funding is being identified to investigate the values of school wide implementation and on-going training for the collaboration of health education and reading education.

Students must be given opportunities to practice the health skills they will utilize in their everyday lives. Practicing these skills help students to analyze health-risk situations in real life, set realistic, attainable goals for themselves, and make decisions based on valid information. Eventually, students can feel confident in self-managing their health needs and become advocates for health issues which demonstrate the highest level of health literacy.

Welcome to the world of German literacy: reflections on teaching adults from culturally diverse backgrounds.

Helga Kansy
Germany

1. Introduction

Germany and illiteracy! Is this an oxymoron? Little could I know that teaching literacy classes in Germany faces many obstacles. After ten years of teaching literacy classes I conclude: alphabetization and illiteracy in Germany are taboo topics. This presentation shares some of the experiences I had. Foci of attention are: alphabetization in general, a synopsis of alphabetization in Germany; and a summary of my teaching literacy from a socio-psycholinguistic view on language.

General Comments about Alphabetization

One of the difficulties talking about alphabetization lies in the fact that there is – rightfully – no single, overall definition. Suffice it to say that knowing how to read and write must always be understood in its historical and social context. Historically speaking there were only a few, an elite, who could read and write. Interestingly enough illiteracy has only been talked about when there has been a literary language.

A modern discussion of illiteracy presents shocking statistics: According to the UNESCO, our “global village” hosts more than one billion primary illiterates. 95 % of those live in the so-called “third world.” More than 600 million of these live in Asia, approximately 100 million in Africa, and another approximately 40 million in South America. Here “primary illiterate” refers to people who do not know how to read and write because they have never attended school.

However, illiteracy also exists in the industrialized world, even in Germany. About two hundred years after the introduction of compulsory education in Germany, approximately four million “functional”, or “secondary illiterates” are estimated. These are people older than 15 who have had some – more or less successful – schooling and have forgotten how to read and write or are unable to apply these skills in their daily affairs. According to a UNESCO census, there were 0.75 to 3 per cent illiterates in Germany in 1990. Today the number has risen to 4 million. Or, 6 per cent of the current population in Germany are illiterate. More than half of the adult illiterates are unemployed.

As mentioned before, illiteracy belongs to the realm of taboo topics. Research, facts and detailed investigations are still missing. Even worse, the federal government sees no need to wholeheartedly support different attempts on a national level. There is no ministry in Germany that is officially in charge of illiteracy (Döbert 2004, p. 30). The estimated number of unknown cases of illiterates is much higher, maybe between 4 and 8 million. Nevertheless, there have been efforts by different institutions and organizations to counteract illiteracy. A brief summary of these deeds over the last 25 years will be given.

25 Years of Alphabetization in Germany

It was only in 1980 at a conference that Drecol and Müller brought the topic of illiteracy in Germany to public attention. Since then most literacy courses are offered under the umbrella of the Volkshochschulen, one of Germany's leading continuing-education institutions. As of 1981, the Federal Department of Education has funded literacy projects. Most of these projects are housed at the Volkshochschulen or the Deutsche Institut für Erwachsenenbildung (DIE, the German Institute of Adult Education). The first study that investigated reasons for illiteracy in Germany was published in 1981 (Ehling/Müller/Oswald 1981). Studies such as the IALS (International Adult Literacy Survey) of the OECD (Organisation for Economic Co-operation and Development) and the PISA study also confirmed, to be more precise, reconfirmed the poor reading skills of many young Germans.

Sadly enough, research findings of these studies are not used as a scientific source for planning and budgeting of alphabetization courses. Furthermore, results of other studies are outdated, books exhausted, and the constant shortage of courses has remained. Only 20,000 people attend alphabetization courses at the Volkshochschule. The same was true in 1993 but by now the number of illiterates has drastically risen. (Genz, 2004, p. 29). Further support has emerged in the form of organizations and registered societies. In 1985, the first issue of the „Alfa-Rundbriefs " now "Alfa-Forums") was published and represents the only professional journal of alphabetization and basic education. There is a federal alphabetization consortium since 1992 and as 2003 it is linked to the Volkshochschulen. All representatives of the state associations are active here.

Other lobbyists for alphabetization include the German Federal Association and the German UNESCO commission or sponsors, such as the buch.de internetstores AG or Ernst Klett Sprachen GmbH Stuttgart.

Today most alphabetization courses are taught at the Volkshochschule, abbreviated VHS. The VHS is a non-profit institution for adult and continuing education. Its name "Hochschule" is misleading because a VHS does not have the

status of a college or university. (Hochschule is an old German word for university.) Each VHS is independent. However, each state has its national association (Landesverband) which regulates and supervises VHSs of that state.

The beginnings of the Volkshochschule go back to the end of the 19th century. Along with the university movement, public readings spread and educational endeavors of the craftsmen escalated. The Humboldt Academy is the first Volkshochschule which as of 1879 offered lectures of scientific findings discussed in a way that also non-academicians could understand. The German Volkshochschule was also strongly influenced by the Danish Heimvolkshochschule. The first German Volkshochschule came into existence in the Deutsche Reich in Berlin in 1902. More Volkshochschulen were established during the Weimarer Republik. Article 148 of the Reichsverfassung (Constitution of the Reich) of 1919 is the first document that regulated the promotion of education, including the Volkshochschulen, by law.

The inception of more Volkshochschulen occurred primarily after the end of World War I in 1918. Their main objective was to offer education of the masses and those who used to be excluded. Course offers vary. A typical course takes place once a week for two teaching units, that is 45 minutes per unit, and over a time span of a semester with typically 14 or 15 meetings. However, different time patterns may also be offered. In addition to courses, the Volkshochschule offers excursions, special lectures and cultural programs. The typical course offers range from politics, society, environment, work and job, languages, alphabetization, German as a second language, health and well-being, culture and arts, arts and crafts, to different school-graduation certificates. Each semester might be devoted to a certain theme so that additional offers are added.

Alphabetization of Adults in Germany

It was only in the 1970s that the German public took notice of illiteracy among German adults. Indeed, it was a shock having to realize that there were quite a number of German-speaking adults who lacked societal minimum standards of written language proficiency. Orthography courses at the Volkshochschulen showed a similar picture. Therefore, the Federal Ministry of Education and Science commissioned in 1980 the Arbeitskreis Orientierungs- und Bildungshilfe (AOB) =Workgroup for Orientation and Educational Aid) in Berlin to conduct a study about illiteracy in Germany. This study evidenced the existence of functional illiteracy - and this instead of mandatory school attendance! Politicians felt most irritated by that. Simultaneously, the first alphabetization courses for native speakers of German were offered. So far literacy courses had only been intended for immigrants (vgl.

Kamper 1994, S. 574ff) but failed due to inappropriate materials and methods applied.

The federal government of Germany presented a national report on alphabetization endeavors for the first time at the 42nd international education conference in Geneva, Switzerland. Furthermore, Germany pledged to implement the recommendations of the world education conference held in Jomtien in 1990 (Huck/Schäfer 1991). Politicians in charge of educational matters limited their attention to the prevention of illiteracy. Regrettably, practitioners' thoughts of and improvements for framework requirements were hardly noticed (Hubertus 1995). In 1993, the federal government declared in its report on "war against illiteracy": The existing school and education system as well as adult education had for long met the objectives set in Jomtien. Therefore, there was no need to compile an additional action plan as the UNESCO had recommended (Hubertus 1995).

In 2001, the European Parliament, however, submitted a report on alphabetization and social marginalization and highlighted the following issues: detailed statistics and general information on illiteracy in Europe don't exist. Thirty years later, the situation is disillusioning: As already requested in the earliest alphabetization attempts, institutionalized and professional validation of the new sphere of action are still missing. The same holds true for a nationwide coordination and development of standards based on scientific findings. To go one step further, political-educational recognition of alphabetization as a permanent part of adult education does NOT exist.

Though alphabetization efforts have been mostly ignored on the political level, there have been different notions to confront the issue. Suffice it to mention few of those major projects, associations and activities that have been promoting, and are still promoting alphabetization concerns.

The UNESCO Institute of Pedagogy (UIP/UIE), founded in 1951, an international research, training, information, publication and documentation center, investigates questions related to alphabetization and related topics. In 2006, the UNESCO Institute for Education became an international institute and was renamed UNESCO Institute for Lifelong Learning (UIL). The UIP institute, as a research and documentation center, contributes greatly to the development of alphabetization collaboration on an international context.

The 'BAG' Bundesarbeitsgemeinschaft Alphabetisierung (Federal Association) was founded in 1993. Overall objectives of the BAG include: to coordinate and link alphabetization efforts in Germany for the sake of more effectiveness. More importantly, their reports never tired in criticizing the shortage of federal and state-wide infrastructure. The federal association of alphabetization in cooperation with

the German association of Volkshochschulen (Deutscher Volkshochschulverband, DVV) ministered different projects.

To conclude, alphabetization in Germany is not a topic that has received as much attention as it deserves. It was only in the 1970s that the public became aware of existing illiteracy in Germany. Whereas different associations work in the field of alphabetization, federal promotion and institutions are rather the exception than the rule. A more critical look reveals the fact that the federal government of Germany has failed in fulfilling some of its promises or implementing the many UNESCO recommendations.

Let me now turn to my own teaching experiences of alphabetization courses under the umbrella of the German Volkshochschul system.

2. My own teaching experience

Before I describe my experiences teaching alphabetization at a rural Volkshochschule for over a decade, I briefly introduce the local setting, participants, and the teacher/researcher.

Local setting

Because students of alphabetization classes are stigmatised, I feel strongly about respecting their anonymity and privacy. Thus, I limit my description to the setting in the most general terms and omit a detailed description of participants.

The Volkshochschule is located in a rural, small-town setting in the southwest of Germany. The small town actually consists of five different towns that were incorporated some years ago. Though public transportation between these different parts exists, my students often had problems in getting to alphabetization class. Sometimes it took them more than one hour by public transportation. A few were lucky enough to have their husbands chauffeur them. Very few were able to walk to class.

Participants of my Alphabetization Class

Most of my students were females and came from all over the world. Afghanistan, Algeria, Burkina Faso, China, Eritrea, Ghana, India, Morocco, Nigeria, Thailand, Tunisia, Turkey, the Kosovo, the former Yugoslavia and Kurds from Turkey, Iran and Iraq. Most women had families and were housewives. Some had been in Germany for over 20 years. Others had just come within the last two months. Most were married to men of their own nationalities. Few had intermarried to a German or Polish person. Some had cleaning jobs in nearby hospitals, others wouldn't dare to talk about whether they had a job or not. I, therefore never asked question in this

respect. Most had financial problems or only limited sources available. Class size and attendance varied greatly. Most students don't attend classes regularly. Those, however, who came regularly and over a time span of some years, grew into a small community of learners. Before I discuss stations on this long and difficult road, I introduce my teaching philosophy.

The Teacher and Her Teaching Philosophy

Trained in linguistics, anthropology, and communication, I have always been interested in combining language, culture and learning. I prefer a socio-psycholinguistic view on language acquisition, believe in the power of books and literature, an interdisciplinary approach, and encourage classroom interaction.

There was one goal I feel very strongly about when teaching alphabetization class: the creation of an atmosphere that makes participants feel comfortable. Whenever they come to language class, they should enter a new and special world, a threshold that would change their lives forever. How could I transmit this idea to a group of students who spoke maybe very little or no German at all? I decided to take time to introduce myself and to share a lot of my experiences learning English as a second language during the lengthy period of time I spent in the USA. In so doing I felt free to not only share cross-cultural problems I had encountered but also asked them whether they had similar experiences living in Germany. At first, they wouldn't answer because of fear and not understanding my question. However, I kept doing this throughout the courses and then, at some point, one student started to talk and then others would join in. This took a lot of time and patience on my side, but it was all worth it. Here is what my "typical class" looked like:

A "Typical Class" Session

An old mill has been renovated and changed into classrooms for the local Volkshochschule. My classroom is on the top floor, up in the attic. The room is smaller than most classrooms because of inclined walls on two sides.

The moment I unlock the door, I dump many children's books and writing paraphernalia on the tables. Thus, whoever comes early can use the time and browse through some books or do some writing exercises. Once class starts officially, I welcome everybody and start asking questions. What is your name? Where do you originally come from and how was your week? Of course, not everybody understands all of my questions or feels comfortable sharing anything. But I insist on doing so because I want them to get a feeling of being special. I will always be interested in every single one of them, as a human being, someone who is important and has something to share.

The next part of class is devoted to my reading something out loud from children's books. At first people didn't expect me to do anything like this and seemed surprised. They, as adults, were reading children's books! Some helped me to understand that their idea of schooling centered on drills, exercises and regurgitation of materials. This was the occasion for me to defend my teaching philosophy, be strict and perseverant. I explained that reading beautiful language is important and that it helps to learn about the rhythm and melody of a language. Most importantly, it is okay for adults to read children's literature and to enjoy language for the sake of its beauty. And, didn't they all laugh and enjoy the story and the illustrations? Moreover, they understood something, as little as this might have been. I had to explain to them that it is perfectly okay to understand something in another language but not necessarily be immediately able to speak or write in that language.

In the course of the semester, reading out loud turned into a joint venture. I read a book with little text out loud, and then they had to repeat. It was clear that they had to read *something*, even if it was only a word. They should never feel alone in doing so. If they couldn't manage to read anything, then they had to try and ask for help. Though this way of reading might be rather time consuming, it was all worth it. The next step was to copy the text of the book, for those who were able to so. Meanwhile I would take my tour and go and read with those who weren't working on writing.

After this reading period, I usually introduced a language activity that strengthened a sense of community and personal risk taking. Every single one of them had to take a marker, go up front to the wall panel and write something on the board. For example, their favorite word of the day, or the answer of a question I had asked. I needed to adjust the task to the skills of each student. For some, just writing one letter on the board meant success. Those who could do more had to write a whole word. Hereby I told them that the whole class would be of assistance should they wish help. However, it was clear that they first had to try for themselves and then ask others. Others task included: naming words starting with an 'A'; identifying words in the text that start with the letter a, etc. It was my role to show patience, be stern and encourage every tiny little step into the world of literature. I was fully aware of the fact that my request to go to the board was for many the utmost challenge. Once they overcame this hurdle in our small group of a community of learners, they had all grown and paved their own way into the world of literacy.

Time permitting, class would end with free-time activity, i.e., participants could choose what they wanted to do, however, they had to work on something. Sometimes I helped in telling people what to work on. Or, they would get together in

a group and help each other. This was when I wanted to make sure that I could talk to each of them individually and do something together. All of this was to take place a class time of 90 minutes, i.e., the two class units per week.

Reflections: what worked and what didn't

If there is one thing I have learned teaching alphabetization classes over the last ten years, it is that these classrooms follow their own rules, time frame and rhythm. There is no shortcut or "quick and dirty" way of learning how to read and write as an adult. Most participants had never been exposed to a safe and nourishing language environment. 90 minutes of language class per week over a semester of 14 or 15 meetings cannot overcome these shortcomings in the course of one or two semesters. More likely than not, participants in alphabetization classes face myriad different problems. Here is a summary of findings of what worked and what didn't work:

What Worked.

I saw it as my personal challenge while teaching alphabetization to help my students understand that language is not only a system of letters and rules for communication but also part of our identity and humankind's most powerful tool. My way of teaching had to model that knowing how to read and write would for ever change their lives in a positive way. Pillars of my teaching from a socio-psycholinguistic view on language acquisition include the idea of a classroom as a community of learners (Peterson 1990 and 1992) and the concept of stories (Wells 1986). I insisted on a humanistic side to teaching. They were important for who they were. They had something to offer, their stories should be told.

Yes, it was more difficult to tap into what these people have to offer under these circumstances. Once we could laugh together, the ice was broken. Laughter overcomes language barriers. Beautiful children's books with illustrations are one of the most helpful tools in generating laughter. This was especially the case when I had more than one copy of the same book available. Then people could read along and take time to follow their own rhythm. Many of my students came from oral traditions and were familiar with stories. What they were missing, however, was the invitation to tell their own stories in German. Their alphabetization class was to serve as their new and supportive environment in doing so.

I must confess it took me a while to fully grasp the importance of taking time in class for telling stories and talking in German. Little could I know that for most of my students I was the only contact to the German-speaking world. Whenever they left

class, they would often retreat into their own little worlds, functioning in a network that didn't NEED German.

When I started to read children's books out loud, many were surprised. Some were reluctant to accept this as a teaching method for them, as adults. Some had the idea that learning how to read and write could only happen with drills and exercises. Furthermore, to enjoy learning was a new concept for them. I persisted and asked questions. For example, "What do you think of this? Do you like the illustrations? Do you know any similar stories in your culture?" One time we read a book on animals that also showed a camel. I turned to the ladies from Africa, namely Morocco, Ghana and Eritrea, and asked: "Do you have camels back home?" One of the ladies from Eritrea looked at me. She got very tense and then told us: "I was thirteen years old when the war broke out. I was lucky to escape the war riding on a camel for two weeks. That is why I don't know how to read and write. Coming from a village girls were not always allowed to go to school, or, their families had no money for it."

This was one of the turning points in class. Now this lady felt at ease and others felt comfortable sharing similar experiences. For example, those who had experienced war in the Kosovo or Afghanistan would tell their war related stories. Occasionally I felt guilty that these class times did not include writing exercises, which they desperately needed, too. There was always so much to do.

Looking back, however, I had to realize that especially this type of talking added more to their language proficiency than I could have ever hoped for. Most importantly, they felt comfortable in class. Topics they liked to talk about included cooking, sewing, and family. Some even talked about their major health and financial problems.

Each semester I finished with a little ceremony. The Volkshochschule was kind enough to give each participant a certificate. I showed participants their names on the certificate and invited them to frame it at home. Unfortunately, not everybody completed class. Here is a list of the most important problems I encountered:

- Too many family members join class
- Husbands don't accept foreign female teachers and act out "machismo".
- Misconception: one can learn how to write and read within one semester or less time.
- Children are not capable of translating everything.
- Time of class, classroom setting and materials
- Lack of teaching materials
- Difficult travel to class
- Discomfort of blackboard and chalk
- Too many interruptions within VHS semester
- Period between semesters is too long
- Irregular class attendance

At first it sounds nice when family members join class and offer help. However, this is counterproductive when class participants get sidetracked and feel distracted. Often many school vacations interrupt the flow of learning. This might do more harm to literacy classes than to “typical VHS classes”.

Reflections and Implications

Alphabetization is without doubt one of those topics that always include an estimated number of unreported cases. Therefore, any research and discussion on this topic remains incomplete and must be carefully scrutinized.

Despite many different attempts at addressing alphabetization and teaching courses in literacy, alphabetization is worldwide on the rise not only in so-called developing countries but also in so-called industrialized countries. (de.wikipedia.org/wiki/Alphabetisierung)

This is shocking in and of itself. What is so appalling to me is the failure of the German government in seriously supporting alphabetizing attempts. As of today there is no federal ministry that is officially responsible for alphabetization nationwide. The German government even showed the audacity to breach promises and ignore UNESCO or OECD recommendations. Sufficient and long-term funding of alphabetization projects scarcely exist. Germany is much more interested in spending money on weapons. It is among the top five weapon exporters in the world (radio channel SWR 2, report in June 2009).

Even before the global economic crisis, the German government failed in doing its “homework”. Based on the findings in the PISA studies, the German education system was more reprimanded than praised. Overall, many German students leave school with very limited reading and comprehension skills (Wikipedia, Migratinshintergrund). This is even more so the case for students of the second generation with migratory background. (<http://de.wikipedia.org/wiki/Migrationshintergrund>). Are these students on their way to functional illiteracy because the German education system lets them fall between the cracks? I’m afraid these ideas are not too far fetched but rather a logical, yet more critical consequence of my research findings.

To come back to my own experiences while teaching alphabetization classes under the umbrella of the German Volkshochschul (VHS) system, I can conclude. Yes, I could apply my teaching philosophy of a socio-psycholinguistic view on language and learning. What I had to learn, however, is that alphabetization classes have their own rhythm and timing.

How much longer can Germany afford its negligence in promoting literacy among its increasingly diverse population? Business experts have repeatedly

warned that the German economy is already missing more and more qualified workers. Lack of language proficiency is at the core of all of this. As long as the public is not truly informed about the illiteracy problem in Germany and the federal government is not more seriously involved in and committed to literacy projects, there will be no major improvement. To the contrary, the German system “prepares” the next generation of illiterates.

Mathématiques et littératie : perspective didactique

Corneille Kazadi

Université du Québec à Trois-Rivières, Canada

Introduction

La littératie mathématique reflète les aspects culturels des mathématiques dans leur enseignement et dans leur apprentissage. Elle implique une certaine compréhension du langage mathématique qui véhicule la culture mathématique. Les mathématiques sont l'expression d'une force de pensée, de langage et d'action qui s'exprime par des processus pratiquement invisibles pour la plupart d'entre nous. Il est crucial, dans la perspective didactique que chaque élève fasse l'expérience de cette force à son niveau, qu'il comprenne le sens et en perçoive les dangers et les limites afin de démystifier les mathématiques, de se sentir responsable de sa propre formation mathématique et d'appréhender son rôle de futur citoyen (D'Ambrosio, 1998).

CIEAEM 53 (2001) souligne que la littératie a toujours été liée aux demandes sociales. L'accent mis dans le curriculum sur les compétences de base en lecture, écriture et arithmétique correspondait, jusqu'à la moitié du 20^e siècle, aux besoins d'une société industrielle. Une éducation plus complète et en particulier une compréhension plus approfondie des mathématiques n'était pas considérée dans le passé comme une exigence pour tous les élèves. Cette éducation était l'objectif d'une minorité qui allait poursuivre de hautes études en mathématiques et en sciences et qui occuperait les postes les plus importants au sommet de la pyramide de notre société. Aujourd'hui, note Davis (2000), notre civilisation est fortement mathématisée. Les mathématiques sont utilisées partout. Dans la défense nationale, la mesure de l'intelligence, les diagnostics médicaux, la conception des cartes de crédit, les statistiques démographiques, le design de nouvelles voitures, etc. Nous avons toutes les raisons de penser que cette tendance se poursuivra dans l'avenir prévisible.

Dans ce texte, il est question de clarifier les trois concepts de littératie, de numératie et de littératie mathématique qui sont polysémiques et de proposer la résolution de problèmes comme une activité mathématique susceptible de soutenir la littératie mathématique.

Littératie mathématique

Des études (Frankenstein, 1994; D'Ambrosio, 1998; CIEAEM, 2001) soulignent que la littératie mathématique évoque une certaine évolution, l'expérience d'un développement continu et de transformations perpétuelles. Cette évolution se traduit en particulier par l'étude et l'amélioration continue de l'enseignement et des apprentissages mathématiques ainsi que par l'utilisation critique des technologies nouvelles dans le cadre de cet enseignement. Le concept de littératie mathématique est enfin dynamique : personne n'est lettré mathématiquement définitivement. Être mathématiquement lettré dépend toujours des besoins et des demandes de la société, directement liés au développement scientifique et technologique de cette société. Ces études ne peuvent pas décider ce qui définit et détermine la littératie mathématique sans analyser les demandes et les caractéristiques spécifiques de la société, ni discuter comment l'éducation mathématique peut favoriser une compréhension fondamentale des processus de mathématisation dans la société. La littératie mathématique repose sur l'idée des mathématiques en tant qu'activité sociale et humaine. Ces recherches conçoivent la littératie mathématique comme une littératie fonctionnelle qui met en valeur d'une part, l'importance de certaines compétences et certains outils définis par les besoins de la société. Et d'autre part, l'accomplissement de tâches concrètes qui impliquent l'utilisation et l'application effectives de ces compétences et ces outils.

Littéracie et numératie

Le concept « littéracie », pratiquement synonyme d'alphabétisme, se définit comme « l'aptitude à comprendre et à utiliser l'information écrite dans la vie courante, à la maison, au travail et dans la collectivité en vue d'atteindre des buts personnels et d'étendre ses connaissances et ses capacités » (Legendre, 2005).

L'Office québécois de la langue française (2002) définit la littéracie comme étant « l'ensemble des connaissances en lecture et en écriture permettant à une personne d'être fonctionnelle en société » et la numératie comme étant « l'ensemble des connaissances en mathématiques permettant à une personne d'être fonctionnelle en société ».

On a souvent séparé la littéracie de la numératie. La première étant considérée comme s'occupant des langues naturelles « français, anglais, portugais, etc. », la seconde se tournant vers les mathématiques comme langage écrit et oral.

On met en œuvre des pratiques de numératie lorsqu'on gère une situation ou qu'on résout un problème dans un contexte réel; il s'agit de réagir à l'information sur des notions mathématiques pouvant être représentées de diverses façons et de

mettre en œuvre une gamme de connaissances, de facteurs et de processus habilitants.

Les objectifs du PISA en littératie

Selon le programme d'évaluation et du suivi des acquis des élèves (PISA, 2001), on distingue quatre grands domaines en littératie :

- La capacité de calculer : la connaissance et les compétences nécessaires pour gérer les exigences mathématiques de diverses situations.
- La compréhension de textes suivis : connaissances et savoir-faire nécessaires pour comprendre et utiliser l'information contenue dans les documents tels que des éditoriaux, des reportages, des brochures, des manuels d'utilisation ou des posologies. Il y a lieu de distinguer les types de texte, à savoir narratif, informatif, descriptif, argumentatif et injonctif.
- La compréhension des textes schématiques : connaissances et savoir-faire nécessaires pour repérer, comprendre et utiliser l'information présentée sous diverses formes, entre autres, les demandes d'emploi, les fiches de paie, les horaires de transport, les cartes routières, les tableaux et les graphiques, etc.
- La résolution de problèmes : compétence qui fait appel à la pensée et à l'action dans une situation où il n'existe pas de procédure courante, ou apprise, de résolution. La compréhension de la situation à résoudre le problème et sa transformation progressive par la planification et le raisonnement constituent le processus de résolution de problèmes. Il s'agit de réfléchir et d'agir dans un but défini dans des situations pour lesquelles il n'existe pas de solution toute faite.

Le concept de littératie est intimement lié au concept de culture, ce qui transparaît dans les évaluations du PISA où on parle constamment de la culture mathématique. Deux outils importants servent à soutenir la littératie ou la numératie, ce sont l'oral et l'écrit. « On peut ainsi situer les sociétés sur une échelle allant des sociétés orales où l'écrit n'est pas du tout intégré, comme on en retrouve encore dans certaines parties du monde, à des sociétés qui ont intégré l'écrit dans toutes les facettes de leur fonctionnement au point que, pour pouvoir y vivre, il faut maîtriser l'écrit à un niveau relativement élevé » (Brissaud et Jaffré, 2003, p. 5).

Les politiques pour appuyer la littératie ou la numératie

Les politiques pour appuyer la littératie ou la numératie sont différentes selon les pays. En ne prenant que le Canada, elles varient selon les provinces. En Ontario, on tend à diminuer les effectifs des classes et on s'engage à fournir aux écoles des ressources et des outils éprouvés qui aident les élèves à exceller en lecture, en écriture et en mathématiques. Dans cette province, on estime que des bases solides en littératie et en numératie donnent aux élèves un choix plus vaste à l'école et plus tard dans la vie. Lorsque les élèves acquièrent de solides compétences en lecture, en écriture et en mathématiques durant leur jeune âge, ils sont moins susceptibles de se décourager et d'abandonner leurs études par la suite. C'est pourquoi le gouvernement de l'Ontario s'est engagé à aider les élèves à améliorer

leurs compétences en lecture, en écriture et en mathématiques. L'objectif est de voir 75% des élèves de 6^e année atteindre la norme provinciale en lecture, en écriture et en mathématiques. Et le gouvernement est déterminé à fournir aux élèves les ressources et le soutien dont ils ont besoin pour réaliser cet objectif. Pour ce faire, il a été créé le secrétariat de la littératie et de la numératie afin d'accroître le rendement des élèves. Sans minimiser les efforts qui sont faits au Québec, en reconnaissant que le savoir et les compétences des individus sont une composante importante de leur bien-être individuel, mais aussi une condition essentielle au développement d'une société. On constate cependant que le renouveau prône avec raison pour la spécificité de chaque apprenant, sauf que quand les effectifs des classes diminuent, on tend à fermer les classes. Et pourtant, la réduction des effectifs dans les classes permet d'accorder davantage d'attention individuelle aux élèves, ce qui améliore le rendement en littératie et en numératie.

Quelques perspectives en littératie et en numératie

Différentes perspectives ont abordé la littératie et la numératie sous divers angles parfois contradictoires et souvent complémentaires. Deux perspectives se démarquent : la cognitive et la didactique.

Littératie et numératie : perspective cognitive

En sciences cognitives, des recherches (Versace et al. 2002; Hutchin, 1996) font des rapprochements entre la littératie, la numératie et le cerveau. La numératie comme la littératie, est créée dans le cerveau via une synergie entre biologie et expérience. L'évolution a développé certaines structures cérébrales pour traiter le langage, de la même façon il en existe d'autres permettant une perception quantitative. Et, toujours comme pour le langage, les structures génétiquement prévues ne suffisent pas à gérer les mathématiques, elles travaillent en coordination avec d'autres circuits neuraux, non prévus pour la numératie mais adaptés au traitement de celle-ci par l'expérience. On voit combien l'éducation est importante (à l'école, à la maison ou par le jeu), et donc combien la neuroscience peut aider dans cette mission éducative. La neuroscience des mathématiques n'en est qu'à ses balbutiements, mais le domaine a déjà beaucoup progressé ces dix dernières années. On sait aujourd'hui qu'effectuer des opérations simples nécessite la collaboration de nombreuses structures situées dans différentes régions du cerveau. La simple représentation d'un nombre implique un circuit complexe qui fait appel à la représentation de magnitude, à la représentation visuelle et à la représentation verbale. Le calcul nécessite lui aussi un réseau complexe, qui varie

selon l'opération effectuée : la soustraction dépend du circuit pariétal inférieur, alors que l'addition et la multiplication activent d'autres réseaux neuraux.

Actuellement, souligne Thulliez (2009), la neuroscience sait peu de choses sur les mathématiques avancées, mais il semble que les circuits activés par les opérations complexes soient au moins partiellement distincts.

Finalement, tout le monde s'accorde que pour développer la littératie mathématique, il faut souligner l'importance de bases solides pour l'apprentissage tout au long de la vie, donc insister sur l'éducation des jeunes enfants et à maîtrise des compétences. La neuroscience contribue à résoudre les principaux problèmes auxquels la littératie mathématique est confrontée, y compris les « 2D » : *Dyslexie* et *Dyscalculie*.

Littératie et numératie : perspective didactique

L'objectif principal de la perspective didactique est de faire des liens entre la littératie et la numératie à travers la lecture et la compréhension des énoncés des problèmes mathématiques. Elle tient à maintenir des interactions au sein de la classe par la confrontation, la rupture cognitive et les obstacles. Ces obstacles sont à prendre dans le sens didactique, c'est-à-dire, il s'agit d'une connaissance qui est vraie dans un certain domaine, mais qui est source d'erreur quand on sort de ce domaine. Pour Arzac et Brun (1997), c'est un obstacle dans la mesure où l'élève a tendance à continuer à l'employer en dehors de son domaine de validité, ce qui est source d'erreurs persistantes, ayant tendance à reparaître inopinément et obstinément. Ces obstacles peuvent être didactiques (liés à l'enseignement), épistémologiques (liés aux connaissances) et ontogéniques (liés au développement physiologique de l'élève) (Briand et Chevalier, 1995).

Finalement, la perspective didactique fait le pont entre les deux disciplines : le français et les mathématiques, en se basant sur le décloisonnement des disciplines, privilégié par le Programme de formation de l'école québécoise en optant une perspective bidisciplinaire, faisant intervenir les disciplines du français et des mathématiques, le plus souvent considérées comme deux disciplines qui n'ont aucun lien entre elles et doivent être enseignées séparément. (Gagnon et Kazadi, 2008)..

La résolution de problèmes pour soutenir la littératie mathématique en enseignement et en apprentissage des mathématiques

Notons que les mathématiques ne sont pas un langage unique et linéaire, mais plutôt une combinaison de deux langages. Le premier qui est naturel ou usuel dans lequel les activités mathématiques vont utiliser prioritairement les vecteurs et les canaux de la langue française tant dans la transmission des savoirs que dans la

présentation des travaux ou des productions d'élèves. Le deuxième est Symbolique et graphique qui utilise différentes formes d'expressions comme les nombres, les symboles, les tableaux, les schémas ou les figures.

Chacun de ces langages a sa propre syntaxe qu'il faut absolument connaître si l'on veut être en mesure de communiquer adéquatement en mathématiques et avoir un bon niveau de littératie dans les quatre domaines.

La résolution de problèmes est un des objectifs de la littératie. Nous l'avons choisi en mettant deux élèves du primaire dans une situation de résolution de problèmes comportant des schémas : le poisson et le chien balourd. Ces élèves ont été soumis à un entretien d'explicitation. Nous présentons d'abord la solution experte ou la démarche attendue et ensuite l'explicitation orale de la démarche par les élèves.

Le poisson

La tête d'un poisson mesure le tiers de la longueur de son corps. La queue est aussi longue que la tête et le corps réunis. Si le poisson mesure 48 cm au total, quelle est la longueur de chacune des parties ?

Résolution de problèmes mathématiques

3^e cycle

Nom :

Problème 3 : Le poisson

La tête d'un poisson mesure le tiers de la longueur de son corps. La queue est aussi longue que la tête et le corps réunis. Si le poisson mesure 48 cm au total, quelle est la longueur de chacune des parties ?

Fig. 1

La démarche attendue (solution experte)

1. Repérer les données importantes du problème.

La tête mesure du corps.

La queue est aussi longue que la tête et le corps ensemble.

Le poisson complet mesure 48cm

L'élève comprend le sens de l'expression « aussi longue » qui signifie « autant ». L'élève comprend également le sens de l'expression « ensemble » qui renvoie à l'addition (dont les termes sont manquants).

2. Repérer la question du problème.

« Quelle est la longueur de chacune des parties du poisson? »

3. Déduire que la queue est équivalente à la moitié de la longueur du poisson.

Puisque la queue est égale à la tête et au corps ensemble, on obtient alors un schéma du poisson représenté comme suit :

4. Choisir l'algorithme permettant de calculer la longueur de la queue du poisson.

Multiplication ou division

5. Effectuer l'opération correctement.

$48 \times = 24\text{cm}$ ou $48 \div 2 = 24 \text{ cm}$

6. Séparer la tête et le corps du poisson en parties égales. Comme la tête mesure le corps, diviser le corps en trois parties égales.

Corps Tête

L'élève comprend que chaque partie du corps et de la tête est égale. Par conséquent, le corps du poisson mesure et la tête mesure . Ensemble, le corps et la tête mesurent . Cela renvoie aux définitions de la fraction « mesure » et « partie-tout ».

7. Calculer la longueur de la tête en choisissant l'algorithme approprié et en sélectionnant le diviseur et le dividende adéquats.

Division (dividende $\rightarrow 24$; diviseur $\rightarrow 4$)

8. Effectuer l'opération correctement.

$24 \div 4 = 6\text{cm}$.

9. Calculer la longueur du corps en choisissant l'algorithme approprié et en sélectionnant les bons nombres.

Multiplication (premier facteur $\rightarrow 3$; deuxième facteur $\rightarrow 6$) ou
Soustraction (grand terme $\rightarrow 48$; petit terme $\rightarrow 24$; petit terme $\rightarrow 6$)

10. Effectuer l'opération correctement.

$3 \times 6 = 18\text{cm}$

$48 - 24 - 6 = 18\text{cm}$

11. Inscrire les réponses du problème et les unités de mesure.

Réponse : Queue $\rightarrow 24$ centimètres

Corps $\rightarrow 18$ centimètres

Tête $\rightarrow 6$ centimètres

Analyse de l'explicitation de la démarche de l'élève Xavier dans l'entretien

Véronique: J'aimerais que tu expliques la démarche que tu as utilisée.

Xavier: Ce que j'ai fait, c'est que je savais que ça mesurait quarante-huit au total avec la queue; toutes les parties. Puis le quarante-huit je l'ai divisé en deux, parce qu'il y a le corps et la tête, plus la queue. Donc, cela en fait deux parties et je l'ai divisé en deux. La queue elle va mesurer vingt-quatre centimètres parce que quarante-huit divisé en deux, ça fait vingt-quatre. Après ça, mon vingt-quatre je l'ai divisé encore en trois parce qu'ils disent « mesure le tiers de la longueur » donc le tiers, c'est divisé en trois. Vingt-quatre je l'ai divisé en trois ce qui m'a donné huit. La tête mesure le tiers de la longueur de son corps. Le corps mesurait seize, puis la tête mesurait huit centimètres. Seize plus huit ça fait vingt-quatre, ce qui fait que les deux...

Véronique: Ok. Quels sont les mots mathématiques du problème qui t'ont permis de le résoudre?

Xavier: « Mesure le tiers de la longueur »... « du corps », puis « quarante-huit centimètres au total », puis « la queue est aussi longue que la tête et le corps réunis ».

Véronique: Ok. Alors ce sont les parties qui t'ont permis de résoudre le problème...

Xavier: Oui.

Véronique: Quelle est la partie du poisson pour laquelle tu as trouvé la longueur en premier?

Xavier: La queue.

Véronique: Ok, parce que tu as fait...

Xavier: Parce que j'ai fait quarante-huit divisé par deux ce qui m'a déjà donné la longueur de la queue.

Véronique: Ensuite, entre le corps et la tête, lequel as-tu trouvé en premier?

Xavier: Le corps parce que je l'ai... non. La tête parce que mon vingt-quatre je l'ai divisé en trois, ce qui me donnait huit, puis la tête déjà mesurait huit.

Véronique: Ok.

L'entretien de Xavier permet à l'évaluatrice de mieux comprendre les calculs qu'il a faits et l'ordre dans lequel il les a effectués. En effet, les traces de sa démarche sont loin d'être exhaustives et elles peuvent être difficiles à interpréter. Aucune équation complète n'a été écrite par Xavier. Dans les faits, les calculs ont été effectués mentalement et rapidement. Ainsi, de ses traces écrites, on aurait dû voir les opérations suivantes :

$$48 \div 2 = 24$$

$$24 \div 3 = 8$$

$16 + 8 = 24$ (il n'y a aucune traces écrites relatives à ces calculs, ces derniers ont été évoqués oralement seulement).

La vidéo permet de comprendre comment Xavier a trouvé la longueur du corps puisqu'il n'y a aucune trace écrite de sa démarche. Sans ses explications, l'évaluateur aurait pu poser de nombreuses hypothèses qui auraient pu relever de difficultés autres que celles de Xavier. Par exemple, si l'élève avait trouvé 16 en faisant « 8×2 », l'évaluatrice aurait compris que Xavier percevait le corps comme équivalent à de la longueur du corps et de la tête ensemble. Toutefois, comme il affirme avoir effectué une addition complémentaire, soit « $8 + 16 = 24$ », l'évaluatrice est en mesure de constater que Xavier comprend mal le sens de la fraction mesure. En effet, celui-ci perçoit le corps et la tête comme un tout (), alors

qu'il devrait voir le corps comme un tout () et la tête comme une partie supplémentaire de ce tout ().

L'entretien de Xavier confirme le fait que ce dernier ne perçoit pas la contradiction véhiculée par sa réponse. D'un côté, il affirme que la tête mesure le tiers du corps et, d'un autre, il ne réalise pas que 8 ne correspond pas au tiers de 16.

Le chien balourd
Quelle est la masse du chien ?

Fig. 2

La démarche attendue (solution experte)

1. Repérer les données importantes du problème.

Les balances, car elles évoquent des égalités, des relations algébriques.

2. Repérer la question du problème.

« Quelle est la masse du chien ? »

Situer la balance où se trouve le chien afin de dégager les éléments pour lesquels l'élève doit trouver la masse.

3. Établir la masse d'un sac en choisissant l'algorithme approprié. Dégager le diviseur et le dividende appropriés à l'aide de la seconde balance.

Division (dividende → 20 ; diviseur → 2)

La deuxième balance est la seule qui contient deux éléments identiques, c'est pourquoi l'élève doit commencer par établir la masse d'un sac. Pour ce faire, il doit inférer que tous les sacs ont la même masse et qu'il en est de même pour les autres éléments.

4. Effectuer la division correctement.

$$20 \div 2 = 10$$

5. Établir la masse d'une boîte en choisissant l'algorithme approprié. Dégager les termes appropriés à l'aide de la première balance et en utilisant la masse d'un sac.

Soustraction (grand terme → 15 ; petit terme → 10)

6. Effectuer la soustraction correctement.

$$15 - 10 = 5$$

7. Établir la masse de deux chats en choisissant l'algorithme approprié. Dégager les termes appropriés à l'aide de la quatrième balance et en utilisant la masse d'une boîte.

Soustraction (grand terme → 13 ; petit terme → 5)

8. Effectuer la soustraction correctement.

$$13 - 5 = 8$$

9. Établir la masse d'un chat en choisissant l'algorithme approprié. Dégager le diviseur et le dividende appropriés.

10. Effectuer la division correctement.

$$8 \div 2 = 4$$

11. Établir la masse du chien en choisissant l'algorithme approprié. Dégager les termes appropriés à l'aide de la troisième balance et en utilisant les masses trouvées précédemment.

Soustraction (grand terme \rightarrow 39 ; petits termes \rightarrow {10 ; 5 ; 4})

12. Effectuer la soustraction correctement.

$$39 - 10 - 5 - 4 = 20$$

13. Inscrire la réponse du problème et l'unité de masse.

Réponse : 20 kg

Analyse de l'explicitation de la démarche de l'élève Shany dans l'entretien

Véronique: Tu peux prendre le temps de lire et de regarder le problème, et quand tu es prête, tu tournes la feuille.

Shany: Ok

Shany lit le problème à haute voix et retourne la feuille.

Véronique: Qu'est-ce que tu retiens du problème?

Shany: Qu'il y a un chien qui s'appelle Balourd et il faut qu'on cherche la masse du chien.

Véronique: Parfait. C'est tout?

Shany: Oui.

Véronique: Alors tu peux résoudre le problème.

Shany résout le problème. Pendant la résolution du problème, Shany se parle à voix haute à quelques reprises. Malheureusement, sur la vidéo, la majorité de ses commentaires sont inaudibles.

Shany: Mon professeur, quand il nous fait faire des choses comme ça, il nous dit que si c'est admettons un signe de dollar, si on oublie le signe de dollar, ça ne veut plus rien dire.

Véronique: Ok.

Shany: Comme là, si j'écrivais juste vingt, ça pourrait être vingt gommes ou vingt quelque chose... tandis que là, vu que j'écris kilogramme on sait que ce sont des kilogrammes.

Véronique: Donc, il faut que tu écrives toujours le kilogramme...

Shany: Oui.

Shany continue la résolution du problème

Shany: Voilà.

Véronique: Tu as terminé?

Shany: Oui.

Véronique: Alors, j'aimerais que tu m'expliques ta démarche.

Shany: Ici, c'est quinze kilogrammes. Alors j'ai fait 15kg + 20 kg + 39 kg et moins 13 kg. Parce qu'ici, ça monte, ça monte, ça monte et là, ça descend [*en pointant la quatrième balance*].

Véronique: Ok.

Shany: Donc, je me suis dit que ça serait peut-être « moins », alors ma réponse, ça m'a donné soixante-sept.

Véronique: Qu'est-ce qui t'a amené à faire cette démarche là: d'additionner et de soustraire à la fin le treize kg?

Shany: Parce que moi, je me suis dit ça va toujours monter, mais quand j'ai vu que ça descendait, pour moi, ça disait « moins ». J'ai additionné ça, quand j'ai vu que ça avait baissé, là c'était à trente-neuf puis là ça a redescendu à treize, je me suis dit qu'il fallait que je soustraie sur ce que ça va donner. Comme « $1 + 2 + 3$ », ça donne 6, puis « $5 + 0 + 9$ », ça donne quatorze, moins treize.

Shany fait une correction.

Shany: J'ai changé parce que... soixante-et-un. Parce que là j'ai vu quatorze mais c'était treize. Puis là, ça donnait six, moins un... cinquante-et-un.

Véronique: Alors maintenant, est-ce que tu considères que tu es certaine de ta réponse?

Shany: Oui. Je n'avais pas pensé que je devais additionner ça plus ça, mais c'était plus intelligent que l'autre façon.

Véronique: Ok. Alors maintenant, tu es sûre de toi?

Shany: Oui.

Véronique: Merci!

En analysant les traces écrites de Shany, les évaluateurs sont voués à émettre une infinité d'hypothèses sur son raisonnement. En effet, il est excessivement difficile de comprendre les motifs qui ont justifié le recours à son opération. Par conséquent, l'entrevue de Shany est essentielle à la compréhension de la logique qui sous-tend la résolution du problème.

« Shany: Ici, c'est quinze kilogrammes. Alors j'ai fait $15\text{ kg} + 20\text{ kg} + 39\text{ kg}$ et moins 13 kg . Parce qu'ici, ça monte, ça monte, ça monte et là, ça descend [en pointant la quatrième balance [...]] ».

Shany: Parce que moi, je me suis dit ça va toujours monter, mais quand j'ai vu que ça descendait, pour moi, ça disait « moins ». J'ai additionné ça, quand j'ai vu que ça avait baissé, là c'était à trente-neuf puis là ça a redescendu à treize, je me suis dit qu'il fallait que je soustraie sur ce que ça va donner. [...] ».

Ces deux problèmes montrent les difficultés des élèves à lire les énoncés comportant des schémas. Les difficultés se situent au niveau de la perception des informations graphiques, de l'inattention aux détails, de la présence des données non pertinentes, de l'inattention aux questions et de non utilisation des connaissances antérieures. Pour la résolution de ce type des problèmes, il faut prendre en compte le transfert des apprentissages en lecture et la compréhension des informations graphiques (illustrations, tableaux, schémas, figures et graphique) qui accompagnent et précisent les informations contenues dans le texte comme le suggère le PISA.

Conclusion : la littératie, la numératie, et si on parlait de l'ordinatie

En considérant toutes les définitions de la littératie et de la numératie, Côté (2007) extrapole ces définitions à l'ordinatie et la définit comme « l'ensemble des connaissances en informatique permettant à une personne d'être fonctionnelle en

société. Il s'agit donc du computer literacy, initié par Moinar, du computing and programming de Gardner et du concept de culture informatique présenté par Legendre ».

Dans l'avenir, les connaissances en informatique vont permettre à l'élève de développer des habiletés qui l'accompagneront toute sa vie. Ainsi, l'élève contemporain, par l'intégration des technologies informatiques et de communication à ses cours, en viennent à développer des habiletés telles que développer un esprit critique, la motivation, l'action face à la machine, l'interaction en groupe. Que ce soit la littératie, la numératie ou l'ordonatie, il est primordial de se donner un plan de développement intégré aux élèves pour réellement répondre à leurs besoins dans cette ère de l'information et de l'informatique.

Horst Paul Kuhley
Elisabeth Gessner
Universität Kassel, Germany

Neveda, die türkischstämmige Deutschlehrerin in der Brennpunktschule, hat für ihre multikulturell zusammengesetzte Klasse eine Unterrichtseinheit vorbereitet, in der es um Märchen geht. „Erzählt doch mal ein Märchen aus Eurem Heimatland“ fordert sie ihre Klasse auf. Betretenes Schweigen folgt, den Kindern wollen keine Märchen aus ihren Heimatländern einfallen. Die intensive Nachfrage der Lehrerin fördert zu Tage, dass zu Hause einfach keine Märchen mehr erzählt werden. Von wem denn auch? Die Großmutter lebt in der Türkei und die Eltern sind selbst schon so lange in Deutschland, dass sie keine Märchen aus ihrer Kindheit in der Heimatsprache erzählen könnten. So muss die Kollegin die Idee der Unterrichtseinheit „Märchen aus meinem Heimatland“ auf den Kopf stellen und selbst nach Märchen suchen, die sie den Kindern mitbringen kann.

Abhilfe schaffen könnten entsprechende ein- oder zweisprachige Unterrichtsmaterialien für „Deutsch als Zweitsprache“ (DAZ). Hier wiederum stellt sich aber das Problem, dass die türkischen Kinder die ihnen in solchen Unterrichtseinheiten zugedachte Funktion gar nicht erfüllen können: „SchülerInnen mit der Erstsprache türkisch übernehmen im Unterricht ExpertInnenfunktion: Sie können etwas sagen zur Funktion und Tradition der Märchen in ihrer Heimat (...)“ (Huth, 1994). Dies können sie, wie gesagt, mitnichten.

Welche Förderung wollen Kinder und Jugendliche mit Migrationshintergrund, wenn man sie selbst fragt? Die Ergebnisse des zweiten ‚Jugendintegrationsgipfels‘ im Bundeskanzleramt wurden von der zuständigen Staatsministerin und Integrationsbeauftragten der Bundesregierung, Maria Böhmer, in ihrer Presseerklärung so zusammengefasst: „(...)Die junge Generation aus Zuwandererfamilien betrachtet Deutschland als ihre Heimat. (...) Sie wollen dazu gehören, wollen die Zukunft unseres Landes mitgestalten (...)“. Und zu den Forderungen der Jugendlichen gehört zum Beispiel: „Das Beherrschen der deutschen Sprachen ist Voraussetzung/Bedingung“ und „Mehr Berufsorientierung in der Schulzeit.“ (Presse- und Informationsamt der Bundesregierung, 2008)

‚Politik und Wirtschaft‘ in einer 10. Klasse, kooperative Gesamtschule, 29 Schülerinnen und Schüler. Manuel, Student im Schulpraktikum, hat sich als Thema die ‚Soziale Marktwirtschaft‘ vorgenommen. Das Thema wird zeitgleich in allen 10.

Klassen an dieser Schule behandelt. Der ‚Ausländeranteil‘ bei den Schülern liegt bei ca. 60 Prozent, in dieser Realschulklasse ist er sogar noch höher.

Der Einstieg in die Stunde mit einer Karikatur wirkt motivierend. Danach sollen aus einem typischen Lehrbuchtext abstrakte ‚Merkmale der Marktwirtschaft‘ herausgesucht werden (Konsum- und Gewerbefreiheit, Freiheit der Berufswahl etc.). Die Auflistung an der Tafel gestaltet sich zäh. Es wird mehr als deutlich, dass die Begriffe zwar mit Mühe im Text identifiziert werden können, aber zunächst nicht ‚verstanden‘, d. h. mit Anschauung gefüllt werden.

Dies gelingt schließlich mit ein paar einfachen Fragen, die auf das Vorwissen und die persönliche Situation der Schüler abzielen: „Kann sich jeder von euch seinen zukünftigen Beruf frei aussuchen?“ „Habt Ihr euch schon einmal beworben oder habt Ihr das bei Freuden miterlebt?“ Im lebhaften Diskussionsprozess über die eigenen Berufsperspektiven füllt sich der Begriff der ‚freien Berufswahl‘ für jeden Einzelnen mit konkretem Inhalt und wird damit für reflexive Überlegungen zugänglich. Das Gleiche geschieht mit der ‚Gewerbefreiheit‘, ausgelöst durch die Schülerfrage: Was muss ich lernen, wenn ich später einen Elektronikmarkt eröffnen möchte? Natürlich lässt sich diese Frage nicht sofort hinreichend beantworten. Es zeichnen sich aber Umrisse eines kleinen, handlungsorientierten Planspiels ab, mit dem man den Unterricht in den Folgestunden fortführen kann. Die Erwartungen der Schüler sind realistisch und zweckorientiert, man könnte auch sagen: affirmativ. Es wird deutlich, dass sie in *dieser* Gesellschaft ankommen, *hier* erfolgreich sein wollen. Nähme man dieses Bedürfnis nach sehr weltbezogenem Kompetenzerwerb nicht ernst, würde man ihnen etwas schuldig bleiben.

Interkulturelle Integrationskonzepte in der Kritik

Solche sehr pragmatisch auf das ‚Ankommen‘ in unserer Gesellschaft ausgerichtete Wünsche wurden von der interkulturellen Didaktik bisher zu wenig erfüllt. Viele Maßnahmen und Konzepte orientierten sich stark an den ‚Herkunftskulturen‘, wobei zumeist auch eine mehr oder weniger explizite ‚Rückkehr-Option‘ mitschwang. Dies hat unserer Ansicht nach dazu beigetragen, dass viele der zahllosen „Klimmzüge gegen die doppelte Halbsprache“ (Frankfurter Rundschau 21.12.2007) bei Jugendlichen mit Migrationshintergrund keinen oder nur mäßigen Erfolg hatten und die sprachabhängigen Integrationsprobleme sogar gewachsen sind, wie die PISA Studie feststellte (Baumert et al. 2001).

Das lange Zeit favorisierte Konzept des *Muttersprachlichen Unterrichts* beruhte auf der Annahme, dass man eine zweite Sprache nur dann gut lernen kann, wenn man vorher die Muttersprache ausreichend beherrscht – eine plausible, wenn auch empirisch bisher nicht belegte Hypothese. Es gibt viele biographische

Auskünfte von Migranten, die auch die Annahme des Gegenteils nahe legen. Explizites Ziel für den muttersprachlichen Unterricht war zum Beispiel in Hessen nach Aussage des ‚Migrationsreports‘ „... die Möglichkeit der Wiedereingliederung in die Schule des Herkunftslandes offen (zu) halten“ (Tischler, 2002). Abgesehen davon, dass die Konzentration nur auf die großen Immigrantengruppen von vornherein ungleiche Bildungschancen innerhalb der betroffenen Schülergruppe bewirkte, war das Angebot faktisch nie flächendeckend und der Unterricht fand außerhalb der regulären Unterrichtszeit statt. Dies hatte zur Folge, dass es keine Verzahnung zwischen dem muttersprachlichen und dem übrigen Unterricht gab und oft keine Kommunikation zwischen den Lehrpersonen. Ein erkennbar positiver Effekt des muttersprachlichen Unterrichts auf die Leistungen in Deutsch war nur schwerlich auszumachen.

In anderer Weise trifft die Kritik auch auf zahlreiche Konzepte und Materialien für ‚*Deutsch als Zweitsprache (DaZ)*‘ zu, wie zum Beispiel auf den sehr verbreiteten Ansatz von Neuner (Neuner, 1995). Sehr vereinfacht gesagt ist der Ausgangspunkt der DaZ-Konzeption die Erkenntnis, dass Deutsch für Schüler/innen mit Migrationshintergrund wie eine Fremdsprache unterrichtet werden muss. Die entsprechenden Praxiskonzepte greifen also auf Erkenntnisse der Fremdsprachendidaktik zurück, verbinden diese allerdings mit einer sehr starken inhaltlichen Ausrichtung des Materials auf die Kultur der Herkunftsländer. In der konkreten Umsetzung bedeutete das eine besondere Beschäftigung mit Gebräuchen, Literatur und Märchen der Herkunftsländer und mit Jugendbüchern, die Probleme der Migration thematisieren.

Der Sprachunterricht wurde allerdings durch diesen interkulturellen Anspruch oft heillos überfrachtet und viele Kollegen fühlten sich überfordert. Gerade bei sehr engagierten Lehrpersonen hat das Resignation ausgelöst und dazu geführt, dass dieses idealistische Konzept in die Defensive geriet. Sehr kritisch betrachtet, kann man es ebenfalls als einen in das Positive gewendeten Versuch des Erhalts von ‚Rückkehr-Optionen‘ interpretieren.

Als problematisch erwiesen hat sich auch ist die Verabsolutierung des didaktischen Prinzips der *Binnendifferenzierung*. Neben dem zusätzlichen Angebot des muttersprachlichen Unterrichts sollte es nach dieser Philosophie möglichst wenige oder gar keine äußerlich differenzierenden Fördermaßnahmen geben, da die äußere Differenzierung im Kontext des gegliederten Schulsystems unter dem Generalverdacht der Selektion und Diskriminierung stand.

Nahezu überall im europäischen Ausland - zum Beispiel auch in Finnland - werden Fragen der Differenzierung allerdings pragmatischer diskutiert. Äußere und innere Differenzierungsmaßnahmen werden dort zu einem flexiblen System

verbunden, welches den individuellen Bedürfnissen der Lerner optimal gerecht wird. Keinem Kind mit unzureichenden Sprachkenntnissen nützt es schließlich, wenn es im Biologie-, Mathematik- oder Deutschunterricht herumsitzt ohne etwas zu verstehen.

Eine offenbar erfolgreiche Reaktion auf den ‚PISA-Schock‘ war dagegen die Einführung von sog. *Vorlaufkursen* in zahlreichen Bundesländern. Beim vorgezogenen Anmeldetermin für alle zukünftigen Grundschüler werden deren Sprachkenntnisse verpflichtend überprüft, unabhängig von ihrer Nationalität und Herkunft. Werden dabei unzureichende Deutschkenntnisse festgestellt, sollen die Kinder mehrmonatige Deutschkurse besuchen, die in Zusammenarbeit von Schulen und Kindergärten wohnortnah organisiert werden. Der Besuch dieser ‚Vorlaufkurse‘ wird sehr gut angenommen, da die Kinder vom Schulbesuch zurückgestellt werden können, wenn ihre sprachlichen Defizite nicht aufgearbeitet wurden.

In der Praxis hat sich gezeigt, dass die von einigen Pädagogen befürchtete Diskriminierung nicht eingetreten ist und die Akzeptanz der Vorlaufkurse bei den ausländischen Eltern von Beginn an sehr hoch war, auch ist die tatsächliche Rückstellungsquote außerordentlich gering. Wichtig erscheint uns dabei, dass diese Kurse zwar überwiegend Kindern mit Migrationshintergrund zugute kommen, grundsätzlich aber auch für deutsche Kinder mit Sprachdefiziten offen sind und (in allerdings wesentlich geringerer Zahl) auch von diesen besucht werden. Der pädagogische und didaktische Ansatz dieser Kurse stellt im Unterschied zu vielen anderen Initiativen nicht die ‚Herkunft‘ in den Mittelpunkt, sondern orientiert sich am systematischen Erlernen von *sprachlichen Standards*, die im deutschen Schulsystem vorausgesetzt werden und je nach sozialem Milieu auch von Muttersprachlern nicht immer erreicht werden.

Sieht man von dem zuletzt skizzierten Beispiel der Vorlaufkurse ab, ist ein Großteil der bisherigen Konzepte unserer Ansicht nach de facto zu stark auf ‚herkunftsorientierte‘ Eltern, Kinder und Jugendlichen mit Migrationshintergrund zugeschnitten. Die im Folgenden dargestellte Schweizer Untersuchung lässt aber vermuten, dass die Gruppe der SchülerInnen und Schüler mit Migrationshintergrund, die sich explizit eine ‚Rückkehr-Option‘ offen halten möchte, in der Schule zahlenmäßig nicht die größte ist.

Sozialstatus und kulturelle Orientierung als entscheidender Faktor

Die typischen ‚Schüler/innen mit Migrationshintergrund‘ gibt es nicht. Kultur und Sprache der Herkunftsländer, vor allem aber der Sozialstatus in der deutschen Gesellschaft können - neben anderen Faktoren - recht unterschiedliche Formen der Förderung nahe legen. Hilfreich erscheinen uns in diesem Zusammenhang einige aktuelle Erkenntnisse der Medienpädagogik, z. B. der sehr lesenswerte Aufsatz von Ben Bachmair (Bachmair, 2007) zum ‚Leserisiko und der Medienumgebung von Migrantenkindern‘ sowie die dort zitierte Studie von Bucher/Bonfadelli zum Medienverhalten von Schweizer Jugendlichen. Die Schweizer Forscher

Kulturelle Orientierung				
	Schweiz-Orientierte	Dualisten	Herkunfts-Orientierte	Ungebundene
Ex-Jugoslawien Kinder	41	27	25	7
Ex-Jugoslawien Eltern	13	35	45	2
Italien, Kinder	41	23	29	7
Italien, Eltern	20	30	48	4
Türkei, Kinder	41	28	24	7
Türkei, Eltern	10	31	57	2

kulturelle Orientierung: (Bucher/Bonfadelli 2007)

untersuchten neben sozialen Faktoren vor allem auch die ‚kulturelle Orientierung‘ der befragten Jugendlichen mit Migrationshintergrund, d. h. das Verhältnis zur Herkunftskultur und zur Schweizer Gesellschaft. Sie beschreiben dabei vier Gruppen (‚Schweiz-Orientierte‘ / ‚Dualisten‘ / ‚Herkunfts-Orientierte‘ und ‚Ungebundene‘), die sich nicht nur in ihren Werturteilen und Gewohnheiten stark unterscheiden, sondern auf die auch mit jeweils sehr unterschiedliche Formen der Förderung zugegangen werden muss.

Diese Beschreibung erscheint uns leicht auf deutsche Verhältnisse übertragbar, da sie kulturelle Grundorientierungen von Jugendlichen fragt und diese als Ausgangspunkt nimmt, um nach unterrichtsrelevanten Konsequenzen zu fragen. Deutsche Befunde legen ähnliche Schlussfolgerungen nahe. So sagt Christian Alt vom ‚Deutschen Jugendinstitut‘ im DJI Bulletin 76 (2006): „Wer aus einem niedrigen

Milieu stammt – gleichgültig ob mit oder ohne Migrationshintergrund – wird stets die gleichen Probleme im Bildungsbereich haben.“

Aus den beiden oben zitierten Feststellungen lassen sich Konturen einer modifizierten ‚Didaktik der interkulturellen Bildung‘ ableiten: Interkulturelle Bildung sollte sich von der Fiktion eines homogenen Status ‚Migration‘ verabschieden und sich den konkreten Bedürfnislagen der verschiedenen und Milieus zuwenden. Entscheidende Faktoren für Förderkonzepte sind dann die unterschiedliche soziale Situation von Kindern (seien sie Migranten oder seien sie Deutsche) und ihre kulturelle Orientierung. Dies erfordert selbstverständlich auch eine Veränderung der politischen Rahmensetzungen für Förderkonzepte, die sich bislang viel zu sehr an der Herkunftsfrage orientieren.

Wir stützen uns bei dieser Forderung nach einer neuen ‚Didaktik der interkulturellen Bildung‘ auf einen Bildungsbegriff, wie ihn Eckhard Klieme (2005) im Zusammenhang mit der Entwicklung der bundesdeutschen Bildungsstandards formuliert hat: „Bildung ist (...) ein Prozess, in dem sich Menschen die sie umgebende Kultur, das System von Normen und Regeln, Wissen und Fertigkeiten erschließen und aneignen“. Sehr wichtig erscheint uns dabei, dass die Forderung nach ‚Aneignung und Erschließen der kulturellen Umgebung‘ keinesfalls als rezeptive Einbahnstraße zu verstehen ist, sondern als *aktiver* Prozess, der auch die Umgebung immer wieder kritisch hinterfragt und den Schülern eine eigenständige Adaption und Veränderung der Umgebung erlaubt.

‚Bildungsstandards‘ gegen ‚Interkulturelles Lernen‘?

Kritiker befürchten, dass die oben erwähnten Bildungsstandards den vorhandenen Selektionsdruck verstärken werden. Die in diesem Kontext entwickelten ‚neuen Aufgabenformate‘ verlangen in viel höherem Maße als frühere Prüfungsaufgaben die Aktivierung von Vor- und ‚Weltwissen‘, das heißt Formen von sprachlichem Handeln und sozialen Einsichten, die wesentlich stärker als bisher Lebensweltbezüge im Unterrichts voraussetzen.

Wer die in den Standards vorgegebenen Aufgaben zum Beispiel für das Fach Mathematik ansieht, wird feststellen, dass für das erfolgreiche Absolvieren der Hauptschulabschlussprüfung in Mathematik auch juristische Grundkenntnisse - zum Beispiel im Verbraucherrecht - nötig sind. In den entsprechenden Lehrplänen der Bundesländer für das Fach Mathematik fehlen jedoch bislang Unterrichtsvorschläge, die zum Erwerb dieser Kenntnisse führen. Es ist eine primäre Aufgabe der Schule, solche didaktischen Lücken offensiv zu schließen.

Die bisher von manchen Kolleginnen und Kollegen in den Abschlussklassen praktizierte Methode des ‚teaching to the test‘ für die Bewältigung von derartigen

Abschlussprüfungen wird die Kompetenzen zur Bewältigung von Alltagssituationen kaum nachhaltig verbessern. Statt dieser ‚subversiven‘ Methode, mit unzureichend vorbereiteten Neuerungen im Bildungsbereich fertig zu werden, schlagen wir einen curricularen Ansatz vor, bei dem im Kollegium einer Schule gemeinsam ein geeigneter Text- und Aufgabenfundus aufgebaut und das Zusammenwirken verschiedener Fächer systematisch verankert wird. Wie man ein solches Schulcurriculum aufbauen könnte, haben wir an anderer Stelle am Beispiel von ‚Beruflichkeit‘ als organisierender Leitlinie gezeigt. (Gessner/Kuhley 2006), Diesen Ansatz kann man mit Hinblick auf Schüler/innen mit Migrationshintergrund noch weiter ausdifferenzieren.

So kann für Kinder und Jugendliche mit sprachlichem Förderbedarf - auch ausgehend von ihrer Mediennutzung - systematisch an der Erweiterung von Kompetenzen für den Schul- und späteren Berufserfolg gearbeitet werden, die eine gleichberechtigte schulische und gesellschaftliche Teilhabe erst ermöglichen. Dabei sind offene Formate, Problemorientierung und Handlungsbezug unserer Erfahrung nach motivierend und haben darüber hinaus noch den Charme, dass sie auf das ‚wirkliche Leben‘ vorbereiten.

Schüler mit größeren Sprach- oder Lernproblemen werden allerdings durch allzu offene Unterrichtsarrangements überfordert und können daher weniger mit ihnen anfangen als sprachgewandte, gute Lerner, wie zum Beispiel auch Untersuchungen von Andrea Bertschi-Kaufmann (2006) gezeigt haben. Zur Unterstützung für solche Schüler empfehlen wir deshalb eine stärkere Strukturierung des Lernprozesses, mehr Hilfestellung, mehr Training und mehr Systematik als für die leistungsstarken Schüler. Eine Kombination von offenen Aufgabenformaten mit systematischem Training scheint sich insgesamt zu bewähren, gerade auch in der Sprachförderung für Kinder und Jugendliche mit Migrationshintergrund.

Mentorenprogramme mit erfolgreichen Migranten aufbauen

Auf einen vielversprechenden und anscheinend effektiven Weg für die Organisation zusätzlicher Förderung verweisen Mentorenprogramme ‚mit Migrationshintergrund‘. Solchen Programmen ist gemeinsam, dass die Mentorenrolle von erfolgreichen Migrantinnen und Migranten übernommen wird, die ihre Erfahrungen authentisch weitergeben können.

Exemplarisch soll hier das Hamburger Projekt ‚Junge Vorbilder‘ skizziert werden. Dieses Projekt richtet sich besonders an Schüler/innen der 9. bis 11. Klasse, die einen guten Schulabschluss anstreben oder in die gymnasiale Oberstufe wechseln möchten. Sie werden dabei von Studierenden der Universität Hamburg in

Einzelförderung oder Kleingruppen fachlich und sozial-emotional unterstützt. Diese Unterstützung kann Sprachförderung oder klassische Nachhilfe bedeuten, vor allem aber soll sie Orientierung und Motivation vermitteln. Die Mentoren fungieren dabei als ‚Erfahrungsexperten‘, die vorhandene Schwierigkeiten aus eigener Erfahrung kennen, dann aber Lösungswege gefunden haben und deshalb ‚Strategien und Tipps für das erfolgreiche Bestehen im Schulsystem vermitteln können‘. So hat man einige der Kurse, die ursprünglich in den Stadtteilschulen angeboten wurden, inzwischen in die Universität verlegt – mit anscheinend durchschlagendem Erfolg: Die Schüler/innen ‚müssen‘ nun nicht mehr nachmittags in ihrer Schule ‚nachsitzen‘, sondern sie ‚dürfen‘ in die Universität. Fördermaßnahmen werden dadurch zum angesagten Prestigeobjekt (Quell: http://www.verikom.de/junge_vorbilder.htm).

Netzwerke für den Förderunterricht knüpfen

Sicher ist: Die Schule allein wird nicht alle Probleme der sprachlichen Integration lösen können, sondern sie kann und sollte auf die Hilfe der Gesellschaft setzen und sich beispielsweise mit Stadtteilgruppen, türkischen Gemeinden, orthodoxen Serben und vielen anderen Gruppen in einem kommunikativen Netzwerk verankern, das auf die gemeinsame Zielsetzung ausgerichtet ist: Ankommen in Deutschland.

Wer sich im Unterricht mit benachteiligten Schülerinnen und Schülern auf die Verbesserung ihrer Berufsperspektiven und Lebenschancen konzentriert, wird vielleicht nicht so intensiv auf die vielen Dinge eingehen können, die ohne Frage an der deutschen Gesellschaft zu kritisieren sind. Auch wird man sich, statt über ‚Bildungsstandards‘ und ‚neue Aufgabenkultur‘ zu klagen, mehr mit der Frage beschäftigen, wie man Unterricht so aufbauen kann, dass die fehlenden Kompetenzen systematisch erworben werden können. Und vielleicht muss man auch auf manche liebgewordene Jugendbuch-Lektüre zugunsten einer Lektion in Verbraucherrecht verzichten. Wir halten das für vertretbar.

Using Professional Learning Communities to Improve Student Learning in Reading: Better Understanding the Stages of Development

Martine Leclerc

André Moreau

Université du Québec en Outaouais

Martin Lépine

Université de Montréal

1. Context

Like the majority of North American schools, teachers in French Ontario schools have been working in an isolated manner for years now. Put forth by the Ministry of Education of Ontario (Canada), the reform pertaining to the teaching of reading skills expects schools to work in professional learning communities in order to improve students' learning abilities (MEO 2003, 2004, 2005; The Literacy and Numeracy Secretariat, 2007). According to *Professional learning communities* (Hord, 1997), this type of functioning is renowned for improving school effectiveness: not only does it guarantee that all students will receive proper teaching, professional learning communities also aim at ensuring that all students are acquiring higher learning abilities (DuFour, Eaker & DuFour, 2005; Roy & Hord, 2006). Furthermore, research in this area emphasizes that changes can create a positive impact not only at the organizational level, but also in students' school performance (Eaker, Dufour, & Dufour, 2004; Goddard, Hoy & Woolforl-Hoy, 2000, 2004; Hord, 2006; Leclerc, 2009; Louis, 2006).

Consequently, French Ontario schools are witnessing a profound organizational change triggered by the implantation of a professional learning community within the school. In fact, this method of functioning requires teachers to put at the heart of their questioning student learning, while choosing to accept a shared responsibility towards collectively fixed learning results and the pursuit of common goals (Fullan, 2001). Because this is a new type of functioning, it becomes pertinent not only to try and establish the mechanisms that play an important role, but also to define the developmental stages of learning communities in order to better intervene, thereby allowing schools to progress.

2. What is a Professional Learning Community?

The expression "professional learning community" made its appearance in literature in the early 1990's and originates from organizational theories, mainly those referring to learning organization (Senge, 1990). Henceforth, we recognize that knowledge built by an individual or a group of individuals constitutes an undeniable advantage in the workforce. This represents one of the most important resources of an organisation (Wenger, 1998). Professional learning communities have an

objective well beyond improving teachers' well-being and professionalism: they aim at triggering a positive change for students and a significant difference in their success (Louis, 2006).

In a professional learning community, the professional culture of the school in its entirety is enhanced; collaboration and team work are the norm; collective responsibility regarding student success and continued learning not only of the students, but also of the teachers is at the heart of this process. More specifically it includes:

- a *community* in which different people share a commitment towards a common goal, each person pursuing this goal by being actively implicated in collective decisions regarding student success (Hargreaves & Fink, 2006, Westheimer, 1999).
- student *learning* as well as the implication of adults in the organisation in general. The learning is significant and non superficial and the community responds to problems and challenges by posing the following question: "What do we know about this topic?" (Hargreaves & Fink, 2006).
- a *professional aspect* of discussions regarding the best methods to be used in order to identify and implement improvements, and in the ways individuals value and put together a variety of data and proof as a basis for their decisions (Hargreaves, 2003; Leclerc, Moreau & Leclerc-Morin, 2007).

Hord (1997) proposes five characteristics of professional learning communities: 1) a shared leadership where the school principal shares their power and encourages the participation of the school personnel in taking decisions; 2) a vision and shared values manifested by a commitment from the staff towards student success; 3) a shared learning of the school staff in response to student needs; 4) the evaluation by peers of strategies utilized, feedback as well as support in order to improve student results for the entire school and 5) physical and human conditions that will allow teachers to collaborate, learn and share together.

3. Traditional Schools and Professional Learning Communities

A few distinctions between traditional schools and professional learning communities should be addressed: these include the focus of collaborative meetings of the teaching personnel, the preoccupations and pedagogical interventions as well as the leadership of the school principal and of the teachers.

Traditional schools are generally places where teachers are isolated; meetings are rare and often informal. These are usually used to manage daily activities and are not structured. The collaboration in regards to teaching practices is left at the teachers' discretion. Decisions concerning teaching are made by the teacher as opposed to the entire school as an organisation (Elmore, 2000). The role of the school principal is to manage matters surrounding and not directly linked to the curriculum and the teaching.

In schools functioning as professional learning communities, the meetings are formal and structured in order to make them efficient. They are centered on student learning and the impact of the interventions is at the heart of topics addressed. The school principal undertakes an active role in targeting the pedagogical preoccupations that should be prioritized and in favouring leadership emerging from the teachers. Table 1 presents certain distinctions between traditional schools and professional learning communities.

Table 1			
Certain Distinctions between Traditional Schools and Professional Learning Communities			
	• Traditional schools	• Professional learning communities	• Literature
Objective of collaborative meetings of the teaching staff	• Emphasis is on teaching.	• Emphasis is on learning. Constant questioning: how is the school responding to the needs of all the students? Which students are a preoccupation? What are we doing to help these students?	• Cate Vaugh & O'hair (2006) • Leclerc & Moreau, 2008 • Roy & Hord, 2006
	• Often informal (school halls, recess) and not structured.	• Formal (time allotted in time table) and very structured (calendar for meetings, order of the day, follow up...).	• Leclerc & Leclerc-Morin, 2007
Preoccupations and pedagogical interventions	• The teacher often feels alone facing the challenges of students that are a preoccupation.	• The preoccupations are shared among the collaborative team. It is not your student, it becomes our student.	• Lieberman, 2009 • Roy & Hord, 2006
	• The teacher uses methods he or she deems acceptable.	• The team decides to utilize the most appropriate methods, based on recent discoveries in this area and taking into account the profile of their students.	• Leclerc & Moreau, 2009 • Lieberman, 2009
	• The decisions concerning students follow popular opinion (intuition).	• The decisions are based on research findings that are relevant to a student's particular situation. Precise data is used to support decisions (proof).	• Dufour & Eaker, 2004 • Hord & Sommers, 2008
	• The approaches and methods are chosen based on what the teacher likes and doesn't like.	• The approaches are chosen based on their impact on student learning.	• Eaker, Dufour & Dufour, 2004
	• The validation of pedagogical methods is done primarily externally: strong commercial component (publishing houses).	• The validation of pedagogical methods is done primarily internally: teachers undertake attempts, observe, collect data and compare the impact observed on their students' learning.	• Eaker, Dufour & Dufour, 2004 • Leclerc & Leclerc-Morin, 2007
	• The planning is mostly static.	• The planning is constantly adapting to the ever changing profile of the students	• Cate, Vaugh & O'hair, 2006
Leadership	• The individuals acting as school principals are perceived as the	• The school principals encourage the expression of leadership among the	• Hord & Sommers, 2008 • Leclerc & Leclerc-

	ones taking the decisions (hierarchy, formal power)	teaching staff (superleadership)	Morin, 2007 • Stoll & Temperley, 2009
	• The teachers have the role of executing.	• The teachers are perceived as experts, are mutually influencing each other and are influencing the individuals acting as school principals.	• Hord & Sommers, 2008 • Leclerc & Leclerc-Morin, 2007 • Roy & Hord, 2006
	• The school principals are rarely aware of the interventions and approaches that should be valued by the teaching staff because their time is primarily dedicated to school management.	• The school principals exercise an active pedagogical leadership and are aware of interventions and approaches that should be advocated by the teaching staff.	• Eaker, Dufour & Dufour, 2004 • Stoll & Temperley, 2009

4. Professional Learning Communities : Stages of Development

Research carried out by Cate et al. (2006) suggests the existence of two phases in the development of a professional learning community (PLC): a) in the first phase, the control is external to the community and is associated with the primary characteristics of a PLC – sharing of best practices and confidence building between team members; and, b) in the second phase, the control comes from within the community. At that point, the team has matured and started questioning its teaching methods based on student learning data. The administration exercises a shared leadership engaging teachers in decision making as well as forming their own leadership. These two phases are two crucial steps but provide few indices in determining the progression of the school to a PLC. The same applies to the questionnaire developed by Dibbon (2000) proposing three stages using Hord's five characteristics (1997), where the outcomes are too broad to evaluate the school's progression.

The literature on professional learning communities also mentions a few indicators that permit us to situate the evolution of the school as a PLC. These indicators concern (a) the vision of the school (b) the human and physical conditions that allow teachers to collaborate, learn and share together, (c) the collaborative culture within the school, (d) the manifestation of leadership from the school principal and teaching staff, (e) the diffusion of expertise and collective learning, (f) the topics addressed that take into account the preoccupations in regards to student learning as well as (g) the decision making based on the use of precise data (Cate et O'hair, 2006, Dibbon, 2000; Eaker, Dufour et Dufour, 2004; Hipp et Huffan, 2003; Hord, 1997, Leclerc et Moreau 2009; Miller 2005, Roy et Hord, 2006, Schussler, 2003; Stoll et Temperley, 2009).

5. Observation Grid of the Evolution of the School as a Professional Learning Community (OGPLC)

Based on research data collected through interviewing 130 participants from 15 French elementary schools, we were able to better comprehend the functioning of schools as professional learning communities (Leclerc, 2009; Leclerc et Leclerc-Morin, 2007; Leclerc et Moreau, 2008; Leclerc, Moreau et Berger 2007, Leclerc, Moreau et Leclerc-Morin, 2007). Eight of these schools are in the Toronto region (n=54), one is in the Ottawa region (n=8), one is in the Outaouais region (n=8) and five are in the south-west region of Ontario (n=60). The participants implicated in this study are teachers at the levels of junior and senior kindergarten as well as first, second and third grade.

Within the schools that are at the initiation stage (level 1), there are multiple priorities. However, the vision and priorities are rarely perceived in concrete actions. The human and physical conditions do not facilitate collaboration and sharing among teachers. The collaborative culture is not thriving, possibly due to certain interpersonal conflicts. The school principal is responsible for making important decisions and the diffusion of expertise is very limited. The team is using data that lacks preciseness to evaluate the impact of their interventions on the progress of their students.

The schools at the implantation stage (level 2) have a clear shared vision and direct links between chosen priorities and the schools' vision can sometimes be perceptible in practice. The human and physical conditions allow teachers to collaborate and share more easily. The collaborative culture is mostly positive, as the group manifests a variety of interpersonal abilities that favour exchanges. The school principal shares a certain power with the teachers and the team sometimes uses precise data in order to obtain proof of the impact of their interventions on the progress of students.

The schools at the integration stage (level 3) have a clear and shared vision that is reflected in their pedagogical practices. The human and physical conditions favour collaboration and sharing. The collaborative culture is very solid and relies on strong interpersonal skills that promote exchanges and questioning. The school principal shares his or her power with the teachers and encourages them to develop leadership. The teachers consider collaborative meetings as ways not only to improve student learning, but also as a powerful means of professional development. The meetings are planned while taking into account the level of progress of the collaborative team as well as the profile of the students. Table 2 explains these three stages of development as described in the Observation grid OGPLC and relates actions deemed necessary to allow schools to progress using this method of functioning.

Table 2
Observation Grid of the Evolution of the School as a Professional Learning Community (OGPLC)

	Initiation stage (level 1)	Implantation stage (level 2)	Integration stage (level 3)
Vision	<ul style="list-style-type: none"> The vision of the school is not clear in regards to success for all in literacy or is not shared by the entire teaching staff. There are multiple priorities that lack precision. The links between the priorities and the vision is not perceptible in practice. 	<ul style="list-style-type: none"> The vision of the school is clear in regards to improving results in literacy for all students and is shared by the entire teaching staff, but there are multiple priorities that lack precision. Direct links between the priorities and the school's vision can sometimes be perceptible in practice. 	<ul style="list-style-type: none"> The vision of the school is clear in regards to improving reading results for all students and is shared by the entire teaching staff and priorities are precise. Direct links between the chosen priorities and the school's vision are reflected in their pedagogical practices.

	Initiation stage (level 1)	Implantation stage (level 2)	Integration stage (level 3)
Physical and human conditions	<ul style="list-style-type: none"> Pedagogical discussions usually take place during informal exchanges (during recess or after class) and there is rarely formal discussion time allotted during the school day. The collaborative meetings are inefficient: teachers often feel as though there is a lot of wasted time or the time is used to fill out paperwork. 	<ul style="list-style-type: none"> Pedagogical discussions sometimes take place during informal exchanges (recess, after class) and also during more formal collaborative meetings that are planned during class time. Teachers make noticeable efforts to collaborate and share, but the structure of the meetings does not permit efficient exchanges. A lot of time is dedicated to managing the agenda, the time and the group. 	<ul style="list-style-type: none"> The teachers are allotted quality time for collaborative meetings. These are usually planned during class time. The structure of the collaborative meetings is extremely efficient and the group is able to manage itself.

	Initiation stage (level 1)	Implantation stage (level 2)	Integration stage (level 3)
Collaborative culture	<ul style="list-style-type: none"> The group manifests few interpersonal skills that favour collaborative work. The conflicts between members are apparent. The discussions are dominated by certain members of the group. The group atmosphere does not favour collaboration and sharing of experiences. The teacher feels alone in facing challenges regarding students that he or she considers to be a preoccupation. 	<ul style="list-style-type: none"> The structure of the meetings favours personal learning and support between colleagues, sometimes in a unidirectional or selective manner (for ex. training from the pedagogical counsellor). The group manifests certain interpersonal skills that encourage collaborative learning. The group atmosphere during discussions is mostly positive and usually favours collaboration and sharing. 	<ul style="list-style-type: none"> The collaborative culture within the group invites an honest dialogue, open mindedness and communication as well as constructive criticism. The preoccupations are shared with the entire team. It is not your student, it becomes our student.

	Initiation stage (level 1)	Implantation stage (level 2)	Integration stage (level 3)
Leadership	<ul style="list-style-type: none"> The individuals acting as school principals are regarded as decision makers (hierarchy). The teachers' role is to execute. The school principal's role is minimal during collaborative meetings and she or he has limited influence in regards to improving results in learning. The principal rarely follows up during collaborative meetings. The roles of the principal and of the teachers are not understood and lack precision. 	<ul style="list-style-type: none"> The exchanges allow teachers to give their opinion, but the school principal makes the final decision. The principal exercises a noticeable influence in improving learning during collaborative meetings. The principal usually ensures certain follow ups during collaborative meetings. The roles of the principal and of the teachers are more or less understood and are somewhat precise. 	<ul style="list-style-type: none"> The leadership is shared as the principal promotes autonomy within the teachers in regards to decisions that concern student needs but also insures that the discussions focus on these needs. The teachers are considered experts, mutually influence each other and influence the school principal. The presence of the principal is positively transmitted through the vision and through follow ups that occur during collaborative meetings. The roles of the principal and of the teachers are precise and well understood. The principal guides the discussions in line with their vision and insists on measurable objectives that focus on student learning.

	Initiation stage (level 1)	Implantation stage (level 2)	Integration stage (level 3)
Diffusion of expertise and collective learning	<ul style="list-style-type: none"> Teachers work in an isolated manner: there is little or no transmission of expertise with others. The meetings do not favour collective learning and transmission of expertise. In general, there is little support between colleagues. 	<ul style="list-style-type: none"> Expertise seems to be shared between teachers of the same level or cycle, or in certain groups. It is no longer only individual learning; we perceive a certain collective learning. There are sometimes peer evaluations of the strategies used, feedback and collective support in hopes of improving student results. 	<ul style="list-style-type: none"> The teachers consider collaborative meetings as a means of improving student learning as well as a means of professional development. Individual learning is transformed into collective learning. Meeting times gives the team an opportunity to exchange on present preoccupations in literacy, to resolve issues collectively and to share the expertise. The progression and collective learning that is occurring is felt by the organisation.

	Initiation stage (level 1)	Implantation stage (level 2)	Integration stage (level 3)
Subjects addressed	<ul style="list-style-type: none"> Multiple subjects are addressed and there is no follow up from one meeting to the next. The subjects are determined well in advance (static planning) The meetings are generally used to offer training or information. 	<ul style="list-style-type: none"> During meeting times, the discussions usually focus on teaching (planning, resources, and organisation) rather than on learning. The subjects addressed are chosen to improve the efficiency of the team in regards to literary learning. The subjects are sometimes predetermined but can 	<ul style="list-style-type: none"> The subjects addressed are chosen in line with present preoccupations in student learning and allow for a follow up on experiences that have taken place between meetings. The planning is done by taking into account student profiles as well as the progression of the team.

		<p>also be changed as the team progresses.</p> <ul style="list-style-type: none"> • There is a certain follow up from one meeting to the next. 	
--	--	---	--

	Initiation stage (level 1)	Implantation stage (level 2)	Integration stage (level 3)
Decision making and use of data	<ul style="list-style-type: none"> • The decisions concerning students are generally based on popular opinion and intuition. • There is very little precise student learning data that can act as proof in helping us notice a progression and allow for questioning in regards to the impact of the interventions. 	<ul style="list-style-type: none"> • The decisions concerning students are sometimes based on popular opinion and intuition and, at other times are based on research or on the impact observed using precise learning data. • Certain precise data exists to measure student progression in reading and these are sometimes analysed and questioned during meetings in order to choose efficient interventions. 	<ul style="list-style-type: none"> • The decisions are based on proof (precise data) to comprehend the efficiency of the interventions. • The school employs data regularly to situate students' progression, to undertake complex analysis and to question the impact of pedagogical interventions.

Conclusion

Working as a professional learning community is certainly a promising way of functioning in obtaining student success in reading. This method provokes a rupture in the traditional ways and in the compartmentalization of students, modifying at the same time the school culture in its entirety. Teachers learn from one another through sharing of practices and constant questioning linked to preoccupations regarding student learning. They analyse data to better understand the impact of their interventions and readjust their teaching accordingly.

In a socioconstructivism dimension, this method of functioning gives meaning to change and allows teachers to undertake a role of leader that becomes more and more apparent as the school progresses as a professional learning community. Teachers are no longer considered as executors restricted to a curriculum or school manual: they have the common goal of exercising a real impact on all students and analysing their practices becomes therefore a frequent topic of discussion. To better assist them in this process, the OGPLC targets key elements that define each stage thus allowing for a better progression using this method of functioning.

Enquête sur les pratiques déclarées et les difficultés rencontrées dans l'enseignement de la littérature à l'école primaire québécoise

Martin Lépine

Centre de recherche interuniversitaire sur la formation et la profession enseignante (CRIFPE); Équipes de recherche en littératie et inclusion (ERLI), Université de Montréal (Québec, Canada)

L'amateur, selon l'étymologie, c'est celui qui aime. En matière de formation littéraire scolaire, il conviendrait de faire de chaque élève des amateurs éclairés de littérature (Dumortier, 2001, 2005, 2009), des amateurs qui arrivent à comprendre, à interpréter et à apprécier des œuvres. Cependant, il semble qu'à l'école, le temps passé à lire et les attitudes positives envers la lecture diminuent plus les écoliers avancent dans leur parcours scolaire (Baudelot, Cartier & Detrez, 1999; Lebrun & Baribeau, 2003; McKenna, Kear & Ellsworth, 1995). La didactique de la littérature, champ de recherche en émergence (Fourtanier, Langlade & Rouxel, 2001) dans lequel nous nous inscrivons, se préoccupe, en plus de l'histoire de la discipline, de ses finalités et de ses fondements, des conditions, des instruments et des démarches liées aux pratiques scolaires. Les travaux dans ce domaine visent donc, pour les écoliers du primaire en particulier, d'apprendre à comprendre et d'initier au plaisir de lire de la littérature (Tauveron, 2001a). Cependant, il reste à voir pourquoi tant d'enseignants semblent, selon certains chercheurs (Rosier & Dufays, 2003), résister aux recherches didactiques innovantes tournées vers l'acquisition de savoirs littéraires structurés.

1. Contexte de la recherche

Depuis le tournant des années 2000, les écoles primaires du Québec doivent mettre en œuvre de façon progressive le *Programme de formation de l'école québécoise. Éducation préscolaire. Enseignement primaire* (ministère de l'Éducation du Québec, 2001; ministère de l'Éducation, du Loisir et du Sport, 2006). Ce renouvellement pédagogique dans le curriculum obligatoire a été imposé au début de l'année scolaire 2000-2001 au préscolaire et au premier cycle du primaire (ministère de l'Éducation, du Loisir et du Sport, 2007). En ce qui concerne plus précisément le français, langue d'enseignement, par rapport au programme de français du milieu des années 1990 (ministère de l'Éducation et de la Science, 1994), le programme de formation de 2001 accorde une importance renouvelée aux pratiques et aux apprentissages liés à la lecture en général et à la lecture des œuvres littéraires en particulier. Cet intérêt pour les œuvres littéraires s'observe aussi dans les derniers

programmes d'autres pays et communautés francophones, telles la Suisse, la Communauté française de Belgique et la France (Dezutter, 2005). Contrairement au programme de 1994, la discipline « Français, langue d'enseignement » compte désormais quatre compétences distinctes : « Lire des textes variés », « Écrire des textes variés », « Communiquer oralement » et « Apprécier des œuvres littéraires ».

1.1 La compétence « Apprécier des œuvres littéraires »

La nouvelle compétence « Apprécier des œuvres littéraires » dans la discipline « Français, langue d'enseignement » est placée au centre de la classe de langue première.

« Recoupant les trois autres [compétences], la quatrième compétence, "Apprécier des œuvres littéraires", apparaît à la fois comme un lieu d'orchestration et de synthèse, puisque l'appréciation d'une œuvre littéraire suppose qu'on l'ait explorée sous plusieurs facettes, que l'on puisse en discuter et communiquer ses réactions oralement ou par écrit » (ministère de l'Éducation du Québec, 2001, p. 73).

La compétence littéraire devient ainsi une voie d'accès au rehaussement culturel envisagé par le programme de formation en plus de solliciter la majorité des compétences transversales et des domaines généraux de formation. Cette compétence devrait permettre aux écoliers, selon le ministère de l'Éducation du Québec (2001, p. 85), d'explorer des œuvres variées en prenant appui sur leurs goûts, leurs intérêts et leurs connaissances, de recourir aux œuvres littéraires à diverses fins, de porter un jugement critique ou esthétique sur les œuvres explorées, d'utiliser les stratégies et les connaissances requises par la situation d'appréciation et de comparer leurs jugements et leurs modes d'appréciation avec ceux d'autrui. Ces recommandations ministérielles du début des années 2000 viennent ainsi modifier la façon d'aborder la lecture et la littérature par rapport aux programmes précédents.

1.2 L'effervescence de la littérature de jeunesse dans le monde de l'édition

Le domaine de la littérature de jeunesse dans le monde francophone est en pleine effervescence, et ce, de façon particulière depuis le début des années 2000. En 2007, en France, le chiffre d'affaires de l'édition jeunesse frôle 16 %, ce qui correspond à 70 millions de livres vendus par année. Entre 1990 et 2007, ce chiffre d'affaires s'est accru dans l'Hexagone de 85 % (Poslaniec, 2008). Il se publie annuellement, dans le monde francophone seulement, au-delà de cinq à six mille livres de littérature pour la jeunesse (Demers, 2009; Turgeon, 2006). Au Québec, depuis 30 ans, soit depuis la fondation de la maison d'édition *La courte échelle* en 1978, le secteur de l'édition pour la jeunesse est passé de la pénurie à la profusion (Lepage, 2008). Ainsi, près de 600 livres jeunesse en français sont publiés au

Québec par année (Turgeon, 2006). Pouliot (2005) signale qu'en 2004, plus d'un livre sur trois, publié au Québec, s'adresse aux enfants et aux adolescents. Cet essor de la production et de la vente de livres de littérature de jeunesse se manifeste aussi dans l'espace anglophone (Hunt, 2005).

Cette effervescence du domaine de l'édition jeunesse combinée aux nouvelles prescriptions ministérielles depuis le début des années 2000 a donné vie à de nombreuses publications sur l'exploitation des œuvres de littérature de jeunesse en classe. Au Québec et en Europe francophone, les ouvrages didactiques récents ayant pour but de soutenir la compétence littéraire sont nombreux. À cela, s'ajoutent des travaux de conseillers pédagogiques et d'équipes de travail rattachés à diverses commissions scolaires ainsi que des outils développés par des praticiens pour enseigner la compétence « Apprécier des œuvres littéraires ». Par exemple, depuis l'hiver 2000, 15 cahiers pratiques de la revue *Québec français* sur 60 (soit 25 % de l'ensemble des cahiers pratiques) portent sur l'appréciation d'œuvres littéraires pour le primaire, et ce, bien que cette revue soit d'abord destinée aux enseignants de français du secondaire.

1.3 L'éclosion de la recherche en didactique du français, volet littérature

Les nouveaux programmes de formation qui ont émergé ces dernières années dans bon nombre de pays ainsi que l'essor du domaine de la littérature de jeunesse concordent avec l'apparition, à l'intérieur de la didactique du français comme champ de recherches universitaires, de rencontres spécifiques pour les chercheurs en didactique de la littérature. Depuis l'an 2000, des chercheurs de divers pays francophones se réunissent régulièrement pour diffuser des résultats de recherches sur l'enseignement et l'apprentissage de la littérature à l'école, au collège et à l'université. De ces travaux de recherches ainsi que des ouvrages des précurseurs de la théorie de la réception (Eco, 1979/1985; Iser, 1976; Jauss, 1975/1990) et de la lecture littéraire (Dufays, Gemenne & Ledur, 2005; Picard, 1986) ressortent des éléments nouveaux en didactique du français pour l'enseignement de la littérature. Parmi ces éléments, signalons l'importance du sujet lecteur (Langlade, 2001; Rouxel & Langlade, 2004), la réception esthétique des œuvres et les transactions du lecteur (Hébert, 2003; Rosenblatt, 1938/1995, 1978/1994; Terwagne, Vanhulle & Lafontaine, 2003), le concept de lecture littéraire (Daunay, 1999; Dufays, Gemenne & Ledur, 2005; Rouxel, 1996, 2004; Tauveron, 2002), la compréhension et l'interprétation en lecture littéraire (Falardeau, 2003a, 2003b; Tauveron, 2001b, 2002), le goût de lire et la formation d'amateurs éclairés de littérature (Dumortier, 2001, 2005; Poslaniec, 1990, 2003) ainsi que la lecture en réseaux (Devanne, 2006; Observatoire national de la lecture, 2003).

Au Québec, peu de recherches ont été conduites spécifiquement pour le cours primaire dans le domaine de la didactique de la littérature. Depuis le bilan et les perspectives réalisés par Noël-Gaudreault et ses collaborateurs (1997), quelques recherches ont été effectuées à l'école primaire québécoise sur l'enseignement et l'apprentissage de la littérature. Signalons ici brièvement quelques travaux : 1) l'enquête sur la lecture en classe de Giasson et Saint-Laurent (1999), enquête menée avant la publication du programme de formation de 2001 qui portait sur la période de lecture personnelle, la lecture à voix haute faite devant les élèves et la présence d'une bibliothèque de classe et d'un coin-lecture; 2) la recherche de Dezutter et son équipe (2007) sur les pratiques déclarées des enseignants dans la sélection et l'exploitation des œuvres complètes au troisième cycle du primaire et au secondaire; 3) l'étude de Morin, Parent et Montésinos-Gelet (2006) sur l'impact d'une approche centrée sur le livre de jeunesse dont les activités ont été réalisées dans des classes du préscolaire et du primaire suivies d'entretiens avec les enseignants participants.

En ce qui a trait aux pratiques enseignantes de la littérature à l'école primaire dans le monde francophone, comme le fait remarquer Louichon (2008), il n'existe pas d'enquête comparable à celle qu'ont menée Manesse et Grellet (1994) pour le collège. Cela dit, Louichon (2008) souligne que le travail d'Olivier Dezutter et de son équipe de l'Université de Sherbrooke sur la lecture d'œuvres complètes pourrait combler, pour le Québec, ce vide pour la classe de français à la fin du primaire et au secondaire. Cependant, les résultats de cette recherche d'envergure ne sont pas encore parus.

2. Problèmes de recherche

Dans un contexte général où la littérature de jeunesse dans le monde de l'édition est en pleine expansion et où un nouveau champ de recherche universitaire sur les approches didactiques de la littérature est né, la mise en place du programme de formation de l'école québécoise devrait avoir modifié, près de dix ans après sa publication, l'enseignement et l'apprentissage de la littérature à l'école primaire québécoise. Cela dit, cet enseignement, particulièrement au niveau de l'école élémentaire, semble poser divers problèmes.

2.1 Le problème général

Malgré tout le bouillonnement entourant la littérature de jeunesse québécoise et francophone dans le monde de l'édition, dans le programme de formation du ministère de l'Éducation et dans le secteur de la recherche universitaire en didactique du français, il semble donc y avoir un décalage entre cette effervescence

et les conceptions, les représentations et les pratiques des enseignants (Giasson & Saint-Laurent, 1999; Morin & Montésinos-Gelet, 2007; Morin, Parent & Montésinos-Gelet, 2006). Un rapport de la Table de pilotage du renouveau pédagogique publié en 2007 montre que seulement 20 % des enseignants titulaires de classe ordinaire du Québec disent travailler souvent la compétence « Apprécier des œuvres littéraires » et 50 % disent la travailler occasionnellement (ministère de l'Éducation, du Loisir et du Sport, 2007, p. 25). Les enseignants titulaires du primaire interrogés pour ce rapport indiquent donc travailler moins fréquemment cette compétence que les trois autres de la discipline « Français, langue d'enseignement » et trouver plus difficile de prendre en compte et d'évaluer cette compétence (ministère de l'Éducation, du Loisir et du Sport, 2007, p. 24). Pourtant, selon les prescriptions du programme de formation, la compétence littéraire devrait être le lieu d'orchestration et de synthèse de la classe de français. Le tableau 1 présente de façon détaillée les résultats de ce rapport sur la prise en compte des compétences disciplinaires et des savoirs essentiels du domaine des langues.

Tableau 1 Prise en compte des compétences disciplinaires et des savoirs essentiels du domaine des langues par les enseignants titulaires de classe ordinaire (ministère de l'Éducation, du Loisir et du Sport, 2007, p. 27)

Compétences disciplinaires	Enseignants qui travaillent la compétence (%)		Enseignants qui trouvent plutôt facile ou très facile de planifier des situations concernant la compétence (%)	Enseignants qui trouvent plutôt facile ou très facile de porter un jugement sur le développement de la compétence (%)	Enseignants qui trouvent plutôt facile ou très facile de tenir compte des savoirs essentiels de la discipline (%)
	Souvent	Occasionnellement			
Français, langue d'enseignement (n≥1632)					92
Lire des textes variés	95	05	97	92	
Écrire des textes variés	79	19	95	92	
Communiquer oralement	52	43	89	81	
Apprécier des œuvres littéraires	20	50	52	35	

Les résultats de cette vaste enquête de la Table de pilotage du renouveau pédagogique menée pendant l'année scolaire 2005-2006 auprès d'enseignants titulaires de classe, d'enseignants en adaptation scolaire, d'enseignants spécialistes, de conseillers pédagogiques et de direction d'école montrent que, à l'intérieur de la discipline « Français, langue d'enseignement », les compétences « Lire des textes variés », « Écrire des textes variés » et « Communiquer oralement » sont plus souvent travaillées que la compétence « Apprécier des

œuvres littéraires ». De plus, la planification de situations d'enseignement et d'apprentissage est plus difficile pour la nouvelle compétence littéraire que pour les trois autres. Quant à l'évaluation, seulement 35 % des enseignants interrogés disent trouver facile ou très facile de porter un jugement sur cette compétence.

Une recherche de l'équipe de Dezutter du Centre de recherche sur l'intervention éducative de l'Université de Sherbrooke (Dezutter, Larivière, Bergeron & Morissette, 2007) indique, par ailleurs, que les pratiques dominantes dans l'enseignement de la littérature à la fin du primaire et au début du secondaire demeurent traditionnelles. Cette conception traditionnelle pourrait s'expliquer, selon Daunay (2007), par la difficulté à cerner les savoirs nouveaux ainsi que par la tradition entourant l'enseignement de la littérature en tant que discipline scolaire. Il faut souligner dans cette même voie que le recours aux manuels scolaires offre peu de propositions issues de la recherche récente sur l'exploitation de l'œuvre littéraire intégrale (Dufays, 1999), que l'enseignement de la lecture est encore majoritairement abordé par l'entremise du manuel scolaire (Fijalkow, 1999, 2003; Giasson, 2003; Pasa & Beges, 2006) et que les recherches en didactique de la littérature de jeunesse sont encore plus récentes que les travaux sur la didactique de la littérature générale (Ahr, 2005).

2.2 Le problème spécifique

Les enseignants titulaires de l'élémentaire semblent éprouver des difficultés à mettre en pratique la compétence « Apprécier des œuvres littéraires » par des activités novatrices issues de la recherche dans le domaine des approches didactiques de la littérature (ministère de l'Éducation, du Loisir et du Sport, 2007). Dans les faits, peu de données, au Québec, permettent de connaître la place de la littérature de jeunesse à l'école primaire (Morin, Parent & Montésinos-Gelet, 2006), les pratiques effectives des enseignants de français (Bru, 2002; Louichon, 2008) et encore moins les difficultés qu'ils rencontrent à l'occasion de la sélection et de l'exploitation des œuvres littéraires (Dezutter, Larivière, Bergeron & Morissette, 2007). Il semble donc y avoir un manque d'études sur la façon dont les enseignants québécois exposent leurs pratiques, leurs difficultés et leurs besoins dans l'enseignement de la littérature à l'école élémentaire. De plus, des analyses sur le travail vertical, à l'intérieur d'un continuum du premier au troisième cycle du primaire, en lien avec l'appréciation des œuvres littéraires, semblent encore inexistantes, et ce, d'autant plus que le temps passé à lire et les attitudes positives envers la lecture diminuent plus les écoliers avancent dans leur parcours scolaire (Baudelot, Cartier & Detrez, 1999; Lebrun & Baribeau, 2003; McKenna, Kear & Ellsworth, 1995).

Comme le souligne Chanfrault-Duchet (2001), en ce qui a trait au domaine de l'enseignement de la littérature dans le monde francophone, l'analyse des pratiques enseignantes demeure encore peu développée. Les travaux de recherche sur ce type de pratiques soulignent par ailleurs l'écart entre les pratiques déclarées et les pratiques de classe réelles (Bru, 2002). Enfin, les recherches didactiques sur la littérature sont encore, selon Daunay (2007), essentiellement théoriques et rarement empiriques et ce n'est que depuis peu que des descriptions de pratiques (d'élèves et d'enseignants) se développent.

3. Questions de recherche

Afin d'expliciter les résultats du bilan de la Table de pilotage du nouveau pédagogique (ministère de l'Éducation, du Loisir et du Sport, 2007), de faire ressortir les conditions qui seraient favorables au développement de la compétence littéraire dans les écoles primaires québécoises et de proposer des pistes de travail pour soutenir la formation initiale et la formation continue sur les contenus disciplinaires remaniés en « Français, langue d'enseignement » et les nouvelles approches pédagogiques (ministère de l'Éducation, du Loisir et du Sport/Conseil supérieur de l'éducation, 2007), nous soulevons deux questions de recherche qui guideront nos travaux des prochaines années.

1. Quelles sont les **pratiques déclarées** des enseignants titulaires de classe ordinaire au primaire en lien avec la compétence « Apprécier des œuvres littéraires »?
2. Quelles sont les **pratiques enseignantes effectives** de la littérature à l'école primaire québécoise?

Pour répondre à ces questions, nous procéderons à une enquête en deux temps : un sondage réalisé à l'aide de questionnaires écrits auto-administrés à l'automne 2010 et une étude de cas multiples de quelques enseignants des trois cycles du primaire pendant l'année scolaire 2010-2011.

La didactique de la littérature générale, et de la littérature de jeunesse en particulier (Ahr, 2005), est un champ de recherche encore en construction qui tend, depuis peu, à se constituer en discipline de recherche. L'analyse de pratiques enseignantes, dans ce domaine, demeure donc peu exploitée (Chanfrault-Duchet, 2001) même si elle constitue un enjeu important des travaux en didactique (Garcia-Debanc & Lordat, 2004). C'est grâce à l'analyse de pratiques réelles que nous serons en mesure de comprendre la distance qui semble se creuser entre les prescriptions ministérielles, la recherche universitaire en didactique de la littérature et les réalités scolaires des classes. Nous nous emploierons, dans les prochaines années, à tenter de savoir ce qui se fait réellement en classe de littérature à l'école primaire québécoise, et ce, selon différentes perspectives de recherche. Œuvre

imposante en soi, sans doute, car « [l]a didactique de l'œuvre littéraire apparaît comme le défi suprême de la didactique » (Melançon, Moisan & Roy, 1988, p. 84).

Étayage d'enseignants et écriture en dyades chez de jeunes scripteurs

Jean-Yves Levesque

Natalie Lavoie

Jessy Marin

Université du Québec à Rimouski (Canada)

Introduction

Les compétences en lecture-écriture sont essentielles pour fonctionner dans la société d'aujourd'hui. Le développement et la mondialisation des technologies entraînent des exigences encore plus élevées pour la maîtrise de la langue écrite. En milieu scolaire, la lecture et l'écriture ne constituent pas des activités qui se confinent aux cours de français; elles soutiennent l'apprentissage dans l'ensemble des disciplines.

Force est de constater que plusieurs élèves, dès le primaire, éprouvent des difficultés dans la conquête de la langue écrite. Au Québec, à l'âge de 12 ans, 25% des garçons et 17% des filles présentent un retard scolaire qui est en grande partie dû à un faible rendement dans le lire-écrire (MEQ, 2001). Selon le gouvernement du Québec (2001), 52,5% des élèves ne répondent pas aux attentes en écriture à la fin du primaire. L'Institut de la Statistique du Québec (2005) mentionne pour sa part qu'encore 25 % des jeunes sortent de l'école sans diplôme, et par conséquent, sans avoir acquis suffisamment de compétences en français écrit, ce qui les expose à des difficultés au plan de leur intégration à la vie adulte.

La dernière réforme de l'École québécoise, mise en place en l'an 2000, reconnaît que l'apprentissage de la langue maternelle doit occuper une place centrale dans le cursus scolaire des jeunes. Cette préoccupation pour l'écrit se confirme aussi dans le rapport d'un comité d'experts québécois sur l'apprentissage de l'écriture *Mieux soutenir le développement de la compétence à écrire* (MELS, 2007) et par le *Plan d'action pour l'amélioration du français à l'enseignement primaire et secondaire* (MELS, 2008). De plus, afin de favoriser la réussite du plus grand nombre d'élèves, cette réforme reconnaît l'importance des interactions sociales dans l'apprentissage et prend appui sur la perspective socioconstructiviste. Cela nécessite donc des changements de pratique puisque la tradition scolaire ne semble pas aller dans ce sens. Ogden (2000) a mis en évidence que les stratégies privilégiées par les enseignants sont surtout inspirées du matériel pédagogique et de l'interaction enseignant/élèves. Des observations

faites dans des classes du primaire et des données recueillies très récemment auprès des enseignants montrent que les échanges verbaux entre élèves pour soutenir l'apprentissage sont provoqués par les enseignements beaucoup plus rarement qu'on ne le croit. (Martel, Levesque et Bilodeau, 2009; Ogden, 2000; Tizard, Blatchford, Burke, Fraquhar et Plewis, 1998).

Plusieurs chercheurs qui se sont intéressés à la collaboration entre pairs dans l'apprentissage de l'écriture montrent une influence positive des interactions dans le développement de leur capacité à écrire (Besse et l'ACLE, 2000; Blain, 1995; Daiute et Dalton, 1992; Montésinot-Gelet, 1999; Ogden, 2000; Sutherland et Topping, 1999; Topping, 2005; Topping, Nixon, Sutherland et Yarrow, 2000). Ces derniers mettent en évidence que les pairs sont souvent capables de s'entraider étant donné que la relation qu'ils partagent est plus informelle que celle résultant de l'interaction enseignant/élève. Ainsi, différentes études ont fait ressortir que les élèves qui écrivaient en collaboration performaient mieux que ceux qui écrivaient de façon individuelle (Louth, Macallister et Macallister, 1993; Stoddard et MacArthur, 1993; Sutherland et Topping, 1999). Cependant, moins nombreuses sont les recherches qui se sont attardées à cet objet en considérant des élèves de première année du primaire. Une recherche de Lavoie, Levesque, Laroui et Langlois (2006) a étudié les interactions produites par des élèves de première année du primaire lors de tâches d'écriture. Les interactions ont été analysées en fonction du niveau d'élaboration de celles-ci. Les résultats font ressortir que les niveaux obtenus par les différentes dyades s'élèvent au niveau 3 sur une échelle de 7. Comme les élèves n'ont pas été initiés à interagir en s'ajustant aux besoins du partenaire pour écrire, on peut se demander si les niveaux d'élaboration obtenus par les dyades auraient été plus élevés si l'enseignant avait modelé devant les élèves comment aider et s'il les avait soutenus lors de pratiques de productions interactives.

En ce sens, des résultats de recherches sur les pratiques enseignantes efficaces font ressortir que les maîtres qui excellent dans l'enseignement de la littératie sont ceux qui contrôlent attentivement les progrès des élèves, les encouragent continuellement à s'améliorer et à apprendre et leur offrent l'échafaudage (scaffolding) approprié à l'égard des stratégies dont ils ont besoin (Taylor, Pressley et Pearson, 2000). Des recherches sur l'appropriation de l'écrit ont montré que l'échafaudage par l'enseignant ou les pairs, lorsqu'il se réalise dans la zone de développement prochain (ZDP), est associé à un enseignement-apprentissage efficace (Applebee et Langer, 1983; Butler, 1998; Palincsar, 1988; Wollman-Bonilla et Werchadlo, 1999). Cependant, on remarque que les recherches effectuées relativement à l'échafaudage, qu'il s'agisse de celui pratiqué par

l'enseignant face aux élèves ou encore d'un pairage entre élèves, n'ont pas comparé les niveaux d'élaboration des interactions selon que les participants aient bénéficié ou non d'interventions de la part de l'enseignant. Pour Topping (2005), former les élèves à travailler en collaboration devient une nécessité, car il soutient que nombre d'écoles croient qu'elles favorisent l'apprentissage coopératif quand tout ce qu'elles font en réalité, c'est de placer des élèves ensemble et espérer le mieux. Lefebvre et Daudelin (2001) mentionnent, quant à eux, que les études dans le domaine de l'apprentissage par les pairs mettent l'accent sur la nécessité de structurer les activités de coopération.

Ainsi, les recherches sur la collaboration entre pairs, et celles qui se sont préoccupées de l'étayage, mettent en valeur ces deux stratégies pour améliorer les compétences des élèves.

Cadre théorique

L'écriture en dyade

Le travail en dyade suppose des interactions entre partenaires dans un contexte donné. Lorsque la tâche est en lien avec la langue écrite, le contexte est principalement de nature linguistique, pédagogique et didactique (Fijalkow, 2000). De nombreux auteurs ont montré les retombées positives de la collaboration entre pairs en contexte de production écrite (Montésinos-Gelet, 2000; Morin et Montésinos-Gelet, 2003; Nixon et Topping, 2001; Sutherland et Topping, 1999; Yarrow et Topping, 2001). De façon générale, ces auteurs se rallient à la théorie socioconstructiviste élaborée par Vygotski (1978, 1997/1934) selon laquelle l'expérience sociale façonnerait la manière de penser et d'interpréter le monde. D'après ce modèle, l'élève élabore sa compréhension d'une réalité en comparant ses perceptions avec celles de ses pairs et celles de l'enseignant.

Afin que les interactions entraînent une construction de savoirs, elles doivent donner lieu à des conflits sociocognitifs qui amènent les partenaires à s'outiller cognitivement afin de résoudre ces conflits (Doise et Mugny, 1997). Les conflits sociocognitifs favorisent l'apprentissage puisqu'ils provoquent des questionnements sur les représentations et les pratiques utilisées ce qui amène les partenaires à se décentrer et à tenir compte des centrations des autres membres de l'équipe (Reuter, 2002). De plus, le travail d'explicitation qui découle de ces conflits permet aux partenaires de prendre une distance par rapport à leur processus de pensée. Ce recul entraîne le développement d'une attitude métacognitive et, selon Besse et l'ACLE (2000), celle-ci est primordiale dans l'apprentissage de l'écrit. Toutefois, les conflits sociocognitifs doivent se situer à l'intérieur des limites de développement actuel de l'enfant et celles de son développement potentiel (ZDP), car ce dernier

pourra résoudre un problème que s'il est proche de son niveau de développement. (Vygotski, 1997/1934).

Santolini, Danis et Tijus (1996) ont développé une méthode d'analyse en vue d'expliquer les interactions que l'enfant entretient avec les autres et ils définissent les interactions par trois propriétés essentielles. La première est celle de l'engagement réciproque où, dans une situation, des personnes ont une action réciproque l'une sur l'autre. La seconde est l'engagement prosocial qui consiste en la capacité d'aider le partenaire à réussir une action. Enfin, la troisième propriété est l'effort d'ajustement qui concerne la prise en compte des capacités de l'autre pour adapter son aide et la rendre plus efficace. Certaines interactions seraient donc plus profitables que d'autres. Ainsi, un étayage doit être offert afin d'amener les enfants à réaliser des interactions efficaces. L'étayage permet aux enfants de modifier leur structure cognitive, d'acquérir des connaissances et des compétences auxquelles ils n'auraient pu accéder seuls et d'intégrer plus facilement ce qui leur est présenté (Bruner, 1983).

Les productions écrites

Dans la chaîne écrite, il est possible de classer les graphèmes dans trois catégories, soit les phonogrammes, ayant une référence phonique, ainsi que les morphogrammes et les logogrammes qui possèdent une référence sémique (Catach, 2005).

Dans la présente recherche, la qualité des productions écrites est déterminée à partir de la dimension phonogrammique, de la dimension morphogrammique, et les aspects visuographiques. Concrètement, les phonogrammes ont pour rôle de transcrire les phonèmes de la chaîne orale. Les morphogrammes, quant à eux, sont chargés de véhiculer des informations de nature lexicale (préfixes, suffixes et dérivation) ou grammaticale (genre et nombre pour les formes nominales; mode, temps, personne et nombre pour les formes verbales) (Catach, 2005; Riegel, Pellat et Rioul, 2004).

Lorsque le jeune enfant fait son entrée dans l'écrit, il doit également tenir compte de certaines conventions graphiques : les aspects visuographiques (Besse et l'ACLE, 2000; Montesinos-Gelet et Morin, 2006; Morin, 2002). Il doit, entre autres, apprendre à n'utiliser que des caractères propres à notre système alphabétique. Il comprendra aussi que les lettres ont des orientations bien définies (Montesinos-Gelet et Morin, 2006). De plus, l'enfant doit apprendre à segmenter ses écrits. Séparer les traces graphiques afin de faire place à des blancs graphiques lexicaux exige un travail de conceptualisation puisqu'il doit comprendre quand et pourquoi est-il nécessaire de laisser un espace entre les mots (Besse et l'ACLE, 2000). À un

stade plus avancé du développement de l'écriture, lorsque l'enfant commence à produire des phrases, la présence de la majuscule et du point peut aussi être considérée comme une convention que doit respecter le jeune scripteur (Morin, 2002).

Aux trois dimensions susmentionnées qui balisent la qualité des productions écrites, la quantité de mots produits par les dyades ainsi que la conventionalité orthographique de ces mots sont des critères qui ont été considérés.

Objectifs

Les objectifs de la recherche sont de mesurer l'effet de l'étayage de l'enseignant sur le niveau d'élaboration des interactions entre élèves de 1^{re} et 2^e année cycle du primaire dans des tâches d'écriture et de comparer la qualité des productions écrites des élèves du groupe expérimental à celle des élèves du groupe témoin.

Méthodologie

L'échantillon est constitué de 138 élèves de 1^{re} année et 124 élèves de 2^e année (8 classes expérimentales et 7 classes témoins) pour un total de 262 élèves. Tous les élèves du groupe expérimental et du groupe témoin ont été placés en dyades. Ces dyades sont formées d'élèves ayant un niveau de compétence différent en écriture puisque ce type de dyade semble générer davantage d'interactions (Lavoie et al., 2006). Le niveau de compétence des élèves au regard de l'écrit est mesuré en début d'année par une épreuve individuelle d'écriture de mots (Morin, 2002). Les résultats à cette épreuve sont utilisés pour la constitution des dyades.

Le protocole d'expérimentation se réalise selon les étapes suivantes. Le niveau d'élaboration des interactions de même que la qualité des productions écrites sont mesurés avant et après l'expérimentation. Chacune des dyades du groupe expérimental et du groupe témoin est soumise à une même tâche d'écriture. Cette tâche d'écriture est filmée et les séquences vidéo sont analysées au moyen d'une grille des interactions utilisée dans des travaux antérieurs (Lavoie et al., 2006). Cette grille permet d'attribuer une cote à un élève pour une interaction qui engage deux élèves et d'établir le niveau d'élaboration des interactions. Les interactions sont alors cotées d'après 7 niveaux. Le niveau 1 correspond à un niveau peu élevé d'engagement et d'ajustement au partenaire alors qu'au niveau 7 on observe un niveau d'engagement et d'ajustement élevé où l'on tient compte des capacités de l'autre dans le but d'adapter l'aide apportée. Les productions écrites réalisées sont pour leur part recueillies et une analyse de la qualité textuelle est faite à partir de différents critères (phonogrammique, morphogrammique, visuographique, nombre de mots et conventionalité orthographique des mots).

Avant le début de l'expérimentation, les enseignants des groupes expérimentaux sont entraînés à étayer les interactions des élèves. Ils apprennent à intervenir auprès des dyades dans des situations d'écriture selon les propositions de l'enseignement stratégique et explicite (Bissonnette et Richard, 2000) : des temps de modelage effectué par l'enseignant, des temps de pratique réalisée par les dyades guidée par l'enseignant et des temps de pratique autonome des dyades. Les enseignants sont entraînés à étayer les interactions des élèves à la fois au sujet du contenu du message et de la rédaction de la phrase. Un suivi de la formation est assuré à la mi-année. Pendant l'expérimentation, soit de la mi-octobre à la mi-mai, chaque enseignant du groupe expérimental fait réaliser hebdomadairement une tâche d'écriture à ses élèves regroupés en dyades spontanées ou selon d'autres critères de regroupement, alors que les enseignants du groupe témoin réalisent les activités d'écriture avec les élèves selon leurs pratiques habituelles.

Résultats

Les résultats présentés conformément à la présentation faite lors de la Conférence, ne concernent que le second objectif de la recherche qui a trait à la qualité des écrits produits dans les dyades expérimentales qui ont bénéficié de l'étayage des enseignants et dans les dyades témoins que n'en n'ont pas bénéficié. L'analyse des données relatives aux interactions entre les dyades des groupes expérimentaux et témoins fera l'objet d'une présentation et d'une publication ultérieures.

Premier constat : résultats au pré-test

D'abord, nous avons constaté, à la fois en 1^{re} année et en 2^e année, que les groupes expérimentaux et témoins ne diffèrent pas au pré-test pour toutes les variables à l'étude ($p > 0,06$ en 1^{re} année et $p > 0,33$ en 2^e année).

Deuxième constat : dimension phonogrammique

En 1^{re} année, lorsque l'on contrôle les scores au pré-test à l'aide de l'ANCOVA, les résultats indiquent que l'étayage par les enseignants des interactions entre les élèves n'a pas eu d'effet significatif sur la qualité des productions écrites concernant la dimension phonogrammique. Ainsi, le score au post-test ne montre aucune différence significative entre le groupe expérimental et le groupe témoin. Les deux groupes ont exprimé de manière similaire leur capacité à transposer à l'écrit les phonèmes de la chaîne orale.

Lorsque l'on contrôle les scores au pré-test à l'aide de l'ANCOVA, les résultats montrent pour les élèves de 2^e année que le score au post-test relatif à la dimension phonogrammique est significativement plus grand ($F(1,60) = 10,361$, $p <$

0,01) chez le groupe expérimental ($M = 0,97$, $\text{É.-T.} = 0,02$) que chez le groupe témoin ($M = 0,95$, $\text{É.-T.} = 0,02$). Les dyades expérimentales de 2^e année ont manifesté une plus grande capacité que celles des dyades témoins à transcrire les phonèmes de la chaîne orale. Toutefois, la différence est moyenne (Eta carré partiel = 0,149).

Tableau 1

Résultats à la dimension phonogrammique en 2^e année

Troisième constat : dimension morphogrammique

À la fois en 1^{re} et en 2^e année, lorsque l'on contrôle les scores au pré-test à l'aide de l'ANCOVA, les résultats révèlent que l'étayage des interactions entre les élèves n'a pas eu d'effet sur la qualité des productions écrites concernant la dimension morphogrammique. Ainsi, les scores au post-test ne montrent aucune différence significative entre les groupes expérimentaux et les groupes témoins. Les dyades dont les interactions ont été étayées par l'enseignant n'ont pas plus porté attention aux finales des verbes, aux marqueurs de féminin et de pluriel et aux lettres muettes que les dyades dont les interactions n'ont pas été étayées.

Quatrième constat : dimension visuographique

En 1^{re} année, lorsque l'on contrôle les scores au pré-test à l'aide de l'ANCOVA, les résultats indiquent que l'étayage par les enseignants des interactions entre les élèves n'a pas eu d'effet significatif sur la qualité des productions écrites concernant la dimension visuographique. Le score au post-test ne montre aucune différence significative entre le groupe expérimental et le groupe témoin. Les dyades qui ont été entraînées à échanger au cours de la production d'écrits n'ont pas davantage tenu compte des conventions graphiques que les dyades témoins qui n'ont pas bénéficié de l'étayage de l'enseignant, telles que la présence de blancs graphiques ou celle de majuscules et de points.

Lorsque l'on contrôle les scores au pré-test à l'aide de l'ANCOVA, les résultats montrent pour les élèves de 2^e année que le score au post-test relatif à la dimension visuographique est significativement plus grand ($F(1,60) = 3,122, p < 0,10$) chez le groupe expérimental ($M = 0,90, \text{É.-T.} = 0,09$) que chez le groupe témoin ($M = 0,87, \text{É.-T.} = 0,07$). Les dyades expérimentales, qui ont été entraînées à interagir dans des tâches d'écriture tout au cours de l'année, se sont, notamment, davantage préoccupées que les dyades du groupe témoin des majuscules et des points dans leur production écrite. Toutefois, la différence est modeste ($\text{Eta carré partiel} = 0,050$).

Tableau 2

Résultats à la dimension visuographique en 2^e année

Cinquième constat : nombre de mots produits et leur conventionalité orthographique
 À la fois en 1^{re} et en 2^e année, lorsque l'on contrôle les scores au pré-test à l'aide de l'ANCOVA, les résultats révèlent que l'étayage des interactions entre les élèves n'a pas eu d'effet sur la quantité de mots produits. Ainsi, les scores au post-test ne montrent aucune différence significative entre les groupes expérimentaux et les groupes témoins.

En ce qui a trait à la conventionalité orthographique des mots produits, en 1^{re} année, lorsque l'on contrôle les scores au pré-test à l'aide de l'ANCOVA, les résultats indiquent que l'étayage par les enseignants des interactions entre les élèves n'a pas eu d'effet significatif. Le score au post-test n'indique pas de différence significative entre le groupe expérimental et le groupe témoin.

Lorsque l'on contrôle les scores au pré-test à l'aide de l'ANCOVA, les résultats montrent pour les élèves de 2^e année que le score au post-test relatif à la conventionalité orthographique des mots produits est significativement plus grand ($F(1,60) = 4,272, p < 0,05$) chez le groupe expérimental ($M = 0,80, \text{É.-T.} = 0,09$) que chez le groupe témoin ($M = 0,75, \text{É.-T.} = 0,09$). Ainsi, les dyades expérimentales ont

été davantage attentives à se préoccuper de l'orthographe exacte des mots produits dans leur texte. Toutefois, la différence est modeste (η^2 partiel = 0,068).

Tableau 3

Résultats à la conventionalité orthographique des mots produits en 2^e année

Conclusion

On a constaté des différences entre les dyades expérimentales et témoins seulement en 2^e année au profit des dyades expérimentales. C'est dire que le dispositif mis à l'épreuve, soit l'étayage des interactions entre les élèves au moment où ils produisent de l'écrit, n'a pas eu d'effet en 1^{re} année sur la qualité des productions, cela pour l'ensemble des dimensions à l'étude. De là, quelques questions sont soulevées. Au moment de l'entrée dans l'écrit (1^{re} année), les connaissances en langue écrite que les élèves peuvent échanger sont-elles suffisantes pour augmenter la qualité des productions écrites? Les habiletés à interagir chez les élèves de 1^{re} année sont-elles trop limitées compte tenu de leur âge pour faire une différence au plan de la qualité de la production écrite? Des données qualitatives recueillies au cours de la recherche montrent pourtant que les élèves tant de 1^{re} que de 2^e année bénéficiant de l'étayage de l'enseignant partageaient volontiers le crayon, manifestaient de l'attention l'un envers l'autre (regards, tentatives d'aide) et avaient une propension à trouver une zone d'entente sur le contenu du message et l'orthographe des mots. Quant aux élèves du groupe témoin, ils étaient plutôt résistants à partager le crayon, étaient moins portés à être attentifs à l'autre et les occasions de conflits sociocognitifs se sont soldés plus souvent par le maintien de la position de chaque partenaire. Le travail d'analyse des niveaux d'élaboration des interactions permettra de savoir si des différences s'expriment entre les dyades de 1^{re} année et celles de 2^e année. Si le niveau d'élaboration des interactions atteint par les dyades expérimentales de 1^{re} année était inférieur à celui atteint par celles de 2^e année, cela pourrait expliquer que l'étayage n'a pas eu d'effet en 1^{re} année sur la qualité des écrits produits. Enfin, si le

travail en interaction dans des tâches d'écriture était mis en place dès la 1^{re} année pour se continuer en 2^e année et par la suite, bien que des résultats tangibles ne soient pas observés en 1^{re} année, peuvent-ils être observés plus tard compte tenu que les interactions auront bénéficié tôt d'un entraînement? Ces questions doivent faire l'objet d'autres investigations.

The Interaction of Language and Para-language: New Meanings for New Readers

Terezinha M. Folhadela Benevides Lobianco
Universidade Federal Fluminense, Brazil

1. Introduction

This work concentrates on the non-linguistic features involved in the composition of the written representation of the message, *i.e.* the physical properties of the characters that form words. These physical properties are referred to here as *written paralinguage*.

Prior to the proposed discussion, there are some important aspects that need to be considered: substance, place of occurrence and communicative purpose. These factors influence the selection of paralinguistic features that are to occur in a particular text and determine their adequacy.

1.1 The Selection of Paralinguistic Features

This discussion involves aspects that range from the substance of the text, which is the first one to be explored, up to its communicative purpose.

1.1.1 Substance

The definition of *substance* here accepts some of the Saussurean notion and can be understood through the following example:

'(...) when a sculptor carves a statue out of a block of marble (...) it becomes, for example, a statue of Apollo or Pegasus. The marble, considered as substance, is potentially many things, but in actuality it is none; it becomes one thing rather than another by the imposition of one structure rather than another on the undifferentiated substratum.'
(Lyons,1977:239-240)

Nevertheless, substance is not only to be defined by an imposed structure, it can also (in some cases) dictate the type of structure that can be imposed upon it. In other words, substance refers to the physical matter the text is written on. Potentially identical sheets of paper can be modified by the imposed text that they may bear, *i.e.*, an instruction for assembling a piece of furniture or a passionate letter. On the other hand, the choice of a particular material instead of another, may determine what type of text, and consequently the linguistic and paralinguistic structures, that can occur.

1.1.2 Place of occurrence

Readers in modern societies are often able to infer that the text contained in a billboard is usually an advertisement of some kind, prior to their reading of it. Just by glancing at a newspaper, readers are able to guess the type of text they may find in a paper of that kind (a broad sheet or tabloid) and suppose its communicative purpose (Kress and van Leeuwen 1996:30).

If a text written is placed behind the door of a hotel room or in the corridor of an airport, it may well be perceived as containing an emergency procedure even though the readers might not always be able to understand its content. However important the place of occurrence of this text may be for its categorisation, one cannot disregard the fact that paralinguistic features may provide most clues to the reader, *viz.* an itemised structure, different typefaces, pictorial representations. Even if emergency procedures are not always equal in appearance, they usually feature conventionalised determining factors, linguistic and paralinguistic, which may allow for their categorisation as such by the reader, together with the awareness of their context of occurrence.

1.1.3 Communicative purpose

The communicative purpose of a text is also a very important factor in determining which particular display features should or should not be used, so that its content can be conveyed more efficiently by the writer and captured more effectively by the reader. If the main purpose of a text is to convince the reader to buy a product, as in magazine advertisements for instance, its design normally works in order to attract the reader's attention, quite often through the use of appealing techniques such as illustrations, colours, various typefaces and sizes, space around a slogan, among other resources. Other texts, such as memoranda, for example, normally express their message in words only and use a conventionalised format, even if there may be variations related to the choice of size and type of font. Their set of practically fixed format features conveys seriousness and formality. This text type does not usually contain elements that might distract or entertain the reader, because this is not its function.

The inappropriate use of paralinguistic features may have serious consequences. When faced with an emergency situation, if a reader is not able to recognise a certain text as the source of information she needs, she may fail to accomplish the task (Benevides Lobianco 1992). Dennis (1975:89) reports on accidents caused by hospital staff failing to understand drug labels with confusing layouts and selecting what they thought to be appropriate.

1.2 Written Paralanguage

In written communication, the linguistic message is conveyed through characters (usually) printed on a surface. Such characters are composed of little and larger strokes, curves, more or less defined inner and outer space, light or darker colours. They may feature in different sizes and shapes. These various features are not linguistic but a vehicle for the representation of the linguistic message. They are paralinguistic features inherent in the linguistic representation of the message. This research examines their function in the conveyance of the written message and how legibility is affected by variations in application of such paralinguistic resources.

Textual display features may have different functions and, as such, contribute to the accessibility of the message from different perspectives. Duchastel (1982:181-187), for example, categorises three types of textual display techniques: those used for illustrating, those for labelling, and those for highlighting the message.

In this paper, the *highlighting* function of written paralanguage shall be investigated. It involves various kinds of typographic devices that are used to emphasise the message, *viz.* bold typeface, italics and capital letters. In general, they are used with the purpose of assisting the reader in the perception of relevant textual components.

1.2.1 The highlighting function of written paralanguage

Very often written texts feature words, lines or whole paragraphs emphasised by means of paralinguistic highlighting tools. These paralinguistic devices may help the reader not only to focus her attention on particular elements of the text but also to find the information around the page (Waller 1979) as well as signal important concepts (Hartley 1980; Foster 1979). In this section, some of the most crucial highlighting elements for the legibility and accessibility of emergency procedures are explored. The use of capital letters, bold typeface, and italics constitute the main topic of discussion.

Highlighting techniques may create a deviation (Wales 1989:116) foregrounded against the surrounding writing. That means that the written text on the page may work as a background against which the highlighted words stand out. Highlighted words or passages are used as deviations from the usual pattern of typefaces and type-sizes adopted in the narrative.

The items to be emphasised have to be kept to a (necessary) minimum however, otherwise they may not achieve the impact expected (Van Uchelen 1980:78-80); their importance may be diluted. Sometimes the genre may determine

how much or how little variation is appropriate (e.g. advertisements versus legal texts).

1.2.1.1 Highlighting with capital letters

CAPITAL LETTERS may stand out very clearly and be effective tools for the enhancement of a few words. However, their use over long stretches of language may be inappropriate (Hartley 1994:29-30; Silver 1981:129; Van Uchelen 1980:58). Capital letters in texts (proportionately spaced) occupy 50% more space on the page than lowercase (Spencer 1969) and, as such, they allow for the visual angle to contain less characters per space read. Consequently, the number of word shapes available to the visual field decreases, thus reducing the peripheral field information (Alfano and Michel 1990:35-37; Massaro, Taylor, Venesky, Jastrzembski and Lucas 1980:13), and consequently, predictability. Mitchell (1982:14) affirms that 'letter shape information is picked up at distances of up to ten character positions (...) from the fixation point'. This means that, with capitals occupying more space in the visual field, the numbers of capital letters to be picked up would be reduced.

The greater legibility in the use of lowercase letters may also be due to the fact that they allow for more variation in their shape, through the contrast between ascenders (b, d, f, h, k, l and t) and descenders (g, j, p, q and y). Such contrast may lead to a more defined word contour (Silver 1981:129; Tinker 1969:60). Studies with slides and projected materials have shown a reduction in legibility of whole paragraphs or texts when they are written in capital letters (Tinker 1955; Ellington and Race 1993), as the following text illustrates:

- IF BACK SLAPS FAIL, TRY UP TO FIVE CHEST THRUSTS, USING TWO FINGERS TO PRESS ON THE BREASTBONE IN THE LINE WITH THE NIPPLES.
- ALTERNATE FIVE BACK SLAPS WITH FIVE CHEST THRUSTS UNTIL THE BLOCKAGE IS CLEARED.
- DO NOT TRY ABDOMINAL THRUSTS ON A CHILD LESS THAN ONE YEAR OLD.
- CALL AN AMBULANCE URGENTLY - IDEALLY SEND SOMEONE TO MAKE THE PHONE CALL AS SOON AS CHOKING OCCURS.

As the lowercase letters version of the same text reveals, capital letters may cause more impact when used sparingly only to highlight the most crucial element(s) of a certain procedure (Silver 1981:131).

- If back slaps fail, try up to five chest thrusts, using two fingers to press on the breastbone in line with the nipples.
- Alternate five back slaps with five chest thrusts until the blockage is cleared.
- **DO NOT** try abdominal thrusts on a child less than one year old.
- Call an ambulance urgently - ideally send someone to make the phone call ...as soon as choking occurs.

The new piece of information to be emphasised to the reader at this point regards the negation of a common practice, which might have been taken for granted by the reader, if not clearly stated and highlighted through the use of capital letters.

Capital letters are used in the text body of approximately 47% of the exemplars (excluding headings and sub-headings) that form the corpus. In emergency texts, capital letters may be used for a number of different purposes and effects. These range from the scarce emphasis of 'dos and don'ts', as well as helpful telephone numbers and addresses, some isolated words, up to almost whole sentences.

One of the most common applications of capital letters to written texts is in headings. In this case, whole strings of words displayed in capital letters are usually applied. The cramped or confusing impression that they may cause in narratives or instructions are diluted through the use of additional space around the words that compose them. The corpus shows that the use of capital letters in headings and sub-headings in emergency texts, although common, does not feature in the majority of the exemplars analysed. These usually feature lowercase characters in a larger type-size with bold effect. This may be due to the fact that typography guidelines often suggest that lowercase letters are easier to read (Hartley 1994; Black 1990; Silver 1981; Biggs 1973; Tinker 1969). Silver (1981:128), for instance, suggests that 'capitals should only be used as the first letter of a word at the beginning of a sentence and with words that need to be capitalized (*sic*)', otherwise their impact on the reader's perception may be decreased.

1.2.1.2 Highlighting with bold typeface

Bold highlighting effect is frequently applied to different typefaces and type-sizes in a number of text types: newspapers, medical reports, emergency procedures, cake recipes, and so on. The text producer has to consider if his choice of typeface and type-size combines well with bold effect, however, in order to avoid *counters* (areas enclosed by the lines that outline the letters) to be almost totally filled with ink. This resulting effect may end up disguising certain defining features of the characters. According to Biggs (1973:14-17) the enclosed areas are as important for the representation of a character as the inked lines. As far as clarity is concerned, the white space within the characters is regarded as one of the most important aspects influencing legibility (Tinker 1969:77).

Therefore, the emphasis of words on the page through the use of bold effect has to take into account the adequacy of this resource to particular type families and the final printed effect that the string of words might end up conveying (Black 1990). As suggested by Biggs (1973:14), 'an increase in width of the stem of a letter by

only a hair's breadth has a tremendous effect on the texture of the type as a whole, particularly in the smaller sizes'. The use of bold typeface with certain typefaces and type-sizes may cause the characters to appear too thick and close together, possibly affecting legibility of whole sentences.

Comfort and reassure the victim

Bold highlighting effect may cause the characters to touch one another producing a confusing effect, or altering the outline of words. As a consequence, this factor may affect word recognition (Wheeler 1970; Monk and Hulme 1983; Haber, Haber, and Furlin 1983).

Some studies have reported bold typeface as an efficient highlighting tool (Tinker 1969:62). It may provide emphasis either to lowercases or capital letters.

Bold typeface may provide means for the reader to skim read the text, if the need arises. This mechanism can be particularly relevant in emergency texts, which may have to be accessed by a reader under stress and in a hurry.

As with other highlighting devices, the use of bold typeface for long passages or too often may weaken its differentiating effect. As previously suggested, typographical variants should be applied sparingly in order to draw the reader's attention to them more promptly (Hartley 1982:203; Biggs 1973:15). This principle applies to features of written paralanguage as well as to layout components.

1.2.1.3 Highlighting with italics

Italic is another tool widely used in different text types for highlighting a word or string of words from the rest of the text. Because this is a light-weight type, it means that it may not always be highly noticeable against the surrounding text. Studies have shown that its application to whole passages may lead to slower reading, even if words keep the contrast between ascenders and descenders (Tinker 1969:60-65).

In emergency texts, its place of application is usually different from that of capital letters and bold typeface. They are employed in sub-headings (for example, when there exists too many bold and type-size variations already being used), to differentiate unusual terms, jargon, or some term that may be applied atypically.

The following text exemplifies one of the occurrences of this display feature in emergency texts. In this case, the italic effect highlights a medical term which is not expected to be known by the layman. Its meaning is briefly explained in parentheses and more comprehensively in a box provided at the bottom left side of the page. This resource may allow for a non-linear reading of the text. The use of italic in this expression is supposed to suggest to the reader a pause at the

highlighted point in order to seek explanation somewhere else in the text, in case she judges necessary.

‘At this point, check for heartbeat. The only reliable way of establishing whether or not the heart is beating is to check the *carotid pulse* (pulse in the neck). Learn and practise how to do this. The pulse at the wrist is not a reliable indication and should not be used.’

THE CAROTID PULSE
This can be felt at the neck in the hollow between the voice box - Adam's apple - and the large neck muscle beside it, just under the jawbone (...).

Typographical devices such as bold letters or italics are signalling tools to guide the reader through the various stages that might compose a text or to highlight the relevance of a particular term or concept. In addition, they may also attribute a relevant connotative meaning to the denotation of a word or string of words.

2. A Case Study

This section presents the methodology, a sample of the material used in the case study to examine the interaction of language and paralanguage.

2.1 The Methodology

A particular text type and a specific grouping of linguistic and paralinguistic structures were selected in this work to be observed, and a particular method of investigation was chosen: a combination of verbal protocols and interviews.

Although verbal protocols compose the main tool to get access to readers' interpretation of emergency texts, the material used here is not composed of problem-solving tasks, but of emergency procedures read out aloud, in a controlled environment.

The use of verbal protocols requires a different kind of reading practice, *i.e.*, the reader is asked to read a text aloud, commenting on every detail that crosses her mind. She is asked to talk aloud while reading. Although this instrument of looking into the reader's mental process may have its drawbacks, it allows the observer to gain access to underlying processes that might otherwise be hidden in the resulting outcome of the task (Ericsson and Simon 1984; Cohen 1994).

The chosen type of interview is classified as semi-structured, because it contains a set of pre-determined questions. The observer may adapt the questions, however, in order to elucidate or explore a relevant subject.

2.1.1 *The Informants and the material*

The verbal report sessions are carried out with naive informants, whose age ranges from 20 to 26 years. The informants belong to two different groups. The first group is composed of native speakers of English. The second is composed of highly proficient Brazilian readers of English. Both groups native and non-native informants are post-graduates engaged in teacher training courses (in EFL) in England.

Three emergency procedures were selected to be read out aloud by the informants in the verbal report session. The first is the type supposed to feature on corridors walls; the second as well, but the layout is more complex and the (linguistic) explanations longer; and the third one is an exemplar of a text from a First-aid training booklet.

The informants could report in either their L1 or L2.

2.2 **Data Analysis**

Due to limitations of space, it is not possible to discuss all the hypotheses raised in the study here. For the sake of the argument, we shall discuss three of the hypotheses raised in the work. They are about the interaction of highlighting mechanisms (capitals, bold, and italics) with selected items in emergency texts.

The following hypothesis relates to the use of the capitals with bold highlighting effect:

Hypothesis 5: The effect of the interaction of capitals and bold with imperatives is that of emphasising the main gist of the procedure, lightening the load for the reader's interpretative process. It affects how promptly and effectively the reader interprets the main point of the procedure.

Most readers in the verbal report sessions suggested that, when part of the action demanded in a procedure was in capital letters, they focused their attention on that part as being the key point to be understood from it.

Interviewer: Why do you think there are some words there in capital letters?
EK: I suppose they're the key, key points of your procedure, but then I don't understand why 'jewellery' is, I don't know, I suppose if you remove 'jewellery'...
Interviewer: If you had to read this text very quickly, what would you opt for reading there?
EK: Uhm... I suppose you could pick out the the words in.. in capital letters...

When interviewed, the following informant mentions the impact that such highlighting effect had on her interpretation of the message. She explicitly confirms that the elicited actions in capital letters were understood by her, during her first reading of the text, as being the focal point of the sentence and the most important part to remember.

EM: The capital letters made me think that those are the most important bits to remember and uhm the most important bits to to actually carry out. That's what I would do immediately cool skin remove jewelry uhm clean dressing. That's, you know, but that's what it makes me think.

Considering the use of bold effect in emergency procedures, different meanings may be conveyed to the reader, as the following hypothesis puts it:

Hypothesis 3: The interaction of bold with technical terms in emergency texts usually modifies the way the reader perceives the meaning of the term(s). The combination of different weights and type-sizes adds different degrees of specificity to headings and immediately conveys to the reader the relevance of the subject to be discussed in subsequent sections of the text.

The verbal report sessions have shown that even if the reader does not know the meaning of the term, the bold effect leads her to perceive it as a main title:

BF: I'll try to read it 'Abdominal thrusts', I already found a big problem here which is 'thrust', I don't know what it is... 'NEVER use this on babies. Stand or kneel behind the person, put your arms around their abdomen.

The position of the verb heading the sentence and the emphasis added to it by the bold typeface often lead the informants to read it with a title-like pause in the verbal report sessions, as the extract below exemplifies:

BM: 'Assess... consciousness shake shoulders gently and shout loudly', 'Are you all right?' 'No response'... the drawing is quite pretty, you know... 'Assistance... shout for help from other .. bystanders', 'Help!', 'Airway... clear foreign material, lift chin and tilt.. head.. slightly (...)'

The peculiarity of this text structure is that the same type-size and red bold typeface highlighting effect is displayed interacting with both imperatives and technical terms. This bizarre indiscriminate use of a same paralinguistic feature may disturb the reading process, affecting the reader's judgement and causing confusion.

Concerning the interaction of italics with technical terms, the following hypothesis suggests that

Hypothesis 4: If technical terms such as 'recovery position' and 'carotid pulse' are differentiated through the addition of italics, they will signal to the reader their status as technical terms and the reader will then adjust her comprehension skills to perceive them as terms of a specific office.

An assessment of the informants' reading performance in the verbal report sessions and interviews shows that, although there is some support for this hypothesis, most cases did not confirm the impact and significant effect of this interaction on the reader's perception.

Interviewer: How about 'recovery position', at the top, being in italics?

EM: That actually made me think it was uhm more of a technical term... a term in itself.

Interviewer: Did it help your interpretation the fact that it is different from the text?

EM: Uhm... no, not really, because I I... I know what 'recovery position' is, a bit like/, cause 'carotid pulse' is in italics as well, it just extend that a little bit and I assumed because they are technical terms and ... that's what I thought.

3. Conclusions

It is a fact that nowadays readers are faced with a variety of multi-modal mechanisms on the written page. Several non-linguistic mechanisms have very powerful effects on the reader's interpretation of the verbal message. Comprehension can only be achieved if elements from both verbal and non-verbal forms of communication are seen interacting and conveying meanings. Observing the effect of such interaction on the reader's perception of the message is crucial for finding out the causes for reading impairment (Benevides Lobianco, 2005).

Non-linguistic elements are seen, in this work, divided into two groups: written para-linguistic features and layout components. This study has focused on aspects of written para-language and has chosen to investigate some para-linguistic mechanisms that have a highlighting function.

Through the observation of a corpus of written texts, hypotheses about the interaction of linguistic and non-linguistic elements were formulated. They were, then, verified in via the use of two instruments: verbal protocols and interviews.

It has been observed that highlighting devices strongly affect the interpretation of the selected lexical items. Different highlighting features convey different meanings when interacting with technical terms. The use of bold effect, for instance, can lead the reader to interpret a term as a title, even when it is presented with the same typeface, same type-size, similar line length, and no line-feed between the term and the first line of a text. It has been found in the verbal report sections that, even when the text presents such clumsy use of defining features in its heading and the reader does not know the meaning of a term, she still perceives it as a main title.

The use of bold type with imperatives not only highlights the main point of each procedure, but leads the informants to read it with a title-like pause in the verbal report sections. In addition, it has been observed that if the same type-size and same bold typeface weight is applied to imperatives and technical terms indiscriminately in a text, the reader is led to confusion not knowing exactly how to interpret their function.

As to the use of italics, the hypothesis that they lead to prompt recognition and attribution of an extra meaning to a technical term does not find unreserved support. The data from the verbal report sections show that, in some cases, the pause

observed in some informants' reading was related to their being faced with an unexpected or unknown term and not by the impact of seeing a known term in italics. Besides, it has been observed that, when a technical term is etymologically and phonologically similar to its translation in Portuguese, Brazilian readers did not even mention the italics effect added to it.

Reading the pictorial text - A hermeneutical analysis of Paul Delveaux's the Pitzer Museum *

José Manuel Lopes
Universidade Lusófona

A friend of mine, with whom I was involved for several years in a complex research project pertaining to the specificities of the narrative text in History and in fiction suggested me to present a semiotic analysis of one of my favourite paintings (or of a given work by one of my favourite twentieth-century painters). However, knowing that in this case Semiotics could afford us excellent tools of analysis, I think we ought not to take at face value the cannons of such field of knowledge, and the rigour it heralded for years in a desperate attempt to become a science (as, for example, in Sciences of Education). I am referring, of course to the concept whereby the interpreter should stand back from the field or work to be analysed, in an attempt to deny any emotions that could be seen as tainting his or her object of analysis. I am referring, even in the twenty-first-century, to some type of prevalent tendency to be neutral therefore objective, although in the language of art this is not always possible, and, above all, not always sought for or recommended. Actually, we had to wait for the 1990's until sociosemioticians, such as Mark Gottdiener, in an attempt to defend and create a postmodern Semiotics, could draw our attention from such impossibility, positing that the "interpreter" (the entity able to attribute sense and meaning to a given object) would have to participate forcibly in the "semiotic process". Our concern was thus to demolish the differences, and the false antagonism, old tired Positivism had established between "analysing subject" and "object". I would dare to go even further in this case, by confessing my personal conviction that Semiotics (even at the height of its structuralist phase), could in fact afford us, as I have mentioned before, excellent analytical tools. Nonetheless, such tools should be under our personal control, so that we may finally proceed to a type of analysis that, eventually (or even inevitably) would have to take into account a hermeneutic type of interpretation. Thus, History or the marks of historicity of a given object ought, in my opinion, to be taken into consideration, together with its mode of production, and the reception on the part of the public for which it was intended.

This presentation aims thus at two different but complementary things. On one hand, we will revisit some concepts pertaining to the Semiotics of Painting as they

* Este estudo foi desenvolvido no âmbito do Grupo de investigação "Literacias: Práticas e Discursos em Contextos Educativos" do Centro de Investigação em Educação, Universidade do Minho.

were suggested several decades ago, especially by the French semiotician Louis Marin who after all, seemed to expand and force the theoretical corsets of his time. Secondly, we will proceed; based on our theoretical knowledge, to the analysis of a painting by Paul Delvaux (1943) '*The Spitzner Museum*'. We are well aware nonetheless that this brief analysis shall never exhaust all the multiple significations and meanings that may inform the reception of the referred work of art. However, just the fact of being able to draw your attention for a rather curious pictographic work by this Belgian surrealist (not always so frequently mentioned as his equally Belgian friend René Magritte) should be, by itself, a good point of satisfaction.

For many years, painting was just destined to be appreciated as a mere decorative object, or to be discussed and analysed by other painters and theoreticians whose main concern was the well-established field of Literature. It should be noted, however, that Literature (with a capital L) was poetry above all, a very well rooted concept that came to rule among us until the middle of the eighteenth-century. Thus, since classical times, poetry had already been defined as some sort of "silent poetry", leading the Latin poet Horatius to coin the famous phrase *ut pictura poesis*, which means: "as in painting the same applies to poetry". It is obvious that for the classics the same difference in media revealed by both arts was not as relevant as it would be for us nowadays. They were in fact, more interested in the types of feelings that both arts (poetry and painting) or the so called "sister arts" could awaken, and about what they thought to be the inherent static quality of both, having compared *ad libitum* and extensively "lyrical poetry" and "painting". Only in the eighteenth-century, in his book *Laocoon, or on the Limits of Painting and Poetry* (1766), did Lessing analyse the theme in detail. However, once more differences in media were not taken into account, because they were not seen as implying differences in the conception or expressiveness of paintings. Drawing, in which colour until the eighteenth-century was seen as a mere appendice, was enjoyed as visual poetry, since it was believed that both drawings and words possessed an "intrinsic beauty". A beauty, one could say, that existed *a priori* in such works, even before our reading or contemplation, or, more specifically, before our reading, being it of poem or of a pictographic work. Lessing (1985) however did point out a category that may seem of importance to our analysis. Contrary to poetry, even the more lyrical type of poetry, painting did not take into account what he had mentioned as "a progress in time". In this case, although not knowing it, Lessing (1985) highlights the fact that painting, as poetry, were not subjected to the obligatory syntagmatic organization of a narrative, or to a specific sequentially, especially in the case we still designate as "abstract painting". For example, when I look at a painting I get a general perception, albeit superficial of that same painting.

Such perception becomes more superficial still if the type of painting resists to a type of an overall perception, such as in Bruegel, Bosch, and in many baroque works. Nonetheless, when I read a poem of a prose fiction text, the image, *only of a mental kind* that I obtain, is always something I have construe through a succession of reading moments. It should be noted that since Greek Antiquity there has been attempts to describe paintings (some of which that have disappeared for ever) through literary texts. These resort to a series of well-planned characteristics, and may afford us the pleasure of a type of visualization, having thus accomplished what is termed as *ekphrasis* (i.e., the literary description of a real or a fictional painting) and giving it the status of a specific literary genre. However, as we have mentioned previously, we are dealing with «mental images» whose characteristics are very different from the materiality of pictographic images. It was already noted that nowadays the pictographic image had become the great cultural paradigm of Post-Modernity, having theoreticians such as W. J. T. Mitchel stating that we live in a “post-literacy culture”. Yet, we cannot talk in the same manner about the iconic and the linguistic signs. It should be further stated the fact that verbal language does not show us anything or permit us to material see anything, while pictures (even at its more determined abstraction) do always make us see a given object, even if such object is a mere coloured stain. The way, however, our gaze traces its progression on a written page (to use one of Louis Marin’s concepts), on a poem, for example, shall never be as erratic as on a canvas. The only exception would be calligrammatic or concrete poems that have a far more visual quality.

We could now argue that it all pertains to the type of painting, in the same way, as it all would depend on the type of poem. In fact, we do not read a painting by Poussin in the same manner as one by Jackson Pollock. Notice that one of the objectives or one of the great utopias of “abstract painting”, and probably ever more of “Abstract Expressionism”, would be to create a pictographic work able to resist to any type of verbal language. Nonetheless, in the same way as we have literary theory and literary criticism we have art theory and art criticism, both using linguistics texts. I can always comment on a poem or on a painting by responding to them, respectively, with another poem or another painting. Nevertheless, when I write about painting—unlike what happens in literature—I always have to change code. In fact, what I cannot do is to expand on a theory of painting without resorting to a written text. The same applies to other arts such as sculpture, architecture, dance, cinema, or ever the most abstract of them all: music. In fact, the medium seems to liberate and restrict us at the same time, not so much in the case of “literary art” but in the case of all whose medium is not a verbal one.

After these general considerations I will limit the comments to “representational painting”, i.e., the one the contrary to Pollock’s does not lend itself in the same way to a series of “floating” statements on the part of a restrict group of “illuminated critics” that ends up, in the majority of cases, talking about the genesis of a specific work. One question, however, does remain -How can we approach or interpret a work of art, in our case, a representational painting? As it ever occurred to you to read a literary text where given the most objective and unemotional motive, you would be tempted (especially after a first or subsequent readings) to jump verses, lines or paragraphs in an attempt to capture an echo, a certain connotative reverberation? Where a meaning we had put on hold, finally finds its measure to become apparently complete? I do not doubt that you may have tried it and believe it, one reads a painting very much in the same way. The way our gaze traces its progression on a painting may have some random qualities, and yet it is never chaotic or arbitrary since our eyes are being guided and attracted in a certain direction, to certain features, and not always in the same way as the artist intended it. We have to admit nonetheless that aesthetic emotion cannot be the only criteria of analysis. As in the case of a literary text, we cannot analyse a painting under the fire of a first emotion, but this does not mean we have to put aside such an indefinable and elusive first impression. As in a literary text, a painting would have grabbed our attention for reasons that we, at first, sometimes seem to ignore. One should reflect on that “first impression” until it ripens, thus penetrating more in the bidimensional space in which the painting ideally appears to us (not in a reproduction as is the present case), but in its blatant materiality, i.e., as we may see it generally on the wall of a house or of a museum. Even though, as we have mentioned, there is not an obligatory sequence when reading a painting (or even a photography), in the same way that we disc used in the case of a text, a representational painting, subject to a given perspective, is not a chaos in which our gaze could jump in every direction. In fact, a painting does offers us generally a privileged central point that Roland Barthes, referring to photography, designated as the *punctus*. This punctus or nodal point first attracts and draws our attention. The other elements can generally be read through a series of visual lexias, i.e., unities of reading formed by groups of objects that have a thematic unity, a similarity in colour or tone, or the same geometric form, something Marin designated as “visual rhymes”. The type of brush stroke is also very important, being fine, thick, very carefully planed or aggressive (let us think, for example, about Van Gogh’s paintings). It is the marks of the brush strokes giving painting their material quality: a canvas painted with pigments. Keeping all these factors into consideration, we may divide a given painting in parts, only for a mere question of convenience and or to

facilitate our analysis better. This division however, where we may group several lexias, cannot be made according to a given formula. In this case, the subjectivity of the reader or interpreter has a role to play, even though that same subjectivity may be guided or reinforced by the object to be analysed.

We are now in a position to start our analysis of Paul Delvaux's painting that, given its absence of brush strokes (do notice we are basing this specific analysis on a reproduction), appears to us almost with the revealing intentionality of a mental image, or of an almost supernatural vision. In our analysis, I shall be referring, among other things, to concrete examples and to the theoretical questions that were previously mentioned. Before we start analysing the characteristics of this painting we should take into account its title and date. The latter has for the majority of us a sinister connotation, 1943, since we think about the Nazi occupation of Europe (an army of fanatics that only in that year starts dealing with its first defeats). We also think of Belgium, the country where Paul Delvaux lived and painted this work. The title, *The Spitzner Museum*, is equally important since, unlike in certain abstract paintings entitled *Figure I* or *II*—that is, neutral titles that do not pretend to orient our reading—this title may alert us for something enigmatic, and, as we shall see, for a specific referent. What museum is this? Is it a purely invented museum or a concrete institution, and if this is the case, of what type of museum are we talking about? It was in fact an existing museum, the Grand Anatomical and Ethnologic Museum of Pierre Spitzner, in Paris, where with the aid of life size wax figures, some anatomical models could be exhibited, many of them pointing to specific diseases and physical abnormalities. Many of these figures, presented sometimes very naked for an audience dominated by Victorian morals, had been reunited at that same place and institution after long successful tours throughout urban fairs during the nineteenth- and twentieth-centuries. The most famous figure of them all, according to some critics, was a woman dressed in white lace, lying as if she were asleep, that, given a certain mechanism could be seen breathing with its chest contracting and distending... We also notice, after title and date, the dimensions of painting, especially since we are not looking at the original but at a reproduction. Two by two and a half metres, make up for a large painting. It is not in any way a miniature, but a surface that aims to capture our gaze and our attention. One could now conclude the analysis of such analytical preliminaries if the painter himself had not informed us that his visit to the museum in question had inaugurated a turning point in his artistic production. Probably due to such fact, I dare speculate, that he found in that museum a whole series of feminine figures, designed with exquisite realism (where natural hair could be included), and with a certain ghostly quality. Knowing Paul Delvaux' works must have been almost as if he were actually seeing

in three-dimensions many of the feminine characters who had dwelt for a long time in the imaginary space of his paintings.

Once in the presence of such relevant information let us look once again at the painting. It seems that part of its mystery has disappeared only to guide us to new enigmatic aspects. To start with, allow me to draw your attention to the division that the column that seems to support part of the strange porch does establish. On the left side, we see a scene of an oniric nature, or, if preferable, a surrealist scene, while in the right hand side we observe a nocturnal view of a street and of an urban square, the corner of a building heavily lit, together with the presence of five men, or of five male figures. These, as if they were part of a photograph, are portrayed in an almost hyper-realistic manner. It is the two sides of the painting that seem to make us see a clear contrast, and, something, no doubt, that at a first approach is able to capture and split our attention. On one side, we have a dream scene quite typical of Delvaux's painting; on the other a desert city or town, where a statue projects a shadow able to evoke a specific characteristic in the paintings of Giorgio de Chirico (a painter that together with Magritte was much admired by Paul Delvaux). Every thing would now seem to us rather coherent were not for the extremely realistic "presence" or representation of the five men. Who are, after all, these figures? We do not really know. Some critics refer to them as the "scientists" or the "academics". Yet, the group they form establishes a contrast in the painting (a contrast that is not only thematic but that, above all, pertains and points to dissimilar modes of representation). All of these men are formally dressed, and very well groomed as one would expect from middle-class men from the decade of 1940 of the twentieth-century, but, curiously enough, they are not wearing the conspicuous and almost obligatory hats of the time. We could in fact speculate. Are they scholars, scientists or entrepreneurs? Why are not they politicians? Confronted with this latter idea one could hesitate, since in 1943, the date of the painting, the great majority of politicians were portrayed, at least in newspapers and magazines, in military garb, and, should they be politicians or military men in civil clothing, how could have they been presented in such a cohesive group? This fact is enough for us to infer that something social or professional brings them close together. Another possible line of interpretation would assume that those men are scholars of the 1930's, or dreamers waiting for fame and recognition, before the cruel realities of the Second World War. Yet, I do not lean towards the figures of the scholar, the politician, not even the one of the mad scientist. These are represented in other painting by Delvaux, such as *Phases of Moon I, II, e III*, but practically as caricatures, as stereotypes. I also do not relate them to the thematic representation

of a certain 'gentleman' dressed in black, indifferent to his surroundings, we may see in paintings such as *The Entrance of the City* or *The Unquiet City*.

Before embarking, however, in a carefully search for similar themes in other paintings by Delvaux (or by other Surrealists), so that we may solve some of the "mysteries" we find in this painting, why not examine each of this male individuals in particular. Curiously, the man we see in the foreground, not only of his group but of the whole painting—with the exception of the walking skeleton on the right, thus in a privileged position—is seen as to assume in the joining of both hands, a certain conformist attitude. This man seems to ignore not only all the remaining features that surround him, but the rest of the group from which he clearly stands out. Could it be a dissident? We know he is not looking at us (spectators or "visualizers" of this painting), even as we look at him right now, in a book of reproductions or through a projected image. He seems to be brooding and his gaze, if we look at it more carefully, seems lost in some form of daydream but in some point in space, we the readers are also included. In fact, when we become aware of the space he contemplates or considers the realism we preciously attached to his figure starts melting thus evoking the previously referred mechanical figures or dolls made of wax. Please notice how fast we reverted to the title of the painting in an attempt to give some sort of explanation of something on which we could not quite put our finger on.

We can now start to examine the individual right behind him. He is the only one with a moustache (blond in this case) whose concentrated gaze and tense expression seem to depart from the remaining context of the painting. It is as if a camera did catch him there against his will. Further, behind both, in decreasing order, almost parallel to the top of the building with a chimney that looms on top, we see three other men's faces in the same order. The first, belonging to a bald individual near the edge of the painting itself who seems to look askew at the scene that would be taking place upon the red floor porch; the next male figure, with a careful partition in his hair has also his eyes focused on the ground in spite of his half closed eye lids. I dare to speculate he may agree or go along with the other members of the group without assuming a clear attitude. In the foreground, exhibiting an obvious white handkerchief in the pocket of his double-breasted coat, we see a middle-aged man whose profile seems to be heavily lit, and where we could underline the dimension of his left ear, and his hand with long fingers where one could simultaneously read a notation of pause, calm, doubt, and hesitation. Behind all the male figures, in a more distant plane, we see the corner of the previously mentioned building, covered with some sort of white marble—something we might interpret based on the shadow projected by the statue under the

moonlight. We also see two symmetrical windows with translucent curtains, in the absolute peace of a middle class home, with a decorative frieze topped by one or two chimneys that seem to disappear—or melt—in the darkness of the sky. My gaze starts then to descend the surface of the canvas. Those men that a while ago seemed to be so realistically represented and so imposing, due to their presence in the foreground, may be nothing but wax dummies very well executed and carefully dressed... I put on hold nonetheless this impression of mine and proceed to examine the rest of the right hand side of the painting, going to the furthest plane. We could now examine the building or series of buildings in an almost stereotypical classical perspective. In contrast with the well-lit residence building, this architectural complex seems to evoke public constructions, given not only their classical geometry but also the stately design of their arches and square portals. Very far, at the end of the perspective, they form and that necessarily orients our gaze, we can see another building where two minuscule black rectangles insinuate the existence of two windows, probably from another public or domestic edifice.

We can now examine the city square, invisible to us, and that only slightly insinuates itself between the group of men and the supposedly government complex, since it is in front of this square, on a round sidewalk with two steps, that we see the statue on the pedestal. Whom does it represent? We do not know, but it would not be farfetched to assume it is probably the statue of a military man or a politician. We see that he is wearing a nineteenth-century overcoat, but it is specially his extended arm, where I imagine a hand with a pointed finger that leads me to suspect we are dealing with a public figure, able to unite, inspire, control and lead the masses. Who knows if in an elegant and non-dated manner, the painter (consciously or unconsciously) wanted to refer to the tyrants of his time?

On the top of the porch and on both sides of the dividing column where at an angle, we see a shadow similar to the one projected by the statue. In this case it invades the train of a dress, a curtain with tassels and fringes evoking the grandiosity of the stages for the grand operas or famous theatre plays, is lifted and pleaded upon the classic space of that same porch. We shall never know if that curtain was just lifted or is about to come down. It is just suspended there, ending the perspective it creates near a somewhat nude and well-lit caryatid, with big breasts and a rounded belly. Probably they exist to call attention to what might be taking place on the porch with a wooden floor. The red, or more appropriately that tone of dried blood or ochre, shall orient our gaze to similar tones: the velvet curtain that is lifted to show an anatomical model (further back on the left side), and the reddish tone of the curtain, echoing the carpet on the porch near that same caryatid. However, what does in fact might be taking place on the porch, in the antechamber

of a totally unknown space? A haughty woman dressed in dark blue exhibits proudly and deliberately her breasts. Her closed eyes and her imposing pose, her naked arms and her abundant mane of hair may indicate to us she is just an erratic sleepwalker, displaced, dreaming the pose of her own apparition, still attached (I would dare to suggest) to some musical piece. She is in fact an apparition, made of dreams and desire, with the heavy connotation of a type of fatality, sliding on that porch that suddenly appears to us as opera stage.

In the foreground, however, our gaze is immediately drawn by the presence of a skeleton—which due its narrow pelvis I would assume to be male—hat seems to be staring at that figure of legend or stage, at that same figure able to synthesize the great themes of nineteenth-century opera: love, death, and disease. It is not by chance that we mentioned disease. Immediately behind that imposing female figure slightly off the centre of the painting, we see walking with difficult steps a young man with frail legs and vacant eyes probably someone affected by tuberculosis, hesitating to label him as an adult or adolescent. His pale skin hues seem to acquire the blue tones of the dress of the haughty nocturnal woman that dominates the canvas. Behind these figures, we see than what seems to be the most obvious allusion to the title of the painting. Sited at a small table or near a stall we might see in a fair, in spite of the tablecloth apparently made of a fine satin, another woman with a more formal look and pose, given her nightgown with a deep cut, who seems to be selling entrance tickets to the referred museum of anatomical abnormalities and curiosities. The skinless figure seem to allude to it, and its revealed red muscles once more echo the tones of the flesh coloured curtain that, as I have already mentioned, also rhyme visually with the carpet on that porch or stage.

If we look now at other paintings by Delvaux, we can see some of the thematic figures we see in this painting. The women, either naked or dressed in nineteenth-century attire are always present, although they generally evoke the dreamy figure of the sleepwalker and lack the dramatic presence of the woman with the velvet blue dress in *The Spitzner Museum*. Naked men, adolescent and male children are also present but not with the same strong connotation of disease. It should be remembered that the title of the painting points to an existing museum, which specialized in the exhibit of several anatomical models, showing the effects of some common diseases. The buildings we see in other paintings are also either classical like these ones or more blatant Greek-Roman. Statues in city squares are practically absent with the exception of an equestrian statue of a Roman general in the painting entitled *Nudes with a Statue* (1946) and that bears no relation to our supposed politician. What we do not find in any of the other paintings is that specific group of men, so realistically represented, on the left side of the statue.

It could be said that our interpretation of this painting was now completed. However, that same pictorial work could raise once again a whole series of questions. The first is as follows: Was I, in spite of my research and previous information reading a given painting while I was writing my interpretation of that same work? No doubt! This may perhaps shock certain plastic art critics that could think that my personal interpretation of this painting would amount to a mere “intersemiotic translation”. The second question, to which I tried to answer briefly, has to do with the reading of this painting in the general context of Paul Delvaux’s work. The third, however, would have to do with the manner in which, after having lifted and mentioned a series of details in this painting, I may bring them together, without being tempted by a quick rationalizing conclusion disguised, as many of them are, as pseudoscience.

At this moment, allow me to return to the date of the work being analysed: 1943. Can we, in spite of its surrealistic nature, read in this painting some marks of historicity? I think we can. This, do notice, do not reside in the supposed “intentions of the author” nor in a position whereby the interpreter aims at putting aside his/her personal history and experience, a series of emotions and a form of intuitive knowledge. That Spitzner Museum that would have gathered in his rooms all those anatomical curiosities, the replicas of those bodies marked by death and disease that used to be exhibited at public fairs can probably be related and not only metaphorically, to the more savage and advanced science of the early 1940’s. Therefore, I think it would not be totally farfetched on my part to see in that adolescent boy both a symbol of the long history of tuberculosis, as well as of other fatal diseases that characterize our nineteenth-century, but a kind of living figure walking out of a concentration camp. Why should it be important to me the fact that the author had no knowledge of the place I just mentioned? Nowadays, after sixty-six years, we do look at this painting in a manner that is very different from the one held by its author or contemporaries. More than a half century has passed. In spite of all the stereotypes we may have concerning artistic currents that may not speak to us today in a direct or immediate manner, those very serious and formal men in the painting that I mentioned in the analysis, are still here, who knows if in the very midst of our institutions. One of them, probably the one that seems to us more absent minded and uncompromised is probably trying to observe us.

Reading Written and Pictorial Texts

Ray Martens

Prisca Martens

Towson University, USA

“Picture walks” are a strategy teachers use to invite students to predict a story from the illustrations before they begin reading a picturebook. Picture walks usually involve examining what is literally represented in the illustrations, including, for example, the characters, setting, and actions. While previewing texts and making predictions do indeed enhance comprehension (i.e., Purcell-Gates & Duke, 2004; Smith, 2004), typical picture walks do not take advantage of the multiple ways artists show meaning in illustrations that extend far beyond the literal images. Artists, for example, make purposeful decisions about what art materials they will use, the technique(s) they will use to apply the material, and how they will construct the composition of the illustration through the use of the Elements of Art (line, shape, color, etc.) and Principles of Design (balance, pattern, movement, etc.) to fully represent meaning (Pumphrey, 1996). In discussing artistic conventions, Gomez-Reino (1996) argues, “The effects achieved through the particular use of media...are integrally related to the written text...Collage, inks, water-colors and pencils are used for different purposes in picture books to execute and develop particular ideas, moods and impressions. To assume that the image is a mere representation or visualization of the written word is to miss the complexity that is to be found in quality picture books” (p. 70).

In this paper we report the findings of a study in which we helped students learn to read and integrate the meanings in the pictorial text (illustrations) with the meanings in the written text to construct meaning. The research question we investigated was: How does learning to read the meanings of art in pictorial texts along with reading the meanings in the written text relate to third graders’ understandings of stories in picturebooks? Since the relationship between art and reading is identified as a neglected area of research (Kiefer, 1995; Sipe, 2008), understanding the interconnections between art and reading and how they can be brought together to support learning is critical.

Theoretical Framework

This research is grounded in transactional socio-psycholinguistic theory which

draws on the work of Rosenblatt (1978), Vygotsky (1978), Goodman (2003), and Halliday (1975). In this view reading is a transactive constructive process between readers and texts in a sociocultural environment. Readers draw on their background experiences and their knowledge of language and the world to construct meaning from texts.

Texts are units of meaning created in particular sign systems (Halliday & Hasan, 1975), that is, mental constructs that cultures use to share meaning (Berghoff & Harste, 2002). Sign systems include, for example, written language, art, music, dance/movement, drama, and mathematics with each offering its own unique perspectives of particular cultural meanings (Kress & van Leeuwen, 2006) in non-redundant ways (Berghoff & Harste, 2002). In relation to writing and art, for example, John Dewey (1978) states, "Thinking directly in terms of colors, tones, images, is a different operation technically from thinking in words...the meaning of paintings... cannot be translated into words... to ask what [visible qualities] mean in the sense of something that can be put into words is to deny their distinctive existence" (pp. 73-74). Sign systems then communicate meanings in equally valid ways (Berghoff & Harste, 2002).

In picturebooks, readers construct meaning through their transaction between two sign systems [the written text and pictorial text (i.e., the visual images in the illustrations)] (Nikolajeva & Scott, 2001). The written text that describes the characters, environment, actions, and developments in the story and the pictorial text that depict these are dependent and interdependent; the pictorial text and the written text make sense and can only be understood in the context of the other (Bader, 1976; Lewis, 2001; Schwarcz, 1982).

To transact with written texts, readers integrate language cueing systems -- the semantic/pragmatic system (meaning cues in a socio-cultural context), the syntactic system (grammar cues), and the graphophonetic system (graphic and sound cues) -- with their knowledge of the world to infer and predict meaning (Goodman, 1996; Smith, 2004). To transact with artistic texts, readers use comparable cueing systems with visual art components to infer and predict meaning in pictorial texts (Piro, 2002). The Elements of Art (dot, line, value, shape, color, space, form, texture) (EA) present the graphic cues that are integrated with the syntactic cues, the Principles of Design (balance, emphasis, pattern, rhythm, movement, variety, harmony, contrast, unity) (PD), to construct meaning (semantics). [Note: The Elements of Art and Principles of Design will be referred to as EA/PD.]

While numerous studies document the power and importance of picturebooks in reading instruction, the focus is usually on either the verbal text (i.e., Braunger & Lewis, 2006; Hoffman, Baumann, & Afflerbach, 2000) or readers' responses to

illustrations (i.e., Arizpe & Styles, 2003; Sipe & Bauer, 2001). We located no studies that examine how students' knowledge and understanding of EA/PD relate to their reading and comprehension of picturebooks.

Method

In this qualitative study we were participant-observers in a third grade classroom two mornings a week and these students' art classroom for art instruction one period a week for one semester.

Participants

The participants were 20 third graders attending a school in a large metropolitan area on the east coast of the United States. In this school, 19.2% of the students received free and reduced-price lunch. Eight participants were African American, nine Caucasian, two Asian, and one Hispanic. They all spoke English proficiently and none were receiving special education services. Both the classroom teacher, Michelle, and the art teacher, Stacy, collaborated with the researchers. [For Stacy, only Michelle's class is involved in the study.]

Reading/Art Curriculums for the Study

Michelle primarily used district-mandated Houghton Mifflin (2001) anthology of children's literature for reading instruction, which she supplemented with other pieces of children's literature. While Stacy had district and state content standards to meet, she created her own curriculum.

Michelle, Stacy, and the researchers met monthly to develop detailed teaching plans for reading and art and touched base weekly to make refinements. In the context of her weekly curriculum, Stacy included discussions about the illustrations in the students' anthology, highlighted how/why the illustrators made the decisions they did related to the EA/PD, and provided opportunities for the students to create works of art using materials and techniques the illustrators in the anthology used. In the context of the daily reading curriculum, Michelle helped students read the pictorial text more in-depth before, during, and after reading, which included examining some of the EA/PD for the anthology stories as well as other children's literature they read. Students also had an art journal in which they drew and wrote responses to stories and sketched ideas.

Data Collection Procedures

Data sources included observations of reading and art instruction; formal interviews (audio-taped/transcribed) with the students at the beginning and end of the study to

learn their understandings of a story and their thoughts about the illustrations (Goodman, Watson, & Burke, 2005); informal interviews (audio-taped/transcribed) with the students individually or in small groups weekly about illustrations in stories they were reading, artwork/sketches they created, their understandings, etc.; written responses and artistic sketches to stories the students read in Michelle's classroom; and, artwork the students created in Stacy's classroom. Informal conversations and interviews with Michelle and Stacy were ongoing and documented in field notes.

Data Analysis Procedures

Data analysis was ongoing. Field notes and interviews were read and coded with emerging concepts which were grouped into categories through constant comparative analysis (Strauss & Corbin, 1998). Students' comments about the illustrations were analyzed for recurring themes related to their understandings of EA/PD, how the illustrators used these to represent meaning, and how the meaning in the pictorial text related to the meaning in the written text. Students' written responses were analyzed for recurring themes related to their understandings of the stories and illustrations, meanings represented in illustrations, etc. Artwork and sketches were analyzed using the EA/PD in relation to the creativity, content, composition, and craftsmanship.

Case records containing the analyzed readings and retellings, interviews, written responses, and artwork and sketches were developed and analyzed for each student. Individual student case records were then analyzed for emerging patterns, followed by a cross-case analysis to examine patterns across the cases (Patton, 1990) in the context of the field notes and interviews. The credibility of our findings is established through the longitudinal nature of the data, providing consistency over time; the multiple data sources offering different measures to compare and analyze to clarify meaning; and discussions between the researchers, Michelle, and Stacy to test the accuracy and trustworthiness of the data (Patton, 1990; Stake, 1995).

Findings

Our analyses of the field notes showed that Michelle and Stacy grew increasingly more comfortable with their discussions about the EA/PD in picturebook illustrations as the study continued. As Michelle became more familiar with the EA/PD, she guided the students to make more and more connections between the meanings in the pictorial text and how similar/different those were from the meanings in the written text. As Stacy became more familiar with picturebooks and the possibilities they offered for instruction, she increased her use of them as examples during art class.

Our analyses also revealed sharp increases in the students' thinking and understandings and their use of the EA/PD in making meaning with pictorial and written texts when reading picturebooks. This understanding was also evident in the students' reflections on artwork they created, showing they could apply their learning to their own work. In what follows, we provide examples from students' discussions of illustrations in particular stories in their reading anthology at the beginning and end of the study, then share examples of students' artwork and their explanations of their thinking in creating it. More detailed analyses the data can be found in Martens, Martens, Croce, and Maderazo (in press) and Croce, Martens, Martens, and Maderazo (in press).

Responses to Illustrations

The students had numerous opportunities during the study to talk about written and pictorial texts in both Michelle's and Stacy's classrooms. These discussions included the meaning in the written text, the meaning the artist was trying to represent in the pictorial text, the EA/PD the artist used to represent that meaning, why the artist chose those particular EA/PD for the pictorial text/illustration, and how successful the artist was. To learn if/how the students' perceptions and understandings changed during the study, we asked all of them to read and talk about two particular stories, one at the beginning and the other at the end of the study. We asked open ended questions to discover the students' thoughts and insights related to the illustrations.

At the beginning of the study the students read *Seal Surfer*, written and illustrated by Michael Foreman (2001). *Seal Surfer* is one of the first stories at the start of the second volume of the students' anthology, which they received as the study began. Thus, the students had not read and were unfamiliar with the story. *Seal Surfer* is the story of a young boy who goes to the beach with his grandfather and finds a mother and baby seal. Over time the boy, who is handicapped, becomes friends with the seal. The seals are put in danger during a bad winter storm and later the boy is in danger when he falls off his surf board in the ocean but the seal rescues him.

At the end of the study, the students read *Peter's Place*, written by Sally Grindley (1996) and illustrated by Michael Foreman. We chose *Peter's Place* because Michelle felt it was a story the students could read and would enjoy. We wanted a story which the students had not read and thought about previously (as *Seal Surfer* was) and thus could not use another story from the anthology because the students were familiar with those stories. *Peter's Place* is the story of Peter and

his love for the ocean and its animal inhabitants near his home. When a tanker spills oil, Peter helps save the animals and clean the area to restore it.

When we compared the students' understandings of the story and comments about the pictorial text in *Seal Surfer* with those of *Peter's Place*, the depth of their thinking and their appreciation of the relationship between the written and pictorial texts were evident. As an example of students' growth over the study, Figure 1 shows excerpts of Kyle's and Brittany's responses to the question "Did you notice anything about the illustrations?", which we asked during the students' comments after they read each story. Figure 1 displays how the depth of the students' comments changed from *Seal Surfer* to *Peter's Place*. Kyle and Brittany were not looking in the book when they made these comments.

Figure 1. Excerpts of students' responses to the illustrations in *Seal Surfer* (Foreman, 2001) (January) and *Peter's Place* (Grindley, 1996) (June)

Question: **Did you notice anything particular about the illustrations?**

	<i>Seal Surfer</i>	<i>Peter's Place</i>
Kyle	Yeah, when the text said the water was too cold and the baby hurt a little, it looked like it in the picture.	The first few parts he did it in warm colors because nothing bad was happening. Then when the wave came, he made it at night and he made the waves slanted so it can look like it is hitting the ship and that made the ship break...
Brittany	I saw a lot of rocks and I saw a lot of the ocean...He draws really good because the seals look realistic and so did the rocks.	Well, in the pictures they usually have warm colors and cool colors. Warm colors because it is happy. In the beginning and the end it was like Peter's land. They cleaned it all up. And in the middle it was all dark and neutral colors and cold colors because the ship crashed and now everything is all sad because all the animals are dying and all the rocks are fading and all of the ocean is black.

In their January reflections on *Seal Surfer*, both Kyle and Brittany talked about what they saw in the illustrations. Brittany, for example, referred to the rocks and the ocean and how Foreman made them look realistic. Kyle also talked about the match between the written text and the illustrations: "when the text said...it looked like it in the picture." They showed little understanding of the depth of meanings represented in illustrations.

Kyle's and Brittany's observations in June after reading *Peter's Place*, however, document the richness of their growth and understanding (see Figure 1).

In contrast to their talk about the objects in the illustrations in January, in June they shared their thoughts about the use of the graphic and syntactic elements within illustrations as cueing systems for making meaning with picturebooks. Their comments went beyond merely naming particular EA/PD to indicating their understanding of *how* Michael Foreman used the EA/PD to represent meaning. Kyle, for example, stated, “He made the waves slanted so it can look like it is hitting the ship...” and Brittany observed, “The pictures have...warm colors because it is happy...And in the middle it was all dark and neutral colors and cold colors because the ship crashed and now everything is all sad ...”

Figure 2 shows another example of how learning to read the meanings in the pictorial text, along with reading the meanings in the written text, enriched the students’ understandings. This example displays Jordon’s and Angie’s responses to “Is there anything about the illustrations that helped you understand the story?”

Figure 2. Excerpts of students’ responses to the illustrations in *Seal Surfer* (Foreman, 2001) (January) and *Peter’s Place* (Grindley, 1996) (June)

Question: **Is there anything about the illustrations that helped you understand the story?**

	<i>Seal Surfer</i>	<i>Peter’s Place</i>
Jordon	I would think, “Hm, what is this story about? Is it about a surfer? I think so. And it must be about seals or something.” That’s what I would think.	There was a diagonal line when the ship came crashing in and I think that was one of the good diagonal lines that really shows meaning.
Angie	Maybe a little how in the dark picture how he was trying to paint the night and watching the sea and looking at the seal.	Yeah, when the oil came crashing everything was just black and rain and stormy like in neutral colors...before it crashed it was all sunny and happy [with] warm colors.

When they answered this question in relation to *Seal Surfer* at the beginning of the study, Jordon discussed how he thought about the story before reading it and Angie talked about the literal images in the pictorial text relating to the night scenes and “watching the sea and looking at the seal.”

In June when responding to this question after reading *Peter’s Place*, however, like Kyle and Brittany, Jordon and Angie were more insightful and analytical in explaining why Michael Foreman made the decisions he did in creating meaning in his paintings. Jordon referred to Foreman’s use of diagonal lines to show the ship crashing (stating that it was one of the “good diagonal lines that really shows meaning”). Angie mentioned Foreman’s use of neutral colors in the illustrations of the crash and of warm colors in the happier scenes.

Through the study, Kyle, Brittany, Jordon, Angie, and their other classmates gradually came to understand art as a language system they could read, along with the written text. Reading the pictorial text and considering how and why Foreman used particular EA/PD allowed them to access another layer of meaning and enriched their understandings of the story.

Creating Pictorial Texts

The third graders had many opportunities in both Stacy's and Michelle's classrooms to create their own pictorial texts in response to a story they read or as an independent project. Creating their own pictorial texts provided a window through which we, as researchers, could learn if the students could apply what they were stating in discussions to their own artwork. In creating their pictorial text, the students needed to consider the meanings they wanted to represent and then decide on the particular EA/PD that would help them create that meaning. The students usually wrote reflections on their work, commenting on their process and the decisions they made related to the EA/PD. We also interviewed them sometimes to learn and understand more of their thinking processes. By the end of the study the students demonstrated deep critical thinking about their work as the following examples demonstrate.

Figure 3. Kara's picture representing "calm"

In Michelle's classroom, three months into the study, we discussed with the students different emotions and feelings and how artists might represent those. The students helped generate a list of feelings/emotions and then selected one to

illustrate. Kara chose to represent “calm”, which is shown in Figure 3. In an interview about her work, Kara explained the decisions she made:

I chose warm colors mostly...to show calm. If I was doing “happy”, the girl would be running but she’s just standing there looking at the view. I put tulips to represent it’s springtime and a little pond with a fish popping out and a lily pad. And I put pine trees and then I put little flowers on the ground...I decided on blue paper because that was like the sky...I used straight lines mostly. I really didn’t use diagonals that much... I only did straight because I wasn’t saying that everything was moving because I wanted everything to look calm. The trees are calm, the tulips are calm, the mountain is calm...I used patterns for the flowers. I used the same colors over but in different ways. And I used the clouds as patterns, the sun too. And I did a pattern of these by repeating them.

At the end of the study, Michelle and Stacy worked together to have the students illustrate and write about a picture. The students started writing, then worked on their illustration with Stacy, they wrote more with Michelle, and finally completed their illustration with Stacy. Gerald's picture is in Figure 4.

Figure 4. Gerald's picture, created in Stacy's art classroom

When writing about his picture, Gerald stated:

My picture is about a command center in Antarctica with people invading the base but, it is a center where they do experiments! They had a swat team to protect them. I used neutral colors to show people that it is a scary scene. I used diagonal lines for the mountains and airplanes. I mostly used pointy lines to! I used repeating shapes and a pattern. (I was trying to make it that scary.)

Kara's and Gerald's comments demonstrate the depth of their thought and critical thinking. Their use of lines and colors are not random but thoughtfully made for specific purposes related to the meanings they wanted to represent. We realize that another artist might make different decisions than Kara and Gerald did, given the same task. What mattered to us, however, was that the students understood that art is a means of communicating meaning; they were participating in that process

and making deliberate decisions to create their meaning, similar to the deliberate decisions they made when representing their meanings through written language (Arizpe & Styles, 2003).

What We've Learned

This study investigated how learning to read the meanings of art in pictorial texts along with reading the meanings in the written text related to third graders' understandings of stories in picturebooks. Through this study several issues have become clear to us. First, the students' understandings and use of two different sign systems, art and written language, provided them with distinct perspectives on the meaning they were constructing as they read (Kress & Van Leeuwen, 2006). The illustration did not exist only to serve as a representation of what is in the written text; it served an additional text within itself (Gomez-Reino, 1996). The students understood that art is a language that represents meaning and can be read. By learning the Elements of Art and Principles of Design, the students viewed the pictorial text as a legitimate way to represent meaning and thus had another cueing system through which to construct meaning.

Second, picturebooks, the weaving together a pictorial and written text, must be respected, valued, and read as the whole complete unit they are. To look or concentrate on only one part (i.e., written text), and not include the other (i.e., pictorial text), violates the integrity of the story. In addition, focusing on one sign system in a picturebook privileges that sign system over the other, leaving readers with the impression one is more important in telling the story than the other. The reality is, as all true picturebooks show, readers need to read both the pictorial and written texts to construct a complete understanding of the story.

Finally, talking to students about their work and thinking is critical to truly knowing what they understand. Relying solely on what students write about their own or others artwork does not provide the richness of what students know. We found that some students cannot express their thoughts fully in writing. It was through talking to the students that we often learned the richness of their thinking and the depth of their understanding.

Closing Thoughts

Through learning to read the pictorial texts in picturebooks using the EA/PD along with reading the written text, the students in this study expanded and enhanced their learning, thinking, and meaning making as readers. Visual art is often viewed as a frill or an add-on to the curriculum, a non-essential. Yet art is a universal language, a valid and essential sign system that permeates our literate world, from texts in

books and magazines to those on the internet. Understanding and valuing art is critical to being literate in the 21st century.

Message Boards: A Springboard to Literacy

Gilda Martinez

Barbara Laster

Betty Conte

Towson University, USA

Message Boards provide an opportunity for students, teachers, and parents to write (or draw) about a story from their lives on a large or small chalkboard. Oral language is then used to describe the written message during a structured circle time. (It is a variation of the traditional show and tell except that the focus is on the communication of stories through conversations and writing rather than explanations about possessions.) A teacher in a South Florida Pre-K classroom has been conducting Message Boards over the past 10 years. When the teacher was asked, “What is a Message Board?” she responded,

Message Boards are a place to communicate through words and picto-writing, which teaches communication skills. It is a springboard for language development, a bridge between home and school, and a way to collect authentic assessments. The majority of teachers of four year olds use dictation as the beginning of the writing process, modeling the writing of words, but not involving the children to this depth. In Message Boards, metacognition is involved. Students carefully think about their ideas before drawing or writing them. They begin to attach beginning sounds to letters and in time entire words are written. I'm looking for more than the mechanics of writing though. I am searching for how and what is written in the acquisition of the writing process. I review their stages of writing development for assessment purposes; but, this is deeper. It's the essence of communication and how to get the attention of an audience. It's how to involve young children in the art of discussion through asking meaningful questions. It's the progression from simple words to sentences to ideas. It's fiction versus biography. I ask, “Did it really happen? Was it a dream? Did you imagine it?” This journey has shown me that four years olds are writers!

The Pre-K students were then asked, “What is a Message Board?” The following quotes summarize what they had to say:

- “It is important.”
- “We like to share our stories.”

- “We don’t get to tell our stories at other times.”
- “It has to be real, can’t be imaginary.”

The students value Message Board time and enjoy having an opportunity to share their stories. As noted by the last student quote, Message Boards are actual stories that take place in their lives. Message Boards are not intended to be about make believe stories or imaginary friends. (The teacher wants to assist her students in separating fiction from non-fiction.)

Researchers, in collaboration with this Pre-K teacher, decided to examine the effectiveness of Message Boards on the literacy progress of her students. Through this qualitative study, this teacher and her students were observed, interviewed, and documentation of the Message Boards was collected and carefully examined to determine what student achievement, if any, was evident through Message Boards.

Student progress is noted in Figures 1 – 10.

Robb’s Oral Conversation Checklist (Robb, 2003), the 6-Trait Assessment for Beginning Writers (Northwest Regional Laboratory, 2007), and Gentry’s Developmental Spelling Stages (Gentry, 1982) were used to analyze and examine student progress in language and literacy.

The Pre-K teacher explained that it took months to get her students to speak to their peers, listen, and respond to each Message Board with respect and care. However, she believes it is well worth the effort because in her experience, student, parent, and caregiver motivation to discuss and listen to each other’s messages increases; student messages (words, pictures, writing) are valued; oral and written messages develop and lengthen over time; and, home and school communication improves. (The full study, including pictures of student message boards and their progress, will be published in the Spring 2010 *TESOL Journal*.)

Mother tongue textbooks and the acquisition/development of reading comprehension competences

Maria da Esperança Martins

University of Aveiro, Research Centre for Didactics and Technology in Teacher Training,
Research Laboratory for Education in Portuguese

1. Introduction

In a Society of knowledge such as ours, the development of verbal communicative competences is unequivocally emphasised with the purpose of assuring an improved ability to process information. In modern educational systems, it is given emphasis to citizenship through an education focused on knowledge and on the critical evaluation of social, civic, political and human dimensions. Students are supposed to become active and critical citizens capable of participating in social life.

Serious literacy problems, successively diagnosed by national and international studies on literacy, which place Portugal at the bottom of the list of OECD countries, represent an obstacle to the above mentioned education.

Aware of the vital role reading comprehension plays in academic, personal and social success, our research project is centred on the development of transversal competences in this domain. Our main issue is the identification and characterization of the way in which the act of reading is perceived within the textbooks of Portuguese as a mother tongue, adopted in Compulsory Education.

We shall attempt to determine whether current textbooks contribute towards the education of readers capable of critical thinking and, should this not be the case, to propose guidelines for the design and selection of better textbooks for the teaching/learning of Portuguese as a mother tongue.

2. Reading comprehension and construction of citizenship

Within this study, *literacy* is perceived as the ability to understand and use written information available in several printed supports (texts, documents, graphs) in daily life (social, professional and personal), with the purpose of achieving personal objectives and broadening knowledge and abilities (OECD, 2001).

Within a context of renewed perspectives of education, concerning literacy in general and reading comprehension in particular, it is urgent to design, implement and evaluate teaching/learning experiences which promote the acquisition and the development of competences in this area.

In modern society, the ability to select and evaluate sources of information is of utmost importance. Additionally, it is fundamental to possess information processing

competences which presuppose the control of reading strategies and which promote the conscientious control of interaction with written information.

The acquisition and development of linguistic and communicative competences which allow the individual to recognise different models of text organization which generate different genres of text are equally important. The purpose of these competences is to make reading and comprehension of an array of texts possible and to develop the ability to act according to the information gathered.

Within this context, one can understand that the act of reading goes beyond classroom boundaries and, therefore, School needs to be prepared to establish valid reading practices in school and extra-school contexts. Hence, it is crucial to organise school work which encourages effective reading comprehension in order that students might experience different reading situations through which they are made aware of the multiple purposes reading serves.

Moreover, it is vital to encourage reading as a leisure activity, a dimension which is often neglected. After all, the motivation for reading leads to the development and strengthening of reading habits and reading comprehension competences.

In addition, it is also essential to overcome traditional preconceptions concerning teaching/learning of reading. Quite often, the activity of reading is reduced to decoding, i.e. converting letters into sounds, perceiving comprehension as the natural outcome of this process. Due to this misconception, school has produced good text “decoders”, but bad “readers”, who experience great difficulties in understanding the texts they usually read.

The fact that school prepares individuals for life, and not for school itself, cannot be ignored. Throughout their lives, students will come across difficult texts, with significant lacks at the level of structure, creative texts and even texts which have been poorly written, and they will be required to act based on the information conveyed by those exact texts.

Therefore, learning how to read is a long-term process, starting in the first years at school and going throughout life, in formal and informal contexts, and depending on the contact with a great variety of reading situations and written texts. This process will favour the development of useful comprehension strategies, which can be transferred from school to everyday life.

An equally relevant aspect for the choice of our object of study is the importance ascribed to the role of Portuguese as a mother tongue in the acquisition and development of transversal competences which are fundamental to the growth of knowledge. The awareness of this responsibility is reflected by the leading role

occupied by the teaching/learning of Portuguese as a mother tongue in the school curriculum (Ministério da Educação, 2001).

In the light of what has been discussed, the importance and relevance of textbooks for teachers and students should be acknowledged as important didactic resources for the teaching/learning of reading comprehension and for the development of competences in this domain. Having made these considerations concerning the process of reading comprehension and its contribution in the promotion of citizenship, we shall now analyse the role of textbooks in the teaching/learning of Portuguese as a mother tongue and their part in the development of students' reading comprehension skills.

3. Mother Tongue textbooks and the development of reading comprehension competences

Modern research on Education focuses on the critical analysis of didactic resources as part of an effort directed towards the promotion of an education capable of meeting new social demands.

With regards to the teaching/learning of Portuguese as a mother tongue, the textbook chosen for this purpose is of extreme importance as it is an essential tool for the development of reading comprehension competences, essential for study and for the resolution of citizens' day-to-day problems. Additionally, this didactic resource provides access to the written patrimony constituted by Humanity's living archive of cultural, scientific and technological experience.

From the point of view of the approach adopted in our research, we wonder if the textbooks used for the teaching/learning of Portuguese as a mother tongue effectively contribute to the acquisition and development of reading comprehension competences.

3.1. Expected contribution

Within the approach chosen for the purposes of our research, the textbooks used for the teaching/learning of Portuguese as a mother tongue are perceived as important tools in the education of effective readers (Morais, 2006).

From this standpoint, the designing, selection and use of these textbooks inside and outside school should be based on the awareness of the transversal nature of the mother tongue and also on the contribution of the competences acquired through the teaching/learning of the language for the student's success at school and in social life.

The transversal competences implied in such an approach are those of reading comprehension. The attainment of such competences presupposes achieving specific reading *objectives* of an integrating and transversal character

which are crucial for success inside and outside school contexts, contributing to the education of readers who are capable of processing written information in the most varied situations.

As a pedagogical and cultural instrument, the textbook brings together a set of knowledge - not representative, in itself, transmitted and/or acquired at school - understood as being decisive to the structuring of the universe of reference within pedagogical communication.

Hence, with regard to the origin of the *contents*, the textbook should be characterised by its openness which will depend on the flexibility and diversity of the information made available. The sources mentioned should be wide-ranging and referred to in an explicit manner, so that the student/reader may, as an option, broaden his/her horizons.

The contents selected should not be exclusively associated to subject areas. The contents should ideally also include cultural aspects of a transversal nature and enhance education towards citizenship, a transversal perspective to the entire curriculum.

The *activities* proposed by the textbook, with the purpose of materialising relevant didactic *strategies*, should be diversified and provide distinct levels of complexity. These activities should consider individual and group work, which includes exploring the textbook itself, but also looking up other sources relevant to the student's education.

It is equally important to encourage students to take part in activities that involve the expansion of their knowledge and the development of attitudes, habits, rules and values which promote student's individual and social fulfilment.

The textbook should, in addition, stimulate the dialogue with learning experiences consolidated outside school. Essentially, this didactic resource should promote the student's growth as a competent reader. The activities meant to encourage the learning and development of reading comprehension competences should focus on the resolution of problems and mobilise students' experience and interests.

The activities above mentioned are expected to suggest paths to approaching reading a socio-cultural act, hence implying the ability to adapt reading strategies to the specific outlines of each socio-cultural situation.

Ideally, the activities will be directed towards comprehension and analysis instead of identification, repetition and memorisation of information. An effective development of the transversal nature of Portuguese as a mother tongue and being aware of school's social role, leads us to state that textbooks should prefer a transformational approach to knowledge instead of the reproductive approach.

Within this context, and bearing in mind the potential of a transversal approach to the teaching/learning of Portuguese as a mother tongue, the reading dimension should be approached from an interactive perspective that includes other areas foreseen in the guidelines set out by the Ministry of Education, especially concerning the aural/oral and writing areas.

The *didactic resources* available combined with other suggestions are expected to be diversified and adapted to target students' level and interests. The students and teachers who will be working with the textbook are extremely heterogeneous and the demands concerning the reader competence also reflect that heterogeneity.

Based on what has been discussed to this moment we believe that textbooks should focus on the development of reading comprehension competences, define objectives to achieve this goal, select relevant contents for the education of competent readers, by exploring didactic strategies and proposing reading activities which are meaningful to the students. In addition, textbooks should pursue general education objectives which go beyond curricular aims. Furthermore, these didactic resources should encourage students to read for leisure purposes, hence encouraging reading habits.

3.2 Real contribution

The assumptions previously presented are the core motivation of the PhD project *Textbooks and crossing of reading comprehension in Portuguese as a mother tongue: a study in compulsory education*, financed by The Foundation for Science and Technology.

Our research project has three aims:

i) to trace the profile of the competent reader within current requirements for academic success and social integration. For this purpose to be achieved, it is essential to develop general guidelines for an approach to the teaching of Portuguese as a mother tongue which promotes the development of transversal competences in reading comprehension, sustained by research on the subject and on the guidelines proposed by the Portuguese education policy for this particular area.

ii) To assess the adequacy of the textbooks selected for the teaching/learning of Portuguese as a mother tongue in Compulsory Education in order to develop transversal competences associated to reading comprehension. Due to their importance, we shall analyse some textbooks and compare their profiles with the one defined by research and by the Portuguese education policy for this area.

iii) To contribute to the definition of guidelines that encourage the designing of textbooks which pursue the development of transversal reading comprehension competences.

Our *corpus*, made up of nine recent textbooks used for the teaching/learning of Portuguese as a mother tongue, was organised according to the following selection criteria: connection to the three cycles of Basic Education (focusing on the final years), extent of influence (related with the number of schools whose preference fell on that particular textbook) and its representation of editorial trends (which implies the selection of textbooks published by several publishers with different editorial projects).

In order to carry out a textbook analysis, a grid was designed which included the principles defined by research and the guidelines proposed by the Portuguese education policy for this area. This grid has been used as a reference for the collection and interpretation of relevant data according to the aims previously defined.

In the majority of the textbooks analysed reading activities are not aligned with the reading comprehension guidelines set out by the National Curriculum for Basic Education (Ministério da Educação, 2001).

Based on the principles defined by research in this field, we conclude that the textbooks analysed do not privilege reading comprehension practices aimed to educate citizen-readers. The activities do not promote plural readings of the texts neither do they invite the readers to participate actively in the construction of meanings for those texts.

We believe that reading should always be written in the plural due to the diversity of uses and contexts which it is linked to. However, textbooks propose limited subjective interpretations of the curricula, developed by one teacher or by a small group of teachers.

The research carried out to this moment has allowed us to arrive at important conclusions concerning the fragility of the textbooks used for the teaching/learning of Portuguese as a mother tongue, namely with regards to reading comprehension.

In the case of *competences*, we were able to observe in the textbooks analysed that these privilege *specific competences* instead of *general* and *transversal competences*. This observation evinces the subjective approach to teaching/learning Portuguese as a mother tongue instead of a transversal approach.

In the case of the *objectives* which encourage the acquisition and development of competences, these are either not specified in a clear manner, or are simply omitted in most cases.

Bearing in mind students' preparation to live in society and to exercise citizenship, the relationship which is established in textbooks between competences, objectives and *contents* should privilege greater interaction. However, the central role ascribed to subject contents and the non-identification of reading strategies which students should put into practice constitute one of the main problems in the education of competent readers.

The contents of the textbooks are predominantly related to specific themes although a society of information like the one we live in requires the selection of broader contents which do not perceive knowledge as a finite process. The subject based and closed nature of the contents does not encourage transdisciplinary dimensions to be explored in the teaching/learning of Portuguese as a mother tongue, especially in what concerns reading comprehension. Additionally, it does not promote the formulation of different opinions concerning the implicit meanings conveyed by the authors of the textbooks, hence failing to encourage critical reflection and plural readings of one same reality.

The approach centred on the mere transmission of contents which still prevails in textbooks and pedagogical practices should also be replaced by a new paradigm which perceives the process of teaching/learning as the development of competences.

The noncompliance with these requirements in textbooks frequently leads to unadjusted methodologies and can be one of the causes behind the poor results obtained by Portuguese students in national and international studies concerning literacy.

Despite the recommendation for a spiral organization of contents, progressively increasing the degree of complexity, textbooks continue to rely on linear organization. The components of information and memorisation are preferred to the processual components which could contribute to the development of transversal competences.

With regards to didactic *strategies* and the *activities* associated to the textbooks, we observed that reading is at the service of purposes other than learning how to read and to develop reading comprehension. The textbook should be based on a perception of reading as a process of construction of knowledge and on the promotion of reading as pleasure. This is essential to create and build up students' reading habits.

It is also urgent to replace perceptions of formatted reading and of the formatted reader, and encourage the dialogue between the student/reader and the information in the texts. Only in this way will it be possible to develop reading comprehension practices which enhance plural readings. The textbooks analysed

reduce reading to the identification and reproduction of the authors' own ideas about their texts. Additionally, these textbooks proposed "transparent texts" which make explicit the meanings the reader is expected to extract from them, hence strongly influencing the student's interpretation activity, and reducing his/her autonomy as a reader. Instead, real texts should be privileged, encouraging plural interpretations and, in this way, promoting reading comprehension autonomy.

An experienced reader goes beyond the meanings of words and sentences, unveils what is hidden in the texts and constructs his/her own meaning. However, textbooks contribute very little to the education of such a reader. By proposing reading activities situated essentially at the level of decoding, marked by persistent operations of identification and confirmation, textbooks centre information processing essentially at the surface or at microstructure levels of the texts. Students are expected to recognise the appropriate value in the reading-comprehension which requires more global and complex operations of semantic integration, namely the reorganization of information in the texts, inference, evaluation, analysis, the mobilisation of knowledge, the justification of interpretations, among others, since they ascribe an active role to the student and encourage the dialogue between the knowledge previously acquired and the texts which he/she reads (Vieira, 2005).

The analysed textbooks lack activities which entail a deeper comprehension of the texts, namely comprehension which involves the macrostructure and superstructure levels. To achieve this purpose, there must be consistent work on the processes of inference, generalisation, construction and integration based on the optimisation of knowledge previously acquired.

Reading comprehension also implies activities which place the subject in a dialogic relationship with the texts, making them active co-constructors of meanings. The textbook has the responsibility of assisting the teacher in the choice or creation of strategies which guide the student in the use of different comprehension models in order to prepare them for the mobilisation of previous knowledge, fundamental in the acquisition of new information, a function which the textbook usually ignores.

The analysed textbooks do not guarantee the development of reading competences associated to different texts, as they are all approached much in the same way, without taking into account different objectives and reading situations.

Textbooks must account for the diversity of reading strategies. At this level, the focus goes beyond the need to contemplate textual diversity within the social arena and implies taking into account different forms of reading different texts.

With regard to *didactic resources*, an issue of primordial importance has to do with textual diversity presented by textbooks. The *corpus* analysed allowed us to

observe that literary texts prevail over non-literary texts which, due to their characteristics, are also important for the involvement of the student/reader's process of questioning the world.

The sources of information are referred to in an explicit manner, allowing the student/reader to broaden his/her horizons autonomously. Despite this fact, a greater diversity of sources would have been expected as well as a greater effort in encouraging students to explore sources other than the textbook when carrying out different tasks.

The teaching/learning of Portuguese as a mother tongue is a crossroad where different competences, objectives and contents from different areas converge. These areas should be approached from an integrative perspective, in order to promote the learning and development of essential competences which encourage interaction with the cultural patrimony of a community and the integration within that same community.

Taking into account the cultural, pedagogical and didactic potential of the textbook used to the teaching/learning of Portuguese as a mother tongue, it should not dissociate itself from this role as it has been doing.

Given the fragilities and limitations referred to in this paper and others which might, during the development of our research, appear as an outcome of the current textbook analysis, we shall attempt to provide a set of guidelines for their improvement, so that textbooks might take in the role of providing answers to the current demands of our Society of Information.

Final considerations

Reading plays a very important role in personal and social development, taking part in the process of structuring the individual's personality, academic success, along with the development of autonomy and understanding of the environment each one of us belongs to. For this reason, reading comprehension should be related to the development of transversal competences within the process of teaching/learning of one's mother tongue.

In our study, we tried to unveil the perceptions of reading as well as the reader profile conveyed by textbooks chosen for the purposes of teaching/learning Portuguese as a mother tongue and understand what is their real contribution concerning the development of reading comprehension competences in all levels of school, with a special focus on the textbooks used in Basic Education, which still corresponds to Compulsory Education.

We aimed at encouraging a discussion concerning the contribution of the textbooks selected for the purpose of teaching/learning Portuguese as a mother

tongue in the learning and development of reading comprehension, so that the education of the student/reader meets the requirements brought by the constant challenges of an active participation in society.

Learning data underlying interventions based on the reading needs of students

André C. Moreau

Martine Leclerc

Université du Québec en Outaouais

The present document describes the results of the first phase of a joint research project aimed at exploring the evolution of learning in reading ability by students from the first to the third grade in eight schools located in a Canadian minority community. The objective is a better understanding of the impact on students of the implementation of new teaching strategies based on three factors: a) teaching strategies for reading, based on the *Guide to Effective Reading Instruction* (OME, 2003), b) the use of learning data to facilitate an informed selection of literacy intervention strategies, and c) working as a professional learning community. The results and their analysis place the emphasis on the use of learning data underlying interventions centred on the reading needs of the student.

1. Context

For over five years, improvement in the achievement of student literacy of students has been one of the Ontario Ministry of Education's (OME, 2003) priorities, recognizing the fact that the reading abilities of students has a considerable influence on their quality of life and on economic and societal benefits. As a result, the Conseil scolaire de district catholique Centre-Sud (CSDCCS) sponsored a joint research project whose objective is an understanding of the improvement in the achievement of student literacy following the implementation of new teaching strategies (OME, 2003, Expert Round Table, 2005). To document the progression of literacy in students, data on learning to read was extracted from three databases: the Report Card (Trillium), Provincial Testing and Literacy Plus. Results of student achievement in reading and the challenges raised by the use of data for interventions centred on the reading needs of the student will be examined, but only after the context and a few theoretical and methodological elements have been reviewed.

2. Effective reading strategies

Since 2003, teachers in Ontario have at their disposal, the *Guide to Effective Reading Instruction*, which explains the new teaching practices and strategies to be implemented. The following elements are emphasized: a) the classroom

environment and its management, b) the four instructional approaches to reading and c) the use of learning data. Three major elements are key: fluency, comprehension and motivation. Fluency is the ability to recognize words and read text with speed, precision and expression, thus increasing its comprehension. Comprehension is the ability to extract the text's meaning, reflect upon it and come to conclusions. Reading motivation is associated to a range of attitudes associated to the student's commitment to completing reading activities.

The guide draws upon the results of research demonstrating that alphabetic reading associates a phonemic auditory component to a graphic visual component that take into account the phonemic structure of the language: the authors recognize the very strong associations between the performances of students in phonemic-related tasks and their progress in learning to read (OME, 2003). Nonetheless, the authors insist on the existence of a continuum of the phonemic conscience, the graphophonetic system and the study of words. Consequently, numerous associated strategies are concretely explained and abundantly illustrated. Problem resolution in reading occupies a central place and a student must attain the ability to use together the three systems of cues: graphophonetic, semantic and syntactic. For example, the four approaches to reading, as further described, allow for the methodical and integrated teaching of the structure of the written language and promote continuous learning. These four approaches are: reading aloud to students, shared reading, guided reading and independent reading (OME, 2003; Leclerc & Moreau 2008; Expert Panel on Early Reading, 2003).

3. Data to improve learning

For students, improvements to their reading ability is measured by the capability to read increasingly difficult text in a satisfactory manner. The student/reader will progressively develop new strategies to meet increases in the difficulty of the text (Clay, 2003). In order for learning to occur, it is imperative that the level of difficulty of texts given to students, present a challenge that will stimulate them to read further. The level of difficulty must be targeted correctly since too high an obstacle may discourage the student from reading more frequently. The longer a student remains in a state of failure, the more difficult it will be to solve the problem.

Using this fact as a starting point, teachers must understand and factor in the concept of "zone of proximal development", which has a key role in learning to read (Vygotsky, 1980). This is the zone within which a student can solve, with some help, a problem that he/she could not have solve alone. An intervention made within this zone is called scaffolding. To be able to work in this zone, the teacher must carefully choose the level of difficulty of texts given to students. The level of difficulty

of the text must not be based on intuition, but on observation data that will allow appropriate interventions. The following section describes the data collection tools used by teachers for planning interventions based on student needs.

4. Standardized tools for pedagogical discussions on student needs

In the wake of the implementation of new teaching strategies, the school board (CSDCCS) requires its teachers to evaluate student progress frequently, in order to determine which interventions are most appropriate. Standardized tools such as the individual observation grid (Clay, 2003) and tools from the Reading Assessment Kit UK+ (Nelley et Smith, 2003) are crucial elements for an effective program of analysis and examination of learning to read strategies. These tools will bring forward points of convergence and divergence between the students. They are helpful in identifying differences and help to ensure the availability of concrete means that will allow all students to progress.

Within the framework of this research project, teachers have at their disposal, the Literacy Plus software. This technology tool allows for an effective management of data and facilitates, for example, the processing of the data and the visualization of the progress of the student, the class, the level and the school. This database clearly shows the priority learning elements that must be addressed immediately. The software promotes further examination of results obtained, such as:

What are these students currently capable of achieving, in terms of reading?

What reading abilities are required to reach the next level of reading?

Can we identify students, who are at risk or having difficulty?

What can we do differently that will allow this student to progress?

5. Results: Improvement in the achievement of student reading

There are 664 students from grade one to grade three (2007-08 school year) included within the scope of this research project. Recall that the three available data sources that enable the determination of reading levels for this study are a) the Trillium database (levels given on the Report Card), b) the EQAO Provincial Testing and c) the Literacy Plus database. Only grade three students have results from all three measurements for reading achievement.

5.1 Convergence between the three measurements for reading achievement

The purpose of the correlation analysis is the determination of the relationship between the three measurements previously identified for grade three students

during the 2007-08 school year. The analysis allows us to determine the degree of convergence of the measurements for reading achievement.

- **Relationship between the three measurements of reading achievement**

Correlation analysis of the measurements of reading achievement demonstrate that there exists a significant relationship between the reading measurements given in the Report Card and those in Literacy Plus (n = 163, r = 0.543, p = 0.000 significant at < 0.01). The analysis also shows a somewhat weaker degree of relationship between the two other measurements of reading achievement, that is, the convergence between the reading measurements given in the Report Card and those from the Provincial Testing (n = 216, r = 0.475, p = 0.000 significant at < 0.01) and, also, the convergence between the reading measurements of the Provincial Testing and those found in Literacy Plus (n = 161, r = 0.458, p = 0.000 significant at < 0.01). Table 1 following presents this data.

Table 1. Relationships between the three measurements of reading achievement levels of grade three students

Variables	N=	Pearson R	P Value
Reading achievement (Report Card) and reading level (Literacy Plus)	163	.543*	0.000
Reading achievement (Report Card) and in Provincial Testing	216	.475*	0.000
Reading Achievement in Provincial Testing and reading achievement (Literacy Plus)	161	.458*	0.000

* The correlation is significant at a level <0,01 (bilateral)

The correlation analysis demonstrates a strong relationship between the three measurements of reading achievement levels. This supports the hypothesis that a level observed from one of the three measurements can be used to estimate the levels that students will obtain from the other two tests. In fact, the three tests are evaluating the same phenomena. This conclusion infers a convergence relationship and not a causal relationship.

- **Link between literacy skills: Reading-Writing**

The correlation analysis also demonstrates a significant relationship between the three measurements for reading achievement level and the measurement for writing achievement level measured in Provincial Testing (EQOA). The analysis demonstrates a) the relationship between the reading and writing measurements taken from Provincial Testing (EQOA) (n = 213, r = .543, significant at < 0.01), b) the relationship between the reading measurement found on the Report Card and the writing measurement taken from Provincial Testing (n = 213, r = .494, significant at

< 0.01) and, c) the reading measurement from Literacy Plus and the writing measurement taken from the Provincial Testing (n = 159, r = .496, significant at < 0.01). Table 2 following presents these results.

Table 2. Relationships between measurements for reading achievement and writing achievement from the Provincial Testing of grade three students

Variables	N=	Pearson R	P Value
Reading level from the Provincial Testing and writing level	213	.543*	0.000
Reading level (Literacy Plus) and writing level	159	.496*	0.000
Reading ability (Report Card) et writing level (EQAO)	213	.494*	0.000

This analysis clearly shows the relationships between the measurements of reading achievement and the writing results taken from Provincial Testing. The relationships appear to confirm the hypothesis that there are common learning processes for reading and for writing (Moreau & Leclerc, 2009; Saint-Laurent, 2008). This idea may have pedagogical implications when planning learning activities for reading and writing. As an example, consider the importance of writing activities that support learning how to read, such as the outline of a text that promotes the study of its structure and improves reading comprehension.

5.2 Description of reading achievement

A descriptive analysis will establish the average scores in reading achievement obtained from Provincial Testing, the Report Card and Literacy Plus. The analysis will attempt to answer the following questions: a) What is the level of the reading skills of students by the number of years of education? and b) Which students are successful and which one are at risk?

• Reading achievement as shown by the three measurements

For grade three students from the eight participating schools (2007-08), the average level of reading achievement was 2.87 (n = 219) in the Report Card (Trillium), 3.18 (n = 216) in Provincial Testing (EQAO) and 23.08 (n =163) in Literacy Plus.

Table 3. Reading achievement as shown in the three databases, by the years of education

	3 rd year of education 2007-08 (3 rd step)			2 nd year of education 2006-07 (3 rd step)			1 st year of education 2005-06 (3 rd step)		
	N ¹	Average	Stand. Dev.	N	Average	Stand. Dev.	N	Average	Stand. Dev.
Trillium	219	2.87*	0.707	220	2.88		200	3.09	
EQAO	216	3.18*	0.737	Missing data			Missing data		
Literacy Plus	163	23.08**	6.313	17	20.71	6.2	15	12.53	5.998

¹ The number varies according to the data availability for each of the steps, with the missing data excluded

*Recall that the scale for reading achievement goes from 1 to 4.

** The achievement contained in the Literacy Plus database corresponds to a reading level with a scale of 1 to 30.

When they were in grade 2, these same students had a reading achievement level of 2.88 (n = 220) in the Report Card and 20.71 (n = 17) in Literacy Plus. Again, when these same students were in grade 1, they scored a reading achievement level of 3.09 (n = 200) in the Report Card and 12.53 (n = 15) in Literacy Plus. Table 3 above provides the average reading achievement, the number of participants and the standard deviation.

- **Students who are successful and those at risk**

By knowing the number of students for each reading achievement in Literacy Plus, it is possible to calculate the percentage of students in each of its 30 reading levels. Figure 1 illustrates the results. The average reading level of grade 3 students of the participating schools is 23.08 for the 2007-08 school years.

Figure 1. Percentage of grade 3 students by Literacy Plus reading level for the 2007-08 school year

The results of grade 3 students on the Report Card and those from the EQAO compared to those from Literacy Plus give us a better insight of the situation. The comparison shows that students at risk, that is, students that did not reach the standard (levels 1 and 2) on the Report Card or in Provincial Testing, have a Literacy Plus level equal to or less than 21. Students with a Literacy Plus reading level of 22 or more had a level 3 or 4 on the Report Card or in the Provincial Test; these students meet or exceed the standard (see Figure 1).

5.3 Learning Progression by years of education

An analysis of the learning progression of the same student sample (*ex post facto* data) provides an answer to the following two questions: a) What are the changes found in the reading achievement of grade 3 students (2007-08) compared to the reading achievements of the same students during the two previous school years (2006-07 and 2005-06)?, and b) What are the levels of reading achievement of students at risk and those not considered at risk?

- **Changes in reading achievement as found in the reading level of Literacy Plus**

To answer the first question, the *t* Test with a 0.05 level of significance was used to evaluate changes in reading achievement. There is a significant difference (<0.05) between the reading levels when measured at different times (see Table 4).

Table 4. Comparisons between repeated measurements of reading achievement from Literacy Plus for grade 3 students (2007-08) and the reading achievement of the same students in the two previous years (2006-07 and 2005-06)

Year of Education	Step	N ¹	Average	<i>t</i> Test	P Value	<0.05 =*
Grade 3 2007-08	3	105	23.00	10.37	.000	*
	2	105	20.66			
	2	56	23.73	9.07	.000	*
Grade 2 2006-07	1	56	21.45	1.69	.000	*
	3	18	22.00			
	2	18	18.72	7.12	.000	*
Grade 1 2005-06	1	12	13.67	7.97	.000	*
	3	18	12.00			
	2	2	3.50	Missing data		
	1	2	2.00			

¹The number varies according to the data availability for each of the steps, with the missing data excluded.

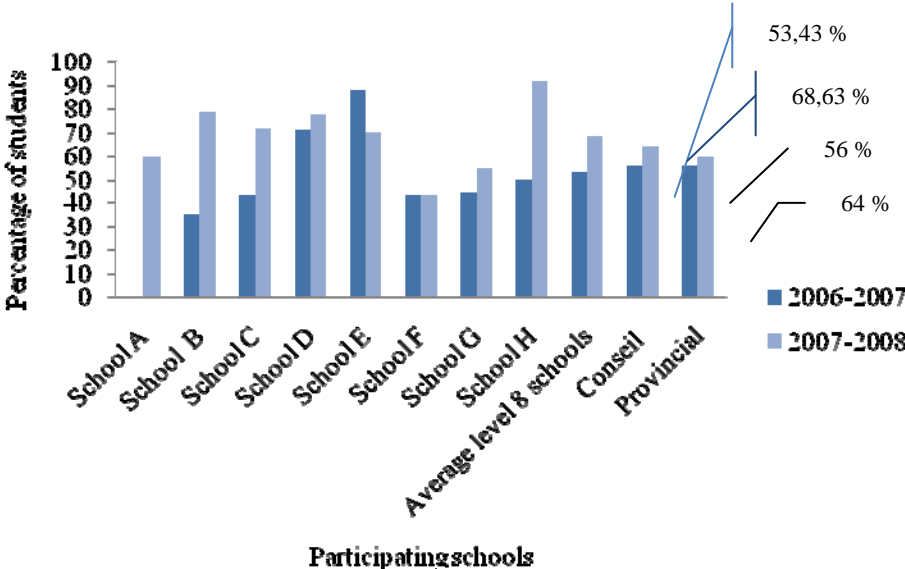

In short, grade 3 students demonstrated a progression in reading achievement when going from step to step in 2007-08 school year. These same students, which had an evaluation entered into Literacy Plus during the two previous years (2005-06 and 2006-07), also demonstrated a significant progression in reading achievement from one step to the next.

- **Reading achievement results from Provincial Testing**

A further analysis of the results from Provincial Testing of the grade 3 students for the 2006-07 and 2007-08 school years, reveals that in six of the eight participating schools, more students met or exceeded the standard. Globally, for the eight participating schools, the results suggest an increase of 15.2 %, between 2006-07 (53.43 %) and 2007-08 (68.63 %), of students meeting or exceeding the provincial standard (EQAO, 2007-08). This is a significant change. Figure 2 below illustrates

the range of the percentage of students meeting or exceeding the standard for reading achievement in Provincial Testing for each of the schools participating in this project as well as the global percentages for the school board.

Figure 2. Change in the percentage of students meeting or exceeding Provincial Testing standard (levels 3 and 4) in grade 3 between 2006-07 and 2007-08

A further look at the range of proportion of grade 3 students by Provincial Testing reading level (n = 216), indicates that 4.6 % were at level 1, 25% at level 2, 54.25 % at level 3 and 12.5 % at level 4. This range of the proportion of students at each of the reading levels can be compared to the one for the school board (n = 1 054)¹. The proportion of students from the school board obtaining level 1 was 4 %, 29 % were at level 2, 49 % were at level 3 and 14 % at level 4.

A notable detail can be inferred from these results. Firstly, the range of percentages indicates a gap of 5.25 % between the percentage for students from schools participating in this project with a level 3 (54.25 %) and the percentage for the board (49 %). A second observed difference is a gap of 4 % for students with level 2, that is 25 % of students from participating schools have level 2 compared to 29 % for the school board. With these differences between the various percentages, one can see that more students meet the standard, level 3, and fewer students obtain level 2. In short, the comparison alludes to the fact that fewer students from the eight participating schools fail to meet the standard, with more of them having met the success criteria for reading achievement.

¹ Education Quality and Accountability Office (EQAO) (September 2008). *Rapport du Conseil scolaire CSDC Centre-Sud (67318)*[Report from the CSDC Centre-Sud School Board (67318)], Ontario: EQOA. Consulted June 22, 2009 at www.oqre.on.ca

- **Comparisons between repeated measurements of reading achievement for student at risk and those not at risk**

Analysis of three measurements of reading achievement in Literacy Plus, repeated during the 2007-08 school year indicates that grade 3 at risk students (n = 35) had an average score in reading of 16.14 at the third step, of 13.2 at the second step and of 13.17 at the first step while students not at risk (n = 70) had an average score in reading of 26.29 at the third step, of 24.39 at the second step and of 24.76 at the first step. The differences between the reading scores for the three steps of the year are significant. Figure 5 above shows the results of the *t* test analysis.

Table 5. Comparisons between repeated measurements of reading achievement in Literacy Plus for grade 3 students at risk and those not at risk (2007-08)

Year of Education	Student Group	Step	N ¹	Average	<i>t</i> Test	P Value	<0.05 =*			
Grade 3 2007-08	Students at risk	3	35	16.14	9.195	.000	*			
		2	35	13.20						
			3	18	17.56	6.529	.000	*		
			1	18	13.17					
	Students not at risk	3	70	26.29	5.702	.000	*			
		2	70	24.39						
		3	58	27.74				7.82	.000	*
		1	58	24.76						

¹The number varies according to the data availability for each of the steps, with the missing data excluded.

In short, the analysis of the reading scores for students classified at risk and for students not at risk demonstrates that both groups had a significant improvement in their reading achievement. In summary, both groups benefited from interventions made in the context of a balanced reading program.

6. What's important?

Data analysis of the reading scores of the students from the eight participating schools showed positive benefits flowing from the measures supporting the reading program. Grade 3 students showed an improvement in their learning from one step to the next during 2007-08. These same students, whose reading assessment was recorded in Literacy Plus in the two preceding years (2005-06 and 2006-07), also showed a significant improvement of their reading skills.

Analysis of the three successive measurements of reading achievement in Literacy Plus for the 2007-08 school year, indicates a significant difference between the achievement in reading from one step to the next for both students at risk and those not at risk. That is, both groups benefited from interventions based on a balanced reading program.

Analysis of the of EQAO results for the 2007-08 school year suggests that there are fewer students below the standard when compared to the previous year for the eight participating schools with a concomitant rise in the number of students meeting or exceeding Provincial Testing standard in reading. Therefore, there are fewer students at risk from one year to the next.

Cross-analysis of the three measurements of reading achievement for grade 3 students also suggests that students meeting or exceeding the standard on the Report Card or in Provincial Testing had a level of 22 or better in Literacy Plus. These students accordingly are very likely to succeed in reading. The benefits to the progression in reading achievement for the students from the eight participating schools, illustrates the important changes seen in the students.

7. Challenges

At the end of the first phase of the research project, some challenges were identified that would support teachers in implementing learning data collection practices, leading to student-centred interventions. Three challenges must be met in many schools.

First challenge: all teachers must learn and be in command of, the conventions pertaining to individual observation grids

Conventions must be respected if the information from individual observation grids is to be credible. At the beginning of the experience, teachers generally had difficulty in mastering the conventions. It is essential that teachers be well trained in this matter. Six different teachers, taking notes and evaluating students with the same tool, must reach identical results. Furthermore, when a teacher reads the notes made by another teacher, he or she must be able to understand what the student actually did (Clay, 2003). When the data is incomplete, for example, if a teacher uses the observation records to only determine the student's reading skill without checking comprehension, or if the interveners do not agree on conventions, then the results can only be approximations. Approximations can provide a false picture of the student's progression. In addition, such results lack the information required to develop a solid teaching strategy, for example, systems of cues prioritized or neglected by the student. The assistance of an expert resource must be available to teachers lacking in confidence or experience; the school must implement a culture of collective learning and of dissemination of expertise. The means to develop collectively a proficiency in the use of these conventions must be created, as well as collaborative meetings.

Second challenge: critical analysis and reliable interpretation of results

The teaching staff from a school that has data but does not use it, misses out on the advantages tied to the data collection. The data must be used to deliberate upon, for example, the strategic activities mastered by students when reading text and the activities that are problematic. In this way, a teacher does not waste time teaching notions already mastered by the student. The data can also be used to detect elements that appear problematic, especially for students at risk.

Third challenge: Reinvesting in teaching

Summarizing the results of observation surveys or individual observation grids is an incomplete course of action if the teacher does not use the information to guide his or her intervention choices in order to meet student needs. Teaching staff will find the best solutions to this type of deliberation by working in collaborative teams. Actions will bear fruit when teachers establish a solid level of cooperation, show perseverance in all their efforts and in a steadiness in their interventions from one school year to the next.

Evaluation tools must be made available to ensure that interventions systematically respond to student needs. Still, it is important to know how to use them effectively in order to improve learning.

Conclusion

This document presents the results of the achievements in reading by students from grades 1 to 3 who have benefited from an effective instructional reading program, where the teaching staff use learning data to steer their interventions to meet students' needs. The results reveal the challenges to the implementation of these practices in schools.

As a result of this research, teachers are able to identify, using the grids generated by Literacy Plus, the strategies and approaches that have not been mastered. They can then adapt their teaching practices, relating these to priority interventions and targeting students at risk. They are strategic in their teaching as a result of data analysis: they choose a specific challenge and attempt to clarify and surpass the challenge before moving on to the next one. Learning data also allowed for better tracking from one school year to the next: teachers at a given level share their learning data on students and discuss with staff that will be the students' teachers the following year. Analysis of learning data ensures that there are progressively fewer students with persistent reading difficulties because teachers know on what difficulty to concentrate. Fewer and fewer students remain at the first level: teachers weigh various means to ensure progress.

Implementing effective strategies to improve student success in literacy is surely one of the most critical challenges facing schools today. This research will support schools in this approach to change.

VISUALISING EUROPE: Visual Literacy and Intercultural European Education *

Margarida Morgado

Instituto Politécnico de Castelo Branco, Portugal

Introduction

This poster introduces a European funded Project, **VISUALISING EUROPE: Visual Literacy and Intercultural European Education**. The VISUALISING EUROPE project is a three-year Comenius 2.1. Socrates EU-funded project for the 2005-2008 period on visual literacy and intercultural education for European teachers of primary school (6 to 12 year-olds). The project offers teachers methodological suggestions and two Pupils' Workbooks to develop *intercultural education* through *visual literacy*. The project is coordinated by Margarida Morgado of the Escola Superior de Educação do Instituto Politécnico de Castelo Branco, Portugal, and jointly developed by colleagues from 5 European countries: Milena Blazic from Slovenia (University of Ljubljana), Milos Ondras from Slovakia (Pedagogická Fakulta Univerzity Komenského), Kay Livingston from Scotland, UK (University of Glasgow), and Juan Tembra from Spain (High School Colexio Seminario Menor da Asunción).

This three-year project, developed between 2005 and 2008, examines children's and educators' practices of looking at pictures in the five European countries mentioned above and builds from their expertise and practice to construct materials for integrated learning of visual literacy and intercultural education. It further engages with understanding how looking is culturally conditioned by habit and custom, preferred ways of seeing and that which people already know. This impacts on intercultural education since the inclusion of multicultural material (pictures) raises the broad question whether, as **educators, we really reflect on the books and the pictures we are using to teach our children about their own culture and that of others?** The issues raised by the *Visualising Europe* project thus address, on the one hand, a set of questions related to how children and educators read/ understand pictures and visual information, whether there are differences between children and educators and whether practices of looking are the same when we show the same picture in five different countries/cultures. Results highlight that looking is heavily influenced by the lookers' experience and habit and that European cultures have not only quite different traditions of looking at pictures, but have also developed differentiated practices in schools. On the other hand, the

* This research is funded by the European Union Socrates/ Comenius programme

project offers a methodological framework that intertwines the aims of intercultural education with those of developing the visual literacy needed by children and educators to operate in increasingly more multimedia and multimodal environments. The project highlights that through pictures – as selected from picture story books and other material connected to reading, book exhibitions and using visual narrative – children and educators may be invited to develop the skills and the attitudes needed to promote intercultural education while developing visual literacy skills.

Methodology & Materials

The project partners thus initiated their research with a small-scale survey on how children and educators look at pictures from international picture books. Three sets of age-appropriate pictures, from different cultural and linguistic (European) origins were chosen and shown to small groups of children in the five countries, who were asked to answer some questions. Educators in these countries were also shown pictures from an art picture book and asked to answer some questions on the pictures. The results of this small-scale survey, published as *Visual Literacy and Intercultural European Education: European Children and Educators look at Pictures. Report for the Visualising Europe Comenius Project 2005-2008* (Morgado et alii, 2009), confirmed initial assumptions of partners on what they intuitively and experientially sensed were the main topics to be covered by this project on the promotion of visual literacy within an intercultural education framework, namely that,

- Teachers, student teachers, teacher educators and librarians are more verbally oriented while children are more visually oriented.
- Teachers, student teachers, teacher educators and librarians, as well as children, lack a vocabulary and a grammar to describe the visual.
- Trends in education are more visually and child-oriented and give rise to a gap between teachers and children in terms of the value ascribed to the visual and the competence to analyse the visual.
- The role of the visual in formal education and teacher education generates fear and rejection in teachers and student teachers.
- The transition from writing-based learning to visual-based learning (and multiliteracies) constitutes a difficult competence area for teachers and educators in general.

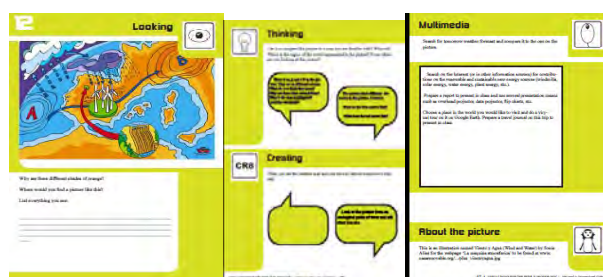

Based on this survey and in close collaboration with teachers in schools, the project partners (researchers in cultural studies and in children's literature, teacher educators, and primary school teachers) developed two Pupils' Workbooks (one for 6 to 9 year-olds and the other for 9 to 12 year-olds) in 3 languages, English, Spanish

and Portuguese, for the integrated development of intercultural education and visual literacy.

The workbooks contain 15 units each, arranged into 3 sections: Home to School, Communities, and National to International Culture. They include pictures from picture books and visual artefacts related to reading, book exhibitions and the use of visual narrative from the five partner countries' cultures involved in the project.

They are organised as seen below:

Sample of a Unit

When tested in schools in teacher education sessions in two Portuguese schools, in Castelo Branco and Tortosendo, and in one Scottish school in Glasgow, the teachers welcomed the materials, indicated that they were important for their further education and were willing to test them in class with pupils after the teacher education sessions.

They also highlighted the need for some theoretical and background information to use the Pupils' Workbooks, that should be published side by side with the Pupils' Workbooks. This was compiled in the *Teacher's Guides 1 and 2* (Morgado et alii 2009), in English and Portuguese. These guides contain an introduction to the concepts of visual literacy and intercultural education as used in the workbooks, and how they can be combined together; a chapter on the thematic framework of the two workbooks; a chapter on the visual literacy and intercultural education aims as common methodological framework; a chapter that explains how to look at visual texts to promote visual literacy and intercultural education; a chapter with an overview of units in each Pupil's Workbook which indicates the aims of each unit, offers a 'reading' of the visual text in terms of its salient visual and intercultural features, and offers a summary of teaching points and information on the visual text's source (as seen below). The last chapter of the

Guides offers tables for quick reference on how each unit relates to visual literacy and intercultural education, and curricular topics.

Unit 12

Aims of the Unit

For visual literacy:

- Interpret visual charts (shapes, lines, designs, perspectives, frames);
- Analyse the role of visual elements and colour schemes.

For intercultural education:

- Compare similarities and differences on map representations;
- Learn to look from new perspectives;
- Learn about sustainable development.

Visual Text Analysis – Special Features

The visual text represents a diagram prepared for children on the influences of weather on air and water currents on the westernmost part of Europe. The diagram does not make use of the traditional two-dimensional perspective of common maps. It offers the child a view of the Earth seen from above, as if from a satellite. However, the visual representation uses graphical and geometrical symbols. On the one hand there are arrows that indicate the circulation of water, the movement of clouds and the air stream circulation (the blue arrows). On the other hand another arrow (the red) is used to highlight in detail a part of the process: it enlarges a given dot on the map into a water-clock. The dots play an important role in dividing Earth from Sea, and in signalling the deeper from the shallower waters in the sea or land that is at sea level from land above sea level (not as an accurate representation). The lines can also be used differently when they are used as symbols for the same level of high and low pressure (isobars) around the A (High pressure centre) and B (Low pressure centre). These meanings are reinforced through colours, too. The colours go from darker to lighter shades of blue and from yellow to brown and they are used conventionally: blue for the sea and yellow-brown for the earth- dark blue for cold and yellow-brown for hot.

From the intercultural point of view, the natural process is represented as very important for humanity and it is not constrained by any political divisions on the map. It is represented as operating over this part of the world, without considering man-made borders. This emphasises the need for cooperation in regard to the preservation of nature. The latter is also represented through the alternative energy sources (water and wind energies).

Summary of Teaching Ideas

Understanding of the use of visual techniques to convey scientific information.
 Developing children's creativity through analysis of the uses of text and image.
 Learning about respect for nature as a way to respect oneself and others.

Book Summary or Contextual information on Visual Text

This is a visual diagram named 'Wind y Agua 'Wind and Water' by Susa Aina for the webpage 'La cultura ambiental' to be found at www.susainnovable.org/ / /la_cultura ambiental .jpg. A visual diagram helps you understand complex natural processes through images. The visual text is part of a so-called 'energy story' (La ruta de la energía), an instance of the

Sample of visual and intercultural information on a unit of the Pupils' Workbooks

Further information on the VISUALISING EUROPE project materials can be found on the webpage of the project at <http://ve.ese.ipcb.pt>. This website contains brief information on the concepts of visual literacy and intercultural education as used in the project. It has the European educational context in mind and includes sample units of the published materials. There is also a bulletin with a quick overview of the project that can be downloaded from the website.

A Brief Highlight of the Theoretical Framework

What is looking?

Looking and thinking about a visual text requires not only a recognition of what is represented (the natural subject matter), but also a comprehension of symbolical content, type and function of visual text, as well as the cultural contexts of its production and consumption. It also requires the use of words to translate visual meanings. For it is not always easy to understand what a visual text communicates to us as particularly significant if there are no words to tell us what might be worth paying attention to. 'Visual literacy' is also about interpreting visual information in verbal terms (Nodelman 1988:211).

Conversely, it is difficult to talk about a visual text (especially for children) if they cannot read it for narrative meaning, as they do, for instance, in picture story books, where they combine what the text says with what pictures convey.

The theoretical framework of the Pupils' Workbooks not only uses the insights of Nikolayeva & Scott (2001), Nikolajeva (2005) and Nodelman (1988) on how to understand pictures in picture books, but also makes extensive use of other scholarly work on picture story books by Arizpe & Styles (2003) and especially by Lewis (2001). In *Reading Contemporary Picturebooks. Picturing Text* (2001), Lewis offers a theory for reading picture books that the *Visualising Europe* project adapted for its understanding of visual images (pictures) in the context of intercultural education. Lewis concerns himself with how a visual text acquires meaning and makes the very valuable point, (based on his observations on how children engage with picture books), that children do not often pay attention to the visual details on the page unless there is some difficulty in producing meaningful interpretation. It is the discordant element or the difficult visual clue that will motivate the looker into exploring visual details. This is important data for the choice of visual texts to include in the Pupils' Workbooks because it sustains the claim that pictures from diverse cultural contexts will probably offer greater motivation for close looking because they will raise some difficulties in meaning making.

Lewis further highlights four ways in which people generally acquire meaning: through meaning that is immediately apparent, meaning as use, meaning as custom and meaning as rule following. These four ways of meaning making gave rise in the project's methodological framework to a set of four questions to be asked in relation to each picture:

- **What do you see?**
- **What does it mean?**
- **What can you use it for?**
- **How could you look at it differently?**

The first contact with the visual text is about 'meaning that is immediately apparent' for it asks 'what do you see?' It calls attention to the things represented in the visual image. Viewers in the Pupils' Workbooks are first invited to make sense of the visual text through looking closely at its overall sense and of its parts through that which is represented and that they can recognize. This depends from the arrangement of lines, colour, design, etc. that make up the visual text, but also depends on the looker's cultural acquaintance with particular organizations of space, such as the particular representation of a school playground, 'home', the countryside or the city. The Workbook activities also invite children's opinions as their own specific ways of

meaning making: it is perfectly natural for adults and children to see things differently and to express different opinions on what they see. This highlights the inherent connections between intercultural education and visual literacy since you can only see what you already know. That which you do not know remains invisible till attention is called to it, or remains puzzling till someone offers interpretation.

However, meaning goes beyond the things represented, for it is also ‘meaning as use’. A visual text also acquires meaning according to the various purposes it serves. For example, a visual image may be used for ends that are not the ones for which it was originally intended, like some of the visual texts of the workbooks that are covers of books or posters. They are now part of a unit in a school workbook and thus will serve a different purpose from the one they serve when they are hung on a wall in public space to announce an exhibition. As Lewis claims, ‘visual images acquire and possess meaning for us in terms of how we use them’. In pedagogical terms, teachers are familiar with the notion that the same visual text can be used to prompt a narrative, can be the starting point for writing a story in a different language, or may be the counterpoint narrative of written narrative in a picture book. The same visual codes may be used for different functions. The representation of a green park may be used to evoke feelings of pleasurable outdoor activities or to introduce the topic of not talking to strangers in public spaces. Many of the activities proposed in the Workbooks invite children to use the visual text in different ways and to realize how its meanings may alter according to different uses. This is important as preparation to understand the picture in context and to call attention to cultural context and the cultural conditions a certain object (the image) functions in.

‘Meaning making as custom’, which is the third process of meaning making highlighted by Lewis, concerns the production of meaning through the influence of routines and patterns, such as preferred and routine ways of looking at, and speaking about, visual texts. These may have been acquired at school and/or at home: children already bring them to school, for example, from their own cultural contexts: some will be skilled in reading images from picture books, others more skilled in reading pictures in animated films. They have particular ways of looking, highlighting, speaking, and exchanging information about a visual text. They also implicitly acquired notions on how to react to a visual text, of what may be acceptable or not acceptable to include in a book for their age span and to say or comment. Because the workbooks were put together by educators from several cultural contexts, it soon became evident that looking is culturally conditioned and that children should be invited to negotiate their routines of looking. The Workbooks provide a guided focus for children’s attention, understanding and interpretation, that is meant not to become a new routine for looking at a visual text, but an attention

call to particular ways of looking that may eventually be challenged by questions, new perspectives or alternative protocols of looking. Thinking about what you saw in the first place may lead you into reconsidering first assumptions and interpretations you took for granted at first sight. The Workbooks further encourage collaborative discussion of what children see in order to facilitate comparison and negotiation of points of view.

The fourth process of meaning making described by Lewis concerns meanings that depend on rule-following in the sense that they are part of conventions and cultural practices. Looking at a visual text may be compared to being inducted into a (new) cultural practice and as such these Workbooks invite children to look more carefully and question possible ways of seeing.

In sum, the cultural practice of looking is methodologically subdivided in the Workbooks into 5 parts: look (1) – think (2) – see (3) – research (4) - learn about the author (5) as part of a process to enhance and deepen the understanding of a visual text or picture. The children are invited to look; to think about what you are seeing; reflect on how they could use it differently and for their own purposes; go on the internet to do some research connected to the visual text in order to use it in a different way or relate it to some study topic; and finally learn about the cultural context of the author of the picture, where s/he comes from, the picture book the picture was taken from, the cultural context that might throw some light on the production and consumption of that particular visual text.

In this theoretical framework to look at a visual text is a *cultural practice* in which the production, the consumption and the beliefs and meanings that viewers associate to a particular visual text are important as a means to make sense and ‘construct’ a particular representation of the world through visual and verbal modes of communication. The viewer is a child in this case, but s/he is an active partner in the creation of meaning because s/he is invited to fill the gaps of what s/he sees with her/his own experience.

The image below describes the network of associated activities connected to looking at a picture, as used by the project VISUALISING EUROPE. The diagram is based on a similar one by Agra (2001) on the process of learning to do art.

Figure 2 - Network of activities

Each knot in this network may be useful to access a visual text, but to look comprises them all: imagining, wondering, connecting it to your own experience, experiment with possible meanings in order to understand it; express opinions through dialogue, talking about it, discover hidden meanings, think about possible meanings, learn about the world...

Intercultural Education

Intercultural education in the VISUALISING EUROPE project is understood as education based on the negotiation of multiple cultures, languages, (visual) texts and inter-texts, the local and the global. The stress is put on the idea of negotiation rather than on the notion of diversity and multiple cultures, because it is the understanding of a different culture through one of its artifacts (a picture) that the project seeks to promote. Now, the look onto a different culture may, and generally is, superficial and based on stereotypes because framed by a particular cultural point of view and a set of assumptions that are most of the times unconsciously accepted and taken for granted. To overcome this superficial and stereotypical image of the other culture, it is necessary to engage in deep and meaningful ways with the other culture, and go through an experience of de-centering and de-construction of one's own assumptions.

The basic concept of the Visualising Europe project is to use the visual texts selected from the 5 European countries to promote this intercultural sensitiveness. In the context of intercultural education that we wish to promote, a visual text is always also a cultural text, i.e., it conveys information about a way of organizing life. We assume that seeing is never neutral or transparent because people always look from a particular cultural standpoint. As John Berger (1972) claims, we can only see what we already know. Besides, any visual text is always a partial point of view into reality. Although a visual text may be interpreted personally by readers/viewers, it is always also part of a larger (educational discourse) and of an established symbolic system (a worldview, a language, a culture).

Thus, intercultural education and visual literacy may be combined to promote valuable learning, namely that ways of seeing are not spontaneous, but learnt. Despite the common sense idea that anybody can understand images, it is not so. Anybody can give examples of situations in contemporary life where it became extremely difficult to ascribe sense to images and icons when no words were employed in combination. Images and visual texts have a grammar of their own, that has been learnt, as demonstrated by Kress and van Leeuwen (1996), as well as a tradition of use that requires study and analysis.

Within each cultural context there will be preferred ways of representing reality and contemporary living, cultural references and traditions of representation that will be difficult to understand from the standpoint of a different culture. Therefore, it is important to shape one's practices of looking into seeing beyond the stereotypical, the binary opposition, the simplification, the regularity and the expected, into the details, the discriminated interpretation, the personal and critical engagement, and the sensitiveness to the world's manifold representations.

For example, it is important for intercultural education to develop the ability to interpret and relate: this can be done through exploring similarities and differences of pictures to viewer's experience. Although similarities are easy to accept because they confirm own identities, differences can sometimes be hard to accept in a positive way, i.e. as an alternative way of doing things as legitimate as one's own.

A further skill for intercultural education is that of being able to evaluate critically attitudes and practices, which some authors will describe as promoting tolerance. However, it is important to understand that tolerance of that which is different does not imply becoming prey of a void relativism. Tolerance is different from acceptance. It implies, however, the will to understand that which is different with civility and respect. The development of this skill also determines the will to adopt a different point of view, which means that students will have to be prepared to accept other cultures to be as valid ways of making things, thinking, and acting as their own.

Early confrontation with cultures through visual texts that represent realities that are different from the viewer's own can provide an awareness of anti-discriminatory processes. The meta-cognitive strategy of self-reflection will be developed through contact with diversity, especially when combined with the acquisition of new knowledge that promotes the de-centering of dominant social constructions, willingness to engage with and integrate different cultures.

Methodological Framework

The several pictures selected for the *Pupils' Workbooks* concentrate on the representation of particular aspects of the reality of European children: at home, in school, doing community activities, and icons that may be 'symbolic' of 'national identity' or of broader European or international identities.

The pictures selected may be understood to convey information about cultural practices of specific children groups and thus may be used to reflect on valued shared experiences, particular ways of looking at the same reality (eg. school) or preferences in representing aspects of reality (such as: playing). However, they also

highlight diverse urban and country landscapes, and diverse ways of representing the activity of reading.

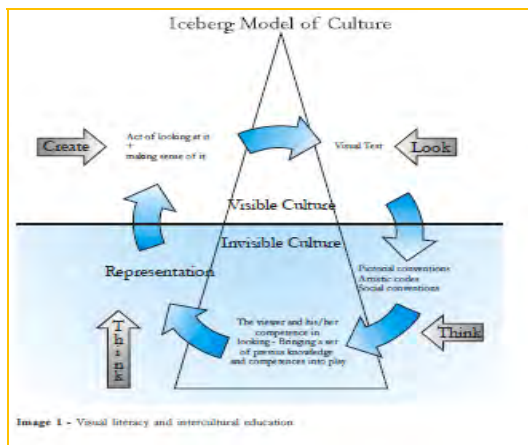

Each of the sections in the Pupils' Workbooks – Home to School, Communities, National to International Culture – invite children to find similarities and differences with their own experiences and environments and encourage dialogue across the European space. (In the picture below there is an overview, by section, of the visual texts (pictures) as used in the Pupils' Workbook 1, for 6 to 9-year-olds).

HOME TO SCHOOL	1 	2 	3 	4 	5 
COMMUNITIES	6 	7 	8 	9 	10 
NATIONAL TO INTERNATIONAL CULTURE	11 	12 	13 	14 	15 

Visual texts (pictures) in the Pupils' Workbook 1.

The Workbooks invite children to read into each visual text their desire, imagination or hostility by relating their lived experience with invitations to talk, draw or write about the visual text and communicate what they imagine it to represent. Thus, the suggested reflections and practices around the visual text promote openness to the perspectives of cultures that are different from their own culture. The proposed questions and activity suggestions concomitantly foster strategies of self-analysis as to where the individual stands in cultural terms in relation to others. Finally, the pedagogical approaches to each picture develop a deeper understanding of what is different through understanding of different cultural norms and expectations.

Graphically, one of the ways to represent looking at a visual text in cultural terms would be the following:

According to the iceberg model of culture, part of what you may see from another culture is but the visible part that you can look at or impact on. Much more cultural content will be invisible, under water, difficult to access unless you think about it or actively search to understand it through study and analysis. What you see may be difficult to understand in terms of its pictorial and artistic codes or social conventions. In order to learn about these you will need to think of the process of representation as crucial for your understanding of reality. To do this you bring your own set of competences and knowledge to interact with the new culture and compare ways of representing reality, the ones you are familiar with those you may not be familiar with. In doing so, you are integrating your act of looking with an act of making sense of what you see, having turned visible that which was initially invisible.

A Final Note on the Overall Pedagogical Approach

The aim of the development of visual literacy education is to facilitate pupils' understanding of visual elements and communication of their meaning. The VISUALISING EUROPE project connects visual literacy to intercultural education. It aims to develop ways of seeing and engage young people actively in the process of making sense of the world around them and applying new ways of thinking and taking action. This means that the pupils must be active in the learning process to develop their *own* ways of seeing, understand their *own* interpretations and the reasons for them, so they can apply them when interacting and negotiating with other cultures. Implementing active learning approaches has pedagogical implications for teachers. This is inline with the emphasis on the latest developments in pedagogy that draw on social constructivist theories. Constructivism is a philosophy of learning founded on the premise that, by reflecting on our experiences, we construct our own understanding of the world we live in. Each of us generates our own 'mental maps', which we use to make sense of our experiences. Learning, therefore, is the process of adjusting our mental maps to accommodate new experiences. Social constructivism emphasises the importance of interaction with others in meaning making through dialogue and sharing different perspectives. According to Vygotsky (1978), social interaction is important for learning because it supports the development of reasoning, comprehension, and critical thinking.

Social constructivists who draw on Vygotsky's work point to the value of group discussion in helping pupils rehearse, elaborate, and expand their knowledge and understanding. They suggest that interactions in a group can create cognitive conflict and disequilibrium which helps pupils to question his or her understanding and think through new ideas. By working in a group the pupils have to organise their knowledge in a way that makes sense to others, they have to make connections to what others say, and review processes that support information processing.

In this scenario teaching is more than delivering knowledge and skills to passive pupils. It is about facilitating the active involvement of pupils in the learning process with emphasis on helping pupils learn how to learn so they are able to take more responsibility for their own learning. Consequently, the pupils need opportunities to do more than just receive information. Classroom discourse should promote the active engagement so that pupils are able to ask questions, challenge and interpret ideas and clarify and elaborate on the ideas of others – sometimes on their own, in pairs and in groups.

Multilingual use of the multimodal: picture books in an English language class*

Sandie Mourão

Universidade de Aveiro, Portugal

The following paper presents the findings of a pilot project investigating the use of English picture books in pre-school English classes in Portugal. Picture books representing parallel and interdependent storytelling models were used during read aloud sessions. Transcripts of the audio recordings of these read alouds were analysed and categorised according to the utterances prompted by the verbal or the visual. Results show that foreign language production is extended when both the verbal and visual in picture books are used for language input and that children are more actively involved in meaning making. Implications are discussed.

1. Picture books and the first language

There are many definitions of what a picture book is but my favourite is from the illustrator Uri Schulevitz (1985:15): a picture book *'could not be read over the radio and be understood fully. In a picture book the pictures extend, clarify, complement, or take the place of words. Both the words and the pictures are "read".'* It is this *inter-animation* between picture and word (Lewis 2001) which makes a picture book such a special thing.

The ability to tell a story through pictures and words, has led to picture books playing an important role in early literacy programmes. Research into first language (L1) acquisition, shows that the single most important activity for developing a basic understanding of literacy and its functions is by reading aloud to children using picture books (NAEYC. 1998). Research has highlighted how important this is at home (Ninio, 1983, Wells 1986), and at school during 'read-alouds' (Robins & Ehri 1994, McGee & Schickedanz 2007), stressing developments in vocabulary acquisition and story narrative (Elley 1989, Dickenson & Smith 1994, Neuman 1999). Research into their role in supporting second language acquisition, in particular vocabulary development is also available, (Collins 2005, Coledge 2005).

* This research project is supported with a grant from the *Fundação para a Ciência e a Tecnologia*, in Portugal

2. The multimodal in picture books

Quality illustrations in picture books allow children to *read* the story: the illustrations support understanding through the visual representation of the words they are listening to. However illustrations in picture books inter-animate with words in complex ways. A simple picture – word relationships, that of telling the same story is '*parallel storytelling*' (Agosto, 1999: 267): the majority of picture books fall into this category. When pictures and words work together to tell the same narrative, they provide a very supportive learning platform, in particular for younger children, '*the reader has the opportunity to focus on the story as a whole and not become distracted by additional commentary*' (Golden 1990: 112). Furnish (2002:11) adds that this '*provides readers of any level with the opportunity to take away a shared minimum of understanding.*'

A more demanding type of picture–word inter-animation forces the reader to use both the pictures and words together to make meaning as each provide only part of the story, often filling in each other's 'gaps'. These picture books fall into the '*interdependent storytelling*' category (Agosto, 1999: 267). Agosto argues that interdependent storytelling provides more intellectual benefits for readers (1999: 278). Non-readers in particular are encouraged to listen and look to construct meaning, developing their language comprehension skills.

Research into how children use picture book illustrations to make meaning has become more extensive. Hughes (1998: 118) reports children being more perceptive than adults at 'reading pictures' and research by Arizpe & Styles (2003) documents how children make sense of very complex illustrations on many levels: their research looked in particular at illustrator styles. Sipe (2008) has recently outlined five categories for children's response to picture books and several of these categories are dependent upon the children's understanding of the illustrations.

2. Picture books in the English as a foreign language classroom

Storytelling in the teaching of English as a foreign language (EFL) classroom represents '*a holistic approach to language teaching and learning that places a high premium on children's involvement with rich authentic uses of the foreign language*', (Cameron 2001:154). Wright (1995) and Garvie (1991) focus on the use of storytelling per se, where as Ellis & Brewster (2002) and Mourão (2003) focus on storytelling with picture books, which in EFL literature are sometimes called 'realbooks' or 'real picture books', (Dunn, 2003:106).

Research into the use of picture books and their illustrations in the EFL classroom is scarce. The importance of illustrations in picture books is mentioned briefly by Cameron (2001:40) who describes children constructing meaning in their

minds through the pictures, using a mental processing which she says '*can be carried out in the first language, or some language-independent way, using what psychologists call 'mentalese'*'. Hsiu-Chih (2008:48) also stresses that illustrations stimulate the students' imagination, and help them learn how to read pictures. Dunn (2008: 7) confirms that illustrations in picture books are not just for supporting understanding of language, but that they are instrumental in developing visual decoding skills. Mourão (2003: 5) encourages teachers to let children interact with a picture book, during the storytelling activity, using the illustrations to prompt language use.

Research by Read (2006:18) focuses on the teacher's scaffolding techniques during read FL picture book read alouds and describes the teacher interacting with the children, linking '*the familiar with the new*', allowing them to use their previous knowledge, often in their L1 to their support their FL learning. Some of these comments are related to the illustrations, though Read's discussion does not focus on this aspect in particular. Mourão (2006a: 54-55) outlines how children use the illustrations in two different picture books to help either retell or actively make meaning. In a picture book with a simple repetitive narrative the children use the illustrations as 'signs' to predict what was coming next, and were successful in retelling the story using these signs. In a picture book with little repetition in the narrative, the children were unable to retell the story, but the illustrations helped them create meaning, often extending the picture book narrative based on the illustrations. Elster (1995) calls these extensions '*importations*', often producing language which has nothing to do with the verbal text.

Concern with inter-animation of picture and word, which has gripped academics in the world of picture books for the last twenty years, has bypassed the EFL world. References to visual text in picture books remain directed towards supporting understanding of the verbal text. Miyahara (2005: 23) makes a brief reference to the 'interplay of words and pictures'. Linse identifies and discusses criterion for selecting picture books and includes reference to 'context-embedded content' and 'context-reduced content' (2006: 77), though she is more concerned with illustration details which do not match the verbal text. Bland on the other hand has written several articles, which highlight the importance of taking illustrations into consideration. She describes '*multi-layered*' picture books promoting language use (2007a: 35), and makes reference to using symbolic and iconic features together to make meaning, referring to picture books in the interdependent category (2007b: 307). There is no empirical research in this area at all.

4. Parallel and interdependent picture books in pre-school EFL classrooms

From the literature review we can conclude that in L1 contexts, reading picture books to young children promotes, among other things, vocabulary development; with a greater possibility for talk and therefore further vocabulary development if there is inter-animation between pictures and words. In foreign language (FL) contexts storytelling is an accepted approach, but there is little research to confirm that picture books actually provide for vocabulary development, and no research to date of how the relationship between the pictures and words affects the FL learner.

With this in mind, data from two pilot projects, using a parallel and an interdependent model of picture book, was analysed to discover if FL production is extended when both verbal and visual texts of a picture book are used for language input and which kinds of word - picture dynamics within a picture book are more successful for promoting this use. The picture books used were '*Peekaboo Friends!*' (Su 2001), which demonstrates parallel storytelling, and '*Goodnight Gorilla*' (Rathmann 1994) which demonstrates interdependent storytelling.

4.1 Setting

For these pilot projects the picture books were integrated into 10 minute read aloud sessions, at the end of twice-weekly 30 minute long English lessons, with two different groups of 25 pre-school children, ages ranging from 52 – 63 months. Each book was reread over a period of two to three weeks, and each of these re-readings was audio recorded. The recordings were transcribed. '*Peekaboo Friends!*' was reread four times and '*Goodnight Gorilla*' was reread five times. Each book was left in the classroom for the children to browse through between English lessons. The resulting tape-scripts were re-analysed, with a view to categorising the children's verbal utterances, prompted by the visual texts (illustrations) and the verbal texts (words) in the picture books.

4.2 The picture books

The picture books were fairly similar in theme and language: both included animals familiar to the children and both used a repeated expression. A brief description of each picture book follows:

Peekaboo Friends!

This is a typical sixteen-page picture book, which falls within the category of a *lift the flap book*. It has brightly coloured, child friendly illustrations of a baby, Robbie, and his stuffed toys playing a game of hide and seek, and each of the toys is to be found under a flap. It is verbally and visually cumulative, repeating the toys found in the

previous pages with a simple refrain “*Robbie and giraffe are looking for their friends.*” And the reply: “*Peekaboo, it’s penguin!*” etc. The animals being searched for are: *giraffe, penguin, puppy, rabbit and donkey*. A kitten appears in all the visual texts, but goes unmentioned in the verbal text, until the last double page spread, when she is depicted looking for Robbie and the toys, the visual text reads, “*Kitten is looking for everyone. Peek a boo - here we are!*” The unmentioned kitten brings a very slight sniff of interdependent storytelling into the picture book!

Good Night Gorilla

Atypical of a picture book, this has 40 pages, and won several awards shortly after its publication in the early 90’s. *Horn Book Magazine (1995)* gave it a starred review describing it thus, “*The many amusing, small details...as well as the tranquil tone of the story make this an outstanding picture book.*” Of the seventeen double page spreads, seven are wordless. The text appears in speech bubbles, and consists of the following exclamation and eight nouns, *Good Night, gorilla, elephant, lion, hyena, giraffe, armadillo, dear and zoo*. The verbal text takes us on the evening rounds with the zookeeper, who calmly says “*Good Night*” to his animals, and makes his way home, gets into bed, says a final “*Good night*” to his wife, rolls over and goes to sleep. The visual text shows us a gorilla taking the zookeeper’s keys and opening all the cages. The animals follow the zookeeper home, walk into his house and settle down to sleep in his bedroom, much to his wife’s dislike. When she realises they are in her bedroom, she takes them all back to the zoo. The twist to the story is that the gorilla is allowed to return home and snuggle into bed between the zookeeper and his wife! There are dozens of extra details to see in the illustrations, including a mouse and a banana, miniature stuffed toys of all the animals in their cages, keys which match the colours of the cages, photographs on walls, a and floating pink balloon.

5. Results of the pilot study

Both picture books enabled the children to successfully acquire language and use it to retell the story as a group, chanting the verbal text with the English teacher. Both picture books gave the children a good deal of pleasure. But there were visible differences between the amount of language that was generated by the children in both Portuguese and English in relation to the visual texts.

5.1 Verbal utterances and the visual text in English and in Portuguese

The overall number of verbal utterances, prompted in English and Portuguese, was calculated per reading. As you can see from the results (Table 1), the children

reacted verbally in both English and Portuguese to the picture book illustrations. Despite the difference in length the verbal utterances in rereads continue to be fairly substantial in *'Goodnight Gorilla'*, where as they drop dramatically in *'Peekaboo Friends!'*. We can also see an increase in English utterances in comparison to Portuguese utterances in *'Goodnight Gorilla'*.

It should be noted here that many of these utterances would be considered single word utterances, used to label parts of the illustration, the majority being nouns. This is consistent with research in L1 picture book reading contexts and language acquisition in very young children, where labelling, in particular of nouns, is considered to be more frequent than that of verbs (Ard & Beverly 2004).

Table 1: Verbal utterances prompted from the visual text
Eng = English; Port = Portuguese

Reading	(Parallel) <i>Peekaboo Friends!</i>			(Interdependent) <i>Good Night Gorilla</i>		
	Total	Eng	Port	Total	Eng	Port
Nº 1	22	0	22	60	10	50
Nº 2	10	2	8	51	9	42
Nº 3	1	0	1	22	6	16
Nº 4	4	1	3	16	10	6
Nº 5	-	-	-	7	7	0

5.2 Verbal Utterances in English from the verbal text

The verbal utterances in English are fairly even (Table 2), despite appearing substantially higher for *'Goodnight Gorilla'*, which is understandable as the book is longer. *'Peekaboo Friends!'* peaked in reread nº 3, and maintained this number in the fourth reread, by which time the children were chanting the verbal text very easily as a group.

In contrast to the visual text, the verbal utterances prompted by the verbal text tended to be chunks of unanalysed language, formulaic expressions (Lightbown & Spada 1999), which have been heard so often that the children acquire and use them in context, "*Peekabook, it's Teddy*" being a typical example.

Table 2: Verbal utterances in English prompted from the verbal text

Reading	(Parallel) <i>Peekaboo Friends!</i>	(Interdependent) <i>Good Night Gorilla</i>
	Nº 1	8
Nº 2	19	26
Nº 3	31	25
Nº 4	31	38
Nº 5	-	23

5.3 Verbal Utterances in English from the visual and verbal texts

When comparing the total number of verbal utterances in English to both visual and verbal texts (Table 3), we can clearly see that *'Goodnight Gorilla'* prompted a

superior or equal amount of English in all re-readings, the visual text providing a considerable amount of these English utterances.

Table 3: Total of all verbal utterances prompted in English

Reading	(Parallel) Peekaboo Friends!			(Interdependent) Good Night Gorilla		
	Total	Verbal	Visual	Total	Verbal	Visual
Nº 1	8	8	0	23	13	10
Nº 2	21	19	2	35	26	9
Nº 3	31	31	0	31	25	6
Nº 4	31	31	1	48	38	10
Nº 5	-	-	-	30	23	7

5.4 Known and new language

If we were to go one step further and look at the kind of language prompted through the two picture book texts, we would see that '*Goodnight Gorilla*' enabled children to use English words they already knew, in context, which is one of the reasons picture books are used in EFL classes. Both visual and verbal texts prompted the use of new words or chunks, although because the verbal text was mirrored by the visual text, it is difficult to know whether the children were prompted by the visual or the verbal.

If we look at the table 4 below, using data from '*Goodnight Gorilla*', we can see that in all but one case, that of the chunk "*black and white*", the visual text prompted children to use nouns which bore no relation to the verbal text. These were words the children used either spontaneously, or after talking about the visual text as a group. The utterances labelled as *Known* are the words/chunks the children already knew from previous stories or English activities during the English classes. Those labelled *New* are the words/chunks generated from the verbal or visual story texts after they had been discussed in Portuguese and recast in English by the English teacher. The verbal text was chanted and chorused by most children with little difficulty.

Table 4: '*Goodnight Gorilla*' utterances from visual text

Session	Known	New
1	Black, white, banana, one, two, three, four, five, monkey	Mouse,
2	Black, pink, ball, bananas, rat, 'black and white'	Zookeeper, mouse, key,
3	Ball, surprised,	Zookeeper, balloon, mouse, zoo,
4	Ball, banana, surprised, six	Balloon, zookeeper, house, wife, balloon, mouse,
5	Green, seven, surprised,	Zookeeper, escaped, balloon, mouse

In comparison, '*Peekaboo Friends!*' prompted just '*socks*' and '*cat*' from the illustrations, both known words. Once again, for the verbal text itself, it is not possible to identify whether the children were prompted by the visual or the verbal

texts. But many of them were able to chant the chunk "... *looking for their friends*", which undoubtedly came from the repetition of the verbal text.

5.5 Creating meaning

Finally, if we were to look at how the 'Goodnight Gorilla' group created meaning from one of the wordless double page spreads. the twelfth double page spread is completely black, except for a small pair of round eyes to the top of the recto page. By bringing all their knowledge and understanding of storytelling and language, which included inter-textual references to previously read picture books, the children were able to arrive at their own verbal text for this spread.

Key: EngT = English teacher; C = child; CC = children; Ed = Pre-school teacher.

Session 1:

TURN THE PAGE

Silence

01. EngT: *São de quem?*[Who do they belong to?]
02. C: *Olha! Aqui há branco.*[Look! Here is white]
- 03. C: Giraffe?**
- 04. EngT: Do you think they belong to the giraffe?**
- 05. C: White!**
06. C: *Elefante?*[Elephant?]
07. **EngT: The elephant? No, no!** (Turning page)... **the wife!**

Note that the child in line 02 prompts the child in line 05 to use the word 'white'. Line 03 and 06 show children thinking about which animal the eyes belong to, they have chosen giraffe and elephant, both tall animals, as the eyes are high up on the page.

Session 2:

TURN THE PAGE

08. CC: *Ha, ha, ha, ha!*
09. C: *A rapariga!* [The girl]
10. EngT: *Oh, ho! É a mulher, não é? A mulher dele!* [It's the wife, isn't it? His wife]
- 11. C: Yeah! Black and white!**
12. C: *Ela vai ver por causa do gorila!* [She is going to see because of the gorilla]
13. C: *Ela está com medo!* [She's frightened]
14. EngT: *Ela vai ver quem é que diz boa noite, não é? Achas que ela está com medo?* [She's going to see who said goodnight, right? Do you think she is frightened?]
15. CC: *Sim!* [Yes!]
16. Ed: *Ela está frightened!* [She is frightened]
- 17. EngT: Frightened. Yeah? Is she frightened?**

Line 09 and 12 show different children successfully predicting who the eyes belong to and why they are on the page, and typical of children in pre-school. Line 11 is a perfect example of inter-textuality - the children had just finished a book called 'Black and White', and so this black and white page prompted this response. Line

13 begins the journey to creating the eventual verbal text, a response to the wide eyes being afraid. The children had recently been playing with emotion words and knew the word for *frightened* in English hence the reason the pre-school teacher prompted them in line 16.

Session 3:

TURN THE PAGE (Page 24 – 25)

18. C: Eh, he, he!
19. C: *É a mulher!* [It's the wife]
20. C: *... a mulher!* [... the wife]
21. EngT: **That's' right it's his wife! The zookeeper's wife. She's surprised!**
22. C: *Ela está com medo!* [She's frightened]
23. EngT: **Do you think she's frightened?**
24. C: *Sim!* [Yes!]
25. EngT: **Yeah! She's not surprised, she's frightened?**

TURN THE PAGE (page 26 – 27)

26. EngT: **Oh!**
27. C: **Surprised!**
28. EngT: **Surprised!**
29. Ed: *Um olho surprised!* [An eye surprised!]
30. C: **Onde está o balloon?** [Where is the balloon?]

Lines 19 and 20 demonstrate children again confidently predicting, with line 21 from the English teacher recasting the utterances into English. The English teacher also brought in the word *surprised*, which was actually a mistake, as she had meant to say *frightened*, reminding the children of what they had discussed during the previous reading session. However when the page is turned, and the children see the woman looking at the gorilla, with his cheeky smile, they spontaneously call out *surprised* (line 27). Line 30 reminds us of one child's obsession with the floating balloon, which appears in all but five of the double page spreads!

Session 4:

TURN THE PAGE

31. C: **Surprised!**
32. EngT: **Surprised! That's' right she's surprised! After all those goodnights!**
33. C: *O sorriso!* [The smile!]

Line 31 brings the previous reading session's *surprised* to the page. And line 33 demonstrates a child predicting why she is surprised - because she sees the gorilla's cheeky smile when she turns on the lights!

Session 5:

TURN THE PAGE

34. CC: **Surprised!**

The verbal text for that double page spread, became the single word *surprised!* But it's enough as the children are eager to see the gorilla's cheeky grin on the next page.

Language acquisition is defined as a process of natural assimilation, Krashen (1981) described it as involving intuition and subconscious learning, and is the result of real interactions in which the learner is an active participant. Through meaningful interactions, using both their L1 and the FL, the children have successfully acquired and used English words they are familiar during the story telling demonstrated here. Bruner describes negotiable transactions (1986:76), with support from Vygotsky's ideas on language acquisition he writes, '*it is in the nature of things that the aspirant speaker must "borrow" the knowledge and consciousness of the tutor to enter (and develop) a language.*' He refers to the '*book reading routines*' he investigated, concluding that through these meaningful parent-child interactions children are taken to the '*growing edge of their competence*' (1986:77). Cosy parent-child read alouds are nothing like classroom read alouds, but we can make comparisons and learn from the way a caring parent scaffolds a child. With the help of the teacher, and more able peers, the children have created meaning, using language they already knew and language they encountered through the picture book text.

6. Conclusion

The results give language teachers something to think about. From a look at the kind of language that emerged from the two picture books, it does appear that an interdependent picture book model provides a richer context for language learning and use. From a look at the triadic interaction, child – book – teacher, there are obvious implications for the way children can create meaning together, with the help of the teacher and their peers.

This research highlights the need to look more closely at how we approach using picture books in the EFL classroom. Firstly, in relation to the kinds of picture books we select. At present teachers tend to select a parallel model, providing for a possibly safer learning environment, to the detriment of a richer learning one. Secondly, in relation to how we use these picture books to make meaning through discussion around the illustrations. The tape-scripts show that both the children and the teachers involved used their L1 and the FL to reach a meaning consensus. We need to understand better how the two languages can scaffold each other in this meaning making process. Finally, in relation to how often we reread picture books to a group of children. It took the '*Goodnight Gorilla*' group five sessions to create their meaning for a wordless double page spread.

I would like to suggest that as teachers who use picture books in our classes we need to understand better how the verbal and the visual texts inter-animate to

produce a multimodal narrative. We should rethink which picture books we use in our classrooms, and attempt to move from playing safe to selecting titles that promote thinking from looking *and* listening or reading, enabling discussion and more language use. Finally we should be retelling the same picture book over a short period of time allowing children numerous opportunities to engage with the visual and verbal texts.

Comprehension with Character: Lessons from Newbery Books

Karen L. Parker
Leonard W. Parker
Liberty University, USA

Character education has been a facet of education from the earliest days of ancient civilization. Plato said, "Education in virtue is the only education that deserves the name" (O'Sullivan, 2004, p. 640). Commitment to a moral foundation was considered essential to the success of democracy by leaders such as Thomas Jefferson, who argued for early instruction in the democratic virtues of respect for the rights of individuals, regard for the law, voluntary participation in public life, and concern for the common good (Lickona, 1991). In the early days of American history, the Puritans used the hornbook to establish virtue-based literature as a cornerstone of American education, a tradition carried on in the next century through the McGuffey Readers (Leming, 2000). The continued popularity of virtue-based literature is demonstrated by the sale of over two million copies of the *Book of Virtues* by William Bennett (1993). The revived attention to character education in the schools is evident in the educational literature of the past decade (Bennett, 1998; Elliot, 2000; Kilpatrick, 1992; Oakes, Quartz, Ryan, & Lipton, 2000; and Schmidt & Palliotet, 2001).

As schools mandate character education, teachers face the dilemma crowding another requirement into their teaching schedules while continuing to meet increased accountability for academic performance. Therefore, teachers are seeking the most effective approach to teaching character education and one that conserves time in their classrooms.

Character Lessons

Character instruction can benefit from the principles of bibliotherapy, which is the process of reading books with a therapeutic intent. Both character education and bibliotherapy have been applied extensively for students with significant learning and behavior problems who often experience peer rejection, poor social skills, and low self-esteem. The perceived success of the approach has made it popular in the classroom. All students in the classroom can benefit because they are likely to encounter similar situations during their school years.

For intervention to have the optimum effect on character education, the reader should experience the following bibliotherapy elements in the character lesson (Sridhar & Vaughn, 2000):

- *Identification.* The reader should be able to identify with the main character and the events in the story. The main character should be perceived at a similar age as the students, display similar behaviors, and face events with which the students can identify.
- *Involvement.* Following identification with the main character, readers relate to the situation and feel emotional ties with the main character. When readers become emotionally involved, literature can have the effect of changing their perceptions of behavior.
- *Insight.* The realization occurs when readers become aware that the problem they are experiencing, like that of the characters in the story, need not remain static. Insight allows readers the opportunity to analyze the main character and situation and subsequently develop opinions regarding behaviors or actions adopted by the main character in his or her attempts to deal with the problem. Readers also develop problem-solving skills by exploring effective alternative behaviors to replace old inappropriate behaviors.

“Bibliotherapy is a child-friendly, noninvasive method that employs reading – a context familiar to students. Incorporating bibliotherapy into the academic curriculum is a natural process that will also augment reading skills” (Sullivan & Strang, 2002/03). Throughout the character lesson, it is vital to maintain an active dialogue with the students. A variety of follow-up activities should also be used because a single lesson is not sufficient to produce the genuine change which is the goal for character education. Activities that can be used to bridge the gap between the lesson and application to their lives include discussion, role-playing, creative writing, and artistic expression (Sridhar & Vaughn, 2000; Sullivan & Strang, 2002/03).

Character Counts (Lickona, 1991) is a well-known character education curriculum that promotes shared values in the school and community. The curriculum emphasizes six pillars of character: trustworthiness, respect, responsibility, fairness, caring, and citizenship (www.charactercounts.org). Integrating character lessons with academics is essential, because effective character development initiatives must be purposeful, pervasive, repetitive, consistent, creative, and concrete.

Application to Children’s Literature

Children’s literature provides an effective vehicle for interweaving character education into existing curricula to address problems in everyday life (Schmidt & Palliotet, 2001; Forgan, 2002). Book selection is a critical element for successful character education in order to facilitate the principles of identification, involvement, and insight. According to Jim Trelease (2006), a book not worth reading at age 50 is not worth reading at age 10. Children have no more appetite for boredom than we do, and perhaps they have less. O’Sullivan (2004) states that “the stronger the characters, the easier it will be to include character education naturally” and

describes four types of books that meet the criterion for “deeper and richer literature” (p. 641):

- Well-written books containing moral dilemmas
- Books with enough depth to allow comprehension beyond literal level
- Books with admirable but believable characters about the same age as the students
- Books across a wide range of cultures with both boys and girls as lead characters.

Representative lists of books for character education have been compiled by the following authors:

- DeLong and Schwedt (1997) organized a book list by genre and included content applications and values at the end of each annotated entry;
- Kilpatrick, Wolfe, and Wolfe (1994) prepared a categorical list of books selected for moral imagination that were “test driven” on their own children;
- Sridhar and Vaughn (2000) listed books by grade level that address everyday problems faced by children, such as self acceptance, teasing, and sibling rivalry;
- Sullivan and Strang (2002/03) provided age appropriate bibliographic information for social relationships;
- The Giant Treasury of Read-Alouds, published in Trelease’s well-known *Read Aloud Handbook* (2006), provides the recommended grade level, the number of pages, and a brief annotation for each book. The annotated list is arranged by the following categories: wordless books, predictable books, reference books, picture books, short novels, full-length novels, poetry, anthologies, and fairy and folk tales.

Newbery Books

Newbery books are another source for book selection that meet the criteria cited by O’Sullivan (2004) for effective character education: well-written with moral dilemmas, depth beyond the literal level, admirable but believable characters, and lead characters with varied culture and gender. “Newbery heroes and heroines meet their problems head-on at the crossroads. These characters are dynamic, learning, and maturing protagonists who weigh and consider options and evidence as they resolve dilemmas” (Friedman & Cataldo, 2002, p. 111). Criteria for book selection facilitates character lessons as well as the elements of effective bibliotherapy. Admirable but believable characters contribute to student identification with the story characters, which provides the foundation for involvement and insight.

Comprehension Strategies

Including children's literature and character principles in language arts lessons provides an effective initiation of character education in the classroom without infringing on academic class time. "Infusing literature study with character education is more a matter of a slight change of emphasis rather than a new topic" (O'Sullivan, 2004). The Summary Report of the National Reading Panel (NICHHD, 2000) stated that teaching comprehension can be effective in the context of specific academic areas, such as social studies. The NRP Summary Report also identified seven types of explicit comprehension instruction that appear to have a solid scientific basis:

- comprehension monitoring
- cooperative learning
- graphic and semantic organizers (including story maps)
- question answering
- question generation
- story structure
- summarization

The 2008 Newbery Medal book provides a social studies context for lessons in character and comprehension, *Good Masters! Sweet Ladies! Voices from a Medieval Village* (Schlitz, 2007). The book is a collection of dramatic narratives, both monologues and two-voice readings. Each narrative introduces young inhabitants who represent various vocations and roles in medieval life.

The sample lessons below demonstrate the application of character education and comprehension strategies in the context of the 2008 Newbery Medal book. Each lesson focuses on one of the seven effective comprehension strategies identified in the NRP Summary Report.

Sample Lesson 1. *Question answering* is the strategy chosen from seven scientifically-based comprehension strategies identified in the NPR Summary Report. For the first lesson (see Sample 1), QAR is the specific question answering strategy, Question Answer Relationships (Raphael & Au, 2005; Fiene & McMahon, 2007; Gill, 2008). The lesson provides explicit instruction to teach students how to identify and answer literal and inferential questions. The following are the core relationships for QAR:

- *In the Book*, which includes "Right There" and "Think & Search," and
- *In My Head*, which includes "On My Own" and "Author & Me."

In the Book aspects of QAR are the focus of Sample Lesson 1.

The literature selection for the first lesson is a two-voice reading which also provides the follow-up activity at the end of the lesson (Figure 1). Schlitz's two-voice readings are reminiscent of an earlier Newbery book, *Joyful noise: Poems for two voices* (Fleischman, 1997). While Fleischman's two-voice poems provide scientifically accurate information about insects for fascinating science integration, Schlitz's readings bring medieval history alive for social studies integration. The two-voice format is an entertaining classroom activity that is similar to a choral reading, with sections assigned to voices to be read alone or together. However, the two voice reading is presented in two columns that are read concurrently. It can be introduced as a whole class activity with half of the class assigned to one voice in the first column (in this reading, Jacob) and the other half of the class assigned to the second column (Petronella, in this reading). As the readers proceed down the page, those assigned to the part of "Jacob" are the only ones who read when the lines are in the first column only, and when the lines are only in the second column, only those assigned to the part of "Petronella" would read. When lines appear in both columns, they are read simultaneously by both "voices," even though the words may be different for each "voice." It may be helpful to assign a leader for each group when introducing two-voice readings. After the students understand the format of the activity, they may divide into pairs to practice the two-voice reading independently.

<p>Sample 1. Fifth Grade Language Arts Lesson (Social studies integration)</p>
<p>Children's literature selection. Two-voice reading from <i>Good Masters! Sweet Ladies!</i></p> <ul style="list-style-type: none"> • Jacob ben Salomon, the moneylender's son, and Petronella, the merchant's daughter
<p>Character principle: <i>Respect.</i> Be tolerant of differences. Be considerate of the feelings of others.</p> <p>Application of bibliotherapy principles</p> <ul style="list-style-type: none"> ▪ <i>Identification.</i> Fifth-graders identify with daily chores and routines. The struggles are similar to the everyday problems faced in the classroom. ▪ <i>Involvement.</i> The elements of racial and religious prejudice draw the students into the story and provide a wealth of topics for discussion during the reading. Students compare to situations in their own lives to the challenges that Jacob faces due to his Jewish heritage. ▪ <i>Insight.</i> Understanding that we are all more alike than we are different. "For one half-hour, I forgot, standing there in the water's shoal, who she/he was and my duty to God: I never told a living soul." (Schlitz, 2008, p. 57).
<p>Comprehension strategy: QAR (Question Answer Relationships)</p> <p>This lesson will focus on the <i>In the Text</i> aspect of QAR including:</p> <ul style="list-style-type: none"> • <i>Right There</i> (literal comprehension) Students are instructed to put their finger on the answer. • <i>Think and Search</i> (inferential comprehension) Students are instructed to put their finger on the clues.
<p>Follow-up activity: Students are introduced to the two-voice reading as a whole class activity. Then they prepare the two-voice reading for readers' theatre and practice reading aloud with a partner.</p>

Figure 1. Jacob ben Salomon and Petronella

Sample Lesson 2. *Graphic organizer* is the strategy chosen from the seven scientifically-based comprehension strategies identified in the NPR Summary Report. The dilemma worksheet developed by Friedman and Cataldo (2002) is the specific graphic organizer strategy selected for the second sample lesson (see Sample 2). The class will be divided into two groups. One group will answer the questions on the dilemma worksheet from Isobel's perspective and the other group will answer from Barbary's perspective. After the students have completed the dilemma worksheet, each student in the Isobel group will partner with a student from the Barbary group to compare and contrast their answers from the two perspectives.

The literature selection for Sample Lesson 2 consists of two dramatic monologues that are related in content. Isobel, the lord's daughter, tells of her experience when someone threw muck on her dress while she was walking through the village. Then Barbary describes the drudgery of a peasant's life and her jealousy of Isobel's fine clothing and leisure (Figure 2).

Sample 2. Sixth Grade Language Arts Lesson (Social studies integration)
<p>Children's literature selection. Two individual narratives from <i>Good Masters! Sweet Ladies!</i></p> <ul style="list-style-type: none"> • Isobel, the lord's daughter • Barbary, the mud slinger
<p>Character principle: <i>Fairness.</i> Be open-minded; listen to others. Don't take advantage of others. Don't blame others carelessly.</p> <p>Application of bibliotherapy principles</p> <ul style="list-style-type: none"> ▪ <i>Identification.</i> Sixth-graders identify with conflict among siblings and differences in economic backgrounds. ▪ <i>Involvement.</i> The issue of bullying is encountered by middle schoolers in their classrooms. Students compare the choices faced by the characters to situations in their own lives. ▪ <i>Insight.</i> Realization of ways that we are all alike. "It made me think how all women are the same – silk or sackcloth, all the same" (Schlitz, 2007, p. 49).
<p>Comprehension strategy: Graphic organizer – Dilemma worksheet</p> <p>Students work in pairs to fill in the dilemma worksheet for their assigned character:</p> <ul style="list-style-type: none"> • What is the important dilemma faced by each (Isobel or Barbary)? • What are two choices for each (Isobel or Barbary)? • What information, evidence, or expertise does each character (Isobel or Barbary) have to support her first choice? • What information, evidence, or expertise does each character (Isobel or Barbary) have to support her choice? • Evaluate the decision and action of each character (Isobel or Barbary). How does she justify her choice? Can she ever be certain that she made the best decision? Why or why not?
<p>Follow-up activity. Students prepare the two narratives for readers' theatre and practice reading aloud with their partners.</p>

Figure 2. Barbary and Isobel

In both sample lessons, readers' theatre is the follow-up activity, selected to increase long-term effects on reading comprehension and genuine development of character. Readers' theatre does not require costumes, props, or memorization of the script, although minimal props can be used. As students rehearse the dramatic reading with partners, their oral reading fluency and comprehension is increased. Repeated reading and read-aloud are beneficial, especially for older students with poor reading ability. Role-playing is another aspect of the follow-up activity that demonstrates understanding of the character principle through the dialogue. Oral rehearsal aids in retention of the character lesson and increases the application of the character principle in real-life situations. The music score that is provided in the book for Alice's song, the shepherdess, offers another option for artistic expression in the follow-up activities.

Conclusion

Teaching character principles that apply to children's literature is a character education strategy that conserves classroom time because it does not infringe upon the academic schedule. As demonstrated in the sample lessons, the principles of bibliotherapy - identification, involvement, and insight - are an effective parallel for guided reading activities to enhance reading comprehension and character education.

Diagnostic and development of reading comprehension for tables, graphs and technical drawings – A study with young people with handicaps in vocational training

Peter Piasecki

CJD Dortmund, Germany

Idea

In 2007 the German Federal Ministry of Education and Research invited tenders for a programme in the field of literacy and basic education for adults.

In cooperation the Technical University Dortmund and the Christian Youth Village Foundation in Dortmund will therefore realize a project from 2008 to 2010 for the improvement of chances in prevocational and vocational training as well as to help young adults in their first steps in working life.

Vocational Training of young adults has neither theoretically nor practically been subject of scientific discussions in the context of “functional illiteracy” in Germany yet.

A specific element of the project for the described test group should be the development and transfer of new approaches for the support in reading, writing and communication skills. The training should include all vocational contents to achieve a strong connection to people's life and resulting from that higher motivation. Here experiences from England, New-Zealand or the USA regarding the concept of Workplace Literacy should be considered.

Methods

With this concept and development for an offer in teaching and learning in their first vocational training students with weak abilities in these fields should get extensive and sustained competences which allow their qualification and adequate employment behaviour. The mutual connection between language – thinking - and acting on the theoretical and philosophical meta-level has been a long standing argument. Existing works from e.g. Walter Volpert see that language stands in compensation for acting and that grammatical structures can be transformed into interaction in work. But experiences lack about how the medium of linguistic interaction within vocational training influences the general linguistic competence. This competence is a central holistic qualification and enables the access to participation and chances in working life.

For the group of “functional illiteracies” should be examined:

- a) growth of communication competences through vocational contents and
- b) growth of knowledge through active, attentive methods of linguistic vocational training

Concept of modules:

The concept of training is oriented on working at different stations. The structure of these stations contains exercises out of the following modules.

Module 1: Support of vocation oriented reading competences

Module 2: Support of vocation oriented writing competences

Module 3: Support of linguistic competences for vocational situations

Module 4: Interpretation of graphs, tables and technical drawings

The complexity of texts and exercises is oriented to the “common European Framework of reference” for languages.

Learning groups

Testing the already existing material takes place in the following groups:

Group 1: Trainees in domestic science

Group 2: Trainees in metalwork

Group 3: Young adults who receive unemployment benefits in casual work, people with handicaps who graduated a professional training but who could not have been placed yet and young adults under social youth care

Interim results

The teaching and learning material for the supportive training which has been developed in the course of the practical realisation of the DoKoTrain project are organized in a modular system. The language and subjects of these modules are related to practical and theoretical contents of vocational training as well as they are connected to general, vocation oriented knowledge. Intentional for the creation of teaching material are criteria such as adult appropriate design and language or the development of motivating and versatile exercises. Such exercises should involve artistic features and the use of various media (e.g. computers, videos or photography) to stimulate all senses. Additionally the development of the material is oriented to the modified contextual framework of the project. This means that exercises are progressed out of the description of competences of different modules and levels. Or rather that ideas for exercises are adapted to the description of competences.

Selection of contents for modules and approach

The selection of contents for different modules is closely related to the requests various vocational situations might bring. Therefore contents for domestic science and metalwork are oriented on subjects and competences which should be gained during vocational training. Here modules are developed following the framework of specific professions.

Conference

On the 25th of November 2008 the first scientific discussion on supporting vocational communication for “functional illiteracies” was held at the Technical University in Dortmund, Germany. The proceedings were published in July 2009 edited by Horst Biermann and Peter Piasecki. Two additional conferences to the topic environmental learning design and a final conference are planned till March 2010.

Discussion

The current course of the project DoKoTrain shows that the development of vocational material for the support of various communication competences for young adults with “functional illiteracy” improves chances of this group in their vocational and social life enormously. First results of the scientific evaluation exist. A main emphasis in the second half of the project will be put on the 4th module, the support of interpreting graphs and tables, as well as the transfer of the project.

Erfassung und Entwicklung des Leseverständnisses von Tabellen, Graphiken und technisch strukturierten Zeichnungen – Eine Untersuchung bei Jugendlichen und jungen Erwachsenen mit Behinderungen in Ausbildung

Projektidee

Im Jahr 2007 hat das Bundesministerium für Bildung und Forschung (BMBF) ein Programm im Bereich „Alphabetisierung und Grundbildung für Erwachsene“ ausgeschrieben. In diesem Rahmen werden von 2008 bis 2010 die Technische Universität Dortmund und das CJD Dortmund im Christlichen Jugenddorfwerk Deutschlands ein Verbundvorhaben zur Verbesserung der Chancen in der vorberuflichen und beruflichen Ausbildung sowie für junge Erwachsene im Arbeitsleben realisieren.

Beruflichkeit bzw. berufliche Ausbildung von jungen Erwachsenen wird in Deutschland bislang weder theoretisch noch praktisch im Kontext zum „funktionalen Analphabetismus“ thematisiert. Als spezifisches Element des Projekts soll für die beschriebene Gruppe der Probanden ein neuer Ansatz in der Lese-, Schreib- und

Kommunikationsförderung entwickelt und umgesetzt werden, der alle Inhalte berufsbezogen vermittelt, somit einen Lebensbezug herstellt und den Personenkreis neu motiviert. Hierbei sind die Erfahrungen aus England, Neuseeland oder den USA aus dem der Konzept Workplace Literacy einzubinden.

Die Projektstruktur

Durch die Konzeptionierung und Entwicklung eines Lehr- und Lernangebots in der beruflichen Erstausbildung lese- und schreibungsgewohnter Auszubildender soll eine umfassende und nachhaltige Kompetenzförderung bewirkt werden, die den Ausbildungsabschluss und situationsangemessenes Arbeitsverhalten ermöglicht. Der wechselseitige Zusammenhang von Sprache – Denken – Handeln ist auf der theoretisch-philosophischen Makroebene seit langem diskutiert. Auch liegen Arbeiten z.B. von Walter Volpert vor, die Sprache als Ersatzhandeln sehen und grammatikalische Strukturen auf Berufshandeln übertragen. Es fehlen aber Erfahrungen, wie über das Medium des beruflichen Sprachhandelns allgemein Sprachkompetenz angeeignet werden kann. Diese Kompetenz ist eine zentrale Querschnitts- und Längsschnittqualifikation und eröffnet Chancen für Teilhabe am Beruf und Zugang in Arbeit.

Die Erprobung der bereits erstellten Lernzirkelmaterialien erfolgt für drei Fördergruppen, die sich wie folgt zusammensetzen:

Gruppe 1: Auszubildende im Ausbildungsberuf Hauswirtschaftshelfer/In

Gruppe 2: Auszubildende in Metallberufen wie z.B. Metallbearbeiter/In

Gruppe 3: Junge Hartz IV Empfänger in Arbeitsgelegenheiten (AGH); Absolventen einer Berufsausbildung im Berufsbildungswerk mit Behinderungen, die noch nicht in Arbeit vermittelt werden konnten und junge Erwachsene aus dem Bereich Jugendhilfe.

Schulabschlüsse der Förderkursteilnehmerinnen und -teilnehmer vor Beginn der Ausbildung

Die im Rahmen der praktischen Umsetzung des DoKoTrain-Projekts entwickelten Lehr- und Lern-materialien für den Förderunterricht sind in Form von Lernzirkeln gestaltet. Thematisch und sprachlich sind diese Lernzirkel an die praktischen und theoretischen Ausbildungsinhalte, sowie an allgemeinen und berufsorientierten Inhalten angepasst. Handlungsleitend für die Materialerstellung sind Kriterien, wie z.B. eine erwachsenengemäße Ansprache und Gestaltung oder das Entwickeln von motivationsfördernden und vielseitigen Aufgaben, die alle Sinne anregen sollen und auch künstlerische Elemente, sowie den Einsatz vielfältiger Medien (wie PC, Video und Fotografie) mit einbeziehen. Des Weiteren orientiert sich die Entwicklung der Aufgaben an dem für das Projekt modifizierten "Gemeinsamen europäischen Referenzrahmen für Sprachen". Das heißt, dass die Aufgaben aus den Kompetenzbeschreibungen der verschiedenen Module und Niveaustufen heraus entwickelt werden bzw. Aufgabenideen an die Kompetenzbeschreibungen angepasst werden.

Die Themenauswahl der Lernzirkel orientiert sich eng an den Anforderungen der jeweiligen beruflichen Situation. So sind die Themen der Berufsfelder Hauswirtschaft und Metalltechnik ausgerichtet an den beruflich, fachlichen Inhalten und Kompetenzen, die im Lauf der Berufsausbildung erlernt werden sollen. Hier werden die Trainingszirkel in Anlehnung an die Rahmenlehrpläne der jeweiligen Berufe entwickelt.

Am 25. November 2008 fand an der Technischen Universität Dortmund das erste Dortmunder Fachgespräch zur beruflichen Kommunikationsförderung für funktionale Analphabeten statt. Die Ergebnisse liegen seit Juli 2009 in einem Tagungsband vor, der von Horst Biermann und Peter Piasecki herausgegeben wurde. Zwei weitere Fachtagungen zu den Themen Lernraumgestaltung und Abschlusskonferenz sind bis März 2010 geplant.

Der bisherige Verlauf des Projekts DoKoTrain zeigt, dass die Entwicklung berufsbezogener Materialien zur Förderung vielfältiger Kommunikationskompetenzen für junge Erwachsene mit funktionalem Analphabetismus die Chancen dieser Menschen auf berufliche und gesellschaftliche Teilhabe deutlich verbessert. Hier liegen erste Ergebnisse der wissenschaftlichen Evaluation vor. Der Bereich von Modul 4 zur Förderung der Interpretation von Tabellen und Diagrammen wird ein Schwerpunkt der Entwicklungsarbeit in der zweiten Projekthälfte sein. Das Konzept wird nachfolgend vorgestellt.

Orientierung des Trainingskonzepts am Zirkeltraining mit Lernen an Stationen

Das Zirkeltraining hat seinen Ursprung im Sportunterricht, wo unterschiedliche Aufgaben bearbeitet werden. Im klassischen Unterricht bei der Vermittlung von Fachwissen oder von Lerninhalten, die fachspezifischen Themen zugeordnet werden können, orientiert sich Zirkeltraining im Dortmunder Kommunikationstraining am handlungsorientierten Lernen. Die Organisationsform ist so gewählt, dass Lernen räumlich auf mehrere Stationen verteilt wird und die Lernerinnen und Lerner in Selbstverantwortung und Differenzierung an den jeweiligen Stationen, gemäß ihrem persönlichen Lerntempo, ihrer Neigung und ihrer Möglichkeit, einzelne Teilaufgaben bearbeiten. Dabei dient das Lernen an Stationen dazu, Sozialformen und Sozialtechniken vielfältig zu nutzen, um zum einen neue Lerninhalte zu erschließen und zum anderen eine Vertiefung eines Lerngebiets vorzunehmen.

Eine Voraussetzung für das Lernen an Stationen ist dabei darin zu sehen, dass Lerninhalte sich geeignet untergliedern lassen. Räumliche und personelle Voraussetzungen müssen in der Form gegeben sein, dass eine großzügige und nach modernen Ansätzen konzipierte Lernumgebung vorhanden sein muss. Voraussetzungen für das Lernen selber an den Stationen besteht dann darin, dass eine bestimmte Lernatmosphäre existieren muss. Eine wichtige Möglichkeit, die das noch wenig genutzte lernen an Stationen in Deutschland eröffnet, besteht darin, dass durch die besondere Form der Binnendifferenzierung die Lernerinnen und Lerner intensiv einerseits Stärken ihres Wissens verbessern und optimieren können, und andererseits besteht sie darin, dass auch erkannte Schwächen und Defizite gezielt und nach förderdiagnostische Ermittlung bearbeitet werden können. Die einzelnen Arbeitsaufträge sind an den Stationen jeweils für sich klar und deutlich formuliert, sie enthalten Informationen, Aufgabenstellungen und Arbeitblätter und sie beinhalten unterschiedliche Formen der Informationsgewinnung. Die Möglichkeit des Zugriffs auf weitergehende und vertiefende Informationen zum jeweiligen Aufgabenfeld einer Station lassen sich darüber hinaus durch Literatur- und Internetrecherche optimieren. Im Anschluss an eine Lernstation können die vorhandenen Lösungsblätter benutzt werden, so dass auch hier Selbständigkeit besteht, die selbständig erarbeiteten Lösungen zu vergleichen und möglicherweise die Aufgaben entsprechend nachzubearbeiten. Je nach Aufgabenverteilung schließt sich bei vielen Lernstationen eine Präsentation oder ein entsprechendes Rundgespräch an. Dieses Rundgespräch kann im Plenum der gesamten Gruppe stattfinden oder es können Teilplenien genutzt werden, um Arbeitsergebnisse zu präsentieren und in der Gruppe die Ergebnisse zu reflektieren.

Struktur der einzelnen Lernstationen durch Modularen Aufbau

Das Konzept des gesamten Projekts DoKotrain ist modular aufgebaut. Es besteht insgesamt aus vier Modulen, die sich wie folgt gliedern: Modul 1: Förderung der Lesekompetenz, Modul 2: Förderung der schriftlichen Kommunikation, Modul 3: Förderung der mündlichen Kommunikation und Modul 4 schließlich Förderung der technisch-visuellen Kommunikation.

Das Modul vier orientiert sich am Verstehen visualisierter Inhalte, die insbesondere in der vorberuflichen wie auch in der beruflichen Bildung, im Bereich der Weiterbildung sowie in der Berufswelt einen immer größeren Stellenwert einnehmen wird. Zeichnungen und Diagramme ersetzen dabei immer öfter Fachtexte (Biermann Piasecki Berufsbildung S. 14) deren Verstehen fundamental für die selbständige berufliche Handlungssituation ist. In dem vorliegenden Beitrag geht es hierbei zunächst darum, Tabellen und Diagramme, die aus unterschiedlichen Parametern konzipiert sind, zu Lesen, zu erklären und verstehend für weiterführende Aufgaben zu nutzen. Entscheidend ist dabei in diesem Kontext immer das Erfassen und Erklären des Funktionszusammenhangs aus den jeweiligen Tabellen und Diagrammen.

Schwierigkeitslevel der Texte und Aufgaben zu den einzelnen Stationen mit der Orientierung am „Gemeinsamen Europäischen Referenzrahmen für Sprachen“

Die Aufgaben an einzelnen Stationen orientieren sich in ihrem Schwierigkeitslevel an dem gemeinsamen Europäischen Referenzrahmen für Sprachen. Dieser Referenzrahmen, ursprünglich für den Erwerb von Fremdsprachen konzipiert, wird beim Dortmunder Kommunikationstraining auf die Schwierigkeitslevel von Texten und Aufgaben übertragen, um insbesondere Menschen mit funktionalem Alphabetismus, mit Lese-Rechtschreibschwächen und Problemen in der Erfassung von Schriftsprache und mündlicher Kommunikation, auszuweiten. Hierbei geht es darum, den jeweiligen Aufgaben an einer Station einen entsprechenden Level zuzuordnen, damit die Lernerinnen und Lerner bei der Auswahl der Aufgaben an einer Station sich geeignet orientieren können und Aufgabengemäß ihren Möglichkeiten und Anforderungen auswählen können. Dabei besteht eben die besondere Möglichkeit darin, dass sich die Erwachsenen jeweils nach ihren eigenen Möglichkeiten so orientieren können dass sie jeweils nach den verschiedenen Leveln die geeigneten Aufgaben auswählen und die Schwierigkeitsgrade für den weitere Bearbeitungsablauf auch steigern können. Entsprechend dem Ansatz des Gemeinsamen Europäischen Referenzrahmens für Sprachen werden im Folgenden Aufgabenbeispiele und Strukturen gezeigt, die sich an den Leveln A1, A2 sowie B1 und B2 hin orientieren. Weitergehende Level sollen

bei dem hier vorliegenden Ansatz keine Berücksichtigung finden, weil die höheren Level der C-Gruppen sich vornehmlich an Lernende mit erweiterter Grundkompetenz wenden.

Entwicklung von Deskriptoren zur Lesekompetenz

Die Entwicklung von Deskriptoren zur Erfassung der Lesekompetenz von Tabellen und Graphischen Darstellungen sind bislang nicht entwickelt worden. Insbesondere zu einer systematischen Erstellung von Trainingsmaterialien in dem hier vorgegebenen Umfeld ist es aber unzweifelhaft erforderlich, dass für den Bereich der Levelstufen A1, A2, B1 und B2 entsprechende Deskriptoren formuliert werden, damit unterschiedlichste Aufgaben aus verschiedenen Themenfeldern formuliert werden können. Die Deskriptoren werden dabei so angelegt, dass bei den einzelnen Niveaustufen jeweils darauf Bezug genommen wird, welche Inhalte für das Leseverstehen von einzelnen Tabellen oder Darstellungen notwendig sind. Der Rückgriff auf Deskriptoren soll insbesondere bei der Neukonstruktion von Aufgaben die Gestaltung einzelner Aufgabenblätter oder Lernaufgaben erleichtern.

Skalierung der Niveaustufen

Die Skalierung der Niveaustufen soll möglichst nach quantitativen Methoden erfolgen. Hieraus ergibt sich, dass eine Anlehnung an die Item-Response- Theorie zu prüfen ist. Dabei besteht das Ziel darin, den Schwierigkeitsgrad der einzelnen Testaufgaben in einer Item-Bank zu bestimmen. Hieraus wiederum soll die Skalierungsmethode entwickelt werden, um anschließend Schlüsselmerkmale zur Formulierung von Deskriptoren der einzelnen Niveaustufen zu entwickeln. Dieser Ansatz kann hier in einem ersten Schritt zu diesem Thema nur ansatzweise entwickelt werden, er soll aber gleichzeitig einen im Hintergrund deutlich bleibenden Rahmen abgeben, in dem die Quantifizierung der Aufgabenkriterien möglich wird.

Die Item-Bank für die Stufen A1, A2, B1 und B2 nach dem Europäischen Referenzrahmen für Sprachen bezogen auf die Klassifizierung von Tabellen soll dabei folgende Faktoren berücksichtigen: 1. Die Anzahl der Zeilen, 2. die Anzahl der Spalten, 3. eine Komplexität von z.B. physikalischen Einheiten in den Tabellen, und 4. die Komplexität der in einer Tabelle verwendeten Fachbegriffe.

Beispiele für die Konstruktion von Aufgaben zum Leseverstehen von Tabellen

Niveaustufe A1

Anteile im Rohöl	Anteil
Gase	3%
Leichtbenzin	8%
Schwerbenzin	10%
Petroleum	15%
Gasöl	20%
Schweröl	20%
Bitumen	24%
	100%

Die Itembank für alle hier verwendeten Levelstufen (A1, A2, A4, A4) für alle Tabellen umfasst folgende Items

- Anzahl der Zeilen
- Anzahl der Spalten
- Komplexität physikalischer Einheiten
- Komplexität der verwendeten Fachbegriffe

Skalierungsrahmen

- Anzahl der Zeilen kleiner 10
- Anzahl der Spalten 2
- Eindimensionale einfache physikalische Einheiten (z. B.: Meter m; Kilogramm kg; Sekunde s)
- Einfache berufsbezogene Fachbegriffe (z.B.: Lebensmittel, Farben, Metalle)

Deskriptoren

Das Leseverstehen auf der Stufe A1 für Tabellen bedeutet, dass Inhalte der Zeilen, Spalten, Einheiten und Begriffe erfasst werden und Fragen zur Tabelle beantwortet werden können.

Beispiel: Fragen zur Tabelle nach der Zusammensetzung des Rohöls: Wie groß ist der Anteil des Schwerbenzins im Rohöl?

Antwort: Der Anteil beträgt 10 %.

Niveaustufe A2

Metall	Dichte, in kg/dm ³	Schmelzpunkt in C°
Aluminium	2,7	660
Blei	11,3	327
Eisen	7,8	1535
Kupfer	8,9	1083
Zink	7,13	419

Skalierungsrahmen

Anzahl der Zeilen kleiner 10

Anzahl der Spalten bis 3

Eindimensionale oder einfache zweidimensionale physikalische Einheiten (z. B.: Kilometer/Stunde Km/h; Temperatur °C)

Einfache berufsbezogene Fachbegriffe (z.B.: Lebensmittel, Farben, Metalle, Ausbildungsbereich Grundstufe)

Deskriptoren

Das Leseverstehen auf der Stufe A2 für Tabellen bedeutet, dass Inhalte der Zeilen, Spalten, Einheiten und Begriffe erfasst werden und Fragen zur Tabelle beantwortet werden können.

Beispiel: Fragen zur Tabelle nach der Dichte und dem Schmelzpunkt der Metalle.

Frage: Welches Metall hat die größte Dichte?

Antwort: Die Dichte von Blei hat den höchsten Wert.

Niveaustufe B1

Winkelstahl				
L	a	b	c	d ¹ /mm
30 x 20 x 3	30	20	3	8,4
40 x 20 x 4	40	20	4	11
50 x 30 x 5	50	30	5	13
60 x 30 x 5	60	30	5	17
75 x 30 x 6	75	30	6	21
80 x 60 x 7	80	60	7	23
100 x 50 x 6	100	50	6	25

Skalierungsrahmen

Anzahl der Zeilen kleiner 30

Anzahl der Spalten bis 10

Eindimensionale oder einfache zweidimensionale physikalische Einheiten (z. B.: Kilometer/Stunde Km/h; Temperatur °C)

Berufsbezogene Fachbegriffe (z.B.: Lebensmittel, Farben, Metalle, Ausbildungsbereich Grundstufe)

Komplexere Definitionen mit Bezug zu einfachen Zeichnungen und EU-Normen

Deskriptoren

Das Leseverstehen auf der Stufe B1 für Tabellen bedeutet, dass Inhalte der Zeilen, Spalten, Einheiten und Begriffe erfasst werden und Fragen zur Tabelle beantwortet werden können.

Beispiel: Fragen zur Tabelle nach den Abmessungen von Winkelstahlprofilen.

Frage: Wie groß ist das Maß „b“ des Winkelstahlprofils L 80x60x7?

Antwort: Das Maß „b“ beträgt bei dem Winkelstahlprofil L 80x60x7= 60mm.

Niveaustufe B2

	M8	M10	M12 x	M16 x	M20 x	M24	M30	M36	M42	M48	M 56
d	x 1	x 1	1,5	1,5	1,5	x 2	x 2	x 3	x 3	x 3	x 4
SW	13	16	18	24	30	36	46	55	65	75	85
k	5,3	6,4	7,5	10	12,5	15	18,6	22,5	26	30	35
dw	11,6	14,6	16,6	22,5	28,2	33,6	42,8	51,1	60	69,5	78,7
e	14,4	17,8	20	26,2	33	39,6	50,9	60,8	71,3	82,6	93,6
b¹	22	26	30	38	46	54	66				
b²				44	52	60	72	84	96	108	
b³						73	85	97	109	121	137
l											
von	40	45	50	65	80	100	120	140	160	200	220
bis	80	100	120	160	200	240	300	360	440	480	500

Skalierungsrahmen

Anzahl der Zeilen größer 30

Anzahl der Spalten größer 10

Eindimensionale oder einfache zweidimensionale physikalische Einheiten (z. B.: Kilometer/Stunde Km/h; Technisch relevante spezifische Abkürzungen wie SW oder M20x1,5)

Berufsbezogene Fachbegriffe (Ausbereitungsbereich Fachstufe in Verbindung mit Technischen Zeichnungen, z.B. Schrauben mit Feingewinde)

Komplexere Definitionen mit Bezug zu Technischen Zeichnungen und EU-Normen

Deskriptoren

Das Leseverstehen auf der Stufe B2 für Tabellen bedeutet, dass Inhalte der Zeilen, Spalten, Einheiten und Begriffe erfasst werden und Fragen in Verbindung mit Technischen Zeichnungen zur Tabelle beantwortet werden können.

Beispiel: Fragen zur Tabelle nach den Abmessungen der Schrauben unter Einbeziehung von Normzeichnungen.

Frage: Erkläre den Zusammenhang der Schlüsselweite zum Maß „e“ bei der Schraube M20x1,5.

Antwort: Bei der Schraube mit dem metrischen Feingewinde M20x1,5 beträgt die Schlüsselweite 30mm, d.h. es ist ein Schraubenschlüssel mit der Angabe 36 zu verwenden. Das Maß „e“ beträgt 33mm. Es stellt das Eckmaß des sechseckigen Schraubenkopfes dar.

Beispiele für die Konstruktion von Aufgaben zum Leseverstehen von Diagrammen

Die Itembank für alle hier verwendeten Levelstufen (A1, A2, B1, B2) für alle Diagramme umfasst folgende Items:

Anzahl der Skalierungen auf der Abszisse

Anzahl der Skalierungen auf der Ordinate

Komplexität der Einheiten

Komplexität der verwendeten Fachbegriffe

Skalierungsübersicht A1, A2, B1 und B2

	X-Achse	Y-Achse	Komplexität der Begriffe	Komplexität der Einheiten
A1	Eine Skalierung	Eine Skalierung	Einfache Fachbegriffe Grundstufe	Eindimensionale einfache Einheiten
A2	Bis 10 einfache Begriffe	Eine Skalierung	Einfache Fachbegriffe Grundstufe	Eindimensionale einfache Einheiten
B1	Bis 10 Begriffe	Bis zwei Skalierungen	Einfache Begriffe Fachstufe	Zweidimensionale einfache Einheiten
B2	Bis 20 Begriffe	Bis zwei Skalierungen	Begriffe der Fachstufe	Zweidimensionale Einheiten Fachstufe

Beispiel Diagramm A2:

Abschluss

Die Förderung der berufsbezogenen Kommunikation nach dem von der TU Dortmund und dem CJD Dortmund entwickelten Konzept DoKoTrain greift mit dem Konzept zur Förderung des Leseverständnisses ein in Deutschland neues Gebiet auf. Systematisches Lesetraining für junge Erwachsene in Ausbildung – insbesondere im Bereich der Arbeit mit Menschen mit Behinderungen – ergänzt das Konzept und führt mit den anderen Konzeptmodulen zu einem umfassenden Ansatz. Der Autor hofft in diesem Zusammenhang mit der Publikation auf anregende Kritik und Hinweise.

La compréhension en lecture: Le rôle des interactions entre pairs dans le développement de la métacognition

Jocelyn Reulier

Université du Québec à Rimouski, Canada; Université de Nantes, France

I. Introduction

Précisons d'emblée que lors de la présentation à la 16^{ème} conférence sur la lecture, c'est principalement la problématique, le cadre théorique puis quelques choix méthodologiques anticipés pour l'expérimentation finale qui ont été soumis. En effet, la présente recherche doctorale est en cours.

Ainsi, du point de vue de la problématique et du cadre théorique, cet écrit permet de dresser des constats généraux sur le niveau des élèves de la fin du primaire en mettant en relief leurs difficultés métacognitives. Dès lors, une synthèse des recherches sur les concepts de « compréhension en lecture » et de « métacognition » permet de mieux les appréhender et de comprendre tout particulièrement l'importance de la métacognition dans l'acte de lecture. Également, grâce à des études très récentes stipulant que les interactions entre pairs permettent le développement cognitif et métacognitif des élèves, le concept d'« interactions entre pairs » sera détaillé puis deux modèles d'enseignement de la compréhension en lecture prenant en compte ces apports seront présentés. Le modèle de l'enseignement réciproque (Brown et Palincsar, 1984) insiste sur la dimension socioconstructive de l'acquisition des connaissances et des habiletés métacognitives. Une étude critique de ce type d'enseignement du point de vue scientifique et praxéologique est proposée et permettra de justifier le principal objectif de cette recherche.

Du point de vue de la méthodologie, il sera justifié en quoi cette recherche peut être qualifiée de « recherche-action à visée qualitative/interprétative » (Savoie-Zajc, 2000). Dès lors, les enjeux et les fondements épistémologiques de la « recherche-action » et de la démarche « qualitative/interprétative » seront explicités (Gohier, 2004). Puis, en anticipant sur l'expérimentation finale à venir, il sera justifié du choix du design propre à la recherche-action constituée de cycles d'« action/observation/réflexion » (Dolbec et Clément, 2000). Pour la collecte des données, l'intérêt de l'observation en situation de phénomènes complexes via l'utilisation de l'enregistrement audio et vidéo (Martineau, 2005) puis l'écriture dans un journal de bord sera explicité. Il en sera de même pour l'analyse des données qui

recourra au questionnement analytique (Paillé et Mucchielli, 2003) puis à la « logique inductive » et « modérée » (Savoie-Zajc, 2000).

II. Problématique

Le savoir-lire demeure un enjeu social et scolaire fondamental et cette importance s'exprime tout particulièrement dans les dernières réformes mises en place en France comme au Québec (MEF, 2002; MELS, 2001). Or, les résultats d'études internationales des élèves de la fin du primaire (PIRLS, 2006), plus spécifiquement dans le domaine de la compréhension en lecture restent très modestes et il ressort que ces élèves sont confrontés à des difficultés métacognitives. Il est donc nécessaire d'enseigner la métacognition (Griffith et Ruan, 2005 ; Baker, 2002) et c'est pour ces raisons que les programmes au Québec préconisent l'enseignement des stratégies de gestion et d'évaluation de la compréhension en lecture. Aussi, la perspective socioconstructiviste commune aux programmes de formation des deux pays (MEF, 2002 ; MELS, 2001) invite à enseigner la métacognition en privilégiant les interactions entre pairs. À ce propos, un modèle en enseignement de la lecture propose justement des modalités d'enseignement structurées et explicites de stratégies cognitives et métacognitives dans cette perspective. Il s'agit de l'enseignement réciproque (Palincsar et Klenk, 1991). Les résultats de ce type d'enseignement révèlent que les élèves maîtrisent plus adéquatement les stratégies cognitives et métacognitives après avoir interagi entre pairs dans des sous-groupes. Or, les raisons de cette amélioration ne sont pas clairement identifiées et l'importance du rôle des interactions dans le développement de la métacognition mérite d'être mieux documentée.

III. Question de recherche

L'objet de la recherche est ainsi formé d'un problème concret (Mayer et Ouellet, 1991) issu du contexte professionnel d'un chercheur-praticien et il en découle la question principale de la recherche: *comment les interactions entre pairs de la fin du primaire (5^{ème} année du primaire au Québec, CM2 en France) accompagnées de l'enseignant permettent de développer la métacognition chez des élèves en difficulté de compréhension en lecture?* .

IV. Cadre conceptuel et théorique

Les trois concepts fondamentaux de notre thèse sont les suivants : « la compréhension en lecture », « la métacognition », « les interactions entre pairs ».

D'une part, la compréhension est aujourd'hui considérée non seulement comme le « *résultat d'un processus [...], réelle activité de traitement de l'information*

conduit par une série de processus ascendants (bottom-up) et descendants (top-down) qui permettent aux lecteurs de constituer le sens du texte par l'élaboration d'une représentation mentale porteuse de sens et qui est également le produit d'une interaction sociale » (Reulier, 2007 : définition-synthèse). L'élaboration de cette définition n'est pas anodine puisqu'elle s'inscrit volontairement dans une perspective socio-constructiviste. En effet, c'est cette conception qui fait l'objet d'un plus large consensus aujourd'hui puisque la lecture est désormais considérée comme un processus interactif. De fait, il s'agit d'une rencontre entre un lecteur, un texte et un contexte (Giasson, 2003). Plus spécifiquement, du point de vue de l'apprentissage de la lecture au primaire, entre l'émergence de la lecture et la compétence à lire des textes variés, plusieurs étapes doivent être franchies par les élèves du primaire. Giasson (2003) présente ces différentes en référant à la terminologie suivante : le lecteur en émergence, l'apprenti lecteur, le lecteur débutant, le lecteur en transition, l'apprenti stratège et le lecteur confirmé. De ces six étapes visant à rendre l'élève compétent en lecture, les trois premières, et souvent la quatrième, peuvent plus précisément représenter les élèves du premier cycle du primaire. Les deux dernières représentent, quant à elles, généralement les élèves des deuxièmes et troisièmes cycles du primaire. Enfin, la compréhension en lecture requiert la mise en place d'un certain nombre de processus cognitifs qu'a décrit Giasson (1990). Elle distingue les microprocessus qui permettent de comprendre le sens de l'information contenue dans un texte, les processus d'intégration qui donnent aux lecteurs le moyen de réaliser des liens entre les propositions et les phrases, les macroprocessus spécialisés dans les relations entre les phrases et les paragraphes, les processus d'élaboration qui permettent de dépasser le texte et d'effectuer des inférences et les processus métacognitifs qui permettent de gérer efficacement tous ces processus.

D'autre part, le concept de métacognition a été introduit par l'américain Flavell (1976). Les chercheurs s'accordent à retenir deux pôles dans la métacognition : les connaissances métacognitives et les habiletés métacognitives. Selon Flavell (1976), les connaissances métacognitives qui se réfèrent au premier pôle se divisent en trois catégories. Elles peuvent porter sur les connaissances des personnes. Dans le domaine de la lecture, il s'agit des connaissances sur ses propres capacités de lecteurs et sur celles des autres, ses connaissances antérieures, son sentiment d'auto-efficacité. Ces connaissances peuvent également porter sur les tâches de lecture à effectuer. Enfin, elles peuvent porter sur des stratégies comme : anticiper l'information, questionner, inférer, résumer. Le second pôle de la métacognition fait référence aux habiletés métacognitives. En premier lieu, ces compétences se rapportent aux activités de gestion. En lecture, il s'agit des connaissances que le

lecteur possède de ses processus qu'il met en œuvre avant, pendant et après sa lecture. En second lieu, elles concernent les stratégies de planification : le lecteur anticipe ce qui va se passer dans le texte. En troisième lieu, elles concernent les stratégies de contrôle : le lecteur est capable de se réguler pendant la lecture.

Enfin, les « interactions verbales entre pairs » se réfèrent à l'approche socioconstructiviste et à quelques concepts fondamentaux de la théorie de Vygotsky (1978) que sont l'« étayage » (Bruner, 1993) et la « zone proximale de développement ». Les interactions verbales sont d'abord guidées par l'enseignant grâce à un « étayage ». Selon les théories de Vygotsky (1978), cet étayage se déploie essentiellement grâce au dialogue entre l'enseignant et les élèves et s'établit dans la zone de développement proximal (ZPD), espace entre le niveau de performance qu'un enfant peut démontrer seul face à une tâche et celui qu'il peut atteindre avec une assistance maximale. Ainsi, pour que l'enfant passe à un niveau supérieur de développement, il faut que les apprentissages se réalisent dans sa ZPD. Un étayage apporté par l'enseignant mais également par les pairs dans cette zone permettent à l'enfant de s'appropriier et d'intérioriser graduellement les stratégies qui lui sont proposées afin de les réutiliser dans une autre activité qu'il pourra réaliser seul (Lavoie et al, 2007).

Les interactions dont il est question ici sont « verbales » dans le sens où le langage devient primordial puisqu'il a une fonction communicative et interactive. A cet égard, son rôle est considéré comme central dans le processus par lequel les individus acquièrent des fonctions mentales supérieures (processus de la pensée, de la réflexion et du raisonnement) qui sont véhiculées par des activités partagées. Ce sont ces interactions verbales qui constituent les fondations sociales de la cognition puisque : « *Pour Vygotsky, ces interactions avec des adultes ou des pairs permettent à certains types de fonctions mentales supérieures telles que, l'attention volontaire, la mémoire logique, la pensée verbale et conceptuelle ainsi que les émotions complexes, d'émerger et de se constituer dans le processus de développement* » (Ivic, 1994, p.4). La métacognition relève de ces « fonctions mentales supérieures ».

V. Méthodologie

A/ Type de recherche et positionnement épistémologique : une recherche-action à visée qualitative/interprétative

La présente recherche est de type « recherche-action » et passe par une voie qualitative et interprétative. Plus concrètement, elle introduit dans une pratique pédagogique de classe un dispositif nouveau, celui de l'enseignement réciproque réadapté. Le dispositif consiste à faire se rencontrer des élèves en difficulté pour qu'ils échangent entre eux sur ce qu'ils comprennent des textes en introduisant

progressivement la métacognition. Le tout est donc accompagné par l'enseignant.

À partir de 1944, les écrits à propos de la recherche-action deviennent très nombreux et Lavoie, Marquis et Laurin (1996) vont proposer la définition-synthèse suivante en retenant quelques éléments: 1) une recherche-action s'effectue dans un contexte dynamique de recherche à caractère social associée à une stratégie d'intervention ; 2) elle peut-être menée « sur soi » comme par exemple, un enseignant qui mène sa recherche dans sa classe mais c'est rarement le cas puisque la plupart de ces recherches sont élaborées par une collectivité d'individus ; enfin, 3) elle a pour origine des besoins sociaux réels et est menée en milieu naturel dans une dynamique suscitée par les échanges entre chercheurs et praticiens afin de résoudre une situation qui pose problème (Lavoie et al, 1996). La présente recherche réfère donc bien à la recherche-action puisque le chercheur effectue cette recherche dans un contexte dynamique qui est sa propre classe et réadapte l'enseignement réciproque afin de répondre à un besoin inhérent : celui de faire progresser les élèves en difficulté de compréhension en lecture. Aussi, du point de vue des finalités de la « recherche-action », Goyette et Lessard-Hébert (1987) en ont relevé trois principales : une finalité de recherche, une finalité d'action et enfin, une finalité de formation et de perfectionnement. En ce qui a trait à la présente étude, la visée principale est une finalité de recherche. La visée secondaire qui en découle est une finalité d'action constitutive d'un changement dans notre pratique (Goyette et Lessard-Hébert, 1987).

De ce fait, la finalité de recherche qui nous préoccupe empruntera la voie qualitative et interprétative. En effet, Savoie-Zajc (2000) explique que le chercheur en recherche qualitative/interprétative serait « *animé du désir de comprendre le sens de la réalité des individus ; il adopte une perspective systématique, interactive, alors que la recherche se déroule dans le milieu naturel des personnes* » (Savoie-Zajc, 2000, p 174). La finalité de l'analyse qualitative/interprétative est donc de construire des lectures interprétatives, c'est-à-dire de donner du sens à des phénomènes caractérisés par une grande complexité (Anadon, 2009). Dès lors, deux facteurs principaux caractériseraient la démarche de recherche qualitative/interprétative : il s'agit de l'accessibilité des résultats et des connaissances produits par la recherche et le caractère essentiel de l'interactivité (Savoie-Zajc, 2000). La présente recherche peut donc être qualifiée de « qualitative/interprétative » puisque cette thèse, en s'inscrivant dans un contexte de recherche-action, se focalisera sur des données qui seront de nature qualitative (données discursives liées aux interactions) et l'épistémologie sous-jacente sera interprétative.

B/ Sources de données : définition de la population et procédure d'échantillonnage

L'échantillon qui sera sélectionné provient d'une population de trente élèves d'une classe de CM2. Cette classe appartient à une école citadine de dix classes d'une ville d'Angers dans l'ouest de la France. Le niveau socio-économique est aisé et ne reflète pas forcément les réalités des secteurs ruraux ou plus encore, ceux des Zones d'Education Prioritaires (ZEP). Malgré cela, des élèves sont considérés en difficulté de compréhension en lecture.

Dès lors, voici comment les élèves seront « sélectionnés » pour constituer l'échantillonnage. Dans le cas de cette recherche, puisque le but de l'étude est de comprendre et d'interpréter des phénomènes, la taille de l'échantillon est forcément réduite et il s'agira d'une étude en profondeur d'un groupe restreint « *plutôt que d'une vision globale d'un groupe hétérogène* » (Pires, 1997, p 155). Dès lors, voici les critères qui seront établis en fonction du cadre théorique et praxéologique et permettant ainsi de constituer un échantillon caractérisé par l'homogénéisation.

Ces élèves appartiendront à la classe de CM2 dans laquelle le chercheur pratiquera. Ils seront âgés de 9-10 ans et auront comme langue première le français (très peu de mixité sociale dans cet établissement). L'enseignant-chercheur les connaîtra bien mais pour éviter les biais, des évaluations diagnostiques issues des Réseaux des Observatoires Locaux de la Lecture (ROLL) (Bentolila et Mesnager, 1999) seront utilisées comme dans la phase préparatoire de la recherche. En fonction des résultats permettant d'établir des classements grâce aux logiciels des ROLL (avec comme terminologie : « bons compreneurs », « moyens compreneurs » et « mauvais compreneurs »), seuls seront alors sélectionnés les mauvais compreneurs et les élèves situés entre la catégorie « mauvais compreneurs » et « moyens compreneurs ». L'objectif est de former un échantillon homogène certes, mais qui au sein du groupe même, présentera une semi-hétérogénéité car les recherches indiquent que les élèves en grande difficulté de compréhension ont moins d'aisance à verbaliser que les élèves moyens compreneurs (Van Grunderbeeck et al, 2003 ; Cèbe, 2003; Almasi, 2003 ; Rémond, 2003). Cela facilitera donc les interactions. Les dossiers scolaires seront également utilisés pour vérifier si les résultats obtenus les années précédentes sont en concordance avec ceux acquis lors de ces tests. Au final, le groupe sera ainsi constitué de tout au plus cinq élèves.

C/ Collecte des données

C.1. Design méthodologique en lien avec la collecte des données

Cette phase de collecte des données consistera en l'utilisation de stratégies souples puisque que « *la recherche qualitative/interprétative comme la recherche-action*

permet au chercheur de comprendre de l'intérieur, la nature et la complexité des interactions d'un environnement spécifique et d'orienter sa collecte de données en tenant compte de cette dynamique interactive » (Savoie-Zajc, 2000, p 174). Les tenants de la recherche-action insistent sur la nécessité pour le chercheur de ne pas s'emprisonner dans un processus méthodologique trop rigide qui l'empêcherait de réagir aux imprévus rencontrés pendant le déroulement sur le terrain (Dolbec et Clément, 2000). Néanmoins, cette recherche s'appuiera sur une démarche qui, bien que flexible et souple en certains points, demeurera tout de même fortement balisée. En effet, le cycle qui sera suivi réfère aux travaux de Kurt Lewin (Claux et Lemay, 1992). Il s'agira d'abord de planifier l'action, ensuite d'agir, d'observer pendant l'action et, finalement, de réfléchir sur l'action.

C.2. Instruments d'analyse des données

Le chercheur-praticien et les sujets seront, dans ce contexte, « les instruments » premiers de recherche puisque cette connaissance ne pourra naître que de leurs interprétations, c'est-à-dire de leurs perceptions et de leurs réflexions placées dans un contexte interactif (Savoie-Zajc, 2000). Aussi, les instruments de données utilisées le plus souvent en recherche-action sont l'enquête, l'observation et l'analyse documentaire (Mayer et Ouellet, 1991). Nous privilégierons l'observation en situation qui correspond bien au statut du praticien-chercheur.

Selon Becker (2002), l'observation en situation est un outil de cueillette de données exigeant (Becker, 2002) puisqu'elle implique au moins de remplir quatre tâches incontournables. Premièrement, le chercheur est présent sur les lieux même du terrain (ce qui est peu difficile dans le cadre de la présente recherche). Deuxièmement, il faut observer le déroulement des événements, ce qui exige une attention soutenue. Troisièmement, le chercheur doit garder une trace de ses observations en les enregistrant d'une manière ou d'une autre. Enfin, quatrièmement, il faut rendre compte de ce qui a été observé afin d'en proposer une interprétation. Cette dernière tâche correspond bien sûr à l'aboutissement du processus, soit celle de produire du nouveau savoir sur un objet (Martineau, 2005).

Du point de vue de l'enregistrement des données, les moyens les plus couramment utilisés sont la prise de note, l'enregistrement audio ou la captation vidéo en recherche-action (Becker, 2002). Les élèves seront filmées lors de l'ensemble des séances et ils parleront dans un dictaphone pour obtenir une meilleure qualité du son. L'avantage de ce type d'outils réside dans le fait de permettre la reprise de l'observation. Une fois filmé, l'événement peut en effet être revu autant de fois qu'on le souhaite, ce qui peut en permettre une analyse très fine (Martineau, 2005). Quant à la prise de notes, elle s'effectuera dans le « journal du chercheur » qui constituera un mode de collecte des données dûment identifié dans la recherche où le chercheur notera la transformation dans les pratiques professionnelles et dans l'analyse des autres données. La rigueur du processus

d'analyse sera inhérent à ce journal puisque qu'il comprendra différentes prises de note telles que les modifications apportées au cadre de référence jusqu'à l'interprétation (Savoie-Zajc, 2000).

D/ Traitement et analyse des données

Dans la logique de ce modèle méthodologique, la collecte des données s'effectuera en concomitance avec l'analyse des données. Pour ce faire, la méthodologie propre à l'analyse de contenu sera retenue puisqu'une telle analyse permet d'exploiter les informations que l'on trouve dans la communication afin d'en dégager du sens (Mucchielli, 1988). Cependant, elle devrait se faire de manière spécifique, en privilégiant une stratégie mixte réunissant le questionnement analytique, l'élaboration d'une grille conceptuelle, le tout intégré dans une analyse en mode d'écriture. Ainsi, selon Paillé et Mucchielli (2003), en situation d'analyse, le chercheur pose dans les faits des questions au corpus de données, auxquelles il répond de manières diverses. Or, le fait de poser des questions et de répondre à des questions peut constituer en soi une stratégie d'analyse qualitative qu'il nomme « stratégie de questionnement analytique » (Paillé et Mucchielli, 2003, p 110). Mettre au point une cette dernière est relativement accessible tout en étant rigoureux puisque selon ces chercheurs, il s'agit de 1) formuler, sélectionner ou adapter les questions opérationnalisant le mieux possible les objectifs de recherche ; 2) soumettre le matériau d'analyse à diverses questions de manière à générer de nouvelles questions plus précises en lien avec le corpus, ce que les chercheurs nomment le « canevas investigatif » puis, 3) répondre progressivement à ces questions en générant des réponses directes sous la formes de remarques, de propositions, de textes synthétiques et de nouvelles questions (Paillé et Mucchielli, 2003, p 111). Au final, le corpus va devoir être examiné à plusieurs reprises puisque de nouvelles questions vont s'ajouter continuellement.

À ce propos, Savoie-Zajc (2000) explique qu'il y a trois sortes de logique inductive. La logique « typiquement inductive » est celle préconisée dans la théorisation ancrée (Glaser et Strauss, 1967) mais elle ne correspond pas à ce type de recherche puisque le chercheur devrait arriver au site avec le moins d'influences théoriques possible. La seconde logique est qualifiée de position « inductive modérée » et « reconnaît l'influence du cadre théorique, par la définition opératoire des concepts étudiés » (Savoie-Zajc, 2000, p 186). Enfin, la dernière est plus « inductive délibératoire » puisqu'elle consiste à « utiliser le cadre théorique comme un outil qui guide le processus de l'analyse. La grille d'analyse peut toutefois être enrichie si d'autres dimensions ressortent des données » (Savoie-Zajc, 2000, p 186). Dans cette recherche, la logique « inductive modérée » correspond bien ici à la démarche de planification/action/réflexion permettant d'ajuster la « situation pédagogique » de manière à rejoindre les préoccupations de recherche. Également, l'analyse par questionnement analytique se réfère à cette logique puisque des questions générales proviennent justement du cadre théorique mais peuvent

évoluer. Quant au concept de métacognition qui pose difficulté d'un point de vue praxéologique et qui nécessite une opérationnalisation, la pré-expérimentation a permis de se référer à un « guide conceptuel » (Lafortune, 2000). Dans ce cas, il s'agit bien d'une position « inductive délibératoire » car c'est ce concept théorique avec ses composantes qui va permettre d'observer si oui ou non, les élèves échangent de manière métacognitive. Le verbatim sera aussi examiné à partir de ce guide conceptuel. Au final, le regard analytique et interprétatif inductif va prendre forme dans l'écriture puisqu'elle va déborder la stricte description pour prendre forme d'essais plus conceptuels, se situant à une certaine distance du corpus analysé (Paillé et Mucchielli, 2003, p 105).

VI. Conclusion

Comme il l'était indiqué en introduction, cette recherche est en cours et il est difficile pour le moment d'escompter des résultats d'autant que la démarche est principalement inductive. L'expérimentation finale aura lieu de septembre 2010 à février 2011 et la thèse devrait être présentée en septembre 2011. La 17^{ème} conférence européenne sur la lecture à Mons sera donc l'occasion d'y présenter les résultats définitifs.

Teaching Portuguese for the development of transversal competences

Cristina Manuela Sá

Universidade de Aveiro, Centro de Investigação *Didáctica e Tecnologia na Formação de Formadores*, LEIP – Laboratório de Investigação em Educação em Português

1. Modern education emphasizes the importance of developing competences essential to life in an ever changing society.

These competences are being defined both by prominent researchers in the educational field and international organizations, namely within the European Union.

In what concerns research, Philippe Perrenoud (1999) presented a set of competences teachers should develop in their pupils in order to prepare them for the modern society in the 21st century about to begin. These competences covered three main fields: i) the ability to cope with heterogeneity, ii) team work and iii) active citizenship (cf. Sá *et al.*, 2008: 3).

Ferre Laevers (2008), taking into account an individual perspective, stresses the need for educational systems to promote competences such as self-confidence and the ability to explore the entourage with all one's capacities (leading to active citizenship), as well as openness to the world (allowing the subject to cope with heterogeneity and engage in team work) (cf. Sá *et al.*, 2008: 3).

In the political sphere, the European Commission (2007: 5-13) also pointed some important competences related to traditional scientific areas (*Communication in the mother tongue and foreign languages, Mathematical literacy and basic competences in science and technology and ICT skills*) and others more directly associated to life in a modern society (*Learning to learn, Entrepreneurship, Interpersonal, intercultural and social competences, Civic competences and Cultural awareness*) (cf. Sá *et al.*, 2008: 2).

Naturally, the governments within the European Union organized their educational policies in order to implement these important guidelines.

Portugal is no exception. Several documents issued since the beginning of this century stated their importance.

Among them there's the *National Curriculum for Basic Education* (Ministério da Educação, 2001), which recommends the development of competences attached to i) knowledge (technological, scientific and cultural) and its use, ii) language (both mother tongue and foreign languages), iii) methods and techniques centred in problem solving (looking for information and organizing it, selecting strategies adapted to a specific goal, taking decisions, being autonomous and capable of

involvement in team work) and iv) the ability to perceive life in an ecological way (cf. Sá *et al.*, 2008: 5).

Another document presented a set of transversal competences (Ministério da Educação, 1999): 1) *Methods for study and work*, ii) *Processing information*, iii) *Communication*, iv) *Cognitive strategies* and v) *Interpersonal and team relationships*.

These competences are viewed as transversal ones, because they are essential at school and in everyday life as they favour success in academic life and the adaptation to professional life and the exercise of active citizenship.

2. Teaching the mother tongue promotes the development of such transversal competences.

Recently, new curricula concerning the teaching of Portuguese as a mother tongue designed for the three cycles within Basic Education in the Portuguese educational system (ranging from 6 to 14/15 year-old pupils) were published (Reis, 2008), reinforcing the importance of these transversal competences and associating them to specific competences to be developed while attending Basic Education.

This document explicitly refers to very important principles underlying modern education in the Portuguese context, namely the essential role played by the mother tongue in the development of competences, attitudes and values and the acquisition of knowledge (Sá, 2009a).

Reading and writing are included in this set of competences. And surely they are essential and transversal competences to be developed through the teaching of the mother tongue.

But one must recognize that the teaching of all the other subjects may contribute to a better performance in reading and writing, because all the verbal intercourse between teachers and pupils takes place in the mother tongue. So, teachers of all the other subjects should recognize this role and act according to it for the benefit of their pupils.

3. Thus, I directed a series of studies leading to the presentation of PhD and Master dissertations and centred in the analysis of the principal features of this issue. Some of these studies are already concluded and gave origin to papers presented and published. Others are still on the make, but the main ideas in them are being diffused too.

3.1. Some of them concern the conceptions of the actors involved in the process: supervisors (Neves, 2004; Neves, 2008; Neves & Sá, 2005), teacher trainees and in service-teachers (Santos, 2007, 2008), pupils (Pereira, 2008a, 2008b) and educational stakeholders in the schools (Barbosa, 2008, 2009).

These studies helped me to understand that these actors are aware of the importance of:

- the teaching/learning of the mother tongue for success at school and in everyday life;
- adopting a transversal approach while teaching/learning Portuguese as a mother tongue;
- using the teaching/learning of other subjects to develop competences in mother tongue, namely related to written communication;
- reinforcing the relation between written and oral communication, both in comprehension and in production.

But they also revealed that these actors – and specially the teachers – do not feel at ease while trying to develop these competences in their pupils.

And the difficulties seem to come mainly from three sources:

- a lack of training in this domain for teacher trainees and in service teachers and also for their supervisors and stake holders in the schools;
- a tendency to close oneself in one's subject;
- the (perhaps) excessive importance attached by the Ministry of Education to some subjects such as the Mother Tongue, Mathematics and Science.

3.2. Other studies deal with the analysis of instruments devoted to the transversal approach of the teaching/learning of mother tongue: documents produced by the teachers in order to design the bases for their practices in the classroom (Bartolomeu, 2008; Bartolomeu & Sá, 2008; Bizarro, 2008; Capucho, 2009; Carvalho, 2006) and textbooks (Martins, 2008, 2009).

These studies also led to important conclusions.

Such as the ones concerning the conceptions, they have revealed that the teachers and the authors of the textbooks are aware of the importance of a transversal approach of the teaching/learning of Portuguese as a mother tongue.

But they pointed to some problems and helped to identify their sources.

In what concerns the documents produced by the teachers in order to design the bases for their practices in the classroom, possible sources of problems are:

- the inability of the teachers to assume a reflexive and critical attitude towards the documents issued by the Ministry of Education, in order to be able to adapt them to the particular conditions in each school;
- lack of team work involving all the teachers in each school and external elements such as the families of the pupils and the community;
- the inaptitude to conduct the teaching of other subjects in order to develop competences in mother tongue, such as reading comprehension and writing.

In what concerns the textbooks for the teaching of Portuguese as a mother

tongue, the problems revealed result essentially from:

- a tendency to focus on the development of competences mainly important at school (e.g. related to the literary texts and the teaching of literature);
- an emphasis on certain domains (for example, the processing of explicit ideas and the teaching of grammar, while neglecting comprehension strategies dealing with implicit information and writing);
- the inability revealed by teachers to select strategies and design activities leading to a transversal approach of the teaching of the mother tongue.

3.3. Another set of studies (fewer than the others) is focused on the design and assessment of practices leading to an effective development of transversal competences while learning the mother tongue.

Two of them were already concluded, one within a PhD (Balula, 2007, 2008) and the other within a Master degree (Carvalho, 2007, 2008) and they concern the teaching/learning of reading comprehension and writing in the mother tongue.

There are three other studies being implemented within Master degrees: one deals with the development of reading competences related with the processing of implicit information (Ferreira, 2009); another one with didactic strategies to motivate the pupils for reading (Pinto, 2009); and the third one concerns the development of competences in reading comprehension and writing while teaching the mother tongue in association with sciences (Neves, 2009). This last study is being directed by me and a colleague expert in the teaching of sciences in primary school (Professor Rui Marques Vieira, from the Department of Education of the University of Aveiro, Portugal).

These studies have been showing me that in fact it is possible to design practices involving the teaching of Portuguese as a mother tongue to promote the development of transversal competences in the pupils. This may also work when the teaching of Portuguese as a mother tongue is associated with the teaching of other subjects.

Nevertheless, they pointed to some sources of discomfort among teachers. All of them were already mentioned:

- a lack of training in this domain;
- the tendency to close oneself in one's subject;
- the inaptitude to conduct the teaching of other subjects in order to develop competences in the mother tongue, such as reading comprehension and writing.

4. These studies produced some tips to strengthen the contribution of school for a better preparation for life (Sá, 2008a).

First of all, the situation requires some intervention from the Ministry of

Education centred on: i) a clarification of new principles in Education, ii) better diffusion of its guidelines among teachers in the school all over the country and iii) the creation of in-service training programs focused on the development of transversal competences (namely on reading comprehension and writing) through the teaching of Portuguese as a mother tongue and other subjects.

The new curricula concerning the teaching of Portuguese as a mother tongue in Basic Education recently published (Reis, 2008) contributed to the clarification of some of the above mentioned principles: i) the importance of developing transversal competences in the pupils through all the Basic Education, ii) the need to promote a transversal approach of the teaching of Portuguese as a mother tongue by relating the study of grammar with the development of competences in reading comprehension and writing and promoting the interaction between oral and written communication and also between reading comprehension and writing, iii) the importance of promoting team work involving the teacher and his/her pupils in the implementation of projects iv) and the building of bridges between the teaching of mother tongue and other subjects at school (cf. Sá, 2009b).

Stake holders in the schools must create new opportunities of training for their teachers and promote a critical reflection on the documents published by the Ministry of Education.

The teachers should engage in teamwork and discussion of ways of generating a transversal approach of the teaching/learning process for all school subjects as well as the conception and assessment of practices promoting the development of transversal competences (namely the ones related with reading comprehension and writing) by their pupils.

The institutions in Higher Education responsible for teacher training must also take part in this movement providing training opportunities for teacher trainees and in-service teachers emphasizing the need for a transversal approach in teaching, especially in what concerns the mother tongue, and teamwork.

A study conducted by me (Sá, 2008b) concerning teacher trainees showed that teachers in Higher Educations institutions should:

- involve their students in project work demanding a collaborative attitude among them and also between the teacher and his/her students;
- create partnerships with other teachers of other subjects and their students;
- promote the acquisition/development of ICT competences and the use of web 2.0 tools, because they generate interactions that can not exist otherwise.

Now I am involved in a research project centred in the creation of communities including language teachers, supervisors and researchers presenting the

characteristics above mentioned (Andrade *et al.*, 2008) and it is really working, although there are always some problems.

Next school year we will be analysing the data we are collecting now and I sincerely believe the conclusions will show that this is effectively a better way of doing this kind of work in Education as elsewhere.

Rôle de la mémoire lexicale orthographique dans l'acquisition de l'orthographe lexicale

Brigitte Stanké

Université de Montréal, Canada

Pour mieux comprendre les facteurs cognitifs qui interviennent dans l'acquisition du langage écrit, il est nécessaire d'étudier les caractéristiques du système d'écriture dans lequel ils s'inscrivent. Catach (1978) définit le français écrit comme étant un plurisystème dans lequel coexistent des unités significatives et non significatives. Les mots y sont représentés selon trois dimensions linguistiques: phonographémique, morphographémique et logographique.

La phonographie fournissant à l'écriture les bases de sa structure, elle constitue la clé de l'écriture (J.-F. Jaffré, 2003). C'est ce qui permet de comprendre le rôle que joue le traitement phonologique dans l'acquisition du langage écrit.

Les dimensions morphographémique et logographique utilisent la phonographie comme unité de base pour coder des unités de sens à l'aide de morphogrammes (dimension morphographémique) et de logogrammes pour distinguer les homophones (dimension logographique). La représentation graphique du français écrit représente non seulement des unités phonologiques, mais également des unités sémantiques (sémiographie linguistique). Notre système alphabétique est donc à base mixte puisqu'il représente à la fois la phonographie et la sémiographie. Pour certains chercheurs, la sémiographie est la superstructure de l'écriture, tandis que la phonographie en est l'infrastructure (Jaffré, 2003). Le rôle de la sémiographie est majeur et permet de rendre compte du rôle complémentaire du traitement orthographique dans l'acquisition du langage écrit. Ainsi, notre système d'écriture permet de transcrire du sens à partir des sons du langage. Le système d'écriture du français a adopté les lettres de l'alphabet latin pour transcrire les phonèmes. Toutefois, cet alphabet, composé de 26 lettres, ne permet pas de coder avec exactitude l'ensemble des 36 phonèmes de la langue parlée. Les scribes ont tenté de résoudre cette distorsion en combinant plusieurs lettres et en ajoutant des marques diacritiques (cédille, accents, tréma) pour permettre de représenter tous les phonèmes de la langue. Le français standard comporte ainsi 130 graphèmes et 5 marques diacritiques pour coder ses 36 phonèmes. Ainsi, l'unité de base de français écrit n'est pas la lettre, mais le graphème, unité graphique qui renvoie au phonème.

La complexité d'un système d'orthographe alphabétique à base phonographémique peut se mesurer, entre autres, par le calcul du degré d'incertitude associé à l'écriture d'une association phonème-graphème ou à la lecture d'une association graphème-phonème (Lété, Peereman, & Fayol, 2008). Ce degré d'incertitude est appelé « consistance » ou « inconsistance ». Le degré d'inconsistance situe les systèmes d'écriture alphabétique sur un continuum permettant d'en qualifier les orthographe d'« opaques », de « profondes » ou de « transparentes » (J.-P. Jaffré & Fayol, 1997). Des études comparatives interlangues ont permis de montrer que le système orthographique du français (tout comme l'anglais) est l'un des systèmes les plus opaques en raison de son degré élevé d'inconsistances phonographémiques (Alegria & Mousty, 1996; Weekes, Castles, & Davies, 2006).

La dimension morphographémique du français est, elle aussi, complexe. Les morphogrammes dérivationnels (affixes) et flexionnels (lettre ou groupe de lettres qui marquent le nombre, le genre, le temps, etc.) sont pour la plupart inconsistants et sans contrepartie phonologique (Peereman & Sprenger-Charolles, 2007). Les morphogrammes verbaux sont homophones hétérographes, c'est-à-dire qu'une même forme phonologique prend des formes écrites différentes (ex. : il mange – ils mangent) dans plus de 80 % des cas.

Enfin, la dimension logographique n'est pas sans poser de nombreux problèmes pour l'apprenti scripteur du français puisque cette langue comporte de nombreux logogrammes homophones hétérographes (ex. : vers, verre, ver, vert, vair).

Les effets de complexité des systèmes alphabétiques comme le français et l'anglais rendent l'acquisition des connaissances orthographiques dans ces langues plus difficile que dans les langues transparentes telles que l'espagnol et l'italien (Alegria & Mousty, 1996; Lété, et al., 2008; Seymour, Aro, & Erskine, 2003; Weekes, et al., 2006). Dans un système orthographique transparent, disposer de la représentation phonologique de chaque mot et de règles de transcodage phonographémique suffit pour orthographier la quasi-totalité des mots. Par contre, dans des systèmes orthographiques opaques, les règles de transcription ne suffisent pas à orthographier des mots de façon conventionnelle. Comme le français comporte un nombre plus important d'inconsistances phonographémiques (46 %) que d'inconsistances graphophonémiques (15 %), l'application de règles de correspondance phonographémique permet d'orthographier de façon conventionnelle moins de la moitié des mots.

Ainsi, dans un système opaque tel que le français, l'acquisition de l'orthographe est plus difficile que celle de la lecture et ces difficultés sont imputables aux dimensions

phonographémique et morphographémique de notre système d'écriture (Peereman & Sprenger-Charolles, 2007). La découverte du système alphabétique ainsi que les connaissances phonographémiques et morphographémiques ne suffisent en effet pas pour écrire les mots français de façon conventionnelle. Les enfants doivent nécessairement acquérir des connaissances orthographiques lexicales spécifiques aux mots (ex.: le phonème /o/ du mot *bateau* s'écrit à l'aide du graphème « eau ») ainsi que des connaissances orthographiques plus générales concernant les régularités orthographiques propres à chaque langue. Les régularités orthographiques permettent d'orthographier les mots. Les facteurs cognitifs qui interviennent dans l'acquisition du langage écrit varient en fonction de la consistance et de la taille des unités pour coder le langage écrit (phonème, syllabe, rimes et mots). Ainsi, dans un système alphabétique transparent, la connaissance d'un nombre limité de correspondances phonographémiques permet d'orthographier la quasi-totalité des mots de l'oral. La charge cognitive est donc moindre en mémoire. Tandis que, dans des systèmes alphabétiques opaques comme celui du français, il est nécessaire de disposer d'une bonne mémoire lexicale orthographique à long terme pour acquérir une représentation orthographique précise de nombreux mots. De plus, même pour représenter la forme orthographique non conventionnelle des mots, l'enfant doit disposer en mémoire des différents graphèmes qui correspondent aux unités phonologiques repérées. Ainsi, même si un enfant possède une bonne capacité de traitement phonologique, s'il ne peut mémoriser les graphèmes correspondant aux phonèmes, il lui sera impossible de produire les phonogrammes composant les mots. Le maintien en mémoire à long terme des représentations orthographiques des mots, quelle que soit la longueur des représentations graphiques des unités linguistiques (mots, morphèmes, graphèmes, lettres), est donc essentiel. Une capacité mnésique déficitaire peut en conséquence entraîner des troubles d'apprentissage de la lecture et de l'orthographe.

Depuis les trois dernières décennies, les recherches se sont majoritairement centrées sur le rôle que pouvait jouer le traitement phonologique dans l'acquisition du langage écrit (Écalle & Magnan, 2002, pour une synthèse en français). Il y a un large consensus voulant que les capacités de traitement phonologique (encodage, rétention, rappel et manipulation des représentations phonologiques) et l'apprentissage du langage écrit entretiennent des relations fortes et spécifiques. Les capacités de traitement phonologique apparaissent comme étant à la fois la cause et la conséquence de l'apprentissage du langage écrit.

Plus récemment, d'autres études se sont penchées sur l'hypothèse d'un lien entre la capacité de traitement visuoattentionnel et l'acquisition du langage écrit. L'hypothèse

visuoattentionnelle a tout d'abord été défendue dans le cadre d'études montrant que certains enfants dyslexiques présentent un trouble sélectif du traitement visuoattentionnel bien qu'ils disposent d'une capacité de traitement phonologique dans la norme (Valdois, 2008, pour une synthèse).

L'hypothèse visuoattentionnelle a également été confortée par une étude de Bosse et de ses collaborateurs (2007). Ces chercheurs ont en effet montré qu'il est possible de distinguer des sous-groupes de dyslexiques distincts à partir non pas de leurs performances en lecture, mais de leurs capacités phonologiques et visuoattentionnelles et que ces deux facteurs contribuent de manière importante et indépendante à la performance de lecture de ces enfants. Selon cette étude, la majorité des dyslexiques présentent un trouble cognitif isolé (44 % un trouble visuoattentionnel et 19 % un trouble phonologique). Toutefois, 20 % de ces dyslexiques ne présentent aucun de ces 2 troubles.

Bien que le rôle du traitement phonologique et du traitement visuoattentionnel dans l'apprentissage du langage écrit semblent bien étayés, il est toutefois manifeste que les capacités de traitement phonologique et de traitement visuoattentionnel ne permettent pas à elles seules d'expliquer le développement du langage écrit ainsi que l'ensemble de ses troubles, en particulier celui concernant l'acquisition des connaissances lexicales orthographiques. La nécessité demeure donc d'identifier les autres facteurs cognitifs susceptibles de faire varier l'acquisition du langage écrit, puisque ni l'hypothèse phonologique ni l'hypothèse visuoattentionnelle ne permettent d'expliquer l'ensemble de cette variabilité.

Bien que le rôle de la mémoire lexicale orthographique soit évoqué dans l'ensemble des modèles théoriques, aucun ne considère cette mémoire comme étant un facteur cognitif déterminant dans l'acquisition du langage écrit. La mémoire lexicale joue pourtant un rôle majeur dans l'établissement des processus tant phonologique (analytique) qu'orthographique (global). En effet, la mémoire lexicale orthographique, qui a pour fonction d'encoder et de stocker des informations orthographiques phonographémiques, graphophonologiques, morphographémiques et logographiques, soit sous forme de représentation abstraite des mots, soit sous forme de schémas d'activation (trace-mots), selon la conception théorique adoptée, permet l'élaboration de l'ensemble des connaissances de l'écrit.

Le constat clinique de plaintes relatives à un problème de rétention à long terme des connaissances lexicales orthographiques exprimées par des enfants et des adultes dyslexiques ou non suggère que la mémoire lexicale orthographique à long terme pourrait jouer un rôle important dans l'apprentissage de la lecture et de l'orthographe.

En outre, une atteinte sélective de cette mémoire entraîne des formes distinctes de dyslexie-dysorthographe. En effet, une difficulté d'encodage entrave l'élaboration des processus phonologique (analytique) et orthographique (global) et par conséquent entraîne une dyslexie-dysorthographe mixte, tandis que des difficultés de maintien des représentations orthographiques en mémoire lexicale à long terme nuiraient au développement du processus orthographique (global) et entraînent une dyslexie mnésique (de surface).

Le rôle de la mémoire dans l'acquisition du langage écrit a été pour la première fois évoqué par Goulandris et Snowling (1991). Ces auteurs ont présenté le cas d'une étudiante dont les caractéristiques en orthographe témoignaient de l'utilisation massive du processus phonologique sans connaissance de l'orthographe conventionnelle. L'analyse des déficits cognitifs a révélé un déficit sévère de mémoire visuelle. Les auteurs ont alors avancé l'hypothèse d'un déficit de la mémoire comme pouvant être le facteur cognitif responsable du trouble de langage écrit de l'étudiante.

Par la suite, plusieurs études ont tenté de cerner le rôle de la mémoire visuelle dans l'acquisition du langage écrit, mais seulement quelques-unes ont pris en compte la capacité de mémoire à long terme (Caravolas, Hulme, & Snowling, 2001; Casalis, 2004; Goulandris & Snowling, 1991; Kremin & Dellatolas, 1996; Romani, Ward, & Olson, 1999; Sprenger-Charolles, Cole, Lacert, & Serniclaes, 2000). Ces études n'ont pu établir de lien entre la mémoire visuelle à long terme et l'acquisition du langage écrit. Ces chercheurs en sont venus à la conclusion que la mémoire visuelle à long terme n'était pas un facteur cognitif causal des difficultés d'acquisition du langage écrit. Toutefois, les conclusions quant au rôle de la mémoire dans l'acquisition du langage écrit doivent être nuancées. En effet, l'efficacité de la mémoire à long terme a été évaluée au moyen d'épreuves de rappel de formes géométriques complexes ou de symboles de nature non linguistique. De plus, le rappel a été réalisé dans un délai relativement court de 30 à 60 minutes.

Les résultats de ces études ne permettent pas d'infirmer l'hypothèse selon laquelle la mémoire lexicale orthographique jouerait un rôle dans l'acquisition du langage écrit dans la mesure où les stimuli utilisés pour évaluer cette mémoire n'étaient pas de nature linguistique. Toutefois, ces études suggèrent que le déficit de mémoire visuelle non spécifique au langage écrit, qui entrave l'élaboration du processus orthographique des enfants dyslexiques dysorthographiques, n'est pas la conséquence d'un déficit général de la mémoire visuelle à long terme.

Récemment, Cohen et Dehaene et leurs collaborateurs (2004; 2005) ont permis de conforter la contribution de la mémoire lexicale orthographique dans le traitement

des mots écrits. En effet, ces chercheurs postulent qu'au cours de l'apprentissage du langage écrit, un réseau neuronal qui était tout d'abord dédié aux traitements des stimuli visuels, se « recycle » progressivement pour se spécialiser dans le traitement de la forme visuelle des mots (FVM). Ce système neuronal aurait pour fonction principale d'encoder et de stocker les propriétés abstraites de l'ensemble des formes visuelles des mots. La mémoire lexicale orthographique peut alors être considérée comme sous la dépendance de ce système neuronal de traitement nommé par ces chercheurs « l'aire de la forme visuelle des mots » (AFVM). L'ensemble de ces représentations orthographiques stockées en mémoire, soit l'ensemble de la FVM, est communément appelé le *lexique orthographique*, dont dispose un sujet pour orthographier les mots par mémoire visuelle (lexicale orthographique).

L'AFVM semble être spécialisé dans le traitement des représentations abstraites des mots écrits chez les personnes lettrées, et ce, quels que soit le système d'écriture (alphabétique, idéosyllabique, etc.), la typographie (a, a, a, A, etc.), la couleur ou la casse (A, a) (Cohen & Dehaene, 2004).

Trois études ont été réalisées afin de démontrer que l'acquisition des connaissances lexicales orthographiques acquises de façon implicite et explicite dépendrait de différentes capacités cognitives indépendantes, dont notamment la capacité de mémoire lexicale orthographique (rétention à long terme).

Ces trois études ont été menées auprès d'une population d'enfants franco-québécois, issus d'un groupe initial de 338 enfants, suivis de la fin de la maternelle à la fin de la deuxième année. Diverses tâches ont été soumises aux participants au cours de cette étude longitudinale, avant l'apprentissage du langage écrit, et lors de cet apprentissage. Les tâches visaient à évaluer le niveau des connaissances orthographiques implicites (maternelle) et explicites (première et deuxième année) ainsi que la contribution respective des facteurs cognitifs (traitement phonologique, traitement visuoattentionnel et mémoire lexicale orthographique à court et à long termes). Ces études sont les premières, à notre connaissance, à examiner le rôle de la mémoire lexicale orthographique sur l'acquisition ultérieure des connaissances orthographiques implicites et explicites à la fin du premier cycle du primaire.

La première étude a été réalisée en fin de maternelle ; elle a permis de constater la précocité des connaissances lexicales orthographiques implicites (Stanké, Flessas, & Ska, 2008). En effet, en maternelle au Québec, seuls le nom des lettres de l'alphabet et les correspondances graphèmes - phonèmes de base sont enseignés de façon explicite, du moins dans les écoles qui ont participé à cette étude. L'orthographe des mots ne fait donc pas partie de l'enseignement explicite requis par le Ministère de

l'Éducation au Québec. Même si ces enfants doivent nécessairement utiliser les connaissances, portant sur les correspondances qui leurs ont été enseignées à l'école, orthographier des mots suppose nécessairement de leur part d'utiliser des connaissances orthographiques acquises de façon implicite. Cette première étude a également permis de montrer que la précision et l'étendue des connaissances orthographiques implicites, sont fonction de différentes capacités cognitives, dont la capacité de mémoire lexicale orthographique à long terme qui rend compte de la part de variance la plus importante de la variabilité de ces connaissances. (Stanké, et al., 2008) .

La seconde étude, réalisée en fin de première et de deuxième année auprès des mêmes sujets, a permis d'établir le rôle prédictif de la mémoire lexicale orthographique sur l'acquisition ultérieure de connaissances orthographiques explicites et sur le maintien de celles-ci à long terme (Stanké, manuscrit en préparation). En effet, parmi les facteurs cognitifs étudiés en maternelle (traitement phonologique, visuoattentionnel et de mémoire lexicale orthographique), le facteur le plus important lié aux connaissances lexicales orthographiques explicites de première et deuxième année est d'abord la capacité de mémoire lexicale orthographique à long terme ; celle de la mémoire à court terme vient ensuite. Ces résultats suggèrent que la précision des connaissances orthographiques dépend largement de la capacité de rétention en mémoire et non de la capacité d'encodage, puisque cette capacité de mémoire à long terme explique un pourcentage plus élevé de la variabilité des connaissances orthographiques lexicales que celle de la mémoire à court terme.

Enfin, la dernière étude réalisée à la fin de deuxième année, toujours auprès des mêmes enfants suivis depuis la maternelle, a permis de mettre en lumière le rôle majeur des connaissances orthographiques implicites, acquises avant l'apprentissage formel de l'écrit, sur l'étendue ultérieure des connaissances orthographiques explicites (Stanké, Flessas, & Ska, à paraître en 2009). Ces connaissances sont à la base de l'acquisition d'une orthographe répondant aux normes orthographiques. Ce rôle a été étudié en lien avec les facteurs cognitifs mis en jeu dans l'apprentissage du langage écrit, précédemment étudiés. Parmi tous les facteurs étudiés en maternelle, les connaissances orthographiques implicites constituent le facteur prédictif le plus puissant de l'acquisition ultérieure des compétences orthographiques explicites. Le fort impact des connaissances orthographiques implicites des enfants de maternelle sur l'acquisition ultérieure de leurs compétences n'est pas surprenant, car le niveau de ces connaissances est à la fois fonction de la capacité de mémoire orthographique lexicale, de la capacité de traitement phonologique et, dans une moindre mesure, de la capacité

visuoattentionnelle. Cette dernière phase de la recherche a permis d'observer la précocité et la diversité des connaissances orthographiques qui se révèlent beaucoup plus tôt que les modèles développementaux ne le prédisaient. Elle a également permis de mettre en lumière l'hétérogénéité du niveau de ces connaissances, parmi l'ensemble des participants de l'étude.

Les résultats issus de ces trois études présentent un intérêt non négligeable dans la compréhension de l'acquisition du langage écrit. En effet, ces recherches ont permis de montrer qu'avant même l'apprentissage formel de l'écrit, l'enfant témoigne de connaissances implicites non négligeables sur la langue écrite et que c'est à partir de ces connaissances que s'élaboreront ses connaissances explicites ultérieures. Ces connaissances sont tributaires de multiples facteurs parmi lesquels la capacité de mémoire lexicale orthographique, facteur cognitif dont la contribution n'avait pas été démontrée jusqu'à présent.

Les résultats de cette recherche montrent qu'il est possible d'envisager des outils de dépistage précoce (avant l'apprentissage formel) qui permettront d'identifier les enfants à risque de présenter des difficultés spécifiques d'apprentissage du langage écrit. Ce dépistage permettrait de mettre en place des interventions mieux ciblées et précoces, ce qui réduirait ainsi l'impact des difficultés sur les apprentissages scolaires.

Children's utilization of written language in meaningful situations: literacy events in role play contexts

Nektarios Stellakis

Marianna Kondyli

University of Patras, Greece

1. Introduction

One of the main problems with early literacy is that is considered to be semantically opaque and/or polysemic. And this "indeterminacy" proliferates in view of its implications in school contexts.

In the present paper, our effort is to investigate literacy events occurring during "free choice" role playing activities enacted by preschool aged children (4;5–6 years old) in a Greek kindergarten setting. Our main concern is to contribute to a view of preschool literacy as a meaningful engagement in social semiotic processes. By this means, our framework mainly draws upon hallidayan concept of language literacy, in contrast with a rather narrow perspective of literacy as a set of neutral reading and writing skills that can be explicitly taught (the so called "autonomous model", Street, 1995).

As Halliday (1996, p. 340), points out "*in becoming literate, you take over the more elaborated forms of language that are used in writing – and the social values that goes with them*", moving up to a higher model of meaning situated in the overall social context. We could say, in a rather naïve way, that the two perspectives ("autonomous" vs "social-semiotic approach") are simply complementary, that is reading/writing skills are integrated in the whole literacy processes. This assumption, however, encounters some difficulties in face of teaching strategies, i.e. in function of its application into formal contexts such as pre-primary school, due to how teachers' do make sense of literacy processes.

That is the case of Greek kindergartens considered to be the place of learning and reinforcing "natural" literacy experiences (Hasan, 1996) towards school literacy.

In few words, Greek kindergartens are institutionally assigned to promote emergent literacy. The National Kindergarten Curriculum concerning the Language Program (reformed at 1999) replaced the reading readiness approach employed since that time adopting an emergent literacy perspective (e.g., Tafa, 2004). Consequently, it supports literacy workshops and the integration of written language in all kinds of activities.

For example, among other suggestions, it is clearly stated that "*Children are encouraged to take notes, to write as they wish, to express themselves through*

writing (e.g. cards, invitations or catalogues)" (*Cross Thematic Curriculum Framework*, 2002: 597). It seems that the work of kindergarten teacher has altered to a continuous provision of child to be engaged in literacy events (Giannikopoulou, 2002). But the fact is that it is a common place that usually pre-school teachers are making assumptions about emergent literacy which do not compass with those of the curriculum, thus opting for the "autonomous model": None of the basic principles, such as authentic communicative situations, neither previous experiences and knowledge is used as a source for teaching literacy. Thus, the "orthographic" approach –or, a small part of "recognition literacy" in Hasan's (1996) terms, seems to be still dominant in Greek kindergartens. (Its worthy to say that, although teachers are aware of the specificity and complexity of reading and writing processes, their persistence in the "orthographic path" could be explained by a long tradition in educational policy and practice in Greece).

These considerations lead us to reflect on the conditions under which a literacy teaching programme could be realised. In consistency with our assumption regarding literacy as social practice, our main effort was to create a congruent communicative situations existing in actual school settings apt to scaffold children's participation in literacy events as social practices.

Our first point concerns the notion of literacy events we adopted. We focused on literacy events following Heath's (1982: 93) outstanding definition, as "*any occasion in which a piece of writing is integral to the nature of participants' interactions and their interpretive processes*". Moreover, we should take into account also that "*[literacy] events are observable episodes which arise from practices and are shaped by them. The notion of events stresses the situated nature of literacy, that it always exists in a social context*" (Barton and Hamilton, 2000: 8).

However, the above presuppositions concerning social practices are not easy to be fulfilled in school contexts, because of the very nature of these –by definition – "non authentic" teaching communicative situations. Previous investigations in Greek kindergartens have shown the importance of schooling - even if more traditional methods of teaching literacy are employed - in developing reading and writing skills (Kondyli & Stellakis, 2005).

In fact, teaching and learning communication is an equally social situation, but with somehow "non-authentic" characteristics (teacher-initiated, decontextualised subject-matters, focused primary upon uncommonsense knowledge, etc) (see, e.g, Painter, 1999) we looked out for contexts into which the principles of socially situated literacy events could occur without curriculum impositions and/or restrictions.

In that sense, we choose “free-choice activities” (integrated into the official curriculum) as communicative situations characterized by low degree of school-like disciplinary frames (see below for more details), considered, thus, to be the enabling condition for the emergence of children’s literacy practices.

No doubt, the most popular practice during free-choice activities is role playing, an advanced form of play in which children, under teacher’s supervision, are prompt to be engaged in taking on social roles and to act out make-believe stories and situations (Schickedanz & Casbergue, 2004). Role play seems so to be the most meaningful activity for children through which they are motivated to be engaged in authentic literacy events. It seems that only in these communicative contexts children’s reservoir of literacy knowledge becomes fully activated. Previous studies have shown that when play environments have incorporated specific literacy-related stimuli, children spontaneously use these stimuli during pretend play (Hall & Robinson, 1997, Roskos, Tabors & Lenhart, 2004).

At this point we should clarify what we account for children’s “reading and writing”. Taken for granted that most of them are not yet in alphabetic phase, we considered as reading any attempt to make meaning out of a written text *interacting with other(s)*: That simply means that children are reading something to/for someone else. For example: G. reads a recipe book to his mates in the doll’s house. He states what the food to be prepared is and “reads” the recipe, based upon both the picture and his everyday experience.

As writing has been considered any effort to write down a message addressed to someone else by employing (quasi) linguistic and/or arithmetic signs. For example: F. pretending to be a cashier in the shop, wrote a receipt with the amount of “100 €”. Scribbles produced in various events were also considered as writing.

Research questions

The main purpose of this study is to investigate how role play reinforces literacy practices and what forms of literacy practices, such as reading and writing, emerge out of role play.

More specifically, research questions could be summarized as follows:

- Does literacy practice is a matter of making meaning which arises “naturally” in social interactions?
- Which kind of contexts privilege such literacy practices?
- How the communicative situation restricts/allows particular forms of reading and writing?

2. Procedure and data gathering

Greek kindergarten lasts two years and serves children from 4 to 5 and from 5 to 6 years old. For the first group the attendance is voluntary, while for the second the attendance is compulsory. Both groups follow the same curriculum and are aggregated in the same class, where they are provided with education-oriented care by staff with specialized tertiary qualification in education.

According to the official program there are two kinds of activities: whole class and free-choice activities. The first are based upon cross-thematic activities, while the later are taken place in various play corners mainly after arrival at school. They last about one hour and children can choose the play corner as well as their partners. For that reason the curriculum suggests the division of preschool classes into distinguished areas some of which should be permanent (discussion corner, construction area, library, art center), while others could be modularized (e.g. center for mathematics, doll house, music corner, computer area, laboratory for observation and discovery, shop center, hospital, etc) (Dafermou, Koulouri & Basagianni, 2004). During these activities it is at teacher's discretion to get involved in play or just to supervise it.

Method

Data collected through an ethnographic observational approach in a Greek kindergarten during a four week period (January – February 2009). Free-choice activities in various play corners were observed by a researcher, who, as neutral observer, recorded literacy events, that is events in which somehow a written text is integrated. When it was possible the researcher videotaped the whole process or took photos to augment this data and incorporated into the observation pattern. Through this ethnographic observation (kidwatching) we could gain insight into the ways children construct and express literacy knowledge (Owocki & Goodman, 2002).

The literacy events were registered into an observation pattern in which notes were taken about the play area, the participants, the duration, the purpose and the tenor of each interaction as well as the reading and writing episodes. As episodes were considered the instance(s) of the event, in which discursive practices are focused on a written text, which was to be read or to be written (see Appendix).

The case study took place in one public kindergarten class in a middle-class area of Patras. In this class there were 17 children, 9 in grade one of kindergarten (girls: 2, boys: 7, aged: 4-5) and 8 in grade two (girls: 3, boys: 5, aged: 5-6), (two children were not native speakers).

In the classroom under observation there were four play areas: a) doctor's office, b) small shop, c) doll's house and d) library. In order to enhance literacy practices, the researcher enriched the play areas with relevant artifacts [various kinds of paper, pencils, cards, notebooks, printed material (e.g. magazines, books, advertising leaflets, etc.)].

It is worthy to be mentioned that individual literacy events not co-involving other participants, such as personal reading or writing, were excluded because of their non-interactive nature.

Results

The number of literacy episodes registered was 214 in total: 111 were writing episodes and the 103 reading ones (Table 1). Even though we cannot argue for statistical relevance of our findings, the onset of literacy practices is evident in our case.

The great majority of literacy events occurred in doctor's office area (writing: 53, reading: 19) and secondly in doll's house area (writing: 32, reading: 26). As expected, in library corner the majority of registered episodes were reading ones (writing: 2, reading: 43).

Table 1
Writing and Reading episodes

DAY	Doctor's office		Small shop		Doll's house		Library		
	writing	reading	writing	reading	writing	reading	writing	reading	
1	9	2	2	1				2	16

17	3	3		2	1			6	15
18	3	3			1			3	10
19						2		2	4
20	3	1	2	1				1	8
	53	19	24	15	32	26	2	43	214

In doctor's office a great number of written texts has been noticed, mainly prescriptions; in shop play area there were receipts, and in doll's house area there was a variety of texts: messages, lists for shopping, postcards, texts on cakes (e.g.

names). In library the majority of episodes, as expected, were reading ones. As far as reading episodes in other corners are concerned, they deal with reading recipes or messages in doll's house, food boxes in doll's house and in shop, reading panels in doctor's offices. In some cases, although not so frequently, children read messages in mobile phones or received fax in doll's house.

It seems that the setting enacted certain interactions, co-involving, thus, embedded literacy episodes. The findings support the assumption about the significance of social context as the vehicle by which literacy is practiced. Spontaneous writing attempts carry clear cultural assumptions, since the texts are closely linked to their cultural function. Children seem to make meaning out of the texts, based upon previous experiences, with the mediation of social conventions of communicative events.

3. Conclusion and discussion

The results empirically not only support the assumptions about the emergence of literacy as socially situated practice. Children's previous social awareness that written communication is meaningful and that is part of cultural behaviors of the everyday world trigger reading and writing. In addition, observation of children's reading and writing in everyday contexts, such as role-play, provides evidence of their knowledge about the symbolic nature of written language as well as the purposes it is used for in certain communicative events. The communicative purposes of a scenario enact children's situated literacy practices and, therefore, enhance the socio-semiotic recourses of literacy events as a social dialogue. This social dialogue implies not only "recognition literacy" (making meaning and use of symbolic systems) but, also, "action literacy" (Hasan, 1996) (making meaning and use of texts) in socially-situated, every day genres (booklets, recipes, etc).

Lastly, this kind of observations illustrate the significance of pre-school education in the development of early literacy, by supporting children's investigation and engagement with written language not only in traditional whole class teacher-centered activities but, also, in authentic or "simulating" situations.

It is a matter of further discussion to which face of literacy each of these two situations privilege and if they can function complementary in order to empower school literacy.

APPENDIX**Examples of registered literacy events**

OBSERVATION PATTERN	
EVENT NUMBER: 32	
Date Time -	12/2/2009
Duration	23'
Play area	Doctor's office
Participants	J. (boy, Grade 2) M. (girl, Grade 2) Z. (girl, Grade 1) M. (boy, Grade 1)
Total	(4)
Videotaped	Yes (), No (X)
Photographed	Yes (X), No ()
Event	J. is pretending the doctor and M. is his assistant, dressed in white robes. [J. wears the tag "DOCTOR"]. Z. is bringing her son (M.) for medical examination. He is suffering from sore throat. At the beginning they knocked the door and they spent some minutes waiting at the hall. [A medical examination takes place] After examination, M. asked for medical booklet and Z.'s answer that they had not brought it. M. suggested never visit doctor without the booklet.
Reading episode(s)	➤ J. explained to Z. and M. pointing to the relevant panel why there is this pain in M.'s throat.
Writing episode(s)	J. "wrote" a recipe for syrup (string of letters) and wrote the numbers "3" and "5". The first ("3") was to indicate that M. should take the medicine every three hours and the second ("5") for the number of days he should take it.
Notes	The language used was relevant to the communicative event. They exchanged greetings and the language used was rather formal.
OBSERVATION PATTERN	
EVENT NUMBER: 18	
Date Time -	7/2/2009
Duration	11'
Play area	Doll's house
Participants	G. (boy, Grade 2) K. (girl, Grade 2)
Total	(2)
Videotaped	Yes (X), No ()
Photographed	Yes (), No ()
Event	G. and K. are writing a shopping list. They decide to make a vegetable soup and buy, also, some fruits. G. is writing to a notebook but K. is also involved.
Reading episode(s)	➤ They are looking for letter /p/ to a calendar at the wall. They find it at days "Thursday" and "Friday" which starts with that letter.
Writing episode(s)	G. is writing the words "onion, cabbage, beans, pine apple". [in Greek: ΚΡΕΜΜΥΔΙ, ΜΑΠΑ, ΦΑΣΟΛΙΑ, ΑΝΑΝΑΣ] He wrote: «ΚΡΕΜΙΔΙ, ΜΑΠΑ, ΦΑΣΟΛΑ, ΑΝΝΑΣ, ΑΝΑΣ» In the first two words all the phonemes are written, in the third one phoneme (/i/) is omitted, but in this word is not so clear. The last word ("ananas") seems to be more difficult because the syllable "NA" there is twice. He writes the word two times: one as "ΑΝΝΑΣ» and one as «ΑΝΑΣ».
Notes	They had a very nice collaboration. K. continually told G. that he was doing well.

Preschool children's use of photography to document their out-of-school literacy practices and partners

Streelasky, Jodi

University of British Columbia, Canada

Introduction

James and Prout (1997) posit that research on children as subjects has had a long history, and that children are generally dismissed as expert researchers of their own lives and environments. Recently however, there has been a paradigm shift as research has begun to occur with children, and children are being positioned and valued as legitimate researchers of their own worlds. Clarke (2004) adds that children, if allowed, have the ability to be empowered as communicators of their own lived experiences and knowledge. The work of Rasmussen (2004) has shown how children can use photography to share their perceptions of the spaces they inhabit. Similar studies by Pahl (2006) and Sharples, Davison, Thomas, and Rudman (2003) have also investigated the ways young children have utilized photography as a way to document the people, places, and objects that are meaningful in their everyday lives.

This research examined and analyzed digital photographs taken by three and four-year-old inner city students, and explored how these photographs could potentially inform early childhood curriculum and pedagogy. The children's photographs centered on the people, places, objects, and communicative practices they deemed as significant in their everyday out-of-school lives. Although the use of photographs to record informants' lives has been used in a number of different contexts with children ranging in age from five to fifteen years (Bock, 2004; Pink, 2001); studies that involve three and four-year-old children's photographic documentation of their own lives has not been previously researched.

A review of the literature revealed a study by DeMarie (2001) who conducted a photography study with three to twelve-year-old children; however this study focused on children's documentation of their trip to a zoo. This study focused on a singular context with all the children following the same task. The children were also continually in the presence of an adult. In that study, photography acted as a tool for research, as opposed to representing the focus of enquiry. Burnett and Myers (2002) did a small-scale study with two groups of primary school children who investigated the use of literacy in their lives, using disposable cameras to record their literacy events and texts. Their study concluded that these children used

literacy as a way of maintaining and reinforcing relationships; as a means of organizing life, as a vehicle for learning, as a reflection of their identities; and for private pleasure. Another study, PhOLKS (Photographs of Local Knowledge Sources) looked at elementary school children's use of photography and narrative with the intent that these photographs would inform teachers of what children's families cared about and knew outside of the classroom. Other studies (e.g., Beilin, 1991; Kose, 1985) examined the ways that children and adults differ in their use of cameras and understandings of photographs.

The research questions guiding this study were: i) What do the children's photographs reveal about the people, places, objects, and meaning-making practices that are meaningful to them in their out-of-school contexts?, and ii) How can the students' photographs assist in the development of an early childhood curriculum?

The Context and Participants

This study occurred in a prekindergarten classroom situated in a community school¹ in Saskatchewan. The area where the school is located is comprised of primarily low-rental housing (e.g., small homes and apartment buildings) and many of the children's parents have more than one job in order to meet their family's basic needs. The prekindergarten classroom had an enrollment of thirteen children (four boys and nine girls). The students in the classroom were of Caucasian, Aboriginal, and Nigerian ancestry.

Prekindergarten programs were developed in the province of Saskatchewan to provide three and four-year-old students with a holistic learning program, and include a school-based family involvement program and a home visiting program. Building on children's and families' interests and strengths is a key element of these programs. This philosophy reflects Hohmann and Weikart's (1995) belief in the importance of developing collaborative and supportive early childhood classroom climates with young children and their family members.

Prekindergarten programs also represent young children's first introduction to school in a formal setting. Therefore, creating meaningful connections to the children's home lives by inviting the children's immediate and extended families into the classroom, visiting the children's homes and neighbourhoods, and referencing their out-of-school lives is crucial to young children's sense of security and ease of transition into these early childhood programs. This perspective supports the understanding that young children's social worlds, including the various meaning-

¹ Community schools were implemented in the province of Saskatchewan in 1980 to provide Aboriginal students with a learning environment that is culturally affirming and reflects their histories, experiences, and educational needs (Saskatchewan Education, 1996).

making systems that they tap into in their everyday lives can inform early childhood teachers of their interests, literacy practices, and funds of knowledge (Moll, Amanti, Neff, & Gonzalez, 1992).

Theoretical Frameworks

This study has been influenced by theories of social constructivism (Au, 1998; Vygotsky, 1978), multiliteracies (New London Group, 1996), and the New Literacy Studies (Barton & Hamilton, 1998; Gee, 1996; Hamilton, 2000; Pahl & Rowsell, 2005). Social constructivists argue that children should be provided with opportunities to engage in authentic literacy and multimodal activities. Bers, Ponte, Juelich, Viera, and Schenker (2002) advocate for the engagement of young children in the creation of their own personally meaningful projects and argue that children can play an active role in the design of early childhood curriculum. Edwards, Gandini, and Forman (1998) and Malaguzzi (1993) expand on this notion, suggesting that the role of early childhood programs is to encourage children to focus on topics that are of interest to them. They add that early childhood educators need to observe and listen to children as children continuously suggest what interests them and what they would like to explore in a deeper way.

A multiliteracies perspective proposes that there are multiple ways of representing meaning. Hodge and Kress (1988) and Kress (1993, 1997) support this view, suggesting that children utilize multiple forms of literacy such as play, drama, and digital multimedia literacies to represent and construct meaning in their lives. Rogers and Schofield (2005) argue that by emphasizing only “school” literacies with students, and neglecting “the range of artistic expression, popular cultural influences, and multimedia savvy they bring, simply pushes students further toward the margins of the classroom and our society” (p. 208).

The New Literacy Studies looks at literacy in everyday life. Theorists such as Street (1984) and Gee (1996) draw on research focused on communication and anthropology to look at the role of literacy in people’s lives. Pahl and Rowsell (2005) argue that the New Literacy Studies have changed the concept of how researchers think about literacy, and recognize that literacy is a social practice, “something that people do in everyday life, in their homes, at work, and at school” (p. 11).

Methodology

In this study I adopted an action research methodology (e.g., McNiff, 1995), as well as a methodological approach which recognizes young children as expert researchers of their own lives and promotes their right to have a “voice” in research projects involving them (Burke, 2005; Nutbrown & Hannon, 2003). Altrichter, Posch,

and Somekh (1993) argue that 'action research' is research by practitioners to improve practice. They add that action research is primarily concerned with change, and is grounded in the idea that development and innovation are an essential part of professional practice.

Recently in early childhood education, researchers have questioned the best means of allowing for the views of children to be appreciated. Burke (2005) also questions the role of the adult in a research environment and asks, "Can children's participation as researchers and reporters on their own lives be achieved in studies involving them?". Nutbrown and Hannon (2003) argue that including children as research informants brings them into the centre of discourse about educational research. This perspective supports the "mosaic approach" developed by Clark and Moss (2001), which is a technique of listening to the voices of very young children in research. The mosaic approach is a flexible, adaptable multi-method tool in which children's own photographs, maps, and drawings can be combined with talking and observing to gain a deeper understanding of children's perspectives on the places they inhabit in early childhood.

In this particular study, a number of methodological challenges had to be addressed. Similar to Burke's (2005) study, group conversations with the prekindergarten students focused on how to operate the camera, what kinds of photographs might be taken, and how photographs would be used in this study. These conversations occurred before the children took home the camera to document their home and community lives. For three months (October-December) the children sporadically took photographs of one another in the classroom, of wooden block structures they developed, or of specific pieces of artwork they created. The next challenge was ensuring that each child would be able to take photographs of their everyday literacy experiences for a one week period in their homes and neighbourhoods with minimal adult interference.

Data Collection and Analysis

This study occurred over a ten month timeframe and data were collected through qualitative research field procedures. A range of data collection methods were utilized throughout the study: field notes, student photographs, video-recorded conversations with each of the thirteen students (focused on their photographs and the collection of artifacts), and informal conversations with the prekindergarten children, their siblings, and adult family members. The children's involvement in the study as co-researchers centered on a thirteen week period (January-April) when each child took home the classroom digital camera for a one-week timeframe to record the people, places, objects, and meaning-making practices that played an

integral role in his or her out-of-school life. During this period, each child took home a small plastic bag containing the classroom digital camera, two extra batteries, and a note describing the purpose of the study (which was previously discussed with each child's adult family members at the initial home visit in September).

Christian, age 4, his self-portrait holding our classroom digital camera

In a grounded theory approach the researcher attempts to derive a general, abstract theory of a process, action, or interaction grounded in the views of the participants in a study (Creswell, 2003). This process involves using multiple stages of data collection and the refinement and interrelationship of categories of information (Strauss & Corbin, 1990, 1998). Thirteen prekindergarten children were involved in the study, and a combined total of 1382 images were taken by the three and four-year-old students. The children's photographs were then divided into a number of categories based on the visual images documented by the co-researchers (Appendix One). A number of categories were developed as a result of the thirteen weeks the children occupied the classroom digital camera. The photographs were divided into the following coding schemes, many of which overlapped: indoors, outdoors, homes, commercial locales, in the vehicle, siblings, parents, adult caregivers, extended family members, friends, pets, toys, books, print, puzzles, games, stuffed animals, and digital technology (digital cameras, computers/Internet, Xbox games, television, CD players).

The Photography Project

In Saskatchewan's prekindergarten programs, home visits play a central role in providing a bridge between the students' home and school lives. Each September, teachers visit their students' homes to learn more about their interests and family members, and to share the philosophy of the prekindergarten curriculum. Of the thirteen children enrolled in the program, five children were returning for their second year of prekindergarten (as four-year-old students), three of the newly enrolled students had older siblings or cousins previously in the program and I was

familiar with their families, and the remaining five children and families were completely unfamiliar with the early childhood program and the school. When I explained the study to the families, all of the families agreed to be involved in the project, although one family was not able to provide consent for the actual name of their child to be used since she was a foster child who they were in the process of adopting. At these home visits, four of the families immediately shared photographs with me that their prekindergarten child has already taken with their family's digital camera. All of the photos were of family members at different celebrations (e.g., weddings, picnics in the park, family gatherings).

From October to December I discussed with the children the various types of photographs they might want to take in their homes and communities. I explained to the children that I wanted them to take pictures of the toys that were important to them, the people in their lives who they play with, and the activities they like to do in their homes. The children had a variety of ideas of what they could take pictures of such as, their pets, siblings, toys, and restaurants. All of the students' ideas during this session were recorded on chart paper with drawings beside each printed word.

A list was made up with the children documenting what week each child would take home the camera. This list was referenced to every week throughout the study, as the children eagerly read or helped their peers read the next name on the list. Each child took home the camera on Thursday afternoon (the children do not attend school on Fridays – Fridays are reserved for home visits or family involvement days in the classroom) and the camera was returned the following Thursday when the pictures would be downloaded on the classroom laptop computer. Every week each child was videotaped describing his or her photographs, and often one or two of their classmates would also be interested in learning about the child's photographs, and would ask each child questions or comment on the photographs. The number of photographs taken per child ranged from 35 images to 325 images.

Findings

The first question that guided this study was, "What do the children's photographs reveal about the people, places, objects, and meaning-making practices that are meaningful to them in out-of-school contexts?" All of the children involved in the study took numerous photographs of their siblings, parents, cousins, aunts, uncles, grandparents, and godparents. Padmore's (1994) literacy study looked at the influence of *guiding lights*² in children's literacy lives. Padmore defines the term *guiding light* as individuals who play a very important role in our literacy

²The term *guiding light* has been used to refer to individuals who play a very important role in our literacy development.

development. Her study, along with others' work (e.g., Gregory, 1998; Volk, 2001; & Zukow, 1989) have focused on the role played by older siblings in linguistic minority families where parents do not speak the language, or older siblings' interpretation of the teachings of school and their ability to present it in an understandable form to their young siblings through play at home.

In this study I use the term "guiding light" to define the people who play a seminal role in the students' literacy and multimodal development (e.g., play, storytelling, digital literacy, games). Through photography, the children documented the important role relationships with family members, community members, and pets played in their everyday lives, specifically in their narrative and play interactions. In the majority of instances, Bruner's (1986) notion of *scaffolding* played a role in this study. This metaphor describes how adults or older experts provide a scaffold to assist young children in their learning. The young co-researchers in the study often described how the family and community members in their photographs supported their learning by sharing their expertise on how to navigate computer games, solve puzzles, or read books.

The second research question in this study asked, "How can the students' photographs assist in the development of an early childhood curriculum?". The children's photographs revealed the important role family, friends, and pets play in their lives, and highlighted the reality that students bring different discourses they are involved with outside of the classroom into the classroom. Valuing young children's contributions to the early childhood classroom supports Pahl and Rowsell's (2005) work with the New Literacy Studies. They suggest that the New Literacy Studies offers a new way of looking at students as involved in literacy in a number of different domains, and a way of seeing literacy in the classroom as part of everyday life – making the classroom both local and global.

Nieto (1999) suggests that if teachers indeed value home and community literacies, then they must consider how to use this knowledge and appreciation of children's homes cultures, to promote learning for all students. Gregory, Long, and Volk (2004) concur, adding that children have had relevant and valuable experiences with literacy before and outside of school and suggest that educators need to explore ways to link mandated curriculum and standards to children's local funds of knowledge. Deplit (2002) agrees, arguing that it is important to acknowledge the legitimacy of children's lives beyond the classroom. The photographs taken by the children in this study became topics of interest and learning in the classroom, and reflect Delpit's argument that children should be taught in ways other than worksheets, textbooks, or activities that make no reference to their lived experiences. Often in early childhood classrooms children do

learn about families, pet, and community workers through worksheets, fiction books, and teacher-made materials. Having the children's photographs, and accompanying drawings and stories explaining their pets, family members, and images of popular culture enabled the learning to be more personally meaningful to the young students.

Willow's explanation of her drawing during the Photography Study.

I'm standing on my bed, and I took a picture of Mya and Orion (older sisters), and my mom! Yeah, I did, and then I put on all my dresses and had a fashion show. Really – I did! I'm not kidding! We were in my Cinderella bedroom.

Her sister Orion then acted as the photographer and documented Willow in all of her dresses. When Willow explained the concept of a "fashion show" to her classmates (3 four-year-old girls) they raptly listened to her story and studied the photographs of her in the

different outfits. Two days after this conversation, the girls started having fashion shows in the classroom, using the dress-up clothes and pieces of fabric found in the room.

This study also taps into the significance of popular culture in young children lives. Bennett, Emmison, and Frow (1999) state that popular culture relates to the social and cultural practices people engage in and find personally meaningful and pleasurable. The previous illustration and narrative notes the role of popular culture through media (reality show – *Project Runway*), and the role older siblings play in influencing their younger siblings' literacy and multimodal development through play. All of the children in the study took photographs of various forms of screen technologies and popular media culture, such as: children's television programs, adult television programs, Xbox computer games, children's websites, and movie clips and videos from the video-sharing website, YouTube. Boyd (1997) and McNaught et al. (2000) state that while many parents view popular media culture positively, it is often banned from early childhood settings.

The roles of *Dora the Explorer*, *Spiderman*, *Max and Ruby*, and *Kim Possible*, as well as several other characters in popular children's media were of interest to the children and were evident in their photographs. At times, the children also took on these characters in their dramatic play and were encouraged to do so in the

classroom. This reflects Arthur's (2005) perspective that the inclusion of popular media culture in early childhood educational settings taps into children's interests and pleasures and respects children's agency. However, during the majority of dramatic play episodes in the classroom, the children seemed to prefer taking on the roles of babies, baby-sitters, older siblings, shop-keepers, waiters and waitresses, brides, parents, pets, or girlfriends and boyfriends as they were very familiar with these "real-life" roles in their out-of-school lives.

At the Photography Exhibit held in the classroom at the conclusion of the study, each child was asked to choose for display their most meaningful photograph and to provide a narrative describing why they liked that particular image. Interestingly, none of the children chose a photograph representing an image of popular culture – twelve out of thirteen children chose photographs of family members (e.g., siblings, parents, extended family, pets), and one child chose a picture of the pilot light in his furnace (his fire). The following images represent four of the children's favourite photographs taken by them during the study.

Arieanna: *It's my kitty and my dad's hand! (giggling). Her name is Dora. I like her because her plays with me.*

Christian: *This is my brother, Brayden. I can carry him and I help him walk. He plays with me too.*

Lawrence: *It's a picture of my mom with a baby (his cousin, Erika). I like it because I like my mom in this picture.*

Niomi: *I really like this picture of Pumpkin and Spaz. Pumpkin is a Calico cat and she has a collar. I like Pumpkin because I like Calico cats.*

Conclusion

Based on the children's photographs in this study, it is evident the crucial role families play in shaping children's identities and their orientation to literacy. This has also been extensively discussed by Gregory and Williams (2001), and Mahiri and Godley (1998). McCarthy (2002) argues that when teachers encourage students to share their identities within classroom contexts, they can collaboratively create a 'third space' (Gutierrez, Baquedano-Lopez, & Turner, 1997) in which school norms and students' lived experiences meet and ensure that children have agency and voice, similar to the classroom spaces described by Dyson (1997, 2000). The photographs taken by the children in this particular study sparked conversations, drawings, printed text, dramatic play re-enactments, and various focuses of learning amongst the children based on their interests (e.g., fashion shows, restaurants, pet stores, babies).

Bourdieu (1977) suggests that the ability of educators to transform pedagogical spaces relies in part on their recognition and celebration of the 'cultural capital' young children bring with them to the site of literacy learning. This also parallels Moll et al.'s (1992) work which acknowledges children's expertise and "funds of knowledge" before they enter classrooms, and Marsh's (2005) observations of children as having a wealth of knowledge based on their experiences as media consumers and users of new technology.

Mitchell and Reid-Walsh (2002) suggest that the 'gaze' of children can be accessed when their representations through photographs are involved and valued. They argue that children's photographs taken without adult supervision may also challenge adults' notions of children's play, as was evident in this study. Although this study provides only a glimpse into the impact the New Literacy Studies are having on contemporary early childhood classrooms, this research did highlight: i) the communicative practices children enjoy and engage in at their homes and in their communities based on their own perspectives; ii) the impact their photographs had on their play practices in the classroom; iii) the powerful role of young children as co-researchers in studies involving them, and; iv) the insight young children's photographs can provide to the development of meaningful curriculum in an early childhood setting, and the critical role young children can play in terms of acting as experts and guides regarding the future direction of early childhood curriculum.

Using journaling attributes to improve struggling sixth grade readers' response to the comprehension of narrative text

Mary W. Strong

Geralee Wood

Widener University, USA

Introduction

Struggling readers begin each new school year revisited by the same reading frustrations and insecurities that marked the end of their previous school year. The beginning of a new school year can be an intimidating experience for children who have difficulties with reading. Feelings of insecurity and dread are mixed together with hope for a successful new school year as the new sixth grade students enter their new classes loaded with new binders, stacks of paper, new cartons of colored pencils, red pens, blue pens, hole punches, and any number of other products proffered by the local discount or office supply store. They meet their new teachers, master their lockers (for the most part), and learn which of their buddies they will be able to sit with at lunch time. After the newness wears off and the real work of learning begins, the new middle school students gallantly strive to "do their best". For some students this level of effort continues making it all the way to the spring semester. For most, however, the effort soon fades as their frustrations with school work make it apparent that the prospects for an excellent report card are unlikely.

Stanovich (1986) states that there are consequences of students who have a long term history of reading difficulties and related academic failures. He indicates that differences in the ease of reading acquisition likely cause differences in reading behaviors. Stanovich posits that difficulties in acquisition of decoding skills lead to repeated negative experiences which cause poor readers to avoid reading. By contrast, ease in the acquisition of decoding skills leads to positive experiences which further encourage proficient readers to read widely. As a result of these behaviors, struggling readers fall further and further behind their peers in their amount of exposure to print. The difference in words read by the least and most motivated readers is enormous and causes great differences in vocabulary acquisition and concept development. Deficits in vocabulary and concept development, in turn, further widen the ability gap between readers since smaller vocabularies and smaller concept banks make it more and more difficult for the struggling reader to catch up. According to Stanovich, one of the most effective means for countering this negative, downward spiral is increasing reading amount.

The purpose of this research study was to determine if teaching the use of attributes in paper and pencil journaling with narrative text to struggling sixth graders could improve their comprehension and responses.

Theoretical Framework

According to Hammill (2004), the best predictors of reading are aspects of the English writing system. He identifies written language skills involving words, sentences, and composition as core abilities and notes that they are acquired via direct instruction. He suggests that these core writing abilities are not just incidental, but are, in fact, causal to reading acquisition.

Martinez and Roser (2008) found that first-grade students who used response journals after listening to oral readings of chapter books were able to make meaning out of lengthy texts because the journaling activity assisted them to remember and integrate the characters and events. They speculate that writing about narratives allows students to sort out critical story information and order the world of the story in a way that aids understanding.

Wollman-Bonilla and Werchadlo (1999), wondered if they could improve first-grade students' personal responses to literature by providing support in the form of scaffolding. They found that the use of modeling, explicit instruction, feedback, and contexts for sharing allowed the students to construct personal responses that demonstrated their engagement with the narrative that went beyond the retelling of text-based ideas. In another study using journals with first-grade students, Roser, Martinez, Fuhrken, & McDonnold (2007) researched how the students used writing to help guide them through the world occupied by the story characters. Their results showed that a student who could follow a character through his world by journaling about that character assisted the student in comprehending the narrative more fully. It allowed them to shift from merely understanding the plot to understanding themes because their understanding of the characters' motivations developed.

It seems logical that if journaling can be used to help first graders comprehend and explore the world of the narrative, it ought to help struggling sixth grade students, who complain that one of the most difficult aspects of reading long books is remembering what happened in the story. Journaling in reference to shared narratives allows for explicit instruction and discussion in the use of strategies such as visualizing or predicting. When students feel confident that they have a reasonable and fundamental understanding of the story facts, they can feel more confident in taking interpretive risks. As Rosenblatt has contended, if a reader reads a story from an aesthetic stance, he is more likely to find personal meaning in the narrative (Rosenblatt, 1994).

Diakidoy, Stylianou, Karefillidou, & Papageorgiou (2005) have noted that listening comprehension is higher than reading comprehension in the early grades, but this is reversed in the middle school years when reading comprehension surpasses listening skills. Nation and Snowling (2004) have concluded that broad language skills make important contributions to reading. They note that expressive vocabulary and listening comprehension were longitudinal predictors of word recognition, which suggested that general language competence “shapes the development and operation of the reading system” (Nation, et al., 2004, p. 354). To that end, prosodic reading and listening together have the potential to draw the students into the story world in a way that encourages their desire to continue the tale, either by writing about the story experience in their journal or by reading on their own. When the students choose to continue to read the story on their own they can do so with the intonations and prosodic clues modeled by the teacher still in their ear. The teacher’s example serves to guide their own inner, character voices while they continue unfolding the author’s world and creating their own experience in it.

Research Question

In an effort to increase the amount of reading practice done by her students, the teacher began a homework program of required reading practice six years ago based on the Accelerate Reading Program (2009). In this program, the struggling readers in her sixth grade basic skills classes were required to read approximately 10- 15 pages, five nights a week, from appropriately leveled novels. After each reading, they were to summarize the major events, discuss new characters, and to include a paragraph with active reader remarks. During the years that the teacher had been using this approach, she found that after complaining about reading and journaling with the first two books, at least half of the students recommended books to their peers by December. Although she was delighted to hear the student recommend “good books” to their friends, she was not entirely happy with the scores they have had on the Accelerated Reader quizzes that the students were required to complete as a part of their homework reading program. Every year, despite many phone calls to their homes, some of the students decided to “opt out” of homework. These students always did poorly on the quizzes. In contrast, there were other students who diligently do all the reading and tried their best to write about what they had read.

Over the years that the teacher used the Accelerated Reader homework reading program, she adjusted and modified it to fit with the needs of struggling readers. Although she felt that though this homework reading program that she developed had gone a long way towards improving many of the students’ attitudes

towards reading, many of the students still continued to demonstrate poor comprehension of their independent reading. She desired to find a way to improve their independent reading comprehension. She believed that if there was improvement in the students' personal engagement in a narrative, this increased engagement would facilitate greater attention to the types of information that often is included on exam questions.

Therefore, the research question that the teacher formulated was:

Could teaching the use of journal entry attribute statements provide an increased use of student response journaling statements and improve the bcomprehension of narrative text of struggling sixth grade students readers in a basic skills program?

Participants

Fourteen struggling sixth grade readers were the participants in the study. There were four male students and ten female students who scored in the low performance range on the New Jersey Assessment of Skills and Knowledge (NJASK). They were assigned to two different basic skills classes based on low test scores, poor grade point average, and previous teacher recommendation and opinion. These students attended a middle school in a suburban school district in southern New Jersey. The teacher of the two classes of struggling students is a Basic Skills Instructor of reading and English. She held this position since January of 1991.

Procedure

The students were given the following list of trade books to read in the program by the teacher of the class:

The War with Grandpa by Robert Kimmel Smith

Hatchet by Gary Paulsen

The Tale of Despereaux by Kate Di Camillo

Maniac Magee by Jerry Spinelli

The teacher taught the students to use good response journaling entries after reading the books assigned. The journaling activities were conducted at least three times per week. The teacher also taught the students to use these specific attributes in their journaling prior to beginning the journal response activity and during the course of the nine month study:

- **Predictions:** Statements that forecast any future event or condition pertaining to the characters or plot. They are most often stated with words like ... *will* or ... *is going to*....

- **Connections:** Statements that indicate that the child has in some way experienced, observed, or thought about an event or experience that is similar or related to something discussed within the narrative. These experiences may be personal or may be related to a personal acquaintance.
- **Character Insights:** Statements that indicate that the child has thought about the character's actions and has determined or considered possible motives for their actions.
- **Theme:** Statements that indicate that the child is considering the overall message of and the author's intent behind the narrative.
- **Questions:** Statements that ask for further guidance or indicate a sense of wonder. The statements will often include words like *wonder* or *will*. In addition, standard interrogative sentences will include words like *who*, *what*, *when*, *where*, *why*, and *how*.
- **Clarifications:** Statements that often follow questions or other statements. They indicate that the child is in some way attempting to answer his or her own questions or to further elucidate an idea. These ideas often contain words like *because* or *since*.
- **Opinions:** Statements that indicate a child's own feeling or ideas regarding something in or connected to the narrative. Often these statements will contain words like *I think*, *in my opinion* or *if I was...*
- **Vocabulary:** Statements that indicate that the child learned or is asking about unknown words in the text.
- **Author's Technique:** Statements that indicate that the child is considering the writer behind the story. These statements may, for example, be about the author's use of literary elements or about the author's background or beliefs as they are reflected in the narrative.

Each student was given the opportunity to orally share or present at least one entry per week. First, the student could share an entry that was response to his own silent reading. Second, he could share a journaling response to texts that the teacher read in class. The student was given ten minutes three times per week to write in his response journal. This provided a minimum of thirty minutes of writing per week from which he could share.

How Student Growth Was Measured

The teacher read each student's journal entries for a chapter at the beginning of the book, in the middle of the book and at the end of the book. Figure 1 shows the rubric that was used to categorize statements.

Figure 1
Response Journal Attribute Statement Rubric

Category								
Predictions	Connections to material outside the text	Theme Insights	Character Insights	Questions	Clarifications	Points and opinions	Author's technique	Vocabulary learned or unknown

The teacher used the rubric to evaluate the journal entries three times for each book. The dates of the teacher evaluation of the three student journal response entries for every student for each book are as follows:

- The War with Grandpa* (Smith) - 17 September, 29 September, 7 October
- Hatchet* (Paulsen) - 22 October, 13 November, 9 December
- The Tale of Despereaux* (Di Camillo) - 14 January, 3 February, 4 March
- Maniac Magee* (Spinelli) - 8 April, 22 April, 20 May

The War with Grandpa

On 17 September, 2008, the teacher read student response entries concerning the beginning of the book (Chapter 1-2), *The War with Grandma*. There were a total of 12 entries that fell into one of the attribute categorizes listed in Figure 1. Six of the twelve entries were prediction statements and the other six statements were scattered among the other categories.

There were a total of 24 journal entries from 7 October that could be categorized and they were based on Chapters 20 to 22. Fourteen (the largest number) of these entries were opinion statements.

Twenty four statements that were categorized in the journal entries from the last chapters of the *The War with Grandpa* (Chapters 35 - 37). Again the largest number of entries were categorized as opinion statements.

Hatchet

On 22 October, 2008, the teacher reviewed the response journal entries from the second book the class read, *Hatchet*. There were twenty four responses that were categorized using the rubric. The largest number of statements were predictions. Since the students were starting to read a new book, this is not a surprise. The second largest number of journal responses were in the category of opinions.

Journaling responses from the middle of the book (Chapter 10) were reviewed on 13 November, 2008. The total number of responses categorized were 29. Eleven responses were categorized as predictions and another 11 were in the opinion category.

There were 28 journal responses reviewed and categorized on 9 December from Chapter 19. The largest number of statements were opinions (13). Five statements were clarifications and 5 statements were predictions.

The Tale of Despereaux

On 14 January, 2009, journal entries for the third book, *The Tale of Despereaux* were reviewed. Thirty one were categorized with the rubric. The journal response entries covered chapters two to four and there were 32 in total. The largest number of responses were placed in the category of prediction and eight were clarification statements.

The response journal entries from chapters 26 and 27 were reviewed on 3 February, 2009. The total number categorized was 58 and 27 of them were opinion statements. Ten statements were predictions and eight were clarifications.

The last response journal entries from *The Tale of Despereaux* (Chapters 50-51), were reviewed by the teacher on 4 March, 2009. The number of entries dropped slightly to 49. Twenty one entries were opinion statements, eleven were predictions, followed in number by six clarification statements.

Maniac Magee

The first response journal entries from *Maniac Magee* that were reviewed by the teacher were from Chapters 13 to 16. There were 48 statements that were categorized on 8 April, 2009. Opinion statements fell in the largest category followed by prediction (15) and clarification statements (5).

On 22 April, 2009, the teacher reviewed the journal entries from Chapters 29 to 32. The total number of entries rose to 71. There were 19 opinion statements and ten character insight statements. This was the first time that character insight statements were second largest in number.

Journal response entries from the end of fourth book, *Maniac Magee*, were reviewed on 20 May, 2009. The journal entries were written in response to Chapters 43 to 44. The total of number of statements fell to 55. Twenty four or almost half of them (24) were in the category of opinion. Of interest is the fact that the second largest category was questions (9).

Discussion and Conclusions

Figure 2 shows the overall growth and decline of the journal response entries over the duration of the project. Note that the students in the beginning of the project in September only gave 12 entries that could be categorized according to the attributes of good journal response entries. The student response entries peaked at 71. The

final total entry count of 55 on Maniac Magee is an increase of 43 more responses than the first journal entries.

Figure 2

The teacher hoped to see all of the students increase the number of statements that they wrote in their response journals. This occurred in the study. She also hoped to see an increase in the comprehension of the text by the students as an application of this process. The Accelerated Reader quizzes that the teacher gave the students each week to test their comprehension of the narrative texts also improved. At the beginning of the school year in September, the students were only scoring an average of 50% of the multiple choice questions correctly. In May, however, that percentage increased to 75%, Therefore, there was student application of journaling techniques used in the project to comprehend the narrative text.

On the final reading benchmark test that the school district required, the average of the students in this study was 83%. The teacher did not expect the students to achieve a mean score this high because previously they had scored below the average on this test.

The ability to find personal meaning in a story also indicates a depth of understanding about a story. The students gave the largest number of response statements in this category. The use fluent oral reading by the teacher was an additional component of this study. In order for students to find personal meaning within a story, students must first grasp the storyline. The struggling readers often

begged the teacher to read to them saying, “I understand it so much better when you read it to me”. Presumably, this is because fluent, prosodic reading of literature plays to their broader oral language abilities freeing their working memory from the demands of maintaining the storyline or from interpreting the unfamiliar syntax of literature. This freedom thereby enabled them to imagine themselves living within the story. Thus, they were also able to write a better quality and quantity of responses in their journals.

Group Work and Assessment: Effects of Individual Work on Group Success

Natasa Blazeska Tabakovska

FAMIS, Republic of Macedonia

Violeta Januseva

Faculty of Education, Bitola, Republic of Macedonia

The work in groups

The changes that have been occurring in the last few years in the Republic of Macedonia, in all the spheres of the social living, unutterably have concerned the educational system, as a crucial element and a pillar of every society. As a result of the numerous projects, training programs and seminars, most often organized and financed from foreign association, the educational system got its new physiognomy. The schools as centers of the educational actions gained a new role which, in a big part, has changed the established practice of the work of the teachers and the students in the classroom. These projects have offered techniques and strategies for the realization of the class which have made the classroom active workshops. The classroom has gained a totally new look, and the teachers and the students new role. The students have become active bearers of the process of gaining the necessary competence skills that are relevant to the job, and the teacher simply gives the directions for the activities. The student and the teacher have become partners in the process of teaching and being taught. The tendency of these changes is that the future academics become the active bearers of the progress in the society, a citizen who knows its rights and obligations, one who will be a useful member of the society, a citizen who under these new conditions that dictate the market of the labor will be professionally capable to communicate and work in teams.

The job of the students in group is one of the strategies of the active methodology. Working in groups significantly affects on the socialization of the students. Besides the beginners difficulties in the usage of this strategy (not having any experience, being unprepared, and the uneducated students and teachers for this kind of work), it is a fact the importance of this kind of work has been noticed. In this article, we do not go into details with the analysis of the beginners' mistakes, but few are just mentioned: considering the fact that the teachers work with students who are different according to their intellectual capacities and abilities on which basis to form the group, how to make the most beneficial division of the students into groups, which is the optimal number of group members, which classes and

themes are most adequate for group work, how to divide the obligations between the members of the group, how can the teacher deal with the loudness in the group, how to surpass the resistance that certain colleagues have, how long should last the work in groups, etc. We are happy to say that these difficulties have been surpassed to a great extent, at least at those teachers who prefer the group work.

The group work enlarges the results from the studying and the benefits are great from this kind of work: the students learn how to collaborate mutually, learn to respect one another, learn to respect their attitudes, work on their self-confidence, learn how to communicate mutually, learn how to analyze, to solve problems, to surpass the conflicts that may arise between them, to share the knowledge, and the most important thing is that they learn that the effect from the group work depends on the effect from the work of the individual. That means, the members of the group have to have the feeling that the given assignment will be completed successfully only if some of the group members uses his potentials to the maximum, and that leads them to agreements, to help each other etc.

The effect from the group work will be even greater if the teacher is skillful and creative and gives that kind of assignments, at which he or she is sure that when the students work on that assignments, they will equally contribute. Teachers and students understand that the group work is not a game and that there has to be great effort into the group work for it to become part of the teaching process and from the established practice of teaching and learning.

Beside all the positive aspects of the group work, our everyday practice shows that there still exist dilemmas and second thoughts, especially when it comes to evaluating the group work. The evaluating of the students' achievements, as a necessary and joint part of the educational process, by itself is a complex process. The numerous projects of the teachers offered them different strategies and tools for continuous following and evaluating the students achievements, whether if it comes to individual work or working in a group, in their everyday routine, as when it comes to their curriculum in general. Beside that, large number of the teachers, in conditions when there are not any standards established for evaluating, have not changed the established practice when it comes to evaluating and have shown some doubts in the success of the new strategies, especially of those where it is required the students to participate in the evaluation. The concepts evaluation and self evaluation, in the last few years, have acquired some new dimensions. The teachers have gained some new acknowledgements in relation to the strategies for the formative and summative evaluation, and yet, the evaluation still is a complex area that still needs some work to be done. That is why it is relatively difficult to

evaluate the achievements of the student that works in a group, as is the evaluating the work of the group as a whole.

There are many ways to evaluate the group work: lists for analytical evaluation of the work of the group with ready made indicators and criteria, rubrics, lists for self evaluation etc., but there still seems that there still is some discussion left as to how the teacher will really evaluate the contribution of the individual to the group, that is, how will the teacher be sure that exactly that student has done the certain work, and not someone else and how will validly and with certainty evaluate his or hers work. The contribution of every member of the group and evaluating of the effect of the work of the individual is not a raising question just in the educational system in Macedonia. The conversations with the volunteers form the IRA, as with the other relevant factors in the education in and out of Macedonia, show that the difficulties to evaluate the contribution of the individual in the group are connected to the education in general, which comes from the complexity of the concept evaluation, as from the insufficient capability of the teachers on this plan. At least in the moment every teacher the evaluation of the individual contribution of the individual makes it individual.

The evaluation of the achievements of every member of the group individually is of great importance and we think that that is the hardest part of working in groups. For example, in a group of 4, the teacher can ask from every member of the group to give a final report, in a form of an essay, for the work of the group. The teacher can not be sure that the student has made the research by himself and that the report was not written by someone else. We think that the teacher has to make an effort to think of an assignment whose realization will take place in the school (if it is necessary the realization of the group work to take place outside the school, the teacher should predict that beforehand, together with the students, and to take into account the concrete help that the student will receive, that, of course, should be of technical nature).

In this article we propose a way that, to a great extent, is successful for evaluating the contribution of every individual in the group (this kind of evaluating we implemented with the students from 4th year). We propose that the group should be made of 4 members. The members from all groups that the teacher will form will remain in the groups until all of the members don not go through all the roles. Then, new groups are formed, with new members, but also in the framework of the new members, the members remain in the groups, until they go through all the roles. The idea is that until the end of the term or the school year (depending on the frequency of working in groups) every student from the class should meet with every student in

the class, that is, to work in groups. The roles that the members of the group go through or play are:

Leader - the one that has the coordinative role. Often, he is brought into situations to bring the decisions. This team member coordinates the process and the thematic activities of the group. The leader should be able to maintain a balance between the time needed for the group to finish the task and the quality of the final product.

Administrator- the one that is in charge to obtain technical and physical conditions for work. This member makes sure that the participants work in the given time, they respect the rules, to involve all of the students, if there is any need, he or she sets some meetings if the group works outside the school-and at the end, he gives the report for the work of the group.

Operator- the one that conducts the activities that are usually different in accordance to the type of the assignment that the group has to make, like gathering materials, classifying the obtained materials, processing the data, etc.

Spokesperson- the one that informs about the results of the work of the group, presents depending on the task the group is doing. In the Article we do not specify about what kind of task is in question, the kind of the task depends on the curricula, the creativity, the ability and the capability of the teacher, as from the interest and the intellectual capacity of the students. The list for evaluating the contribution of every individual the teacher can change and modify depending on the type of the assignment, on the information that he wants or needs to get, and also if the information will be useful for formative or summative evaluating.

When evaluating the work, that is, the contribution that every member of the group gives for the completion of the assignment, the principal of triangulation is being used; the contribution is being evaluated from the student itself, from his peers and from the teacher. Every one from the group gets four lists by which he or she evaluates his own work and the work of the rest of the three team members. The teacher also fills out 4 lists evaluating the work of every member of the group. The final mark about the work of every member of the group is determined according to a formula:

GRADE (POINTS)= $30 * (\text{total number of points from the peers}/3) + 30 * \text{Points from the self evaluation} + 40 * \text{Points from the teacher} / 100$

Example of evaluation: 1 peer- 4; 2 peer-3; 3 peer-4: Self evaluation-5: Teacher-3
Grade (Points) = $(30 * (4+3+3)/3 + 30 * 5 + 40 * 3) / 100 = 3,8$

Our experience has shown that in the beginning the students are not too skilful in evaluating their work and the work of the rest of the group. But with time, they become more and more skilful and more objective in the evaluating. In the beginning the teacher needs to dedicate more time to explain the significance of this activity, as to give the needed directions for more effective completion of the work.

During our work, it turned out that it is very important and necessary the students to get acquainted with the contents of the analytical list for each part. In that way, the students got the picture what is expected from their role, or what they have to do to maximize their contribution in the wholesome effect. Also it was necessary to separate time for the roles to be explained of all the members of the

group. Only when the roles and the assignments are clear that come with the role, can be expected the students to start with a more serious approach towards self evaluating and evaluating the others. Hence, it is important the students not just to understand their role but also the role and the assignments of the other peers so they can perform the evaluating more successfully.

Our experience has shown that the group has a great benefit from two additional elements for evaluating the work of the members of the group that do not affect directly on the final grade of the individual from the group, but indirectly they affect and improve the work of every individual member, as of the whole group: *what to improve - what have I learned from him*:

What I recommend him to improve for the group, with that change of his, to learn more effectively and more efficiently - suggestions and views from the peers and from the teacher. It is especially important to be stated when this information should be given (our experience says that it is better information from this kind to be given at the end of every phase from the work on a given assignment). This to a great extent affects on the self criticism of the students and on their ability to have a true judgment. This, also, helps the teacher to evaluate how much every student understands its role and the role of the other, how much every student understands his or hers assignment and the assignment of the others, and how much every student is dedicated in the completion of the assignment. The information that the teacher receives, affects on the further work of the students in the group.

What have I learned from him and will implement in the future when working with groups- suggestions from the peers in the group. Our practice showed that this kind of information is needed, also, to be given after every phase of the task is finished. This a powerful tool that shows the teacher that every one of the students has put maximum effort to understand the role and the assignment of the other student, and that is an indicator that the students are really interested to get involved in a work group, that they understand that in a work group every one learns from the other and that every idea is welcomed. Conversations with students showed that these two elements in the beginning were very difficult part of the task (probably that is because they are not prepared for this type of work), but at the same time they consider them to be very useful because they indicate their weaknesses and their strengths.

Our experience has shown that the most complex part from this whole activity is based on the completion of the lists for analytical evaluation of the work. In

addition, we offer you the list for analytical evaluation for every role and for the certain assignment that is characteristic for the role with indicators for success, on a scale from 1 to 5:

	1	2	3	4	5
Leader	Forces one or other element. Takes care only for the work to get done in a certain time and does not care for the quality of the work done or takes care just to do the work no matter the time. Forces other members from the group. Does not take care for the learned content.	Very weak balance between the process and the content. Weak focus on the work group and not taking into account for the results of the work. To a great extent forces certain members of the group.	A better balance is needed between the process and the content so as between the members of the group.	Balances solidly. Most of the time speeds up the process when needed even if it takes reassigning the tasks to those who can and will work well or to slow down the process if he or she sees that the solutions are too precipitated and does not give the members chance to contribute.	Balances perfectly between the time needed for the completion of the work and growing into the decisions, taking care equally for everyone to be involved. Makes possible for the members to learn the contents of the working group.
Administrator	Does not complete its duties. Leaves for the group to work without adequate technical support, does not inform the members on time for their tasks and duties, lets the chaos rule in the group in not obeying the rules, the time etc.	The results from the involvement do not satisfy about the physical and the technical conditions for work of the group. Often the group is not informed on time about the activities. There is not any respect for the established rules.	A bigger involvement is needed for gaining the needed physical and technical conditions for the group can work. Sporadically, the group is not informed on time. A more objective practice of the sanctions is needed.	The conditions that he establishes on the most part of the meetings are satisfactory. With rare exceptions, gives the needed information and takes care for obeying the established rules.	Completely creates the conditions for the group can work. Sporadically gives the needed information and takes care for obeying the rules and solemnly takes sanctions if disobeyed.
Operator	Not at all motivated for completion of the given assignments. Lack of different materials as weak connection with the contents.	Weak motivation, little results. The materials are not useful for the theme that is in question or there are too little materials, does not know what to do with them.	Not enough motivated. The materials lack difference and originality or they have weak connection with the theme. Inappropriate procession of the data in function of the task.	Solidly completes the assignments. Uses enough materials that are not too different. To a great extent and with mild back steps they are connected with the theme and they are well used in function of the task	The tasks are completed with great dedication. Balanced use of different materials, perfectly good usage for the concrete theme.

Spokesperson	The presenting was very short or very long. It was hard to follow and there wasn't clear what it was about, like the speaker was not motivated, too silent/too loud, no contact with the audience. Did not show any interest for what he exposed. Did not had any elements of organization and the ideas were not connected.	Big overlapping in time when presenting. Did not spoke very clearly or with weak motivation. Just stating facts and they were not enough and do not make a whole. Weak organizational behavior of the ideas, do not complement one another.	Exceptions from the established time for presentation. Did not spoke clearly enough but at times makes the impression better. впечатление. Presents one idea or several ideas or facts but do not works them deeply enough. The ideas as a whole do not come one after the other so the organization is not good enough.	Sticks to the already arranged- the determined time frames with little overlapping. Decently exposed ideas with little faults that were easy to follow. Exposed several important ideas that were connected to the theme and showed solid knowledge for the theme. Organized ways of presenting the ideas, most ideas were logically submitted.	Respects the time completely. Presenting clearly, balanced, right, with self confidence, good body posture and makes eye contact with the audience. Shows deeper knowledge about what was presenting. Well organized presenting of facts, logically submitted.
---------------------	--	---	--	---	--

The assessment of the effects of individual work on group success still remains difficult and complex task for the teacher. Hopefully, this Article will contribute to improve the assessment of the individual and the group work. We think that the model we offer in the Article will make teachers think and invent ways to improve and modify this charts in order to make assessment more objective, to improve the practice of assessment and to become compatible with the modern standards.

The process of development of mother tongue laboratory

Turan Temur

Dumlupinar University, Turkey

Introduction

Every individual is born with language ability due to the biological and physiological development process which all people go through. According to Ergenç (2002), this ability can be considered as a kind of preliminary preparation because it is a kind of mechanism that enables one to learn the language spoken in the society in which he lives and to use this language after a while. When the language formed in one's mind and described as abstract is written out or verbalized, it becomes concrete and turns into a social being which determines and also forms the relationships between individual, external world and other people and which has a relation with all fields such as science, art, technique. Language plays an important role in determining both psychological and social identity of an individual.

Given the big importance of language in both academic and social life of an individual, it is necessary to give sufficient importance to mother tongue education. Because the basic aim of language education is to improve one's thinking and communication skills. Therefore, all countries pay much importance to language education and particularly to mother tongue education in their education systems (Ozbay, 2003).

An individual starts to acquire the first information by 'listening' since the day he is born. As he grows up, he performs "speaking" using the words that he learned by listening. He communicates with people around him by using the words and expression forms in his mind. He uses his language again while thinking, dreaming and interpreting all kinds of information and ideas. By this way, he acquires many skills and information with the language of the society in which he lives (Tosunoglu, 1998). Development of a language doesn't only mean learning words but also the rules about meaning relationships between words, sentences and structures of words and sentences.

Language development of a child relates to the improvement of his listening, speaking, reading and writing skills. Listening and speaking are usually considered as the skills which are acquired before he starts school. However, reading and writing are those which are acquired in a systematic way and in accordance with a teaching program by the help of an instructor (teacher). Actually the social environment, in which a child lives, can guide him during the process of acquiring

listening and speaking skills. However, the most important characteristic which distinguishes this environment from school environment is the lack of opportunity to organize it identically for each individual. In other words, it is impossible to carry out this education according to a particular plan and program.

According to Graves (2006) and Senemoglu (1997), children have acquired basic language skills until they come to school environment. Among these basic skills, oral communication skill improves in earlier ages compared to the other skills. The speaking skills of children between the ages of 2-5 improve rapidly. When children are 3 years old, they can become good speakers. They can make sentences consisting of 3-4 words, and they can usually use verbs and times appropriately. Late in the preoperational period which is mentioned in Piaget, they can understand numerous sentences and speak with grammar rules.

The level of language development varies depending on individuals. This difference arises from the variables such as intelligence, environment, sex, culture and family environment. In addition, the influence levels of the factors related to language development are said to be different. For example, while the culture factor's influence on a student's language development is significant, the intelligence factor may play a leading role for another student. In this case, language development can be considered as a structure which determines its own way depending on personal and social factors (Selcuk, 2004; Rubin, 2000).

The Aim of the Laboratory Project

In addition to the abovementioned factors which have some influence on language development, school environment has a quite significant place in cognitive and social development of an individual. However, the studies that are not planned effectively and being dependent on only text books bring about a limited activity area. Therefore, in a broad sense, it is aimed to obtain information about the language development levels of the students in the Private Maya College and to analyze reading, writing and speaking – listening errors and to improve these skills. In order to accomplish this aim, a Reading, Speaking and Writing Laboratory was established in the Private Maya College. This project which can be considered as a distinctive mother tongue development laboratory consists of two basic processes: (1) the process of analysis, (2) the process of development. The former aims to photograph the development process of students' language skills while the latter aims to support individuals, if needed, with further exercises related with learning language. Analysis and development models are described below in detail.

The Aim of the Study

The basic aims of this study are to give information about the process of development of mother tongue laboratory, which was established in the Private Maya College, and to provide descriptive information about the activities for assessing and improving reading, writing and speaking skills. In addition, the study aims at describing the problems confronted in the process of establishing the laboratory.

Practice School

The Private Maya College started its education program in 2002 – 2003 Academic year with two first year classes, one second year class, one third year class, one fourth year class, one fifth year class and 153 students in total. The college, which participates in many EU projects, contributed to 2004 curriculum reform studies which were carried out within the body of the Ministry of National Education with its experience and knowledge. The school, which receives the scientific support of many national and international academic bodies, gives importance to qualified personnel, high parent involvement levels and the design that allows flexibility in learning – teaching styles.

The Private Maya College is a widely known school for its leading practices. In addition to the mother tongue development laboratory, it has different applications such as multiple intelligence applications, learning styles applications and anthropometric measurements.

Development and Analysis Process of Language Skills

The information about the development and analysis process of reading, writing and speaking skills in the mother tongue laboratory is given below.

Reading Analysis Process

Reading errors are limited to a few researches for the Turkish language (Mavi, 1995; Yilmaz, 2000; Yilmaz, 2006; Akyol and Temur, 2007; Cayci and Demir, 2008). Reading errors are seen as “a way through reading”. Because the strategies used in reading and errors made can only be defined with this kind of studies and the reader (student) is directed to necessary studies for a more effective reading.

Error analysis was first used by Goodman and Goodman and Burke. With these studies, the errors made by readers while reading were defined and classified. As a result of these studies, the following errors were defined:

Substitution: Reader uses a word in substitution for a word in the text.

Adding: Reader adds the sounds, vowels or words which are not included in the text.

Skipping (misreading): Reader skips sounds, vowels or words without reading.

Repetitions: Reader usually repeats a vowel or a word.

Correcting oneself: Reader reads the sound, vowel or word again correctly which he misread before.

Reversing: Reader reads sounds and words reversely.

Many inventories were developed in order to define and analyze reading errors. The information obtained through these inventories is used with the aim of preparing more suitable teaching activities for the students depending on what kind of reading strategy they use and what kind of errors they most commonly make. One of these inventories is Defining and Evaluating Reading Errors Inventory. This inventory is used with four different aims: (a) to provide a frame for teachers related to comprehension in the reading process, (b) to help teachers prepare an instructional plan, (c) to enable students to observe their own improvement in reading, (d) to provide information for families and administrators about students' reading improvement.

In Error Analysis Scale, three different types of reading levels are defined:

Free level is a level at which a student can read and understand a material without the help of a teacher.

Teaching level is a level at which a student can understand a portion of what he reads and therefore needs the help of an adult. The characteristics of the students who are at this level are similar to those of the students who are at free level.

Anxiety level is a level at which a student makes so many errors and understands only a little portion of what he reads.

The Development Process of Reading Skill

An effort is going to be made to improve the reading skills of students by means of various activities. These activities consist of three different types including personal, small and larger group activities. The objective of these activities is to make the students gain the necessary qualifications in order to be effective readers. In order to accomplish this aim, various activities were also designed. With these activities, it is aimed to improve the basic skills of students such as being able to use their previous knowledge about the subject that they are going to read about, being able to have an inkling of the text, improving the speed of reading, making comparisons (for example, comparing his own ideas with those of the writer), analyzing the structure of a text and generalizing. Reading skill development process is described below in detail.

Reading Comprehension Activities

Individual Activities

Reading Conference: Reading conferences include the activities such as brainstorming, discussing and interpreting the texts, correlating them between teachers and students or students and students.

Small Group Activities

Guided reading: Guided reading is a group activity which consists of four or five students. It can be considered as a reading activity which is performed in a homogenous group consisting of the students who have similar reading development levels. Teacher is going to support the students and guide them in using reading strategies.

Book discussion club: Teacher acts as a guide in this activity. The activity begins with talking about the subject of a book or summarizing it. Then, students may talk about the parts of the book which affect them most, respectively. The features of characters, the event, the results, the time, and the descriptions in the book may be chosen as a discussion topic. A discussion environment in which all students can tell their thoughts comfortably should be created.

Larger group activities

Book presentations: It includes the activities within which 3-5 books are introduced in one session. Presentation of a book should start with technical information such as publishing house, year of publication, number of pages, author and table of content and continue with a simple summary of the content. What is generally told in the book, heroes, the information that students will have when they read the book and the reading aims such as entertainment or intellectual thinking should be mentioned. The book or the books presented in the class are given to the students so that they can go through for a few minutes.

Interactive oral reading: This type of activity used almost in all classes in elementary education, particularly in small classes, is performed with the aims of increasing students' interest in reading, distinguishing correct and effective reading, feeling emphasis and intonation etc. It includes the activities within which teacher reads a text or a book which has not been read by students before and students do comprehension studies both during and after reading.

Reading theatres: Reading theatres are performed with the aim of dramatizing, playing and vocalizing a short story, a fairy tale or a poem. This activity can be performed by playing either only one part of a story or the whole story. The students should read the related part several times and then play it.

In addition to the abovementioned activities, it is planned to train students in reading strategies (*stimulating the previous knowledge, adjusting reading speed, making comparisons, distinguishing the realities from thoughts, analyzing the structure of a text, defining the aim / viewpoint of the writer, defining main idea and supporting ideas, making inferences, generalizing, estimating*).

Writing Analysis and Development Process

The process of teaching writing requires a planned and professional support as distinct from speaking and listening. The acquisition process of this skill is two staged known as "acquisition of the skill" and "improving the skill". Each student

comes to classroom environment with personal differences and these differences influence the process of learning to write as they do all stages of the education. When the differences derived from teachers and teaching styles are combined with the differences in students, some problems are confronted in learning how to write effectively and improving it. Some problems range from holding pen wrong, not being able to write on lines to not being able to write a letter, a word, a sentence or a paragraph. In addition to formal errors, the fact that there are some texts lacking of cohesion is an important problem as well. In order to solve both formal and semantic problems, an analysis and development process was designed. With analysis studies, it was aimed to define the levels of the students in the process of learning to write; and with development process, it was aimed to enable the students to acquire the desired target.

Writing Analysis Process

Writing analysis process consists of formal analysis, meaning analysis and holding pen.

Formal analysis: It includes variables such as forms of letters (appropriate measures, upper and lower extensions), writing on lines, spacing appropriately between letters and words.

Meaning analysis: It is paid attention to whether the principles of coherence and consistency are generally applied in a text or not. Whether the transitions between sentences and paragraphs are appropriate and whether the text has integrity in terms of the idea discussed are emphasized.

Holding pen: Holding pen is an important variable regarding to writing skill. There is not a certain way of holding pen. However, when the types which are found acceptable by the researchers are analyzed, the style which is formed with the support of forefinger, thumb and middle finger is considered more suitable (Reason & Boote, 2000, Sommers, 1991).

Writing Development Process

Improving written expression skill is possible with a process-oriented training. An efficiently designed process enables students to improve not only their writing skills but also their cognitive skills. Because, the thoughts, dreams, feelings that one wants to express pass through a mental process, although writing seems a product of the interaction between pen and paper. An Individual tends to make an abstract plan about various things starting from what he is going to express and how he is going to express it to which purpose he is going to serve to with this mental process. Writing can actually be considered as the concrete form of these abstract plans. In order to be able to write well and effectively, a writer, no matter what he writes about, needs to learn some phases and apply them.

Gradual Writing

1. Preparation before writing: It can be said that an effective preparation is a prerequisite for a successful writing study. Preparation studies should function as a facilitator for writing. The phase of preparation might consist of various steps such as motivating students for writing, choosing the subject, determining the aim and the text type, organizing the basic ideas about the subject (what can we write, what can subtitles or content include?).

2. Drafting: Creating a draft can be considered as correlating the studies conducted in the phase of preparation. The basic dimensions and the supporting ideas of the subject are defined in the draft phase.

3. Organizing: In writing, listing ideas one after another is not enough by itself. The ideas need to be within a logical framework and need to be complementary to each other. Students should check the text by reading it several times to see if the text has these qualifications or not. By doing so, the students give feedbacks for their own texts while reading and define the points which need to be added, excluded and edited.

4. Revision: While the activity of organizing usually covers the content, editing checks the text to see if it is appropriate in terms of form, spelling and grammar. Editing is the last phase of completing a written text.

5. Sharing: It means sharing a written text with friends, parents, and a teacher namely with another person. The aim of sharing is to transfer the written feelings and the thoughts to another person. In addition, comments about the text can be in a form of criticism (Noyce and Christie, 1989).

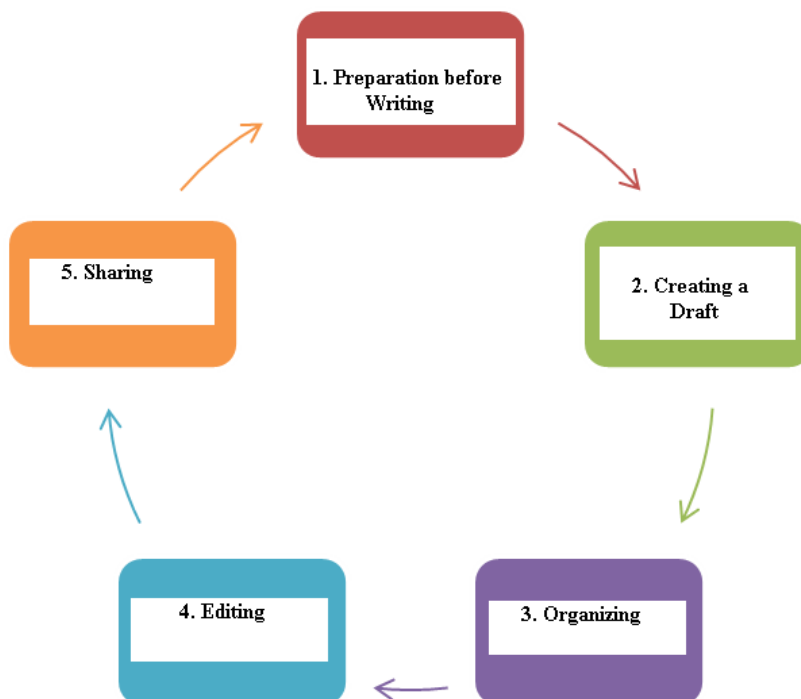

Figure: Gradual Writing Process

The second phase of writing development process consists of writing trials. Students should start with writing a sentence, a paragraph and a text, respectively. Students are going to be informed about various different phraseologies (descriptive, narrative and expressive) and they are going to be encouraged to practice.

Speaking Analysis and Development Process

Speaking skill has a significant role in a student's socializing process. Speaking which is one of the basic elements of communication is a skill that should be emphasized not only in socializing process but also for the success at school because it is of great importance for an individual to express himself. While discussing the development process of this skill, it was not considered as independent from listening skill because listening is another face of speaking. The students, who feel that they are listened to, will not abstain from speaking and they will be more courageous for speaking. In addition, they will improve their speaking skills with the support of their families, teachers and friends. When the studies about the development of speaking skill are examined, it is seen that the students, actors, politicians and leaders who express themselves effectively and correctly are analyzed. Moreover, an effort was made to determine the characteristics of these individuals depending on the findings obtained from these analyses. These characteristics of the people who speak effectively and smoothly are breathing properly, emotional intonations, correct pronunciation and time use, self-confidence and being able to present what he wants to tell briefly, correctly and effectively. Given these characteristics, the fact that students reach a level at which they can apply the expected speaking styles and techniques at classroom level is only possible with determining their levels and then improving their skills.

Speaking Skill Development Process

Planning : Before organizing the activities aimed at improving students' speaking skills, a plan which can meet the needs of the students should be prepared. In this plan, "Determining Speaking Development Level Control List" should be used primarily. Besides the data obtained from this inventory, the comments of the teachers on students speaking skills are also important.

Speaking Encouraging Activities

Conversation: It is a significant part of socializing process. It is completely natural, unplanned or unstructured. It is a dialogue between students about the subjects they find by themselves.

Talking on the phone: Telephone is one of the most important tools that make our life easier. It provides teachers with many opportunities to carry out the elocution practices. Practicing in replying a phone call, reporting a fire, asking for help, introducing oneself, dialing a wrong number, informing one who calls by mistake, calling a friend about homework.

Discussion: Discussion is totally different from conversation activities. This difference arises from the fact that discussion is performed within a framework of a plan, subject and time. In the activities to be performed under this headline, the students are going to adopt the idea that there might be different thoughts and they are going to learn how to respect them as well as sharing their own ideas with the others. The subject, content and time of the discussion can be decided together with the students and by the teacher as well.

Speaking assignments: Students can make imprompt speeches about a subject which will be given by the teacher and they can also make prepared speeches about a subject that requires preparation.

Finger theatre: It consists of an activity within which students play the roles of the characters in a story or an event with their fingers for improving some students' speaking skills particularly in small classes, who are embarrassed while speaking.

Puppet: It is an activity which can encourage the students who do not want to participate in any speaking, creative drama or role playing activity to speak and enables them to express their feelings and thought orally. Puppet means telling a story or animating a character with the help of various figures.

Story telling: It is how oral literature products, especially stories, are transferred from one to another. The basic point in story telling is not to memorize the whole story but to tell it as far as the student remembers. The story is going to be enlarged as much as possible and the aim is to enable students to tell the quotations or behaviors of the characters by paying attention to intonation and emphasis.

In addition to the speaking encouraging activities mentioned above, different types of speaking activities which the students will be able to use in their social relationships and which will establish a self confidence in the students can also be carried out. For example, asking somebody how he is, meeting with someone or introducing someone to another person, asking a question – answering, congratulating, giving a title, apologizing etc. Besides the examples that we see frequently in daily communication, students may also make ready for an organized event (panel, seminar, discussion contest etc.) with various activities.

Problems encountered

The problems generally encountered in the process of establishing the reading laboratory are as follows:

Scales: Scales are the materials used in the analysis phase of the laboratory. Lacking of standard scales, which can be used in the analysis of reading, speaking and writing skills in our country, was one of the biggest problems we encountered.

Library: The school library had a physical environment consisting of only bookshelves and tables for reading. Therefore, we had to perform the activities with the tables. However, the school administration solved this problem by bringing the upper floor of the library into use for the laboratory activities.

Readability: Whether the texts, the books and the magazines which are prepared for students are appropriate for the levels of students is left to the individual experiences of the writers. Therefore, texts are not written according to the scientific criteria but depending on experiences in readability features. Although readability levels of the books give an important idea regarding to the level of the class, lacking of readability formulas in our country, which reliably determine the readability of a text for a particular age group, was one of the problems encountered.

Word lists: Basic word lists are of great importance in terms of determining what students know. Moreover, they give ideas regarding to what should be taught. In our country, not being able to prepare basic word lists was one of the problems encountered in creating readable texts.

Teacher: There is no teaching staff that we can consider as reading specialist in our country. Generally, Turkish teachers carry out the reading activities. Therefore, we realized that the listening, speaking, reading and writing activities in the laboratory should be carried out by the teachers who are trained about this field.

Conclusion

Some applications such as reading clinic and reading laboratory, which are similar to the abovementioned mother tongue development laboratory, exist in various universities. These clinics and laboratories are the environments which are designed for university students, adults and children. With the practices performed in these environments, it is usually aimed to analyze and improve reading skill; however, with the mother tongue development laboratory which was established within the body of the Private Maya College, it is aimed to analyze and improve not only reading but also listening, speaking, writing and visual reading – presentation skills. The basic aim of these studies which are planned at the level of elementary education is to provide students with the opportunity to see their errors in listening, speaking, reading and writing in early ages and to correct these errors.

Function of libraries and internet in purpose of achieving learning while implementation of Bologna Process

Nada Todorov

University of Novi Sad, Serbia

Modern studies involve established quality system, effective the end, the inclusion of students in international cooperation. All this requires of Bologna process before any higher education institution sets tasks for the introduction of the system of internal mechanisms that will ensure both internal, and external frame quality. If the "quality adjustment requirements" (Crosby, PA, 1984), it means new learning strategies that will allow faster acquisition of knowledge for easier inclusion in the labor market. This means using new resources in the field of information and communication technologies.

Bologna process means greater compatibility of study programs, mutual exchange of students and teachers, strengthen research, better information flow, increase competence and easier integration into the European area of higher education. Higher education institutions are now more focused on the respect for public accountability. To Bologna process better realized, it is necessary to nurture their own traditions, and respect for diversity.

This means a change in the modern teaching that complete changing paradigm of learning. The appearance of Google in 1998. over 20th billion web pages, increased ability to use research and learning. Over six million people use the internet and electronic mail. This network is suitable for learning because it has a wider field zmatno resources, regardless of the time and place, as well as a diverse nature of content that brings a new framework of learning strategies. Research shows that learning with using the internet more developing critical thinking.

Bologna process includes training that will be faster and more efficiently than the knowledge acquired traditional instruction (face-to-face), which prevails in many of today's higher education institutions. The education system library occupies an important place, especially because of its document reference. Much faculties in Serbia is equipped with personal computers, networked system or COBISS Pisisa. Thus, the modern generation of students, who in the world called Net generation, provide excellent opportunities under context expansion of knowledge. "Net-generation students prefer to learn by working more than they are told what to do. Net generation of students well taught through discovery - either independently or

with peers. This style of research enabling them to better adopt and use information on the creative, designed way. "(Tapscot, 1998). According to Jones (Jones, 2002) 73% of students would rather use the internet to search information about books and references from journals, but the library itself. However, students and other users should refer to the different sources of information, not just Google. It is particularly important to point out the fact that not all shown to be true, because sometimes ignore ethical principles.

For successful implementation of new educational strategies, libraries and availability of their funds via the internet, have immeasurable significance. Basic principles of modern libraries are: quality, informativeness, timeliness, competence, educational and stimulating component, coordination of work with international standards, inclusion in the worldwide development of library and information science. That is the reason for the research functions of the library and the Internet in the new European educational integration. Small countries such as Serbia, efforts are their students involved in these flows. Since there are many unknowns to run the process, the research done at the University of Novi Sad in December, 2008. Students (150 - students of the Pedagogical Faculty in Sombor (direction of teachers) and 150 from the Faculty of Technical Sciences in Novi Sad, (II, III and IV year of studies) were filled out anonymously a questionnaire with nine questions.

Research hypothesis was: Technical Faculty students use the library less, and more online, while students from the Pedagogical Faculty of the situation is reversed.

Dependent variable was the success of students in the previous year.

Below hypothesis research were: 1) students of humanities faculty used more direct work in the library, 2) students of Engineering using more data from the Internet, 3) level of achievement in the previous year of study is not conditioned by the way of work.

Measuring instruments: statistical, analytical and synthetic and descriptive methods.

Sample: 300 respondents, 102 (34%) were second year students, 100 (33.3%) third and 98 (32.7%) fourth year.

Investigation results

Arithmetic mean successful examinees 8.046 with standard deviation 0.677. The median and mode on 8 minimum achieved success at the university was 6.2, while the maximum 10th indicators of normality of distribution coefficients of the curvature (skewness) is 0.090 with standard error 0.141 and the coefficient lengthen (kurtosis)

-0.106 with standard error 0.281. given that the coefficient of curvature of the curve is positive, it can be concluded that the bevel curve to the right. Given that the coefficient is negative lengthen curves can be concluded that the curve flattened.

		Faculty average in last year
N		300
Normal Parameters(a,b)	Mean	8,046
	Std. Deviation	,6769
Most Extreme Differences	Absolute	,090
	Positive	,090
	Negative	-,086
Kolmogorov-Smirnov Z		1,566
Asymp. Sig. (2-tailed)		,015

Value Kolmogorov-Smirnov test is $Z = 1.566$ with $p = 0.015$. How this indicator statistically significant, we can conclude that the distribution of the success of the faculty respondents did not normally distributed.

Differences of success depending on the faculty, the study and answer the questions

The condition for using χ^2 test to the expected frequencies were less than 5% in 20 categories. Therefore, they merged into one category of students with an average 9

and 10 (regular average), students with an average 6 and 7 (worse average). Students with high school grade 8 were categorized as "medium average".

		Average category on Faculty			Total	
		Worse	Medium	Regular		
Faculty	Tehnical faculty	Count	20	73	57	150
		% within faculty	13,3%	48,7%	38,0%	100,0%

By 150 students of the Faculty of Technical Sciences, 36 (24%) often use the internet to find information on books, 89 (59.3%) sometimes, and 25 (16.7) never. By 150 students of the Faculty of Pedagogy, 39 (26%) often use the internet to find information on books, 99 (66%) sometimes 12 (8%) never.

	Value	df	Asymp. Sig. (2-sided)
Pearson Chi-Square	5,219	2	,074
Likelihood Ratio	5,319	2	,070
Linear-by-Linear Association	2,380	1	,123
N of Valid Cases	300		

$\chi^2 = 5.219$, for 2 degrees of freedom, $p = 0.074$ is not statistically significant.

B) Answers that have a statistically significant difference.

1. Do you research for the electronic library catalogs via the internet?

		Do you research for the electronic library catalogs via the internet?			Total	
		Much	Some time	Never		
Faculty	Tehnical faculty	Count	21	65	64	150
		% within faculty	14,0%	43,3%	42,7%	100,0%
	% of Total	7,0%	21,7%	21,3%	50,0%	
Pedagogic faculty	Pedagogic faculty	Count	18	86	46	150
		% within faculty	12,0%	57,3%	30,7%	100,0%
	% of Total	6,0%	28,7%	15,3%	50,0%	
Total	Total	Count	39	151	110	300
		% within faculty	13,0%	50,3%	36,7%	100,0%
	% of Total	13,0%	50,3%	36,7%	100,0%	

By 150 students of the Faculty of Technical Sciences, 21 (14%) often searches the electronic library catalogs via the internet, 65 (43.3%) sometimes 64 (42.7) never. 150 students of the Faculty of Teacher Training, 18 (12%) often searches the electronic library catalogs via the internet, 86 (57.3%) sometimes 46 (30.7) never.

	Value	df	Asymp. Sig. (2-sided)
Pearson Chi-Square	6,097	2	,047
Likelihood Ratio	6,120	2	,047
Linear-by-Linear Association	1,696	1	,193
N of Valid Cases	300		

$\chi^2 = 6.097$, for 2 degrees of freedom, $p = 0.047$ was statistically significant, which indicates that students are significantly different in response. The fact that a large number of students of both faculties (36.7% cumulative) Upstate does not search the electronic library catalogs, leads to the conclusion that the requirements of modern education, with or without the Bologna process, can not be fully achieved without a significant segment of this extraordinary work.

2. Your success in previous studies, was conditioned by using books from the library.

			Your success in previous studies, was conditioned by using books from the library.			
			Not agree	Partly agree	Agree	Total
Faculty	Tehnical faculty	Count	129	17	4	150
		% within faculty	86,0%	11,3%	2,7%	100,0%
		% of Total	43,0%	5,7%	1,3%	50,0%

Likelihood Ratio	37,538	2	0,000
Linear-by-Linear Association	35,454	1	0,000
N of Valid Cases	300		

$\chi^2 = 35.907$, for 2 degrees of freedom, $p = 0.000$ was statistically significant. Differences in student responses can be interpreted as a consequence of how the organization of the faculty. Although many teachers use the internet for communication, it is obvious that the living word of its value.

Collective table for subjects differences in responses to questions depending on the given faculty

	χ^2	df	p
Why use the Internet?	2,418	2	0,298
Do you use professional journals on the Internet?	2,927	2	0,231
Do you search for the electronic library catalogs via the Internet?	6,097	2	0,047
Do you use the Internet to find information about the books?	5,219	2	0,074
Your success in previous studies, was conditioned by using books from the library	116,485	2	0,000
The success of the study depends on the use of books from library.	129,981	2	0,000
The Internet is an indispensable tool of modern education.	7,701	2	0,021
The Internet is useful for learning from the traditional library funds	23,320	2	0,000
The communication between teachers and students to use the Internet more.	35,907	2	0,000

The research results confirm the hypothesis about the difference in attitudes towards the use of libraries and the internet, depending on the faculty. Obviously, students recognize the value of changes in higher education, rapid technological and educational development, global processes, orientation towards learning society, where knowledge and information resources boot. Necessary growth of communications and information technologies, which enable a wealth of information to those who have the skills to access and using, the requirement for faster downloading materials from the library.

Summary

Careful analysis of previous results shows some flaws in the organization of courses in both faculties. Synchronize the entire new system of knowledge acquisition involves the use of traditional libraries and the internet. The information each student's own subordinates, the individual paths of knowledge. Professors have their lectures and diverted to a virtual method of distance learning, librarians made available to different types of information. In this way, determine the limits of the circle that is required in the implementation of the Bologna process. It would be good to form a university library, which would be based on the concept of so-called "Virtual Library", whose main focus in the development of scientific and technical information (online availability of domestic and foreign bases, CD ROM databases, etc.), together with the construction of their own materials. This strategic institutional care quality at the highest level of academic organization and establishes quality in the field of higher education.

Libraries, especially college and university, have their work schedules harmonize the modern educational requirements: make a modern documentation from most disciplines, the administrative resources (especially personnel), must enter innovative content from library resources, particularly in integrated electronic catalog at the level of all universities in Serbia. Efficiency in work, which involves the Bologna process, includes the work of different library, because each time gets a new dimension, and therefore the responsibility of librarians to the new challenges will be harmonized with the general tendencies.

The book should find its way to the reader. It is therefore essential that libraries find ways to take their place in the information society. When all libraries are digitalised their funds, modified to the user will be very simple. Automated library and information system of Serbia is the basis for infrastructural development of science. Bologna process can achieve its true function in connection libraries and their users, readers and information technology. This will be achieved a high level of scientific-educational and scientific research process, which creates a new basis of

the quality system in which each factor has to find its right place and have an active role.

Impact of On-line Writing Groups in a National Writing Project Invitational Summer Institute

Lynda M Valerie

Central Connecticut State University, Connecticut, USA

Introduction

National Writing Project (NWP) is a federally funded professional development initiative that utilizes a teachers-training-teachers model to develop teachers as writers and writing teachers. Teachers participate in open and invitational institutes to discuss research, demonstrate best practices, develop portfolios and WRITE personal and professional pieces.

The Central Connecticut Writing Project (CCWP), part of Central Connecticut State University (CCSU), is one of over two hundred National Writing Project sites in the United States and beyond. The service area for CCSU/CCWP is diverse in terms of social-economic status, ethnicity, and spoken languages. A National Writing Project site since 2005, Central Connecticut Writing Project has developed its site identity to focus on two interrelated spheres: teacher inquiry and making our writing public. To that end, we conducted a teacher inquiry project on an on-line writing group that supports teachers as writers.

The Invitational Summer Institute is the core program of each writing project site. Selected teachers come together for four weeks of intensive study that includes: maintaining a writer's notebook, writing a personal piece for institute anthology, developing a professional writing plan, participation in writing response groups. Participants also read and discuss books/articles on pedagogy, writing, and research. As part of leadership development, participants are also members of management teams and site committees.

This institute is followed by year of active involvement in the CCWP professional learning community. Participants are required to participate in the CCWP fall open institute and the spring Literacy Essentials Conference, presenting at one. Each participant also self selects from several continuity activities including: writing marathons, book talks, shine sessions, committee membership, study group participation, and teacher inquiry projects.

At the end of each Invitational Summer Institute, many comments from the participant evaluation were noteworthy. Examples:

- ☉ "I understood through the program that my writing mattered and I had something to say."
- ☉ "I feel a little bit of a different person, kicked up a notch."

- 🕒 “I didn’t see my writing as something worth sharing before.”
- 🕒 “When I went for a job interview, they asked me what my weakest area was, and I thought writing. After three years of teaching, I still was feeling that way, until this.”
- 🕒 “Everything I do in the classroom with writing will change because of this.”

When we analyzed the evaluations, it was evident that working in writing groups seemed to foster the strongest bonding for colleagues. Participants overwhelmingly commented that the quantity, and given the format of the institute, quality of their writing increased. We discussed how this could be extended. Several factors were considered. Was the increased writing the result of the bubble of concentrated time created solely within the summer institute? Could the supportive, productive milieu be maintained over a distance? Once teachers were back in their classrooms would professional demands take precedent? Would teachers be able to balance personal responsibilities with the desire to continue writing? Was the commitment and motivation to write fleeting, or a catalyst to a continuing avenue for personal and professional growth? Based on these factors, the investigation explored the impact of online writing workgroups as an aid to maintaining and enhancing the professional community developed in the Invitational Summer Institute.

Inquiry Procedures

Both Google Groups and Wikispace were trialed as the sharing mechanism for the writing group. Since a few members were already familiar with Wikispace, it was adapted for the purposes of the writing group.

Group I *Invitational Summer Institute fellows from previous years 2006, 2007 & 2008.*

The writing group configuration were participants selected based on their expressed desire to develop as a writer, or expressed interest to be involved in a CCWP teacher inquiry project or individuals who seemed to have what we called the heart of a writer. The commitment for each participant was for a four-month duration. Writers agreed to monthly post five hundred words prose or a poem, respond to other writers’ work, and submit a short reflection on the process.

We began with a group for each year. Everyone was contacted via phone with an invitation to join the on-line writing group. Feedback was unanimously positive. Several potential group members were simultaneously beginning other CCWP writing initiatives involving writing a community and two family literacy articles and therefore withdrew from the on-line groups early on. The three groups were consolidated into one. At the end of the four month period, it was clear that the on-line writing group was not effective.

To find out why, we went back to the group members for feedback. Besides the aforementioned opting out to pursue other writing initiatives, responses fell into three broad categories. The first was the technology gap which further dived into two groups. For some individuals, it was maneuvering through the mechanics of the Wikispace. Others found the additional step of posting their writing an added time burden. A second factor that inhibited or prevented participation was the time hourglass; their day-to-day lives demanded their attention away from their writing desk. Lastly, and a bit regrettable, some individuals, when it came down to it, liked the IDEA of writing but found that they didn't, at this time, have sufficient intrinsic motivation to draw the ideas out of their head and onto the paper.

Group II *Invitational Summer Institute participation as part of 2009 institute curriculum*

The on-line component of the regular ISI writing groups was incorporated to address some of the technology concerns from first group. During orientation, a hands-on workshop was presented so all participants would be acquainted with an on-line sharing group. In the month prior to the four week summer institute, participants were required to post a short selection from their writers' notebook, respond to other postings and write a short reflection on the process. Thereafter, the institute schedule included specific times for participants to post and respond. At the close of the institute, participants were asked to complete a survey.

Question	Agree or Strongly Agree	Disagree or Strongly Disagree	Not Sure	
Once I got the hang of Wikispace, I found it easy to post my writing.	92%	8%		
I find it easy to give commentary through Wikispace.	92%	8%		
Using Wikispace just added another step before getting any feedback on my writing	100%			
The type of feedback I got from Wikispace was different that sitting down face to face with my writing group.	92%	8%		
I prefer to give feedback during writing groups discussions.	76%	24%		
I prefer to receive feedback through Wikispace	24%	76%		
Utilizing Wikispace enhanced my writing group.	24%	68%	8%	
The feedback I got through using the Wikispace was _____ I received from sitting down and discussing my writing.	Greater than 8%	Same as 16%	Less than 68%	Not sure 8%

Comments:
Liked the number of feedback responses
Less nervous about posting due to distance
Wikispace extends as a teaching tool
All revisions are readily available
Lots of initial confusion and frustration
Takes time
Miss the voice tone and physical reaction of responder
Wikispace response seemed more surface, sitting down with someone more meaningful
It was too anonymous
Found it difficult to relay info at times
Prefer face to face
It is easier to sit and talk with a peer
Wikispace not as thorough
Received more valuable and constructive feedback in writing groups
Groups more personal and in-depth
Both beneficial
Easier to be judged honestly when not face to face
Wikispace allows you to pinpoint parts, comments and see others opinions

Group III *Central Connecticut Student Writing Project Students*

This group was added to the inquiry to compare the impact of on-line writing groups with a population raised with technology savvy. This group was comprised of fourth through twelfth graders participating in the summer writing academy sponsored by the Central Connecticut Writing Project and was held at two locations. The academy teachers are Central Connecticut Writing Project fellows. The academy began with an orientation to Wikispace. Some students were already familiar with it, although all students were proficient with utilizing Wikispace by the second day. With the exception of writers' notebooks and the final anthology hardcopy, all student writings were posted on Wikispace. Because students from the two locations had not met, each student posted a bio as their first page to help build the writing community. All stories, responses, assignments were posted.

At the conclusion of the program, students were asked for their feedback on being part of an on-line writing group. The two negative comments seemed to focus on the limitations of the Wikispace itself. The site does not utilize an edit undo function nor does it have proofreading prompts such as green and red underlines to indicate possible grammar and spelling.

Besides the comments on the site limitations, student participant feedback was overwhelmingly positive. The students liked commenting on other writer's work and getting to help other writers with their problems with their stories. Additionally, they liked getting good ideas for their stories and the whole concept of posting their poems, pictures and stories. For these participants, Wikispace served as a social network of student writers.

The students' comments were reinforced by the instructors' feedback. They thought that students were more willing to revise and edit because they didn't have

to rewrite the entire document. Students asked repeatedly if they could continue to use the site in the future. They were excited that they could continue to be part of the writing program.

Discussion

We returned to our original inquiry questions.

1) What are the supports and challenges of establishing and maintaining an online learning community of writers?

The primary support to establishing an on-line writing group was, by virtue of being CCWP participants, writers were already a community of writers. The challenge was to try to extend and maintain the group through on-line communication. An additional support is the availability of established on-line communication sites that can be utilized for sharing purposes.

The challenges were many. The technology gap had to be initially taken in to account. Because of the time required to learn to negotiate the site initially, less time was available for writing and responding. This is a challenge, however, that would diminish after an anticipated learning curve and need not be a lasting deterrent. The accountability of members appears to be less with an on-line writing group. It may be easier to ignore an E-mail calling for posting and responses than to arrive empty handed at a writing group. The personal nuances of face-to-face feedback do not seem to be replicated through on-line transmission.

2) What are the benefits and drawbacks to the members of the group?

The benefits of the on-line writing group seem to be primarily through providing additional opportunities for feedback. This was especially true for the student writing groups that were located in two different cities. For these young on-line networking savvy writers, the on-line writing group was their major source for feedback and it worked well for them.

For some members, the supposed distance provided through on-line sharing was more comfortable and therefore a benefit. This also was true for responding as well; on-line responding allows for more candid feedback. The major drawback of an on-line writing group seems to be that it does not replace face-to-face interactions. Speech intonations and body language are not easily transmitted via E-mail. Receiving critiques via E-mail sometimes left too much room for misinterpretation. Was that comment sarcastic, sincere? What is meant by "You have an interesting piece" or "With a bit more tinkering, you'll have a finished piece." or, "Who is your audience?" These are examples of actual feedback that left the writer needing at least a phone, if not an in-person follow-up discussion. However, the value of the

on-line communication may be that it precipitated further discussion between writers. So it seems there may be a benefit within a drawback.

Perhaps the most interesting conclusion of the inquiry was the realization that writing groups also serve as a social support that an on-line writing configuration can not suffice. Discussions during writing response groups focused on writing but there was many offshoot conversations on related topics such as teaching moments, concerns, and of course, students stories. In this way, the writing group serves an important function by supporting the larger professional learning community for writing projects. Though the writing is central, there are additional essential components that colleagues benefit from.

3) *In what ways, if any, does this experience impact their teaching of writing?*

For participants who became comfortable utilizing the Wikispace site, there is great potential for using the site as a tool to enhance students' revising and editing practice and ability. This seems especially true for the teachers who worked in the student-writing program and observed first hand the resulting increase in quantity and quality of student writing.

Teachers who participated in the 2009 ISI reported increased implementation of writing community activities such as writing marathons and sharing of writing time in their classes but there it is not possible to differentiate if this was due to participation in on an on-line writing group or the larger impact of participation in the Invitational Summer Institute.

4) *How can we use what we have learned to address the need for teachers to continue to be part of a learning community beyond the Invitational Summer Institute?*

First, we concluded that an on-line writing group may provide for additional opportunities for writing feedback but does not replace the social/professional support afforded through in-person meetings. As such, one possibility is to continue to utilize Wikispace but have an established schedule for meeting. CCWP Invitational Summer Institute participants are required to attend the fall and spring conferences in the year following their ISI experience. Perhaps as part of these, a time could be designated for a write share. Additionally, there are several continuity events including study groups, book talks and writing marathons in which time can be designated for writing groups. Based on the feedback that limited time is an ever present factor, we want to try to offer activities that dovetail the teachers' professional demands from their classrooms and schools. Collegial teacher inquiries for teachers who work in districts requiring action research is one. Another is supporting teachers to write about their classroom expertise for publications such as

Read, Write Think or for sharing on the CCWP website. In order to create and sustain, we need to continue to offer many doors through which teachers can travel through, participate in and become part of CCWP professional learning community.

Conclusion and further study

Based on the findings of this inquiry into on-line writing groups, we will continue to provide a CCWP sponsored on-line space and encourage teacher writers to utilize as an avenue for giving and receiving response on writings and teaching of writing experiences in addition to regularly scheduled in-person feedback sessions. We will monitor the site for summer 2009 student writers to determine their site utilization during the school year.

Role of Conditional Knowledge in conscious reading: The integrating model of metacognition

Istvan Zsigmond

Sapientia University, Romania

Reading, as a problem-solving process

Reading is a problem solving process. This may sound strange: what has to do reading with problem solving? Aren't they two separate domains?

In every problem solving situation there is an initial state (that is the givens, what we have), a final state (the goal, where we want to arrive) and several intermediary states – they occur during the problem-solving process (see Figure 1). And there are strategies – named as operators – which we use as tools in order to go from one state to the next, until the problem is solved. There are metacognitive strategies, too, like planning the problem solving process (setting the goals), monitoring the

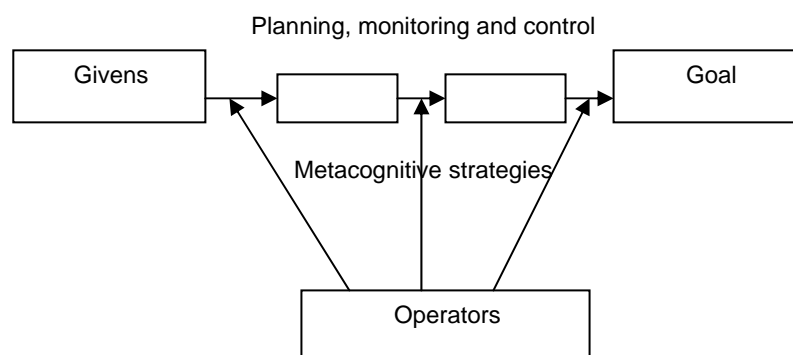

Figure 1. Elements of the problem-solving space

execution of the plan, and, in the final, evaluating the process and its results.

Now, in case of reading, we can recognize every element of the problem-solving situation (see Figure 2, below). In this specific problem-solving situation, the given is the text for reading, and the goal is to understand it. We use cognitive strategies in order to accomplish this goal, like decoding letters and words, recognizing an entire word after reading several letters from it, etc. – that is: language-specific knowledge. We use metacognitive strategies as well when starting to read: we are planning to understand the text, in course of reading we continuously check for understanding, and usually we control periodically and in the final if we have understood the text.

If we analyze reading as a problem-solving process, metacognitive processes – which has a crucial role in problem-solving and reading as well – can be analyzed

in our model of reading as problem-solving. Let us look more deeply at metacognition.

Metacognitive processes in reading, as problem solving

Cognition is a form of knowledge about the external stimuli and facts from LTM. Metacognition is a form of knowledge, too; its distinguishing feature is its referent: the human processing system (Wellman, 2002).

A widely accepted model of metacognitive processes is the Nelson-Narrens model (Nelson, 1996). The model distinguishes two levels of problem-solving processes: the object level, and the meta level. Cognitive processes are running at the object level, and metacognitive ones at the metalevel. There is a continuous communication, an information flow between these two: the metalevel - which includes the goal of the problem we are working on - is monitoring the processes of the object level in order to check out if they will accomplish the goal. In case of failures a controlling function is activated in order to adjust the cognitive strategies at the object level for accomplishing the goal of the problem-solving process.

In case of reading it goes like this: at the object level there are processes for decoding letters and words. When the processes at the object level do not generate the understanding of the text, we face a problem. The metalevel contains knowledge about strategies regarding what should we do in case we don't understand what we read (which is the model, or the goal of this problem-solving process named reading) - strategies like evoking more prior knowledge or looking for connection between ideas. The metalevel will modify processes of the object level by evoking these strategies in order to accomplish the goal of reading comprehension.

Problems with the concept of metacognition

We could think: nothing new up to now. But there are problems with the concept of metacognition. Let us take the example of a reading strategy: summarizing.

Summarizing can be regarded as a cognitive strategy - that is we can use in order to transfer a text with too much new ideas into a comprehensible one (by writing a shorter version of it). In this case summarizing is a cognitive strategy, because it makes its contribution to understanding. But summarizing can be a metacognitive strategy, too. We can summarize a text in order to control if we have understood it (Flavell, 1979). If we can write a good summary, it means we have understood the text at a certain level.

If the same strategy can be cognitive and metacognitive, too, several problems arise:

- What is metacognition?
- When can we say that a strategy is metacognitive?

The answer is important. There is consistent experimental evidence indicating that metacognitive processes have a primary role in determining successful learning and problem solving as well as in text comprehension (Armbruster, Echols, & Brown, 1982; Vauras, Kinnunen, & Rauhanummi, 1999; Wang, Haertel, & Walberg, 1990). There have been elaborated development programs and methods for teaching metacognitive strategies, or facilitating their implementation (Tei & Stewart, 1985; Thomas & Barksdale Ladd, 2000).

However, as some researchers (e.g. (Cavanaugh & Perlmutter, 1982) argue, metacognition is a fuzzy concept. We cannot make a difference between metacognitive strategies and cognitive ones, they say. There are other problems regarding metacognition, too. Although metacognitive processes play a crucial role in human thinking, they still has to be included in existing models of human problem solving.

Sources of reading comprehension failure: The Integrating Model of Metacognition

In order to approach these problematic questions, I have included our existing knowledge about metacognitive processes in the problem-solving framework already presented. It resulted a new framework of metacognitive processes, the Integrating Model of Metacognition - IMM (Zsigmond, 2008).

The model is well-grounded on existing theories of metacognition. For example, Brown, and others (Brown, 1987; Jacobs & Paris, 1987; Schraw & Moshman, 1995) distinguish three knowledge components: declarative, procedural and conditional components. What does this mean?

When we learn a procedure or a strategy – like adding together numbers, or summarizing a text – our strategy has three components.

- Declarative knowledge is a description of the strategy, like “a summary is a piece of writing in which original material is reduced to its main points and key supporting details”. Declarative knowledge is knowing “that”.
- Procedural knowledge is knowing the “how”-to-do it – how to write a summary (how to identify main ideas and formulate sentences).
- Researchers emphasize also the role of conditional knowledge, referring to knowing “when” and “why” to use declarative and procedural knowledge.

Summing up, knowledge about strategies is composed of knowing the strategy, knowing how to implement it, and knowing when (in what conditions) and why to use it (what will be the result, if we use them).

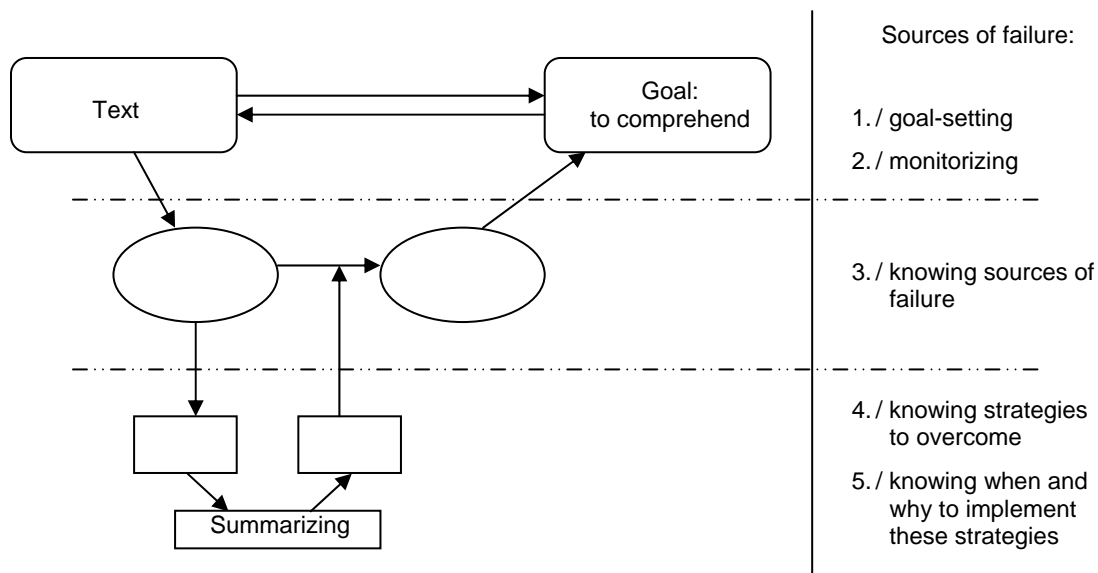

Figure 2. The Text-Comprehension Process

To put it in a very short way, the IMM resulted from the insertion of these strategy elements in the problem solving space (or model) described earlier. The model of problem-solving processes which resulted includes the metacognitive processes too.

I will illustrate this model of metacognition in problem-solving using the problem-solving process of reading a text – where the initial state (the given) is the text to-be-read, and the goal to be approached (the final state) would be the comprehension of the written information.

In case of reading we use many strategies as operators to reach our goal of comprehension – like re-reading some passages, or splitting down large texts into smaller parts – even giving subtitles, too. I will use the already-mentioned strategy of summarizing in order to illustrate the processes modeled by the IMM (see Figure 2).

If we conceive reading as a problem-solving process, the first and most important thing is to have the goal of understand the written information. Here is *the first source of failure* in the reading comprehension process, too.

If a beginner does not set himself the goal to understand a written text - maybe she just wants to read it correctly, aloud, or she read just to get praise from the teacher - she will not use strategies in order to foster text comprehension. Studies indicate that even this can be a source for text comprehension failures, maybe because lots of teachers simply do not emphasize enough that reading is for comprehension.

Let we assume that the reader has formulated the goal of comprehending the written information. The metacognitive planning of the goal is OK. We start to read the text. In order to know if we are approaching our goal, we have to monitorize how we get along with this problem. We have to supervise our thinking. Are we

approaching our goal, or not? This can be the *second source of failure* in reading comprehension (see Figure 2.). Maybe a beginner has the goal to understand the text, but she does not realize the lack of understanding. She does not know what understanding means.

Eleanor Markman proved this in a simple way (Markman, 1979). She has given contradictory information in a short text about pigeons. After reading it, the majority of the children related the text was OK, they understood it. About 7 inductive questions were necessary for them in order to realize the text has a flaw). So, they thought they have understood the text – but, as a fact, they didn't. They had a misconception about what does it mean to understand a text.

But even if a beginner strive to understand a text, and she realize she doesn't understand it, she has to identify the reason why she doesn't understand. There are lot of text characteristics which can make understanding difficult: too much new information, too long paragraphs, unknown words, incoherent ideas, etc. If we don't know them, this can be the *third source of failure* in reading comprehension. Children has to be told and also thought about text characteristics which makes a text hard to understand. There are specific methods elaborated for teaching these, and teachers should use them. If a child does not know why she doesn't understand a text, she will be not motivated to read it along, or to read at al. On the other hand, if she knows what is the problem, a sub-problem will be created, with the goal of overcoming this obstacle, in order to reach the major goal – text understanding.

For example, let us suppose the comprehension obstacle is that the text contains too many new ideas. One of the useful strategies to overcome this obstacle is to write a summary, in which the original material is reduced to its main points and key supporting details. In order to overcome this obstacle, children should know the strategy of summarizing: to know “that” – what is this strategy (declarative knowledge), to know “how” to implement it, and to know when and why to implement it.

These are the *fourth and the fifth possible sources of failure* which can impede reading comprehension (see Figure 2.). Maybe a child does not know such a strategy, but, most frequently, even if they know, they do not know the conditional elements of this strategy, so they don't know when and why to apply it.

In a problem-solving situation strategies are recalled by activating their conditional knowledge. Am I in a front of a text with too much information? What are the strategies to be used in such situations (which strategies has as answer for their “when” question – when you face too much information? What can these strategies do (the answer to the why question – they can reduce the material)? Let's apply it (use the procedural knowledge), in order to overcome the obstacle, and understand the text.

Declarative		...original material is reduced to its main points	
Procedural		The how-to-do it	
Conditional	When	text contains too much new ideas	you are not sure about understanding
	Why	Simplify it	Check for understanding
		Cognitive	Metacognitive

Table 1. The knowledge-elements of summarizing as a cognitive or a metacognitive strategy

The IMM makes it clear that without conditional knowledge strategies will be not recalled from the LTM. We can teach what is summarizing, and how to do it. But if we don't explain in what situations should we summarize, and why, this strategy will remain an *inert knowledge* – a well-known phenomena for educators. The child will know about it, without using it for text comprehension.

Metacognitive or cognitive? Conditional knowledge makes the difference

So, what makes a strategy metacognitive? *It's the conditional knowledge.* Let we illustrate this again with the strategy of summarizing. As I already mentioned, this can be a cognitive and metacognitive strategy as well – giving an opportunity to criticize the concept of metacognition.

In case of this strategy, the declarative knowledge could be formulated like this: A summary is a piece of writing in which original material is reduced to its main points and key supporting details (see Table 1). It is a condensed version of someone else's writing in your own words. The procedural knowledge is the how-to-do (that is identifying main ideas and formulating sentences).

Until now, there is no difference between summarizing, as a cognitive strategy, and summarizing, as a metacognitive strategy. However, conditional knowledge can make the difference.

If the conditional knowledge of *when* refers to situations in which the text contains too much new ideas, and our goal is to simplify it, this goal is formulated in the conditional knowledge of *what* for the strategy of summarizing - the strategy of summarizing will be used in order to advance with understanding – that is, as a cognitive strategy.

If the conditional knowledge of *when* refers to situations were *we are not sure about understanding* and our goal is to check out this, the strategy of summarizing will be used *in order to control our understanding* process, that is as a metacognitive strategy. If we succeed, we have understood the text (at least at a certain level).

So, summarizing as a cognitive strategy is to help understanding; as a metacognitive strategy is to check out for understanding.

Implications of IMM are twofold. From the point of view of a researcher, it offers a framework for defining metacognitive processes and to integrate them in any problem solving procedure. I have used the problem-solving case of reading as an example, but we can differentiate sources of failure, and we can model how

metacognitive strategies work in the same way in problem-solving situations from any domain.

From the education practitioner's point of view, there are two major points. First, according to the IMM framework, conditional knowledge is necessary for transfer – that is to apply the strategies we have learned in new situations. Without conditional knowledge, there will be no spontaneous reading comprehension processes.

And second, the IMM points out the sources of failures in conscious reading, which can be useful when we design intervention programs for reading comprehension. These intervention programs should address the five sources of failure in reading comprehension mentioned.

A arte na construção do espaço de vivência: uma nova forma de ler o mundo

“A arte na construção do espaço de vivência – Uma nova forma de ler o mundo” consiste em uma intervenção pedagógica promovida pela Prefeitura da cidade de Belo Horizonte/MG e desenvolvida com famílias em situação de vulnerabilidade social, muitas delas com grande defasagem escolar.

A proposta tem o objetivo de promover o desenvolvimento e alfabetização dessas famílias por meio de diferentes formas de leitura de linguagens artísticas. Tais oportunidades contribuem posteriormente para o fortalecimento dos vínculos familiares e comunitários dos moradores dos territórios e comunidades assistidos pela Secretaria de Assistência Social.

A metodologia empregada utiliza a Arte como proposta de intervenção, por ser esta a mais ancestral forma de comunicação humana, capaz de desencadear processos de aprimoramento numa abordagem não só individual mas também coletiva, perpassando do espaço real para o fictício, do campo científico para o poético.

As atividades abrangem vários procedimentos das artes visuais, pesquisa sobre história da arte, literatura, poesia, música, investigação sobre a história das famílias e a cultura do território no qual vivem.

A partir do contato com textos literários, poéticos, visuais, musicais ou cênicos os participantes adquirem referências para construir suas biografias, revivendo suas memórias e traduzindo de forma expressiva e poética novas formas de ler o mundo. Nessa dinâmica de construção os novos leitores se reconhecem como sujeitos autônomos, capazes de serem autores de suas próprias histórias.

Amaro, Alice Manuela; Silva, António Carvalho

Portugal

Concepções de professores de Língua Portuguesa sobre o(s) uso(s) do manual escolar. Um estudo no 3.º Ciclo do Ensino Básico

Desde há alguns anos atrás, que estudos no âmbito dos manuais escolares, nas suas mais variadas vertentes, têm sido levados a cabo por investigadores ligados à educação. Um considerável número destes trabalhos atesta a clara evidência da centralidade dos manuais escolares nas práticas pedagógicas dos professores.

Enquanto instrumentos pedagógico-didáticos, os manuais escolares têm sido alvo de uma renovação e complexidade crescentes, em larga medida devidas ao progresso acelerado das novas tecnologias, de que parece advir alguma dificuldade no manuseamento daquelas ferramentas de ensino (Choppin, 2000).

Partindo do pressuposto de que o manual escolar se impõe na prática docente, tanto na preparação como na organização das aulas, torna-se pertinente investigar como e com que finalidade os professores utilizam este dispositivo e seus satélites e quais as razões subjacentes à sua relação com o(s) mesmo(s).

Como tal, este estudo procura saber de que modo os professores de Língua Portuguesa se apropriam do manual escolar, de que recursos disponibilizados por este instrumento se servem e, em particular, as suas concepções relativamente ao uso que dele(s) fazem.

Tomando como objecto de análise declarações dos professores, a partir de entrevistas semi-estruturadas, pretende-se: i) averiguar com que intuito e propósito os professores utilizam o manual escolar; ii) saber como é que usam esta ferramenta de ensino e aprendizagem; iii) conhecer as razões implícitas no modo como utilizam o manual escolar.

Em suma, enquanto instrumentos de trabalho, os manuais escolares estarão sujeitos a leituras diversas que importa aferir para uma melhor compreensão do processo de ensino/aprendizagem.

Arena, Adriana Pastorello Buim

Brasil

Leitura de jornais gratuitos em uma escola portuguesa

Os dados aqui apresentados foram coletados em pesquisa de doutorado cujo objetivo era compreender e discutir indícios que se destacam na prática da leitura de jornais impressos e on-line em contextos educacionais no Brasil e em Portugal. Em Portugal realizou-se um estudo etnográfico, tendo como instrumento principal de coleta a observação e a entrevista semi-estruturada. Três escolas foram pesquisadas, mas destacam-se dados coletado em apenas uma delas, localizada em Lisboa. Durante os dias de observação, o trabalho com leitura ficou restrito a textos narrativos propostos pelo livro didático. Por essa razão, solicitou-se à professora que preparasse uma aula com jornais. Foram usados dois diários distribuídos gratuitamente: o Global e o Metro. A professora conversou sobre a organização temática do jornal, mostrou aos alunos parte de sua formatação, mas priorizou, como nos manuais didáticos, a interpretação do texto e a gramática da língua. Foi possível observar que no âmbito escolar, o encontro do leitor com o jornal ainda é insuficiente e seu uso não faz parte do planejamento da escola. Os alunos têm acesso ao jornal praticamente por ações de familiares e por isso demonstram conhecer parcialmente sua estrutura.

Arqueiro, Ana

Portugal

PISA 2000 em Portugal: algumas (des)construções discursivas

Ao representar o uso da linguagem como forma de prática social, na mediação entre o homem e a sua realidade, o discurso associa-se intrinsecamente ao modo como o texto produz sentidos enquanto objecto não apenas linguístico, mas também social e histórico. A análise do discurso observa esse processo de interacção e reciprocidade, procurando documentar esferas de existência dos indivíduos e relações que estabelecem com o mundo.

O texto jornalístico, reflectindo sistemas de valores dos indivíduos e da sociedade em que circula, (re)produzindo concepções e posições dominantes e influenciando novos modos de pensar e agir colectivos, converte-se num espaço privilegiado para a recolha de corpora de amostras discursivas que permitam o exercício de observação a que acima nos referimos.

O trabalho que aqui se apresenta seleccionou como objecto de análise os resultados obtidos pelos alunos portugueses no programa internacional PISA (ano 2000 – literacia em leitura) sob a forma de quatro artigos publicados num jornal de referência em Portugal aquando da divulgação do primeiro relatório nacional sobre o estudo. Privilegiou-se uma estratégia analítica estruturada em dois momentos fundamentais, em que se procurou: 1) caracterizar a forma como os autores (sujeitos sociais) contextualizam o tema/problema e conhecer a sua interpretação acerca do mesmo; 2) analisar o modo como essa contextualização e interpretação do tema/problema incorporam a construção da relação dos autores (sujeitos textuais) com a realidade social e com os seus próprios enunciados.

Assis, Andreia; Timóteo, Hebert; Diniz, Mariano; Andrade, João

O uso das tecnologias de informação e comunicação aplicadas à educação para escrever e ler no ensino de História: relato de experiências

O objetivo deste artigo é apresentar uma parte de uma discussão do grupo de História e Tecnologia de uma escola da rede municipal de ensino de Belo Horizonte / Brasil que também se constitui como foco de uma pesquisa de doutorado. Procuramos refletir acerca das possibilidades de ações pedagógicas mediadas pelas tecnologias de informação e comunicação

na perspectiva de se repensar as metodologias que favoreçam a formação de sujeitos letrados. Relatamos experiências de leitura e construção de textos utilizando ferramentas como o blog, editor de texto, ferramenta de imagem, internet etc.

Balula, João Paulo Rodrigues

Portugal

Da leitura à escrita: a tomada de notas como estratégia

A evolução da Sociedade do Conhecimento coloca à nossa disposição muitas e variadas fontes de informação e do conhecimento. Mas, para aceder, sem constrangimentos, a essas fontes, é necessário que cada pessoa consiga mobilizar competências que lhe permitam processar a informação e o conhecimento.

A língua escrita continua a ser uma fonte de informação privilegiada. Ora, no contexto da Sociedade do Conhecimento, a leitura assume um papel único, enquanto meio de acesso à língua escrita como fonte de informação.

Nesta comunicação pretendemos abordar a tomada de notas (TDN) enquanto estratégia central de uma actuação destinada a favorecer o desenvolvimento da compreensão ao nível da leitura funcional que pode ser utilizada como contributo para resolver algumas dificuldades quer ao nível do desempenho em compreensão na leitura, reveladas pelos resultados dos estudos sobre literacia, quer ao nível da escrita.

Tendo por base as conclusões de um estudo levado a cabo com alunos do Ensino Básico, será apresentado um conjunto de actividades, que podem ser implementadas em sala de aula, destinadas ao ensino explícito da TDN enquanto estratégia de recolha e tratamento de informação escrita e ao desenvolvimento da sua utilização em diferentes textos e contextos de modo a contribuir para melhorar o desempenho dos alunos ao nível da compreensão na leitura e ao nível da expressão escrita.

Belmiro, Célia

Brasil

Entre imagens e textos verbais, o aprendizado da leitura e da escrita

O estudo apresenta parte dos resultados de uma pesquisa sobre a relação entre imagens e textos verbais, a partir de suas naturezas constitutivas. Com base na concepção de linguagem em Bakhtin, analisa tanto cartilhas de alfabetização, quanto livros de literatura infantil, considerando esses materiais fundamentais para os processos de alfabetização. Também utiliza o aporte teórico de Anne-Marie Christin, para quem o espaço permite dar direção a variadas formas de leituras, é um espaço polissintático. Esta apresentação privilegia uma discussão sobre a cultura escrita, relativizando seus fundamentos fonocêntricos e observando a importância dos traços gráficos na escrita contemporânea. Categorias como as de superfície e de traço dão relevância a novas configurações entre o icônico e o verbal, podendo explicitar tanto a importância das imagens e textos verbais na construção da argumentação, quanto o uso textual e discursivo do dêitico como estratégia de leitura e de apropriação de estruturas lingüísticas apoiadas no eixo imagem x fala x escrita. Com isso, enfatiza-se a historicidade da noção de aprendizagem e os pressupostos da razão gráfica.

Belmiro, Célia; Alcântara, Flávia

Brasil

Imagens e textos verbais em livros de literatura infantil

Esta pesquisa se integra ao projeto Produção literária para crianças e jovens no Brasil: perfil e desdobramentos textuais e para-textuais(2005-2008) e toma a linguagem como elemento fundante das interlocuções. Para isso, propõe um olhar transversal na análise das obras apresentadas, superando o enfoque estritamente lingüístico. Seu objetivo principal é compreender como se estabelecem relações entre imagens e textos verbais em livros de literatura infantil, abrindo um caminho de reflexão em que a concepção de linguagem não só é posta no centro das interrogações, como também facilita um maior diálogo com áreas próximas, como a literatura e as artes plásticas, no campo da educação. A linha de estudo prioriza uma perspectiva discursiva/plástica baseada nos estudos de Bakhtin e de Christin para a ampliação dos horizontes de possibilidades de relações imagem/texto, interrogando como as imagens participam da narratividade da obra apresentada. Dentro desses parâmetros, sinaliza-se, entre outras questões, que o lúdico, o estético e o educativo são frequentemente sobrepostos, criando uma ambigüidade conceitual que ora se traduz em práticas de leitura redutoras, ora permitem superar a falta de formação estética dos docentes.

Bezerra, Maria Auxiliadora

Brasil

Modelos de literacia em práticas de escrita acadêmica

O estudo da escrita na academia, influenciado por teorias de literacia, tem identificado práticas de escrita diferentes na sala de aula. Esta comunicação tem o objetivo de descrever modelos de literacia identificados em trabalhos de estudantes brasileiros de Letras Modernas, que se preparam para serem professores de língua portuguesa. Trata-se de uma pesquisa interpretativa, que analisa dados coletados em sala de aula, em situação de ensino e de avaliação da aprendizagem. São textos escritos pelos estudantes sobre assuntos variados, atendendo a comandos específicos, com anotações posteriores do professor (ou não), a título de avaliação. Foram identificados os modelos: 1) de habilidades de estudo - a escrita e a literacia como habilidades cognitivas e individuais; 2) de socialização acadêmica – o processo de aculturação dos alunos, no sentido de se apropriarem dos gêneros e discursos disciplinares, presumindo-se que estes são relativamente estáveis e que, uma vez que tenham aprendido suas regras básicas, os alunos serão capazes de reproduzi-los sem qualquer dificuldade; e 3) de literacias acadêmicas - relacionado à identidade, ao poder e à autoridade. Os processos envolvidos na aquisição dos usos efetivos e apropriados de literacias são complexos, dinâmicos, situados e envolvem tanto tópicos epistemológicos quanto processos sociais incluindo relações de poder entre pessoas e instituições e identidades sociais. Os dois primeiros tipos relacionam-se ao modelo autônomo de literacia (domínio do código e das estruturas composicionais do texto) e o terceiro, ao ideológico (compreensão da escrita e de seus usos como fator de poder e destaque de quem os domina).

Texto e gramática em livros do PNLD 2010: as atividades de leitura

Neste simpósio apresentaremos estudos sobre texto e gramática em livros didáticos de Língua Portuguesa do Ensino Fundamental analisados no Programa Nacional do Livro Didático 2010 (PNLD). A partir da análise das atividades de leitura, produção textual e conhecimentos

lingüísticos presentes nesses livros, avaliamos a contribuição dessas obras ao ensino de português.

O PNLD é um programa que faz parte das políticas públicas do Brasil que visam melhorar os níveis de desempenho dos alunos brasileiros. O Ministério da Educação, considerando a qualidade do ensino fundamental oferecido nas escolas públicas brasileiras, estabeleceu como uma das prioridades de ação o aprimoramento do livro didático. Esta melhoria é fundamental ao processo de ensino-aprendizagem, pois o livro didático constitui um instrumento muito importante no trabalho pedagógico desenvolvido pelo professor, dentro e fora da sala de aula. Como instrumento de aprendizagem, o livro didático deve apresentar conteúdo e atividades que favoreçam a aquisição do conhecimento, por meio da reflexão e da resolução de exercícios propiciadas pela observação, pela análise e por generalizações, visando ao desenvolvimento da proficiência.

Nesse sentido, os trabalhos deste Simpósio (1) apresentam a base de dados com os resultados do PNLD 2010, (2) analisam as contribuições das atividades de leitura para o desenvolvimento do aluno como leitor de diferentes textos, (3) apresentam propostas de produção de texto que contribuem para o desenvolvimento da proficiência em escrita, (4) analisam as atividades que exploram conhecimentos lingüísticos verificando se essas orientam os alunos para a reflexão sobre a língua e a linguagem.

Talleres de animación a la lectura en la Biblioteca Municipal de Cuenca

Durante el curso académico 2007-2008 se han realizado diversos talleres de animación a la lectura para niños de entre seis y doce años en la Biblioteca Municipal de Cuenca dentro del programa de actividades de animación a la lectura y promoción del libro que se desarrollan en dicha biblioteca. Los mediadores que intervenían en esos talleres eran estudiantes de Magisterio a los que se les ofreció realizar prácticas en la Biblioteca Municipal de Cuenca gracias al convenio firmado entre la Fundación de Cultura Ciudad de Cuenca y el Vicerrectorado de Extensión Universitaria y del Campus de Cuenca (Universidad de Castilla La Mancha). Con este convenio se perseguía, por una parte, contribuir a la formación de estudiantes de Magisterio en la práctica de realización de actividades de animación a la lectura, que completara su formación académica, y por otra, apoyar a la biblioteca en el desarrollo del programa de animación. La finalidad última del programa es contribuir a crear hábito lector, acercar los textos a los niños mediante actividades lúdicas y promocionar el uso de la biblioteca como recurso cultural, informativo y de ocio.

Projeto Luz & Autor em Braille: a leitura como fator de inclusão social

Com o objetivo de incentivar leituras, dinamizar a Biblioteca Braille e promover a socialização dos deficientes visuais, foi criado um projeto literário, por meio da integração com os escritores brasilienses. Propõe que os leitores participantes escolham suas leituras e criem seus próprios textos, inspirados no autor escolhido. O relato, quanto à diversidade de ações, destaca que 58 escritores participam das atividades práticas de interação com os 83 deficientes visuais, também autores em Braille: resultado do processo ensino/aprendizagem que promoveu a leitura/criação de textos. E permite que a Biblioteca, em sua especificidade em lidar com deficientes visuais, além de servir de ambiente para o desenvolvimento de habilidades e talentos, promova o ensino da linguagem em Braille.

Brincando de biblioteca com programa literário e a arte de ler e criar

Este trabalho tem o objetivo de expor sobre as ações de um projeto literário desenvolvido nas escolas públicas do Distrito Federal - Brasil, criado para possibilitar que alunos do ensino fundamental evidenciem, de maneira prazerosa, em apresentações lúdicas, a compreensão de textos lidos e que essa prática facilite e desenvolva, em seus participantes, o gosto pela leitura. Brincando de Biblioteca consiste numa série de oficinas ministradas nas escolas, com o apoio do FAC – Fundo da Arte e da Cultura, programa da Secretaria de Cultura do DF. A iniciativa surgiu da necessidade de capacitar alunos para atuarem como multiplicadores de leituras na escola, em casa, e na comunidade. Setenta e duas obras de literatura infantil são distribuídas em seis minibibliotecas e os alunos participantes apreciam, lêem, planejam e apresentam um programa literário, utilizando variedades de linguagens artísticas, como a música, o teatro, a poesia. Vários objetivos são alcançados, após a oficina: alunos-multiplicadores de leituras nas escolas; leitura por prazer; recreios com atividades culturais; divulgação da literatura brasileira e outras obras nacionais; alunos educados para a recepção da arte, como expectadores, leitores e mediadores; hábito de trabalhar em equipes; talentos em linguagens artísticas e vocações profissionais; acrescentados à valorização de bibliotecas.

Ler, Falar, Escrever, Pensar: Projecto para melhorar competências na Língua Portuguesa

O trabalho que pretendo apresentar reporta-se a uma experiência pedagógico-didáctica que está em curso no Agrupamento escolar onde lecciono. Trata-se de, com o recurso à leitura sistemática de textos literários, promover nos nossos alunos, desde muito cedo, hábitos e métodos de escrita de cariz crítico-argumentativo.

O projecto que encetámos no Agrupamento de Escolas do Arco, neste ano lectivo de 2008/2009 visa contribuir objectivamente para a melhoria das competências do público discente, ao nível da compreensão e da expressão, representando um esforço (estratégico) de combate a um problema magno que é sobretudo visível e mensurável em épocas de testes e/ou exames.

Elegemos a questão da expressão escrita, sobretudo a que implica o exercício da exposição/argumentação, como campo de batalha preferencial; é nossa convicção que um trabalho aturado, articulado, coordenado, regular e persistente, que estrategicamente envolva os vários ciclos de ensino do Agrupamento, pode mudar – para melhor – o insatisfatório panorama actual. Aprender a escrever com método pode bem representar a possibilidade de, desde os nove-dez anos, aprender também a pensar. A prazo, tal significará por certo um substancial lucro linguístico e intelectual para os alunos.

Letramento e formação de professores na era pós-construtivista: impactos no cotidiano das classes de alfabetização

Vivemos nas últimas décadas, influências radicais, significativas e polêmicas nos currículos escolares, em especial nos anos iniciais da escolarização, que exigem um intenso movimento de mudança nos pressupostos teóricos e metodológicos da formação docente, tendo em vista o desenvolvimento de práticas mais condizentes com o perfil do homem que se pretende formar para viver no século XXI. Este artigo pretende demonstrar como têm ocorrido a formação, a

reelaboração de conceitos e as práticas pedagógicas de professoras alfabetizadoras de escolas públicas e particulares da região metropolitana de Belo Horizonte, no momento atual, após o advento do construtivismo e demais conceitos que foram introduzidos no meio educacional no que concerne à apropriação da língua escrita pelos alfabetizandos.

Profissão: Leitor - leituras de professores universitários brasileiros e portugueses

Esta comunicação tem como objetivo discutir representações e práticas de leitura e processos de formação de leitores de professores universitários brasileiros e portugueses com elevado nível de escolarização. O método de coleta de dados utilizado foi a entrevista semi-estruturada e a análise de currículos públicos dos entrevistados. Serviram de base teórica para a discussão dos resultados uma categorização de leituras proposta por Kenneth Goodman e discussões em torno do(s) conceito(s) de (multi)letramento(s)/(multi)literacia(s) de James-Paul Gee, Magda Soares e Maria de Lourdes Dionísio, dentre outros estudiosos do tema. Em termos metodológicos, baseamo-nos em estudos da sociologia da leitura e das práticas culturais, em especial nos trabalhos de Bernard Lahire e Pierre Bourdieu. Os resultados apontam para uma predominância das leituras ocupacionais, em detrimento das leituras recreativas, que são sempre relegadas a um “quando der” e a um “se calhar”. Discute-se, entretanto, que essas leituras ocupacionais podem proporcionar tanto prazer e satisfação quanto proporcionam algumas leituras recreativas, embora não sejam feitas de modo “descompromissado” ou “desinteressado”. Com relação aos processos de formação de leitores, ressaltam-se as influências familiares e escolares, além do esforço e do mérito na construção de capitais culturais.

Literatura Infantil: as crianças e as leituras

Este trabalho, que parte dos estudos da linguagem de Walter Benjamin, Mikhail Bakhtin e Lev Vigotski, tem como objetivo discutir relações, interações e apropriações de crianças na idade pré-escolar a partir da literatura. Aborda diferentes formas e funções com que a literatura infantil é apresentada e disponibilizada às crianças em instituições de Educação Infantil da cidade do Rio de Janeiro. Traz as crianças, suas leituras e maneiras singulares de entrada no texto verbal e nas imagens, com suas falas, gestos, brincadeiras, brinquedos e personagens. Discute a literatura infantil na perspectiva artística, em que forma e conteúdo são indissociáveis, assim como a estética e a ética. Entende que a polifonia e polissemia de textos em verso e em prosa e as ilustrações que os acompanham se efetivam na leitura intertextual e intersemiótica das crianças em interação. Palavras, histórias, rimas, imagens vão compondo um mosaico de possibilidades de trocas e de apropriações, nem sempre previsíveis nas práticas pedagógicas.

O livro didático como agente de Letramento digital

Neste simpósio, apresentamos trabalhos sobre multiletramentos e novos letramentos, focalizando desde as fases iniciais de aquisição da escrita até um diagnóstico de práticas leitoras de estudantes do ensino superior. O trabalho de Coscarelli e Ribeiro apresenta aspectos

dos jogos (games) desenvolvidos para auxiliar na alfabetização de crianças em língua portuguesa. A partir de um levantamento de sites que oferecem jogos, foi feita uma análise tendo como parâmetros critérios tais como interface, usabilidade, concepção de aprendizagem subjacente a eles, utilização de recursos propiciados pelos ambientes digitais, extensão do repertório, contextualização, desafio, feedback, etc. A maioria dos games não tem cuidado suficiente com o quesito diversão, tornando-se uma extensão da didática tradicional das escolas. Coscarelli e Santos apresentam resultados de investigação sobre livros didáticos (LDs) utilizados no Brasil, nas séries do ensino fundamental. O objetivo do estudo foi observar se de que maneira e com que finalidade os LDs vêm incorporando características formais do ambiente digital e dos gêneros que circulam na web. Os gêneros textuais emergentes dos ambientes digitais, entretanto, não são trabalhados nesses materiais levando em consideração suas condições de produção ou a adequação lingüística, pouco servindo ao ensino do português para o letramento. Finalmente, Ribeiro mostra uma análise de um problema de letramento encontrado em investigação com jovens universitários durante a leitura de jornais impressos e digitais. Estes jovens deixam de compreender textos jornalísticos porque não conhecem aspectos visuais que interferem na leitura.

Presentación de los avances del Grupo de Investigación Fracaso Escolar y Competencias Comunicativas en relación con prácticas educativas de carácter inclusivo en la enseñanza de la lectura y la escritura

El simposio, centrándose en los avances de las investigaciones del Grupo de Investigación Fracaso Escolar y Competencias Comunicativas de la Universidad Complutense de Madrid, aborda el análisis de diferentes prácticas de carácter inclusivo en la enseñanza de la lectura y la escritura. De este modo, cada uno de los participantes aportará experiencias y orientaciones psicopedagógicas que perfilan nuevas dimensiones en la alfabetización de niños y adolescentes que, a causa de sus dificultades para aprender, resulta necesario que recuperen su lugar en el uso de la palabra hablada y escrita.

Los objetivos de este simposio se definen de la siguiente manera: i) Establecer relaciones entre diferentes prácticas educativas inclusivas y el desarrollo de competencias comunicativas en los niños y adolescentes; ii) Identificar, analizar y evaluar la riqueza que aporta la diversidad de los lectores y escritores, de los textos, de la forma de leer y de escribir, de analizar la realidad, etc. a la configuración de aulas inclusivas; iii) Potenciar acciones de mediación (de parte de profesores, bibliotecarios, padres, etc.) en relación con las distintas diversidades.

Los contenidos, pues, que se pretenden abordar son: i) Enseñanza de la lectura y la escritura: su relación con la inclusión de la diversidad del alumnado; ii) Intervenciones docentes que favorecen la producción y la comprensión de textos por parte de niños y adolescentes evaluados con dificultades para aprender; iii) Organización de adaptaciones curriculares en ambientes alfabetizadores.

A volta do conto literário: reflectir e agir

Questionar a relevância da leitura do conto literário em sede escolar, a importância que alunos e professores lhe conferem no território de aprendizagem que é a sala de aula, as dinâmicas pedagógico-didáticas que são desencadeadas na sua leccionação, foram as nossas motivações num trabalho de recolha de dados junto de alunos e professores de uma dada comunidade escolar, com vista à reformulação de estratégias para a formação de cada vez melhores leitores e cidadãos.

Tentou-se chegar aos discursos de professores e de alunos, focalizando-se os anos em que o conto literário é abordado pelos programas escolares – 9º e 10º anos.

O nosso pressuposto era uma dupla constatação: o conto literário, pelas suas características, promove o gosto pela leitura; a leitura literária conduz ao desenvolvimento do pensamento reflexivo.

Pretendia-se criar uma dinâmica de reflexão, cruzando discursos vários, que envolvesse professores e alunos em torno dos textos, dos modos como são lidos na sala de aula, das actividades que promovem o conhecimento; das aprendizagens que são conseguidas. Para recolher informação recorreu-se a questionários e gizou-se uma descrição da situação no que à leitura do conto respeita. Deste descritivo pôde passar-se para uma proposta de acções tendentes a uma melhoria de resultados – ao nível de estratégias; do corpus textual a leccionar; das actividades a desenvolver; dos pressupostos teóricos a enformar a prática lectiva. As acções estão a ser colocadas em prática no presente ano lectivo.

A Presença da Biblioteca Escolar na Prática Pedagógica dos Professores da EB 2,3/S Aquilino Ribeiro

A Biblioteca Escolar e o professor bibliotecário têm um importante papel a desempenhar no desenvolvimento do currículo, não devendo ser encarados como recursos marginais ao processo de ensino e aprendizagem. Com este estudo quisemos saber de que modo os professores da EB 2,3/S Aquilino Ribeiro integravam nas suas práticas pedagógicas os recursos da Biblioteca Escolar. Utilizando uma metodologia eminentemente quantitativa, recorremos a um inquérito por questionário cujos dados foram posteriormente interpretados. Entre os dados analisados verificámos que a maioria dos docentes concordava com a importância da Biblioteca Escolar como centro de recursos pedagógicos na escola. Contudo, a utilização daquela nas práticas lectivas não corresponde à importância que é evidenciada nessa percepção, parecendo existir uma “teorização” da ideia de Biblioteca Escolar que não tem uma correspondência nas práticas dos docentes.

Leitura literária: uma análise das práticas escolares

A falta de leitura nas escolas brasileiras é um dos temas que tem merecido maior atenção dos estudiosos do assunto (Zimerman, 2008, 2007; Soares, 2001; Rosing, 1999). Cientes de que é no contexto escolar que vai se dar a formação do leitor e que o professor é o agente dessa formação é que empreendemos a presente pesquisa, que teve por objetivo principal conhecer como se desenvolve a leitura literária na escola e verificar se esta leitura faz parte das actividades desenvolvidas na escola, ou se serve apenas como pretexto para a abordagem dos conteúdos gramaticais da Língua Portuguesa. O projeto desenvolveu-se em três escolas do Município de Palhoça e compreendeu duas etapas: primeiramente, aplicação de questionários a 6 professores, 3 bibliotecários (ou responsáveis pelas bibliotecas) e 596 alunos; em seguida, análise dos dados e devolutiva para a comunidade escolar para auxiliar em projetos que visem a capacitação docente no que se refere às práticas de leitura literária em sala de aula. Os resultados demonstram que a leitura literária em sala de aula ainda limita-se ao mero utilitarismo, pois a maioria dos docentes entrevistados não usam esta leitura como uma leitura prazerosa, mas sim como um meio para abordagem da gramática. Além disso, observou-se que os textos literários lidos em sala limitam-se aos clássicos da literatura brasileira e que a falta de referências mais atualizadas também parece contribuir para o atual desinteresse dos alunos.

Avaliação de analogias presentes em manuais escolares: um estudo com professores de Ciências Físico-Químicas

Uma analogia é, frequentemente, entendida como uma comparação baseada em similaridades entre estruturas de dois domínios de conhecimento diferentes, um conhecido e outro desconhecido. A utilização de analogias é uma prática corrente no ensino das Ciências com o objectivo de facilitar a compreensão dos conceitos científicos.

A inclusão de analogias em manuais escolares é defendida por diversos autores, utilizando argumentos do tipo: as analogias podem mudar a linguagem do manual, tornando-a mais compreensível e atractiva; promovem uma codificação mais rápida da informação e a sua mobilização; aumentam a imaginação do aluno, ajudando à formação de imagens mentais que facilitam a construção de novas estruturas conceptuais. No entanto, se não forem utilizadas com o devido cuidado, as analogias podem constituir um obstáculo à aprendizagem, dado poderem reforçar concepções alternativas ou induzir ideias cientificamente incorrectas

Neste trabalho procuraremos contribuir para uma melhor compreensão da utilização de analogias na educação em ciências através da avaliação feita por 50 professores de Ciências Físico-Químicas sobre três analogias presentes em manuais escolares. Os dados foram recolhidos através de um questionário que incluía, relativamente a cada analogia, três questões: concordância/não concordância com a analogia; utilização/não utilização da analogia na sua prática lectiva; antecipação de dificuldades sentidas pelos alunos na compreensão da analogia.

Os resultados obtidos permitem constatar uma grande variedade de opiniões entre a amostra de professores inquiridos, embora haja analogias que são mais valorizadas do que outras pela maioria dos professores.

Alfabetización académica: diagnóstico situacional y propuestas para mejorar la comprensión y producción de textos en la universidad

Los profesores universitarios suelen manifestar preocupación porque los alumnos leen y comprenden poco y lamentan que, con frecuencia, su interpretación de lo leído es muy pobre. Frente a esta situación, que podríamos calificar de falta de autonomía lectora, exigir de entrada condiciones de lectura independiente, a pesar de estar hablando de la universidad, no resuelve sino que agrava la situación. Diversas universidades (Skillen y Mahony, 1997; Carlino, 2005 y Castelló, 2007) han comenzado a tomar conciencia de este problema y a asumir algunas responsabilidades respecto de la tarea de orientar a los estudiantes en aquello que una gran mayoría no sabe hacer autónomamente.

La implantación del nuevo sistema de créditos europeos (ECTS), que requiere del alumnado una mayor implicación y autonomía en su aprendizaje, nos hace pensar que la comprensión y producción de textos se convertirá en una competencia imprescindible.

Esta comunicación intenta mostrar algunos resultados obtenidos en la primera fase de diagnóstico de un trabajo de investigación, financiado por la Universidad del País Vasco, cuyos objetivos fundamentales son: Delimitar el problema (diagnosticar, describir y categorizar los principales problemas de comprensión y de producción escrita de estudiantes universitarios de reciente acceso); Analizar experiencias llevadas a cabo por otras universidades en este campo; Elaborar propuestas de intervención que sirvan al profesorado para orientar a sus alumnos en la lectura y producción de los textos encomendados, de modo que puedan alcanzar niveles más altos de competencia en estas habilidades.

Leitura literária na Educação de Jovens e Adultos: práticas e significados

O trabalho que apresentamos refere-se a duas diferentes pesquisas de pós-graduação em nível de mestrado desenvolvidas no âmbito do Programa de Pós-graduação em Educação da Faculdade de Educação da Universidade Federal de Minas Gerais. O foco do trabalho recai sobre as práticas de leitura literária escolares e não escolares de sujeitos na modalidade de ensino Educação de Jovens e Adultos, na Educação Básica. Ambas as pesquisas trabalham a partir de dados coletados numa instituição escolar de natureza filantrópica na região central da cidade de Belo Horizonte.

Desejamos investigar os significados atribuídos por esses educandos a essas práticas, as formas de estruturação delas, se interferem e de que maneira interfeririam na relação dessas pessoas com a escola, com a família e com o trabalho. O eixo que permeia toda a pesquisa é a relação que se estabelece entre os educandos da EJA e a leitura literária; para tanto, deve-se levar em conta os estudos em letramento e os diferentes modos de realização da leitura literária por este grupo de leitores, além da contribuição desses estudos para a compreensão das práticas referidas, a partir de suas condições sociais, culturais e temporais singulares.

Os resultados das pesquisas pretendem contribuir para o aprimoramento das práticas educativas na modalidade citada, uma vez que a educação como prática de inclusão social e a aprendizagem ao longo da vida requerem pensar na democratização do acesso aos bens culturais socialmente legitimados, entre eles os textos literários.

TIC, aprendizagem da língua e pensamento complexo: Contributo do blogue língua portuguesa

O Blogue Língua Portuguesa, disponível em <http://paulofaria.wordpress.com/>, é um Projecto de Intervenção no domínio da Língua Portuguesa dos alunos da Escola Básica Integrada de Vila Cova – Barcelos. É o blogue do professor e foi criado no ano lectivo 2006/07 funcionando como interface de todos os blogues dos alunos do 7.º ano nesse ano lectivo. O projecto acompanhou os alunos do 7º ao 9º ano de escolaridade.

O professor, em articulação com o trabalho lectivo presencial nas turmas, lança no seu blogue as propostas de actividades. As respostas dos alunos são principalmente apresentadas nos seus próprios blogues constituídos principalmente, mas não exclusivamente, por produções escritas. O professor comenta esses trabalhos dos alunos, avalia-os, propõe e acompanha as alterações. Os alunos criticam-se e ajudam-se mutuamente sendo bem visível nessas interações o envolvimento intelectual, social e afectivo dos participantes.

Este artigo apresenta o enquadramento teórico subjacente ao projecto, descreve algumas das potencialidades do blogue e das actividades realizadas pelos alunos e faz um breve balanço do trabalho realizado até ao momento.

Portugal

A construção de literacias em contexto académico: eventos, gêneros e sentidos

O objetivo do presente trabalho é caracterizar como se dá a constituição letrada de alunos ingressos em um curso brasileiro de Letras, em eventos de literacia no contexto académico. O quadro epistemológico interpretativo (Soares, 2006) qualifica a natureza metodológica do trabalho. Estudos de casos etnográficos (André, 2003) ganham destaque, por haver processos longitudinais de investigação. Esses processos ocorrem por meio da observação participante desta pesquisadora no curso de Letras, durante um ano letivo. Assumem a posição de sujeitos da pesquisa Renata, Beatriz e Sandra, devido à diversidade de experiências sócio-culturais, às singularidades em suas trajetórias de aprendizagem, aos propósitos distintos por estarem em Letras e às diferentes reações em situações interlocutivas de sala de aula. O acompanhamento dos trabalhos permitiu comprovar que os gêneros discursivos foram os objetos de ensino-aprendizagem desencadeadores de muitas ações reflexivas e críticas. Dessa forma, para se caracterizar como se dá a constituição letrada de cada uma das três alunas, recorre-se à perspectiva sócio-cultural de literacia e às contribuições de estudos com a teoria bakhtiniana dos gêneros discursivos. Com esse aporte metodológico e teórico foi possível identificar distintos eventos - interdiscursivos, identitários-profissionais e reflexivo-transformativos (Fischer, 2007), e identificar igualmente diferentes literacias em que as alunas vão se constituindo sujeitos letrados. Isso contraria o discurso da crise da literacia no ensino superior, uma vez que a prática dialógica com a linguagem dá respaldo à sócio-construção dos conhecimentos sobre/da língua.

Fischer, Adriana; Pelandré, Nilcéa

Brasil

Leitura situada em um modelo dialógico dos letramentos na esfera acadêmica

Este trabalho objetiva caracterizar como processos de leitura situada contribuem para que alunos se assumam insiders na esfera acadêmica. Os dados, coletados em 2005 e 2006, em um curso brasileiro de formação de professores, através de observações participantes e de entrevistas orais, constituem parte de eventos nomeados reflexivo-transformativos, Fischer (2007), incluindo leitura, produção e análise linguística do gênero discursivo crônica jornalística. Estes eventos também integram o modelo dialógico dos letramentos acadêmicos (Fischer, 2007) que se reporta à construção de sentidos, à identidade, ao poder, à autoridade e à natureza institucional do que conta como conhecimento em um contexto académico particular. Discutem-se dados relativos à leitura e produção de crônicas, de duas alunas, em disciplinas de um curso de Letras. Os resultados comprovam que, às alunas, são ferramentas de poder conhecer o funcionamento de um dado domínio social, no qual se insere o gênero destinado à leitura e à produção escrita, e desenvolver o metaconhecimento que o constitui, a fim de fazerem uso do letramento crítico e usarem o(s) letramento(s) dominante(s) que dele fazem parte, na direção de se assumirem insiders na esfera acadêmica.

Frade, Isabel

Relato de um programa pedagógico de intervenção em aula de Português: da relação entre conhecimento do vocabulário e compreensão leitora

Esta comunicação apresenta um projecto de investigação que se consubstanciou na construção, desenvolvimento e avaliação de um programa pedagógico gerado por duas questões principais: É o vocabulário um factor condicionador da compreensão na leitura? Que aspectos ter em consideração para uma abordagem do léxico em articulação com o desenvolvimento da compreensão leitora? Foram seus objectivos: contribuir para a construção de processos promotores do aprofundamento da competência de comunicação verbal, dos alunos; explorar as relações entre o vocabulário e a compreensão na leitura; analisar a relação entre desenvolvimento do vocabulário e compreensão leitora, tendo em conta as competências – extrair informação, interpretar, reflectir e avaliar.

Procedeu-se, primeiramente, à aplicação de um teste que permitiu diagnosticar o desempenho dos alunos no quadro das competências em causa (extrair informação, interpretar, reflectir e avaliar). Programou-se, depois, um conjunto de actividades a desenvolver em aula, acompanhadas por professores convidados a participar no programa, tendo estes avaliado os desempenhos dos alunos, tarefa a tarefa, segundo os indicadores considerados para cada competência e de acordo com uma escala avaliativa própria.

Os dados revelam que os alunos, globalmente, não têm dificuldade em extrair informação. Quanto à competência “interpretar”, o nível de desempenho é mais baixo. Uma hipótese interpretativa deste facto está relacionada com a prática docente: esta estará mais orientada/formatada para avaliar a interpretação textual, comparativamente, p. ex., com a competência “reflectir e avaliar”, onde os alunos obtiveram resultados mais elevados.

Frigotto, Edith

Brasil

A emergência do letramento literário

Analisa-se, neste trabalho, a construção de identidade leitora de alunas do 6º período, do curso de graduação em Pedagogia da Universidade Federal Fluminense, que não se utilizavam de práticas literárias na sua formação e na sua vida cotidiana.

O desenvolvimento do processo, que teve a duração de quatro meses, deu-se a partir da criação de ambiente de leitura compartilhada de contos machadianos, construindo relações interativas em que a temática e o gênero pudessem se tornar o fórum de discussão de pequenos grupos.

A proposta de contato com um autor do século XIX, cuja atmosfera literária se delinea sobre costumes datados, não seduz, em princípio, jovens leitores. O legado de Machado de Assis, considerado, pelo público, um discurso de autoridade de difícil aproximação, costuma despertar nos leitores certo tom de respeito sacralizado. O primeiro confronto se situa no nível temático, distante das experiências contemporâneas; o segundo, na sofisticação estilística do autor.

Partindo de inúmeras estratégias como a disponibilidade de material, a criação de movimentos de mediação entre leitor/livro e a formação de comunidade leitora, a aproximação foi se desenvolvendo nas interações discursivas de esclarecimento dos processos de apropriação, inicialmente do sentido global do texto, para depois desvendar a posição do narrador/autor e compreender as estratégias lingüístico-discursivas do texto.

O resultado da pesquisa, realizada posteriormente, mostrou as estratégias de leitura das alunas, as identidades construídas no grupo e, principalmente, o status adquirido pela familiaridade com discursos acadêmicos e midiáticos sobre o autor e sua produção.

Do PNL à Escola: sentidos e dinâmicas de leitura numa escola do Ensino Básico

Com esta comunicação, pretendemos identificar e analisar os modos como o Plano Nacional de Leitura (PNL) se actualiza num agrupamento de escolas do ensino básico, na região de Leiria.

Num primeiro momento, faremos uma incursão pelos textos do PNL, no sentido de salientar as dimensões orientadoras deste programa, em correlação com a dimensão oficial do discurso pedagógico, nomeadamente, aquele que se centra nas práticas de formação de leitores.

Partindo do pressuposto de que a relevância do conhecimento das práticas de leitura escolar constitui condição para uma intervenção significativa nos contextos educativos, num segundo momento, apresentaremos os dados relativos às práticas de leitura no contexto do PNL, a fim de dar a conhecer quer o processo de organização de integração do PNL nas práticas pedagógicas, quer a forma como os alunos se relacionam com a leitura, quer as percepções que os pais têm sobre como o PNL pode contribuir para a formação dos seus filhos enquanto leitores.

Construção de oportunidades de aprendizagem da escrita no início do processo de alfabetização

Este estudo examinou o quê e como os alunos em fase inicial de alfabetização podem aprender sobre a escrita ao participar de uma atividade sobre o registro da rotina do dia na lousa pela professora. A pergunta que norteou nossas análises foi: o que os alunos podem aprender sobre

a escrita quando participam, com seu professor, da elaboração e registro da Agenda ou Rotina de atividades no início de cada dia de aula?

Buscaremos responder a essa pergunta por meio da análise de uma interação estabelecida entre uma professora alfabetizadora de uma escola pública em Belo Horizonte/Brasil e seus alunos de seis anos idade. A observação dessa turma ao longo do ano de 2006 permitiu a identificação de um evento interacional diariamente construído pelos participantes desse grupo: o Registro da Rotina do Dia.

Na análise realizada, destacaremos as oportunidades de aprendizagem da estrutura silábica das palavras. Fizemos essa análise por meio de um caso expressivo (telling case), pois interessamos demonstrar como se relacionam, em sala de aula, os processos de alfabetização e letramento, por meio da articulação entre o trabalho com um gênero textual e o estudo de características estruturais do sistema de escrita. Isso porque esse caso expressivo nos dará oportunidade de refletir sobre como, no processo interacional em sala de aula, articulam-se o uso e o conhecimento de um gênero textual, no caso a Agenda ou Rotina do Dia, ao estudo sobre características estruturais do sistema de escrita do português, no caso a estrutura silábica das palavras.

Liberdade pela Escrita

Liberdade pela Escrita é um projeto de incentivo à leitura e à escrita que se desenvolve em encontros semanais em um presídio feminino, na ala onde detentas compartilham o espaço com filhos de até três anos de idade. As atividades de leitura visam propiciar o contato com outras realidades – reais ou fictícias; as de produção de escrita têm se caracterizado como espaços de liberdade do dizer, o que justifica o título do projeto. Para manter o interesse do grupo, as atividades têm sido organizadas em torno de diferentes focos. No decorrer de 2008, o projeto prioriza a narrativa de experiências e histórias de vida que, ao final do ano, serão reunidas em forma de livro. Durante o primeiro semestre de 2007, as participantes leram e criaram histórias infantis e cada uma escreveu e confeccionou o seu próprio livro; no segundo semestre, leram poemas de Shakespeare, escreveram poemas e confeccionaram máscaras venezianas para declamá-los sem sentirem-se constrangidas. O trabalho é realizado por bolsistas de extensão universitária e por estudantes voluntários, orientados pelo professor responsável pelo projeto. Como resultados perceptíveis da interação leitor/texto, leitor/leitor e da própria interação entre as integrantes do grupo, destacam-se o interesse crescente pela leitura e pequenas mudanças nas relações interpessoais. Deste modo, o projeto vem atingindo os objetivos inicialmente previsto: contribuir para minimizar os efeitos das adversidades próprias de um ambiente de detenção e, ao mesmo tempo, desenvolver o nível de letramento das mães, o que se reflete, indiretamente, no desenvolvimento sócio-lingüístico das crianças.

La Lengua como factor determinante del rendimiento en lectura, un estudio de la base de datos PIRLS

Tres premisas son la base de esta investigación: la 1ª es la comprensión del aprendizaje de la lectura como una tarea que se realiza en varias etapas (Chall 1996). La 2ª es la definición de la lectura como un proceso cognitivo pluridimensional (Adams 1990), la competencia lectora no es una sola sino un sistema complejo de conocimiento, procesos, estructuras y estrategias. Así, el aprendizaje es a su vez un proceso complejo tanto a lo largo del tiempo como en su desarrollo interno. En consecuencia, los lectores aprenderán en forma diferente dependiendo de la etapa y el objetivo cognitivo específico; diferentes factores podrán, a su vez, incidir en forma diversa. El 3º pilar es el rol del código en tanto que factor en el aprendizaje de la lectura. En las primeras etapas del aprendizaje, está demostrado que hay una incidencia del nivel de transparencia de la lengua (Goswami et al. 1998, Ziegler et al. 2005). Nuestras preguntas son: ¿Qué rol juega el código en etapas posteriores? ¿Es distinto su rol dependiendo de los procesos y estructuras cognitivas?

Nuestra investigación analiza datos del estudio PIRLS (IEA), este estudia el rendimiento en lectura de niños en 4º año de escolarización, en varios sistemas educativos y, por lo tanto, en varios contextos idiomáticos. Se busca establecer las posibles relaciones entre la lengua usada en el test, los resultados obtenidos en diferentes tareas y tipos textuales y factores asociados al hogar y la escuela. El objetivo principal es la construcción de un modelo que permita explicar la incidencia de la lengua y otros factores en esta etapa específica, según la complejidad del proceso de comprensión y el tipo textual usado como estímulo.

A formação de leitores na escola: o enfoque da leitura literária no projeto político-pedagógico

Este estudo nasceu da observação, no cotidiano escolar, da preocupação dos educadores com a falta de interesse do aluno pela leitura – inquietação presente no discurso docente, se, nem sempre, haver uma discussão aprofundada sobre o assunto. Como a escola pode formar leitores e como esse trabalho pode ser desenvolvido pelo coletivo da escola, em seu currículo, de forma que fique sujeito a crenças individuais e projetos temporais. O artigo trata sobre a leitura literária no Projeto Político-Pedagógico de escolas públicas de ensino fundamental, visto a importância dessa leitura para a formação e democratização do leitor/cidadão.

Brasil

Uma abordagem discursiva da aprendizagem inicial da escrita de crianças

A tradição de estudos da alfabetização gerou uma cultura que, na perspectiva bakhtiniana, pode ser considerada monológica. No processo de aprender a significar por escrito, a criança lida com a necessidade de elaborar diferentes características da linguagem verbal, como uma nova forma de representação do mundo. Tal elaboração acontece no plano da escrita, no sentido estrito, e, ao mesmo tempo, no sentido do discurso escrito. Além disso, há que se considerar o contexto social como um todo dialogizado em que muitas outras formas de representação convivem com a escrita, criando diferentes modos de significar. Com base em Bakhtin, o estudo visa destacar e caracterizar estratégias semióticas utilizadas por crianças em textos escritos para dar conta de objetivar a escrita e o discurso escrito. Buscamos dados que evidenciem o entrecruzamento de aspectos semióticos e discursivos envolvidos no processo de alfabetização.

“Tudo que li e escrevi durante o curso constituíram minha identidade como profissional”: reflexões sobre a literacia na graduação

Aproximar literacia e formação de professores é uma possibilidade para compreender o processo de formação em serviço, levando em conta os momentos em que o acadêmico aprende ao realizar suas leituras e produzir seus textos. As discussões em torno da formação do professor nem sempre levam em conta que, nos saberes curriculares, pode haver mais do que o definido pela instituição formadora. Nessa perspectiva ensinar e aprender estão em processo interativo o que sinaliza uma concepção de linguagem num viés bakhtiniano. O diálogo do sujeito inserido em curso de graduação se faz com ele mesmo, com os atores sociais que com ele convivem e com o texto escrito. Isso aproxima a noção de linguagem da de literacia estando ambas numa perspectiva social, ou seja, são as práticas sociais de leitura e escrita que contribuem para a formação do professor. A questão que se apresenta, nessa investigação, é quais são as práticas sociais de leitura e escrita que contribuem para a formação do professor no espaço da academia? Quanto à metodologia, a pesquisa se constitui do recolhimento de dados de nove formandos do curso de Letras de uma universidade da região sul do Brasil, o que se deu na forma de memoriais. Os resultados revelam que há uma relação entre a formação do professor e a perspectiva social de letramento uma vez que o sujeito se constitui pela linguagem em um processo no qual vivencia os eventos de leitura e escrita.

Infância, brinquedos, literacia e aprendizagem da História

O presente estudo pretende discutir o potencial do entrelaçamento entre práticas de ensino/aprendizagem de leitura e escrita e de ensino/aprendizagem em História para o desenvolvimento do letramento/literacia. Está inserido no projeto do LABEPEH Escolas Parceiras: Integração, Extensão, Pesquisa e Ensino na formação de professores de História. Desenvolvido com crianças entre 8 e 10 anos de idade, o projeto Brinquedos e brincadeiras – ontem e hoje tem como eixo organizador a infância e a memória. Este estudo quer refletir sobre a importância da cultura material, fator de identidade individual e coletiva, que, neste trabalho assume a condição de “objeto gerador”. Descobertas, estudadas e produzidas, as “pipas” induzem práticas de leitura e escrita. Referenciadas por conceitos básicos do ensino-aprendizagem em História – o diálogo passado versus presente, a relação tempo-espaço e a percepção da alteridade – estes brinquedos suscitam variadas formas de expressão verbal e escrita, entre elas, recontos, relatos e narrativas. Com base na tríade ação-reflexão-ação, a montagem de um museu na escola encaminha uma nova relação dos sujeitos com seu objeto, na qual se vislumbra a perspectiva de Walter Benjamin “as crianças formam o seu próprio mundo de coisas, um pequeno mundo inserido no grande”. Ao final, pretende-se problematizar um desafio: a literacia/letramento no ensino de História nos anos iniciais da educação básica, sobretudo com crianças de meios socialmente desfavorecidos.

A Velhice na Literatura Infantil Brasileira Contemporânea

Este texto discute livros com representações de velhice, em que estão presentes temas como vida e morte, doença, pedagogia da finitude, memória, entrelaçando-se com infância solidária, cuidadora/cuidada, compreensiva. Transmissão da experiência, marcas de decadência, traços

de jovialidade/vida ativa coexistem, evidenciando o rompimento de modelos fixos. O alcance pedagógico dessas obras, independentemente de seu grau de literariedade, parece advir tanto de sua larga utilização no contexto escolar, quanto do seu poder de formação/subjetivação de leitores e futuros cidadãos.

Panorama das Dificuldades para Ensinar a Escrita de Textos na Educação Básica no Brasil

O ensino da escrita de textos no Brasil realiza-se em condições inadequadas, por diversas razões: a) artificialidade das situações de produção que descaracterizam o aluno como sujeito usuário da língua cristalizando-o como escrevedor e simples cumpridor de atividades; b) artificialidade dos temas propostos; c) falta de objetivos com a escrita; d) ausência de um leitor real, a não ser o professor; e) falta de acompanhamento do professor nas várias etapas de elaboração, revisão e reestruturação do texto; f) professor corretor de textos e “caçador de erros”; g) instabilidade do professor diante do seu desconhecimento de como explorar melhor ou como “corrigir” o texto do aluno; h) dependência do professor ao livro didático; e i) desconhecimento da teoria acerca dos gêneros discursivos. O objetivo do nosso trabalho é traçar um panorama acerca das principais dificuldades enfrentadas pelos professores no ensino da escrita de textos tendo como corpus para análise qualitativa: a) 5 (cinco) dissertações de mestrado e 5 (cinco) teses de doutorado defendidas em programas de pós-graduação em Linguística Aplicada no Brasil, produzidos no período de 1998 a 2008, que abordam a questão do ensino da escrita e as dificuldades; e b) 10 (dez) depoimentos de professores de escolas públicas de Educação Básica que participam do projeto de qualificação em desenvolvimento no curso de Letras na Universidade Federal do Triângulo Mineiro (UFTM) em Uberaba – MG, Brasil. Diante das dificuldades apresentamos sugestões de como poderia ser o trabalho de produção de textos escritos na escola numa perspectiva linguística mais coerente com as práticas socioculturais de letramento.

A Diferença e a Literatura Infantil Contemporânea: Estratégias de Composição

A literatura para crianças, conectada ao conceito moderno de infância, tem sido marcada por intuítos pedagógicos coerentes com ideais sociais de criança a ser formada. Debates recentes sobre as diferenças nas sociedades democráticas vêm repercutindo intensamente nesses livros, em especial através de narrativas com personagens “diferentes”. O objetivo do simpósio em que este texto se integrou foi analisar 3 conjuntos de livros que tematizam a diferença, disponíveis em livrarias brasileiras, usando como referências Hall, Woodward e Colomer. Aqui, analisa-se um conjunto de livros constituído por narrativas que usam simbolismo para representar a diversidade, com personagens diferentes não-humanos (animais, objetos), cujas diferenças não têm correspondência com o mundo real. Especial atenção foi dedicada ao desfecho das tramas e ao destino do personagem diferente.

As relações de acolhimento e reciprocidade na apropriação do conhecimento na Educação de Jovens e Adultos

O estudo tem como objetivo apresentar uma pesquisa junto a estudantes jovens e adultos da escolarização inicial marcados por uma “obrigação social de aprender” uma vez que vivemos em

uma sociedade que valoriza a cultura letrada, na qual o termo 'analfabeto' assume uma condição pejorativa, definindo o sujeito pela sua distância com o saber letrado e não pelos conhecimentos que domina. Ao analisarmos o que apontam estudantes e docentes com relação à desvalorização que os alunos de EJA fazem de si, constata-se que essa imagem é construída socialmente nas relações desses sujeitos com o mundo. Os docentes indicam que desenvolvem modos próprios de lidar com essa imagem de desvalorização, pelo acolhimento para o ato do conhecimento e pela reciprocidade que estabelecem com os sujeitos. Mediante a realização de uma pesquisa de abordagem qualitativa com o uso da técnica de grupo focal analisam-se as falas dos estudantes em que emergem a dialogicidade sobre o que significa essa relação com o saber, o tempo de dedicação às aulas, as necessidades de ausências em função do seu cotidiano e como eles percebem que seus professores lidam com fatores como: o modo como são acolhidos para o processo ensino-aprendizagem, o estabelecimento de relações que ajudam na sua permanência na escola, lidando com o fenômeno da evasão/desistência na escola, um grave problema na Educação de Jovens e Adultos. Constituem referências fundamentais para o aprofundamento teórico os estudos de Paulo Freire, Bernard Charlot, Marta Kohl de Oliveira e Vera Masagão Ribeiro.

Literacias no ensino superior de contabilidade

Neste texto discuto a produção do trabalho docente e os percursos da formação da docência para o ensino superior que ainda não consideram a literacia em seus espaços de trabalho. Nas sociedades letradas o domínio da leitura e da escrita constitui valorização do conhecimento ao mesmo tempo em que produz exclusões entre sujeitos que sabem ler e escrever e aqueles que não exercem sua funcionalidade cotidiana nas dimensões pessoais e sociais. Na educação contemporânea, em seus diferentes currículos, a literacia encontra plena ancoragem na escolarização inicial, mas reduzida aderência e menor investigação no ensino superior. Com base na pesquisa exploratória de levantamento de dados e abordagem qualitativa, analiso que a formação de leitores e escritores em espaços de trabalho na área da docência em contabilidade ainda não se configura como prática no ensino superior. A titulação obtida pelos processos de formação inicial, e seguida na pós-graduação centrada na especialização, não se tem constituído em espaço formativo para uma apropriação dos diferentes textos sociais. Esta situação favorece o iletramento diante da complexidade do mundo. Mediante estas considerações os resultados desta reflexão indicam que as aprendizagens em espaços formativos menos rígidos permitem aos sujeitos uma maior compreensão das condições de suas vidas e da produção da sua existência, possibilitando intervenções contextuais. Apontam ainda para a necessidade da apropriação do processo de literacias como condição emancipatória e constituição de identidades que se reconstituem pela compreensão do mundo nas ações de trabalho.

Os sentidos de escrita no discurso dos pais, das crianças e da professora

A presente pesquisa está situada na Linha Discurso e Práticas Educativas. Buscou-se compreender quais os sentidos de escrita, no discurso de crianças, seus pais e professora; refletir sobre os sentidos da escrita na escola enunciados pelos sujeitos, para desencadear contribuições para família, escola e sujeitos a respeito da maneira de se conceber e conduzir o processo de escrita. Foram investigados oito alunos de uma turma de 3.^a série do Ensino Fundamental de um município de Santa Catarina, no sul do Brasil, cinco mães e uma professora. Desenvolveu-se uma pesquisa qualitativa interpretativa, de abordagem fenomenológica-hermenêutica. O instrumento utilizado foram entrevistas semi-diretivas. As

transcrições formaram os quatorze textos, que constituíram o corpus. O solo teórico-metodológico fundamenta-se nos referenciais da enunciação no viés do Círculo de Bakhtin, e no referencial histórico – cultural de Vygotsky. Os resultados apontaram os seguintes sentidos para o escrever: para as crianças sentido de grafia, correção e também o escrever como cópia; para os pais, a escrita é marcada pela grafia, porém em alguns momentos aponta para o escrever como prática social, como processo de intervenção em conflitos familiares; para a professora, os sentidos de ortografia. Os estudos históricos permitiram compreender algumas variações que aparecem em diferentes épocas em relação à escrita. A cópia e a caligrafia fazem parte do ensino da escrita na escola, por isso em alguns contextos elas estão presentes atravessando os discursos de nossos sujeitos. A pesquisa permitiu compreender escrita como interação social, muito além do que domínio do sistema alfabético e de codificação.

Provinha Brasil: uma nova modalidade de avaliação externa à escola?

Este trabalho apresenta dois processos de avaliação em larga escala, denominados Provinha Brasil e Brasil Alfabetizado, os quais estão vinculados a um programa nacional de avaliação do Ministério da Educação – MEC. As duas avaliações são aplicadas em alunos de escolas públicas do país. Na Provinha Brasil, avaliam-se, crianças de 7 anos de idade, matriculadas no 2º ano do Ensino Fundamental. No Brasil Alfabetizado, avaliam-se jovens e adultos, matriculados no programa de Educação de Jovens e Adultos – EJA, uma modalidade de ensino amplamente difundida no país. Em ambas as avaliações, foram produzidas matrizes de referência que orientaram a elaboração dos itens dos testes. As matrizes foram organizadas em eixos e descritores que abordam as habilidades a serem avaliadas. Os eixos considerados foram: aquisição do sistema de escrita, leitura e escrita. Um diferencial da Provinha Brasil foi o fato de ela oferecer informações que orientaram, tanto os professores quanto os gestores escolares e educacionais, a implementar e operacionalizar essa avaliação. Ficou a cargo do próprio professor desde a aplicação até a análise dos resultados da sua turma. Como a Provinha Brasil, o professor passa a ter elementos que contribuem para ele (re)planejar e (re)avaliar as suas ações. No Brasil Alfabetizado, de modo semelhante aplica-se em todos os alunos no início e no final do Programa.

Ensino de língua materna na perspectiva do letramento com vistas à formação de um leitor crítico do mundo

Esta comunicação tem três objetivos: 1) discutir a importância de um novo projeto de leitor e, em consequência disso, 2) refletir sobre qual é projeto de homem que nossas escolas têm desenvolvido ao longo de sua história e 3) apresentar um projeto de ensino e de formação humana em que se verifica um efetivo diálogo entre universidade, instituições governamentais e sociais, escolas, comunidades, famílias e alunos visando habilidades de letramentos e numeramentos. Este estudo pauta diferentes concepções de leitores, baseado em teorias sobre letramento(s) e sobre a interação, evidenciando a necessidade de se formar indivíduos capazes de se inserir e agir no mundo de forma a produzir mudanças positivas para a sociedade. Além disso, discute a necessidade de iniciar e agilizar as formas de diálogo entre a academia e as demais instâncias sociais com vistas a formar um novo projeto de cidadão que leia o mundo de forma crítica e seja capaz de nele intervir para melhorias das condições de vida e de um exercício pleno de cidadania. O artigo resultante deste exercício se estrutura em três partes: a) a apresentação e os pressupostos teóricos do estudo; b) a apresentação do programa Promoting Excellence e do curso de verão Promoting Excellence in Literacy and Numeracy. Neste ponto, apresentaremos um projeto de ensino desenvolvido na Universidade de York/Toronto/Canada que ilustra como é possível formar leitores do mundo numa perspectiva do letramento; c) os resultados desse curso e contribuições para o campo do conhecimento.

Ensino de língua materna na perspectiva do letramento: estratégias de leitura e de escrita

Este estudo discute, com base em teorias que abordam a linguagem do ponto de vista interacional e sobre o letramento, como tornar o ensino de língua materna – e outros conteúdos escolares – atrativo(s) para alunos na Educação Básica, desenvolvendo habilidades de letramento(s) essencial(is) para a sua atuação no ambiente escolar e, em extensão, em outros meios sociais. O objetivo é apresentar como podemos potencializar as habilidades de leitura e de escrita dos estudantes tanto na escola quanto nas experiências relatadas por eles sobre o uso de tecnologias e de recursos em atividades escritas executadas rotineiramente. São considerados para isso: a participação de crianças e adolescentes em eventos de letramento(s), sua relação com os sujeitos sociais, com os objetos, com as atividades e seus comportamentos associados com a cultura escrita, além de aspectos discursivos relativos ao contexto escolar e familiar dos estudantes. Assim, pesquisas sobre a relação entre escrita e oralidade que concebem a linguagem sob uma perspectiva dialógica e social corroboram uma concepção de letramento baseada principalmente na noção bakhtiniana de linguagem social e de gêneros discursivos. Tal discussão é importante para evidenciar as diversas estratégias que podem ser usadas para se compreender diferentes formas do que é ser um sujeito letrado e auxiliar os docentes no entendimento do papel da escola e da família no processo de letramento dos alunos.

Riscos e Rabiscos: promovendo o pensamento criativo

O conceito de criatividade é de difícil definição, sendo que, ao longo dos anos, diversos autores como Stein, Torrance, Gardner, Amabile, Gil e Cristóvam-Bellman apresentaram a sua perspectiva sobre esta temática, gerando uma multiplicidade de hipóteses. Para uns, a criatividade é atributo apenas de alguns, para outros, todos a possuem embora em diferentes graus.

Jonassen considera pensamento criativo a capacidade de gerar novos conhecimentos a partir dos já adquiridos: “O pensamento criativo exige ir além do conhecimento aceite, no sentido de gerar novo conhecimento” (p. 42, Jonassen, 2007). Segundo este autor, as competências envolvidas no pensamento criativo são sintetizar, imaginar e elaborar.

Tendo por base estes princípios e perspectivando mudanças no panorama educacional, nomeadamente a emergência das tecnologias, foi criado, em 2007, o sítio Riscos e Rabiscos (www.educacaodofuturo.org/rabiscos).

A Literacia Informacional no Espaço Europeu do Ensino Superior: Estudo das competências de informação em Portugal (primeiros resultados globais)

Neste século XXI Portugal enfrenta transformações substanciais. A sociedade do conhecimento exige cidadãos preparados e capazes para enfrentar o desafio de uma economia globalizada e competitiva onde a gestão do acesso à informação é a sua linha central. Novos conceitos

aparecem neste novo modelo de sociedade e em alguns deles é visível a ausência de uma situação social consolidada para atender às novas exigências. Embora vivamos numa sociedade mediática existe ainda uma brecha digital; aparecem novas literacias e para, além disso, novas formas de iliteracia.

Alguns países da União Europeia desenvolveram uma aposta forte na formação de seus cidadãos em competências e capacidades de leitura e acesso a informação através de uma rede sólida de Leitura Pública. Em Portugal só na década de oitenta foi possível implementar uma rede de Bibliotecas em instalações novas e adequadas e com livre acesso, o que configura um atraso grave numa conjuntura difícil e desafiante – a Sociedade em Rede da Era da Informação. É por essa razão que é essencial compreender e criar estratégias de intervenção. Todas as medidas ou iniciativas devem começar pelo diagnóstico das bases da sociedade, isto é, pelo sistema educativo.

O presente trabalho apresenta parte dos resultados de um projecto da investigação, financiado pela Fundação para a Ciência e a Tecnologia, em que se estuda o nível de competências informacionais dos estudantes Portugueses da universidade e de ensino secundário. Este diagnóstico, realizado em nove cidades do país, tem como fim avaliar a preparação dos estudantes para confrontar, não somente as mudanças da sociedade da informação, mas do Espaço Europeu de Ensino Superior.

Exploradores de bibliotecas: una experiencia de colaboración entre bibliotecas públicas y bibliotecas escolares para integrar el uso de la información en los aprendizajes

El uso y dominio de la información accesible desde las bibliotecas se ha convertido en una habilidad imprescindible para la construcción del conocimiento. Tanto las bibliotecas públicas como las bibliotecas escolares trabajan con el objetivo de formar personas competentes en el uso de la información, aunque, en nuestro caso, en España, desde una situación de desequilibrio propiciada por un mayor desarrollo y evolución de las bibliotecas públicas que contrasta con el estado precario de nuestras bibliotecas escolares.

En este contexto se enmarca la experiencia del Programa Exploradores de bibliotecas que impulsó en el año 2000 la red de bibliotecas públicas de la Diputación de Barcelona (Catalunya) con el objetivo de mejorar las bibliotecas escolares, potenciar su uso como elemento del proceso educativo y facilitar a los alumnos la formación en el uso de la información. El programa se desarrollaba, conjuntamente, entre la biblioteca y el centro escolar con la finalidad de conseguir una total implicación de bibliotecarios y profesores en la utilización de recursos para facilitar el uso de la información en el aprendizaje. En la última fase de este programa se elaboraron unos materiales para uso de los escolares, que siguen utilizándose en la actualidad por parte de ambas bibliotecas. La comunicación presenta los resultados de dicho programa y analiza el proceso de diseño y elaboración de los distintos materiales utilizados, como las carpetas individualizadas para cada alumno, las fichas de trabajo con distintos niveles, y las fichas-guía para los formadores.

A abordagem dos conhecimentos linguísticos em livros didáticos aprovados no PNLD 2010

Neste texto apresenta-se um estudo sobre texto e gramática em livros didáticos de Língua Portuguesa do Ensino Fundamental analisados no Programa Nacional do Livro Didático 2010 (PNLD).

O PNLD é um programa que faz parte das políticas públicas do Brasil que visam melhorar os níveis de desempenho dos alunos brasileiros. O Ministério da Educação, considerando a qualidade do ensino fundamental oferecido nas escolas públicas brasileiras, estabeleceu como uma das prioridades de ação o aprimoramento do livro didático. Esta melhoria é fundamental ao processo de ensino-aprendizagem, pois o livro didático constitui um instrumento muito importante no trabalho pedagógico desenvolvido pelo professor, dentro e fora da sala de aula. Como instrumento de aprendizagem, o livro didático deve apresentar conteúdo e atividades que favoreçam a aquisição do conhecimento, por meio da reflexão e da resolução de exercícios propiciadas pela observação, pela análise e por generalizações, visando ao desenvolvimento da proficiência.

Nesse sentido, o objectivo deste trabalho é apresentar a análise das atividades que exploram conhecimentos lingüísticos verificando se essas orientam os alunos para a reflexão sobre a língua e a linguagem.

Brasil

Novos letramentos nos processos sociais de inclusão e exclusão

Diferentemente do que ocorreu no Brasil, nem todos os países da América Latina adotaram um termo específico para traduzir a palavra literacy, muito freqüente na literatura em língua inglesa que circula nesses países. Enquanto no México literacy é alfabetización ou cultura escrita, no Brasil literacy pode ser alfabetização, cultura escrita e também letramento. O neologismo letramento põe em circulação um conceito heterogêneo, polêmico e em construção. Consequentemente, os conceitos de cultura escrita e alfabetização passam por processos de ressignificação que nos demandam buscar razões históricas particulares capazes de explicar a necessidade de convivência e a legitimidade dessa tríade conceitual.

Neste texto analisa processos atuais de letramento, em um momento em que os movimentos sociais, novas identidades sócio-culturais (índios, quilombolas, geraizeiros, sem-terra) “ocupam” ou “invadem o latifúndio do saber”, entram nas universidades, mobilizando-as a implementar propostas de inclusão e, simultaneamente, desenvolver pesquisas para se conhecer essas “novas identidades”.

A (des)construção das (des)igualdades na literatura infantil e juvenil brasileira

Uma parte significativa da literatura infantil e juvenil brasileira das últimas décadas vem abordando temáticas que giram em torno do cotidiano das crianças e dos adolescentes, com predominância do contexto sociocultural escolar. São obras que buscam se aproximar de seus

leitores por meio da encenação de situações vividas no ambiente escolar ou dos usos que os textos poderão ter nesse contexto. É assim que nelas se observa, como marcas editoriais ou temáticas, preocupações relacionadas à transversalidade (ecologia, sexualidade, gênero, relações socioeconômicas) e à diversidade (relações étnico-raciais, cultura afro-brasileira e indígena). Tratando especificamente da diversidade, este estudo traz uma análise das respostas que a produção literária para crianças e jovens está dando para o cumprimento da legislação recente que estabelece a obrigatoriedade da temática "História e Cultura Afro-Brasileira e Indígena", no âmbito de todo o currículo escolar, em especial nas áreas de Educação Artística e de Literatura e História Brasileiras. Com base nessas respostas, são explicitadas as relações entre literatura, escola e a constituição de comunidades de leitores, a partir da materialidade discursiva das obras e, sobretudo, das suas possibilidades artísticas e literárias.

Biblioteca Escolar/Centro de Recursos Educativos: um conceito emergente no século XXI

A emergência do desenvolvimento, na sociedade do século XXI, confronta o indivíduo com diversas áreas do conhecimento que solicitam uma constante actualização e aprendizagem.

Neste contexto, é pertinente falarmos em dotar o aluno de competências, para uma integração mais eficaz no seu meio, ao nível da literacia, sem as quais corre o risco de se converter num inadaptado.

A biblioteca pode cumprir esse desígnio, por já não ser um espaço onde a informação se confina, unicamente, ao livro, mas diversificando-se em suportes tecnológicos mais práticos e, por vezes, mais aliciantes, dando origem às Bibliotecas Escolares/Centros de Recursos Educativos.

Neste espaço privilegia-se a pesquisa da informação através das Tecnologias da Informação e Comunicação a par da promoção do livro e da leitura, numa convergência de várias literacias, em que o mediador assume um papel relevante, sendo o sujeito que faculta e propicia a vinculação entre os livros e os leitores.

Desta forma, a animação da BE/CRE concretiza-se em actividades culturalmente enriquecedoras para os alunos tais como; a hora do conto, o teatro, o cinema, concursos literários, clube de leitura, que visam a promoção da competência literária, condição sine qua non para o alargar dos horizontes de expectativas da comunidades leitoras, pela criatividade e imaginação.

A literatura de recepção infantil sendo um meio através do qual se podem formar leitores competentes, pela fruição da leitura, potencia a revelação de mundos que podem surpreender o leitor ao virar de cada página, onde se esconde o estranhamento, o maravilhoso e o fantástico.

Escrever e ler “em ensaio” – uma literacia para a Vida

Aspiramos abordar o conceito de literacia, perspectivando-o através do ensaísmo como Weltanschauung para a Vida. Dilatando a amplitude de literacia através da sua etimologia (ler, interpretar e julgar criticamente), pretendemos exaltar dela a sua estrutura profunda: apre(e)nder a compreender humanamente a cronotopia envolvente.

Exploraremos um conceito de literacia não circunscrito a uma área específica, mas sim uma literacia de Vida, que parte dela visando interpretá-la. Assim, o ensaio, texto de experimentação de escrita e de leitura, escorando-se no pensamento crítico e num avanço cognitivo tentativista e dubitativo, permite tanto ao escritor como ao leitor a aquisição de ferramentas para viver na sua cronotopia. É nesse sentido que propomos o conceito de “literacia ensaística” – o ensaio, experiência titubeante e de enviesamento, é também uma literacia que mescla as potencialidades de três áreas distintas mas complementares: Filosofia, Ciência e Literatura. Ponto de partida, o ensaio assume-se como móbil de e para reflexão.

Além disso, a “literacia ensaística” desagua numa metodologia de vivência democrática, permitindo uma leitura crítico-interpretativa da sociedade em que o escritor e o leitor estão circunstanciados, propiciando uma existência democrática em cidadania crítica e consciente. Por isso, o ensaio é um texto que rascunha um escrever e um ler, porque se sustenta numa exegese da Vida, facultando a aquisição das competências capitais para “ler-interpretar” a Vida e para a “escrever-viver” na primeira pessoa.

Encararemos a “literacia ensaística” como uma anagnorisis vital, porque descoberta, porque em (re)conhecimento na Vida e para ela, tornando-se num instrumento de acção e de discussão cultural.

“O dia em que o sol caiu”: o discurso argumentativo sobre o lançamento da bomba atómica em Hiroxima

Este texto apresenta um estudo sobre o discurso argumentativo dos alunos em contexto de sala de aula. O tema histórico escolhido foi o lançamento da Bomba Atómica em Hiroxima, e o critério que a norteou foi a sua própria natureza, pois ao momento da tomada de decisão de Truman estiveram presentes diferentes argumentos. A relevância dada a este tipo de estratégia deve-se ao seu papel na promoção de competências, entre outras, que possibilitem os alunos usarem procedimentos descritivos e explicativos, necessário à compreensão e interpretação dos acontecimentos históricos particulares. Pretendemos também valorizar o envolvimento dos alunos na construção do conhecimento histórico através de estratégias activas e da prática de autoavaliação e de metacompreensão processual.

Literacia Visual Histórica: primeiras viagens e descobertas

Este simpósio tem como objectivo partilhar estudos desenvolvidos nesta área específica da Educação Histórica. Assume-se a literacia visual histórica como uma literacia de fronteira já que convoca quadros de análise e de reflexão oriundos de estudos que se centram na leitura e interpretação de imagens de diversa natureza (fotografias, pinturas, cartoons, etc.) olhados como fontes históricas primárias, e enquanto objectos artísticos, logo, mobilizando actos de fruição estética.

Os diferentes estudos pretenderam contemplar algumas das dimensões da literacia visual histórica que definimos como um processo de crescente sofisticação da percepção e interpretação, mobilizando a resolução de problemas e o pensamento crítico, e em alguns casos, promover a compreensão da intencionalidade, manipulação e perspectivada das estratégias e narrativas que as imagens apresentam e ou despoletam. Ela inclui o estudo das imagens no seu contexto histórico (fontes primárias) permitindo que os alunos se consciencializem dos seus autores e ou dos processo de disseminação (instituições sociais/actores sociais). Assim, ela inclui as seguintes acções: procurar (dar) sentidos de acordo com o contexto sócio -político, cultural, económico (heurística e contextualização histórica da fonte); compreender as estratégias que desenvolvemos quando tecemos esses sentidos com os nossos próprios sentimentos, emoções, valores, crenças (análise semântica; metacognição), e compreender a valorizar as suas características formais enquanto obra de arte (análise sintáctica) tais como, estilo, técnicas, materiais, organização do espaço, cores, etc.

Fomento de la Lectura y Escritura

Con este trabajo pretendemos dejar constancia de las iniciativas llevadas a cabo en nuestras respectivas universidades. Se plantea la necesidad de modificar los métodos y técnicas utilizados por el del docente atendiendo a los cambios tecnológicos de este siglo y a la necesidad de la lectura en todos los ámbitos académicos y profesionales, desde la intertextualidad y la creatividad que deja paso a la comprensión, a la crítica y a la creación.

En primer lugar, el profesor Mula reflexiona sobre la recepción y las marcas que dejan las obras literarias. En segundo lugar, la profesora Morote plantea viejas y nuevas fórmulas para adentrarse en la lectura de una manera gozosa para, con posterioridad, realizar una buena escritura creativa. Por último, la profesora Labrador presenta nuevos espacios de lectura con el proyecto Espere leyendo que se está llevando a cabo en la Universidad Politécnica de Valencia.

Educação em Línguas: práticas e orientações em contextos de educação de adultos – o estudo de um caso

Na esfera educativa, nos países "centrais", as últimas décadas têm-se caracterizado por uma crescente afirmação da educação/formação das pessoas adultas, movimento que deve ser associado a factores económicos, sociais e educativos, entre outros. No caso português, a fragilidade da formação de base da população tem igualmente suscitado o desenvolvimento de diversas iniciativas de educação de adultos (entre elas os Cursos de Educação e Formação de Adultos) que, ainda assim, não corresponderão à presença permanente, na esfera pública, de discursos sobre a educação ao longo da vida.

A presente comunicação apresenta parte dos resultados de um projecto de investigação que visa compreender as orientações e as práticas de educação em línguas, designadamente em língua portuguesa, presentes em cursos de Educação e Formação de Adultos promovidos por associações de desenvolvimento local, autarquias e organizações não governamentais do distrito de Braga.

Assim, serão objectivos desta comunicação: i) Analisar as práticas educativas que têm lugar em cinco instituições que, no distrito de Braga, promovem Cursos EFA, procurando evidenciar as concepções de educação em línguas que as atravessam, tendo em conta os objectivos explicitados, os conteúdos seleccionados, as opções metodológicas assumidas, os recursos utilizados e as modalidades e instrumentos de avaliação adoptados; ii) Analisar as concepções de uma amostra de formadores e formandos sobre a educação em línguas de adultos ao nível do seu âmbito, funções e conteúdos.

A literatura na infância: a recepção e o uso do acervo do PNBE/2008 no contexto de educação infantil

O PNBE (Programa Nacional de Biblioteca na Escola) é uma iniciativa governamental que tem como objetivo central a democratização do acesso dos alunos à cultura literária. O PNBE/2008, objeto da presente pesquisa, apresentou caráter inovador. Pela primeira vez, livros literários com adequação temática e lingüística destinada ao segmento da Educação Infantil (0 a 6 anos) foram avaliados, o que corrobora a atual tendência das políticas públicas brasileiras de inserir a criança em um universo que lhe é particular. As obras selecionadas encaminharam-se às escolas públicas de todo o país, entre Abril e Maio de 2008. Intenta-se, por meio da pesquisa em andamento, problematizar a influência das práticas pedagógicas no letramento literário dos educandos em escolas públicas, a partir de discussões sobre a recepção e o uso do acervo selecionado pelo programa, destinado à educação infantil. A pesquisa se apóia, como referencial teórico preliminar, em estudos de Lajolo e Zilberman, Perroti, Gouvêa, Pereira e Freire, que contribuem com a reflexão ao discorrerem sobre os diversos modelos que permearam as concepções de infância e suas influências nas práticas pedagógicas que se desenrolam na escola atual, ao dissertarem sobre a escolarização do pensamento e da leitura literários ou ao abordarem questões que se referem às práticas de uma educação libertadora. A pesquisa baseia-se, essencialmente, no enfoque metodológico das pesquisas qualitativas, utilizando-se dos seguintes procedimentos, sujeitos à mudança ao longo do trabalho: observação das aulas, registro no diário de bordo e entrevistas com os professores.

La promoción social de la lectura y la escritura en España o el telar de Penélope

Conferência de abertura do 1º Fórum Ibero-Americano de Literacias

Quizá más de uno entre los asistentes pueda sentirse extrañado por la asociación que aparece en el título de esta conferencia: la lectura y la escritura y el telar de Penélope.

Así, cualquiera que asocie la labor de la heroína por cuyo amor Ulises regresó a Ítaca como símbolo del hacer y del deshacer, de un tejer y destejer continuo, de los cambios continuos sin avanzar significativamente en un determinado sentido, podrá pensar – y por ahí viene la intención buscada por este conferenciante– si eso no sucede también con la promoción social de la lectura y la escritura.

Programa Nacional de Biblioteca da Escola: análise descritiva e crítica de uma política de formação de leitores

O texto situa e historia o processo de avaliação e seleção de obras de literatura no contexto das três últimas edições (2007, 2008, 2009) de um programa brasileiro de formação de leitores, o Programa Nacional de Biblioteca da Escola, coordenado pela Secretaria de Educação Básica, do Ministério da Educação, pelo qual se responsabilizou o CEALE da Universidade Federal de Minas Gerais.

Esse Programa destina-se à composição e distribuição de acervos para as bibliotecas das escolas públicas brasileiras que atendem aos segmentos da Educação Básica (Educação Infantil, Ensino Fundamental e Ensino Médio). Além de constituir cada acervo com diferentes categorias de livros e diferentes gêneros de textos, os processos de seleção se pautaram por três critérios

básicos: a qualidade textual, que se revela nos aspectos éticos, estéticos e literários, na estruturação narrativa, poética ou imagética, numa escolha vocabular que não só respeite, mas também amplie o repertório lingüístico dos leitores da faixa etária correspondente a cada uma das edições do Programa; a qualidade temática, que se manifesta na diversidade e adequação dos temas, no atendimento aos interesses dos leitores, aos diferentes contextos sociais e culturais em que vivem e ao nível dos conhecimentos prévios que possuem; a qualidade gráfica, que se traduz na excelência de um projeto gráfico capaz de motivar e enriquecer a interação do leitor com o livro: qualidade estética das ilustrações; articulação entre texto e ilustrações e o uso de recursos gráficos adequados aos leitores.

O perfil editorial brasileiro em três tempos: premiações, categorias e traduções

O texto apresenta e discute o perfil editorial brasileiro, no contexto do processo de avaliação e premiação da produção literária destinada a crianças e jovens no Brasil, conduzido pela Fundação Nacional do Livro Infantil e Juvenil – FNLIJ – seção do IBBY no Brasil, integrada às ações da Fundação Biblioteca Nacional/MinC – Ministério da Cultura do Brasil.

Há 40 anos a FNLIJ conduz esse processo que tem servido de parâmetro de qualidade para a produção editorial e repercutido positivamente nas escolhas dos livros que fazem parte da composição de acervos para bibliotecas públicas do país. O Gpell – Grupo de Pesquisa do Letramento Literário – CEALE/UFMG – ao qual as pesquisadoras proponentes estão vinculadas, participa formalmente desse processo desde 1996 e, em decorrência desse envolvimento institucional, vem realizando inúmeras pesquisas em torno desse acervo avaliado, sendo a mais recente “Produção literária para crianças e jovens no Brasil: perfil e desdobramentos textuais e para-textuais (2005/2008)”. Esta comunicação tem por objetivo a apresentação e discussão de um dos eixos dessa pesquisa, perfil editorial, a partir de três dimensões de análise: o estatuto conferido pelo campo editorial a essa premiação, por meio da produção inscrita em cada uma das categorias sugeridas para a premiação; as categorias predominantes (criança e jovem) – as primeiras instituídas pela Fundação – e que concentram o maior volume de inscrições e, por fim, a internacionalização de grupos editoriais brasileiros e a crescente produção na categoria tradução.

O autor da literatura para jovens: um corpo esquartejado para a academia suturar?

Este trabalho analisa os perfis do que se denomina “autor de literatura juvenil”, para verificar as causas de sua fragmentação, no Brasil, entre demandas mercadológicas e a busca de maturidade literária. Muitos autores que se assumem como escritores para jovens se deixam levar pelos apelos do mercado, em busca de uma legibilidade e leveza “juvenis”. A análise de uma série best-seller internacional, Harry Potter, serve como contraponto, na medida em que não se reduziu o número de páginas nem se pedagogizou para sobreviver no mercado globalizado de livros. A opção do escritor brasileiro Bartolomeu Campos de Queiroz é vista também como prova de que a qualidade estética pode garantir legitimidade em lugar do poder financeiro. Caberia à Universidade interpretar tais opções diversas e suas conseqüências para os jovens leitores, que afirmam não gostar de literatura. Por que as editoras publicam tantos livros banais para os jovens? Em que medida estão assumindo divulgar autores que escrevem bons romances junto aos jovens que se iniciam na leitura de livros longos, sem ilustrações? Que critérios de qualidade são esses? Que autores seriam esses? As questões referentes a uma era denominada pós-literária (Sloterdijk, 1999) são objeto complementar de reflexão neste trabalho, a partir da análise das condições de produção de ficcionistas para jovens, em sua atual crise de identidade.

O ponto é começo... O ponto é vida

A presente comunicação pretende dar a conhecer o desenvolvimento de um projecto integrador em contexto de 1.º Ciclo do Ensino Básico, com 22 crianças do 1.º ano de escolaridade. Para a sua implementação partiu-se do pressuposto de que as áreas disciplinares devem ser exploradas na pluralidade dos seus contextos e funções envolvendo a palavra como instrumento de expressão e dando forma a experiências individuais e colectivas. Este projecto veio confirmar que o conhecimento científico se constrói através de um processo de interacção da criança com os objectos do conhecimento, da partilha e da negociação de representações pessoais.

Do diário ao blog: um percurso da escrita íntima

Os diários de escrita íntima constituem tipo de texto do domínio confessional. Apresentam narrativas pessoais com características específicas ao gênero, como datação, marcas de subjetividade, escrita informal e coloquialidade. Durante muitos anos eram escritos em cadernos e guardados “a sete chaves” por seus autores para que não fossem lidos por outras pessoas. Por volta dos anos 80, surgiram as agendas de adolescentes. Aproveitando o modelo pré-definido industrialmente, as agendas eram preenchidas dia a dia, como um diário, mas com a novidade do acréscimo de elementos semióticos, como fotos, papéis de bala, recortes de revistas, entre outros. Além disso, traziam como diferencial a presença de um leitor participativo: os textos eram compartilhados com amigos, e bilhetes e comentários eram escritos nas páginas das agendas. Com o advento da Internet, o diário e a agenda se fundem no blog que aproveita os recursos do suporte virtual, para tornar o gênero interativo, hipertextual e multimídia, acentuando o processo de leitura e de escrita nos jovens produtores de blogs. A partir da teoria de Bakhtin sobre a transmutação de gêneros do discurso e do conceito de gêneros digitais de Marcuschi, a pesquisa apresenta como objeto perceber e elencar categorias pertinentes aos gêneros diário e blog para analisá-las e compará-las, na intenção de mapear um possível percurso dos diários aos blogs de adolescentes, discutindo o contraste público-privado na escrita íntima, bem como suas principais marcas lingüísticas.

Biblioteca infantil: um espaço em construção

O objetivo desta comunicação é apresentar a análise de alguns dados da pesquisa A infância, a cultura contemporânea e a literatura nos espaços de Educação Infantil realizada no município do Rio de Janeiro (Brasil). A coleta de dados foi realizada em escolas públicas e particulares, e em centros culturais em áreas carentes. A partir de entrevistas aos profissionais responsáveis pelas seções de livros e de fotografias dos espaços dos livros, a análise evidenciou que há preocupação com a seleção de livros e que as soluções para a organização dos espaços e para a classificação dos livros contam com critérios tanto funcionalistas como baseados no universo literário. A partir dos discursos analisados, tendo como referência a filosofia da linguagem em Bakhtin, Vigotski e Benjamin, concluímos que a recente história dos espaços infantis de letramento literário deve ser analisada, considerando-se as formas de apropriação das crianças para que a infraestrutura gerada pelos investimentos públicos se converta em práticas culturais

que ampliem o imaginário e a possibilidade criadora das crianças. Podemos considerar a história da biblioteca infantil no Brasil recente a partir de dois marcos nas políticas públicas: o aumento de investimentos em livros infantis a partir da década de 1930, com a expansão das escolas primárias; e a instituição, em 1997, do Programa Nacional de Biblioteca da Escola. Este programa, que visa a formação de acervos nas escolas públicas, apenas em 2008 contempla a Educação Infantil. Portanto, consideramos a pesquisa relevante para o avanço da produção de conhecimento nessa área.

O “desbaste da colecção”: um adjuvante da leitura?

O objectivo desta comunicação é demonstrar que uma colecção sujeita a um desbaste criteriosamente efectuado favorece a leitura.

A cada vez maior utilização da Biblioteca Escolar, a par com a criação do Plano Nacional de Leitura (PNL) nos 1º, 2º e 3º Ciclos e com a obrigatoriedade de se estabelecerem Contratos de Leitura, a nível da disciplina de Português, no Ensino Secundário vêm necessariamente provocar alterações na constituição, desenvolvimento e gestão dos fundos documentais. Este facto realçou a necessidade de se proceder à avaliação sistemática da colecção da BE, tornando-se fundamental a implementação de uma Política de Desenvolvimento de Colecções. Esta “Política” vai, entre outros aspectos, estabelecer princípios claros e fundamentados para a acção de selecção, encontrando-se este processo na base de duas actividades complementares: a aquisição e o desbaste.

É sobre este último procedimento e sobre as suas implicações na optimização da gestão da colecção – nomeadamente na organização do espaço e na recuperação da informação --, que nos propomos debruçar nesta comunicação. Complementaremos esta reflexão com a apresentação de um estudo empírico realizado num conjunto de bibliotecas escolares portuguesas e que teve como objectivo perceber e explicar as atitudes dos responsáveis pela colecção relativamente ao desbaste da mesma. Concluiremos, demonstrando que uma colecção sistematicamente sujeita a desbaste é uma colecção que facilita e promove a leitura.

A escrita na escola: transgressões e significados construídos pelos adolescentes

A pesquisa teve por objetivo investigar como um grupo de adolescentes, com trajetórias marcadas pelo fracasso escolar, se relacionava com a escrita em um projeto denominado “Rede do 3º ciclo”, desenvolvido pela Secretaria Municipal de Educação de Belo Horizonte/Brasil, cujo objetivo era incluir esses sujeitos na prática escolar do 3º ciclo. O projeto exibiu como principal objetivo a construção de uma nova prática de alfabetização para adolescentes, tentando criar canais reais de comunicação escrita e práticas culturais.

A pesquisa foi realizada em 2007 e acompanhou o trabalho desenvolvido por uma professora e 42 adolescentes, com idades entre 12 e 16 anos. A partir da observação participante, foram organizados e analisados sete eventos de letramento, tendo como foco os gêneros textuais produzidos em sala de aula e as ações desenvolvidas pela professora e pelos alunos no momento das produções textuais, destacando como os gêneros foram lidos e produzidos em sala de aula. Os sete eventos analisados foram assim nomeados: dando um toque de humor aos anúncios; revisitando o anúncio com humor; descrevendo um personagem, interagindo com o texto por meio da leitura de sua própria produção escrita, construindo uma história a várias mãos, orientando sobre a escrita de bilhetes e trabalhando com palavras.

Os eventos foram analisados considerando os estudos de Bakhtin, Gee, Ivanic e Kress dentre outros, destacando-se as transgressões produzidas pelos adolescentes (transformação do gênero anúncio em piada) e o uso do desenho, considerado como uma modalidade de letramento, como uma maneira de expressar e moldar o discurso.

Idéias circulantes acerca da leitura e da escrita: significações

Inspira-se em Jacques e Éliane Fijalkow - *Idées reçues: la Lecture -*, e delinea-se este estudo, tendo como ponto de partida a pergunta: identificadas e desfeitas idéias equivocadas acerca da leitura e escrita (LE) entre acadêmicos, parte dos obstáculos ao seu ensino e aprendizagem poderá ser superada? Considera-se como variáveis: a) existem em circulação no meio acadêmico idéias equivocadas sobre LE; e b) idéias equivocadas sobre leitura e escrita contribuem para manter o status quo nestes campos. Constituem-se objetivos: (re)avaliar o ensino da LE, por meio das idéias de senso comum, que perpassam as suas práticas; identificar e analisar as idéias circulantes acerca da LE. Trata-se de pesquisa qualitativa e exploratória, com duração de três anos, que se volta para cursos de graduação e busca informações a partir de questionários apresentados a alunos, professores, equipes pedagógico-administrativas e pais ou outros familiares, com o intuito de coletar-se idéias circulantes (*idées reçues* – fase I da pesquisa), de senso comum, que perpassam as temáticas/atividades de LE. Espera-se obter como resultado elementos contribuintes para superação de dificuldades acerca da leitura, que perpassam a vida acadêmica.

Programa Nacional de Avaliação de Livros Didáticos no Brasil

Este trabalho apresenta e discute a avaliação de livros didáticos de Alfabetização e Língua Portuguesa destinados ao Ensino Fundamental, no Brasil, no âmbito do Programa Nacional do Livro Didático (PNLD). O processo avaliatório é promovido pelo Ministério da Educação e tem sido desenvolvido sob a coordenação do CEALE-FAE/UFMG desde 2000. Com o objetivo de analisar e selecionar coleções didáticas a serem compradas pelo Ministério e distribuídas gratuitamente a todas as escolas públicas brasileiras, o Programa apóia-se em metodologia que vem sendo construída desde a primeira avaliação pedagógica de livros escolares, efetivada no PNLD 1997, e fundada numa concepção discursiva da linguagem. Os resultados constatados indicam o impacto positivo do Programa, com ganhos educativos, sociais e políticos, dos quais o mais visível e significativo é a melhoria da qualidade dos livros didáticos presentes nas salas de aulas da rede pública em todo o Brasil. Reconhecem-se, entretanto, aspectos políticos e pedagógicos que devem ser problematizados, tais como certa uniformização das coleções, a necessidade da presença de outros materiais didáticos na sala de aula e algumas dificuldades dos professores quanto à escolha e ao uso do material avaliado.

Jogos online para alfabetização: o que a internet oferece hoje

Neste trabalho será apresentada uma pesquisa que tem sido desenvolvida por uma equipe interdisciplinar da Universidade Federal de Minas Gerais. O seu objetivo principal é estudar a alfabetização e o letramento em ambientes digitais multimodais, buscando utilizar e criar novas interfaces para desenvolver jogos que auxiliem o processo de aquisição do sistema de escrita. Apresentaremos possibilidades que as novas tecnologias nos oferecem para repensar a alfabetização, bem como a base teórica que estamos usando para servir de suporte para os jogos que estamos desenvolvendo. Pretendemos discutir o que é alfabetizar em tempos de tecnologia digital, uma vez que os estudantes agora precisam dominar não apenas o sistema de escrita que encontramos em textos impressos, mas precisam também se familiarizar com textos

que exploram variados sistemas semióticos (multimodalidade) e novas formas de apresentação (hipertextualidade) que, por sua vez, demandam o desenvolvimento de habilidades (como a navegação, por exemplo), que vão além daquelas com as quais a escola estava acostumada a lidar tradicionalmente. A título de exemplo, apresentaremos algumas tecnologias disponíveis com as quais estamos trabalhando e como elas têm sido incorporadas em jogos de alfabetização já desenvolvidos pelo grupo.

Portugal

O trabalho do leitor na leitura inferencial

A apresentação reporta-se a uma experiência pedagógico-didáctica resultante da operacionalização de uma metodologia de leitura inferencial, experiência que esteve na origem da elaboração de um trabalho monográfico apresentado no curso de doutoramento em Literatura Portuguesa (investigação e ensino) da Faculdade de Letras de Coimbra.

Sabendo-se, no plano teórico, que operações semiológicas de leitura como a inferência e a abdução favorecem o desenvolvimento de competências de leitura e permitem um conhecimento mais consciente dos usos da linguagem, no texto literário e fora dele, dispusemo-nos a realizar um programa de leitura para viabilizar a sua operacionalização explícita em contexto pedagógico. A motivação pessoal para levarmos a cabo esse programa de leitura deve-se ao contexto em que nos situamos como professora de Português face aos problemas do ensino-aprendizagem de estratégias de leitura. Neste sentido interrogamo-nos: que importância se atribui ao uso consciente da linguagem nas práticas pedagógicas de leitura? Em que medida uma leitura centrada no ensino explícito de processos cognitivos e intelectuais (de que a inferência é um exemplo) pode contribuir para o desenvolvimento do pensamento crítico dos leitores?

Com base num fragmento de *Os Maias*, de Eça de Queirós, é analisada essa perspectiva inferencial, centrada num trabalho efectivo de aproximação ao texto literário por parte do leitor que desenvolve, deste modo, competências intelectuais de leitura. As leituras efectuadas, inseridas no processo semiológico de configuração de sentidos, promovem um constante posicionamento crítico face ao texto.

Brasil

Colonização: eis a questão. Reflexões acerca do letramento em História

No presente trabalho pretende-se discutir o significado da leitura e da escrita para a aprendizagem da História com crianças de 10 e 11 anos. Ao mesmo tempo, procura-se colocar em evidência as contribuições do Ensino da História para o desenvolvimento do letramento a partir da produção de um dos conceitos chave da História do Brasil: a colonização portuguesa.

Através do diálogo presente/passado, objetiva-se perceber como os alunos lêem diferentes gêneros de texto: linguagens escritas, visuais presentes em vídeos, fontes iconográficas e materiais que abordam a temática em questão, discursos com pontos de vista diferenciados (do colonizador, do colonizado, dos primeiros donos da terra, dos africanos trazidos para o trabalho) e depoimentos de historiadores atuais enfocando a colonização do Brasil. Parafraseando Foucault (1994) os educandos poderão “saber o que se passa na cabeça do outro, para compreender melhor o que se passa na (deles)”. Poderão ainda estabelecer um compromisso de indagação com as próprias marcas de identificação e distinguir elementos díspares, ou dialeticamente relacionados nas narrativas observadas.

No trabalho analisar-se-ão atividades nas quais os alunos investiguem, comparem, estabeleçam relações e socializem conhecimentos pela interação discursiva, lembrando com Lahire (2002), que “para se apropriar dos saberes escolares, o(s) aluno(s) deve(m) passar por um conjunto de exercícios de linguagem”.

Finalmente, tenciona-se avaliar como os estudantes irão se apropriar dos saberes provenientes das interações discursivas e das leituras anteriores no momento da sistematização escrita. Demonstrarão que a aprendizagem da leitura da narrativa histórica passa pelo desenvolvimento da habilidade de produzir suas próprias narrativas?

Brasil

Entre a expectativa de aprender a ler e a escrever e a convicção de que esse tempo já passou: o letramento na perspectiva de dois garimpeiros/agricultores

O trabalho apresenta concepções de alfabetização, letramento e exclusão de dois adultos analfabetos, residentes em uma comunidade rural “marcada” pela exclusão, pela fome, pela miséria e por uma riqueza cultural que não pode ser medida com o parâmetro da cultura escrita, que é a cultura de prestígio. O município onde a pesquisa foi realizada se identifica por sua religiosidade; pela forte presença das benzedeadas, artesãos, músicos, cantores, contadores de histórias, corais... por crenças, tradições, rituais expressos e transmitidos fundamentalmente por meio da oralidade. Este trabalho apresenta uma parte das análises empíricas realizadas em pesquisa de doutorado de caráter etnográfico, realizada entre 2000 e 2003. Procura-se apreender e compreender concepções e expectativas em torno do letramento por parte de dois adultos que, embora compartilhem as marcas da exclusão e o valor que atribuem à palavra escrita, divergem quanto às percepções de seu direito subjetivo de aprender a ler e a escrever na vida adulta. Duda (49 anos) desejava aprender e lembrar o pouco que sabia sobre leitura e escrita; Sr. Clemente (70 anos) não queria se “assujeitar” a esse aprendizado, na certeza de que seu tempo já havia passado e de que poderia viver assim o pouco tempo que lhe restava...

Avaliação da alfabetização com crianças de 8 anos: experiência no estado de Minas Gerais, Brasil

Neste trabalho, abordamos um processo de avaliação em larga escala – realizado em maio de 2008, em Minas Gerais, estado da região sudeste do Brasil –, a qual teve por objetivo identificar níveis de aprendizagem em alfabetização e letramento. Tal avaliação contou com a participação de 272.443 alunos de 8 anos do 3º ano do Ensino Fundamental, matriculados em escolas públicas. Essa avaliação faz parte de um programa de avaliação do Estado de Minas Gerais, denominado Programa de Avaliação da Alfabetização – PROALFA, que, desde o ano de 2005, avalia crianças de 7 a 9 anos. A avaliação aqui focalizada tem por objetivos diagnosticar, regular, (re)definir rumos, detectar a distância ou a proximidade entre o que é e o que deveria

ser o ensino e indicar intervenções necessárias. Também, objetiva subsidiar propostas de formação de professores. Os itens da avaliação foram elaborados a partir de uma matriz de referência, composta por descritores de habilidades relativas a três eixos do processo de alfabetização e letramento: aquisição do sistema de escrita, leitura e escrita. Os resultados da avaliação, os quais serão apresentados neste trabalho, foram analisados pedagogicamente com o subsídio do tratamento estatístico realizado.

Ler para escrever a partir de várias fontes: um estudo da sua abordagem no Programa de Língua Portuguesa vigente em Portugal e em manuais publicados a partir da sua implementação

“Ler para escrever” com vista à elaboração de sínteses sobre um tema a partir de várias fontes é uma tarefa complexa que activa mecanismos de compreensão e de produção textual, podendo levar ao desenvolvimento da literacia crítica na medida em que esse processo, aliado ao conhecimento prévio, pode conduzir à competência de transformação do conhecimento a partir da recombinação de ideias, reordenamento e categorização da informação, resultando numa nova lógica discursiva.

Considerando o crescente interesse de investigação no domínio da tarefa híbrida de “ler para escrever” para o desenvolvimento da literacia crítica, o presente trabalho teve como objectivo fazer uma reflexão sobre a competência de síntese a partir de várias fontes e analisar como se processa a sua abordagem no novo programa de Língua Portuguesa e em manuais elaborados a partir das suas linhas orientadoras.

O estudo das orientações teóricas sobre a matéria presentes no novo Programa e a análise detalhada da sua abordagem teórico-prática nos cinco manuais de Língua Portuguesa mais adoptados permitiram verificar o pouco espaço atribuído à instrução explícita da síntese sobre um tema a partir de várias fontes no contexto do Ensino Secundário português. Deste modo, os resultados obtidos forneceram importantes indicadores para melhor compreender as dificuldades dos alunos e melhor actuar em sala de aula, além de apontarem também para a necessidade de reflexão sobre o redimensionamento da importância da leitura-para-escrita a partir de várias fontes em contexto escolar.

Projecto Desafios em Português – desafiar os jovens para a leitura e a escrita

O projecto Desafios em Português, concebido por dois docentes da Escola Secundária Padre Benjamim Salgado com o intuito de elevar os níveis de literacia dos alunos, consiste na organização, divulgação, incentivo e apoio à participação dos jovens em concursos de língua e

literatura portuguesa, a nível de escola, ou de âmbito regional, nacional e internacional. Estes desafios, lançados a alunos e até a ex-alunos da escola, levam-nos a ler e escrever mais assiduamente, despertando neles o gosto da leitura e da escrita.

O recurso às TIC tem contribuído decisivamente para o entusiasmo e elevada participação dos estudantes. O projecto tem uma página de divulgação na plataforma Moodle da escola, e para certas iniciativas criaram-se blogues educativos, que, no caso do Concurso Nacional de Leitura, funciona como incentivo à leitura das obras a concurso e como orientação e apoio dos alunos. Este blogue (www.cnlespbs.wordpress.com), em que os jovens redigem comentários à medida que vão lendo os livros, permite desenvolver, para além das competências de língua materna, as de reflexão e de espírito crítico, e até o sentido de entreatajuda, funcionando como espaço de intercâmbio, colaboração e debate. Assim, aliando o uso das TIC à prática lúdica da leitura e da escrita, este projecto pretende contribuir para que, numa escola de um meio sociocultural desfavorecido, a literacia “floresça”.

Conceito e Práticas de Literacia em Gramáticas Escolares: o caso das gramáticas portuguesas publicadas após a TLEBS

Assumindo-se a Literacia como “a minimal ability to read and write in a designated language, as well as a mindset or way of thinking about the use of reading and writing in everyday life” (Hodges, 2000: 19) e aceitando, à partida, a visão tridimensional da Literacia (operacional, cultural, crítica) referenciada por Lankshear & Knobel (2003: 10-11), o que, nesta comunicação, se pretende é avaliar as formas como, em gramáticas escolares portuguesas, se enunciam conceitos próximos da literacia e/ou se implementam possíveis práticas de literacia.

Com esta análise de conteúdo, desenvolve-se um novo olhar sobre os discursos e as descrições das mais recentes gramáticas do Português publicadas entre 2005 e 2008, as quais foram reunidas num corpus pelo facto de terem sido editadas na sequência da Nova Terminologia Linguística.

Assim, quer na análise dos discursos quer na confronto das descrições das gramáticas, procurar-se-á desvendar conceptualizações diferenciadas acerca da gramática, da língua, da comunicação e das literacias, no sentido de atingir os objectivos específicos delineados para este estudo: a) Categorizar os discursos e as práticas descritivas dos gramáticos sobre as funções (linguística ou instrumental) do saber gramatical; b) Avaliar a hipótese de as gramáticas constituírem instrumentos de promoção de literacias, nas suas dimensões técnica, cultural ou crítica.

Em termos das conclusões, avaliaremos se os gramáticos enunciam ou privilegiam uma visão mais linguística ou mais instrumental do ensino da língua e do conhecimento da linguagem, tendo por referência as funções gramaticais enunciadas em Silva (2008: 260).

Concepções de leitura em práticas de letramento na educação de jovens e adultos do meio rural

Nesta apresentação examinamos as concepções de leitura de quatro professoras que atuam nas séries iniciais, na modalidade Educação de Jovens e Adultos, em três comunidades rurais do município de Caeté, na Região Metropolitana de Belo Horizonte. A análise focaliza as práticas escolares de leitura e as expectativas e representações das professoras sobre a escrita, em particular sobre a leitura, na tentativa de estabelecer relações entre as práticas presentes na escola e o contexto cultural específico no qual estão localizadas essas instituições escolares. Inicialmente, é feita uma descrição dos usos e funções do texto escrito, utilizado em sala de aula, assim como são expostas as motivações para a seleção desse material e como se dá o acesso a ele. Os dados analisados fazem parte de investigação de abordagem qualitativa, em que foram exploradas diferentes estratégias, como observação das aulas, anotações em diário de campo e entrevistas semi-estruturadas. Os resultados obtidos apontaram que o trabalho de leitura, realizado pelas professoras, apresentava lacunas, como falta de clareza nos objetivos,

pouca diversidade de textos, não planejamento das atividades e inadequação dos textos selecionados aos interesses dos alunos. Pelo estudo, constatou-se que o objetivo principal da leitura, perseguido pelas professoras, era a decodificação. Após análise dos resultados, tornou-se evidente a necessidade de se propor um programa de formação continuada de qualidade, que atenda às demandas, às necessidades e aos interesses de professoras que atuam nesse segmento de ensino.

O prazer de ler literatura: a perspectiva pedagógica

Esta comunicação propõe reflexões acerca da recepção da literatura em ambiente de ensino, acerca das práticas que ensinam a construção da cidadania e que podem despertar o prazer de ler literatura. Considerando as perspectivas de dialogismo de Bakhtin e a estética da recepção de Jauss, pretende-se demonstrar que é possível despertar o gosto pela leitura literária e construir uma educação pela literatura.

Livro Didático lido em sala de aula de História

O que tem sido, para os alunos, o ato de ler a escrita escolar da história quando mediados pelo professor em salas de aula?

Aisenberg, em seu artigo “Uma aproximación a la relación entre la lectura y el aprendizaje de la historia” (2005), lança aos professores de História uma provocação: eles não ensinam seus alunos a lerem os textos, eles simplesmente utilizam os textos para que seus alunos localizem informações. Concordando com Lautier (1997), esta mesma autora diz que estes usos dos textos correspondem a um modelo de ensino de História que dissocia o ato de ler em duas fases temporais: primeiro a incorporação da informação e, depois, a interpretação e a explicação. E avança o seu raciocínio dizendo que a leitura não é considerada como um trabalho inerente à construção do conhecimento histórico, somente oferece vestígios para ele e que quem assim concebe a leitura considera que o sentido do texto já está dado. Portanto, nessas situações, o texto encontra-se fora do leitor cabendo a ele, apenas, extrair dos textos as informações nele contidas.

Esta perspectiva defendida por Aisenberg nos sugere buscar outros elementos que venham contribuir para a construção de uma perspectiva teórico-metodológica com vistas a orientar investigações e ações docente no campo das práticas de leitura em História. Nesse sentido, assumimos uma premissa: existe uma diversidade de práticas de leitura a ser conhecida, uma vez que os leitores - professores e alunos - são diversos e lêem em condições singulares e diversas (Batista, 2001; Andrade 2006, Siman e Andrade, 2008; Siman 2007, Coelho 2006, Rocha, 2009).

A escolarização e as práticas sociais de leitura e escrita: a análise dos educandos adultos da Escola Básica

Este artigo traz reflexões desencadeadas a partir de uma investigação, realizada no Projeto de Ensino Fundamental de Jovens e Adultos da Universidade Federal de Minas Gerais (Brasil), sobre os modos como pessoas adultas em processo de escolarização básica analisam suas práticas de leitura e escrita, percebem as experiências de letramento vivenciadas na instituição escolar e avaliam seus possíveis impactos naquelas práticas. A análise de quatro entrevistas semi-estruturadas com alunos da Educação de Jovens e Adultos sugere que os sujeitos

consideram a diversidade de suas práticas de leitura e escrita e reconhecem, mas relativizam, o papel da escola na promoção de práticas letradas de uso social. Os entrevistados identificam, ainda, a ampliação e o refinamento de suas práticas de leitura e escrita, desencadeados pelas demandas e pelas oportunidades da vivência escolar. Apontam, porém, para uma certa independência de suas práticas de letramento cotidianas em relação às da escola, independência esta conquistada em decorrência da experiência escolar ou preservada apesar dela.

Lecturas (pre)juiciosas

Mostramos dos ejemplos de buena práctica en el área del fomento de la lectura crítica. Crítica entendida como: selección cualitativa de la literatura a leer, y como análisis de los contenidos de lo que se lee. Son dos proyectos de distinta envergadura y duración, llevados a cabo en una biblioteca especializada de Liubliana, Eslovenia, uno dirigido al público en general y otro dirigido a la población estudiantil y adulta. En el primer caso, que acentua la importancia de la lectura cualitativa, se presenta la organización y realización de una lectura ininterrumpida bilingüe (castellano/esloveno) de una obra literaria de valor universal: el Don Quijote. El acontecimiento (desarrollado a lo largo de 51 horas), contó con la participación de casi 250 lectores (estudiantes y destacados especialistas de la obra). El segundo proyecto (Philólogos) dirigido a promover una lectura crítica de textos, se ha llevado a cabo en forma de ciclos de 8 veladas durante 3 años académicos consecutivos, despertando un amplio interés, que no ha menguado con el tiempo. El objetivo de la actividad fue la lectura y el análisis atento y minucioso de obras relevantes (clásicas o contemporáneas) de la filosofía, la literatura, el psicoanálisis, la teología y el arte, guiados por una pregunta rectora y moderados en cada oportunidad por dos especialistas del área a tratar. Fragmentos de las obras tratadas, con su presentación, análisis y discusión, fueron editados al término de cada ciclo como volúmenes independientes y han merecido una acogida favorable por el público lector en general. Ambos proyectos condujeron a un diálogo intercultural activo, por lo que abrieron un espacio amplio para la colaboración y el apoyo de instituciones y organizaciones gubernamentales y no-gubernamentales.

Os conceitos de alfabetização e de letramento: o discurso e a prática de professoras alfabetizadoras em uma escola municipal de Belo Horizonte/Brasil

Esta pesquisa de natureza qualitativa caracteriza-se como um estudo de caso desenvolvido com duas professoras alfabetizadoras que atuam na rede municipal de Belo Horizonte/MG/Brasil. Tem como objetivos compreender os pressupostos teóricos e metodológicos que fundamentam as práticas de alfabetização e letramento, estabelecendo relações com as ações e os processos de formação inicial, continuada e em serviço dessas professoras; analisar o discurso sobre o processo de alfabetização, identificando o que as professoras falam e o que fazem nesse processo. A fundamentação teórica se sustenta nos estudos sobre a psicogênese da língua escrita e os voltados para a aquisição do sistema de escrita, letramento, formação de professores e análise do discurso, especialmente os estudos de Bakhtin, Ferreiro, Soares e Tardif. Os procedimentos metodológicos adotados compreendem entrevistas com as professoras, observações e filmagens em sala de aula. Os resultados parciais demonstram que há momentos em que se prioriza de forma isolada, ora a alfabetização ora o letramento, e momentos em que essas práticas se apresentam de forma articulada. O modo como esses conceitos se efetivam na sala de aula e são construídos evidenciam as diferentes experiências profissionais e os processos de formação vivenciados.

A Polifonia na Construção do Discurso Docente acerca das Concepções de Alfabetização

O presente trabalho tem por objetivo analisar o discurso dos professores da rede municipal de educação da cidade de Barbacena - MG, a fim de compreender as concepções de alfabetização presentes no discurso desses professores. A discussão será feita numa abordagem interdisciplinar entre a área da educação e a teoria dos discursos. Nossa proposta de análise visa a destacar nos referidos discursos as diversas vozes que os perpassam e suas funções. Como referencia teórico-metodológico, adotamos uma perspectiva que considera a alfabetização e o letramento como práticas sociais e culturais, condicionadas pelo contexto no qual se realizam, marcadas por relações de poder. Tais práticas devem ser vistas numa perspectiva crítica e emancipatória, conforme nos ensina Freire. A pesquisa divide-se em duas etapas: inicialmente investiga-se o perfil dos participantes com o intuito de levantar dados referentes à formação desses professores, tempo de experiência, organização do trabalho docente, etc; a segunda etapa direciona para a elaboração de um texto em que os sujeitos pesquisados esboçam sua concepção de alfabetização. Para se desvelar as vozes constituintes desses discursos apoiamos-nos além dos estudos sobre alfabetização e letramento, nas categorias de heterogeneidade constitutiva e marcada de Authier Revuz. Com os resultados, esperamos contribuir para o avanço na compreensão da forma como os professores pensam e elaboram suas práticas pedagógicas de alfabetização.

Leitura significativa no ensino superior: quais as estratégias de ensino do professor?

O trabalho aborda a leitura a partir de conceitos da teoria de texto e da psicologia. Mostra que ler não é apenas decodificar, mas, sobretudo, compreender, interpretar, inferir. Professores e alunos dependem do texto em quaisquer disciplinas do currículo, como veículo de idéias, informações e cultura. Em um mundo globalizado com as mais sofisticadas tecnologias, o texto continua com seu valor, permeando toda a comunicação acadêmica, empresarial e social. Pesquisas apontam que os estudantes, incluindo os universitários, no Brasil e em outros países, lêem pouco e pouco entendem o que lêem. As informações relativas à leitura na universidade, de que o professor dispõe são poucas, assim: Que razão o professor tem ao usar textos no processo de ensino e aprendizagem? Que orientação oferece? Como discute em classe o conteúdo do texto supostamente lido pelo aluno? Realizamos um estudo de traço qualitativo num curso de formação de educadores. Analisamos os dados e evidenciamos entre outros aspectos, que os professores consideram o texto um elemento fundamental, no direcionamento e estruturação da discussão. Na orientação oferecida ao texto indicado para a leitura, confirmou-se a tese de que os professores usam práticas de leitura adequadas do ponto de vista da teoria de texto, e da psicologia, porém de forma assistemática. A forma como os professores discutem em classe, o conteúdo do texto caracterizou-se pela reprodução. Entendemos que cabe ao professor a mediação no processo de tornar o aluno leitor competente, por meio de uma concepção de leitura que ponham em contato o texto, o autor, o leitor.

La poesía en educación infantil desde la perspectiva de la intertextualidad

La propuesta que se presenta para ser incluida en el 1er. Foro Iberoamericano aborda una experiencia en un aula de Educación Infantil de 4 años de una escuela pública en la provincia de Jaén (España). Dicha experiencia se centra en el contacto de la población infantil con la

narrativa poética como alternativa válida para el desarrollo de las distintas competencias básicas del alumnado de esta etapa educativa, de manera muy especial, la competencia en comunicación lingüística (expresión y comprensión oral, lectura y escritura) y en el uso de las Tecnologías de la Información y la Comunicación. En la presentación se mostrarán las secuencias didácticas desarrolladas en el aula, así como, las producciones realizadas por el alumnado en relación con el uso de los distintos lenguajes y los criterios con que las mismas han sido evaluadas.

A Biblioteca Escolar e o desafio da Literacia da Informação

A explosão informacional associada ao advento das Tecnologias de Informação e Comunicação configuraram uma nova sociedade onde a informação, caminho para o conhecimento, ocupa um lugar cimeiro. As mudanças significativas na produção, distribuição e troca de informação exigem dos cidadãos competências em informação essenciais não só para a sua realização pessoal e profissional, mas também para o exercício pleno da cidadania. A literacia da informação, enquanto capacidade para aceder e usar, de forma intencional e efectiva, a informação de variados suportes, constitui-se como a competência de sobrevivência para os cidadãos na Sociedade da Informação.

Reflecte-se sobre a missão da Biblioteca Escolar - estrutura educativa e núcleo de organização pedagógica da escola - e o papel nevrálgico do professor bibliotecário na promoção e desenvolvimento da literacia da informação. Exploram-se ainda, a partir da Biblioteca Escolar, e num quadro de um programa integrado e abrangente, as diferentes possibilidades e contornos que essa promoção pode assumir.

A configuração de gêneros da literatura para crianças e jovens no Brasil

Neste texto apresenta-se o subprojeto de pesquisa do projeto “Produção literária para crianças e jovens no Brasil: perfil e desdobramentos textuais e para-textuais” que tem como propósito o estudo da produção literária em livros de literatura para crianças e jovens lançados no Brasil a partir de 2005, e submetidos à avaliação pela Fundação Nacional do Livro Infanto-Juvenil (FNLIJ). Dentro desse amplo contexto de produção, delinea-se o quadro dos gêneros literários mais publicados e como eles se configuram quanto à forma, à temática e ao endereçamento dos textos. Algumas questões mais específicas se colocam como fundamentais: como se distribuem nesse universo poesia e narrativa? Há predominância de gêneros? Quais são os gêneros mais recorrentes? Como categorizar gêneros híbridos? Quais as dificuldades encontradas na categorização? Qual a relevância da categorização por gêneros da LIJ? Haveria diferença genérica entre a literatura que se produz para crianças e jovens? Quais as relações entre a configuração do projeto gráfico editorial e a categorização por gêneros? Quais as relações entre as ilustrações/imagens e o gênero proposto? Essas são algumas das questões exploradas neste subprojeto, segundo aportes teóricos dos estudos de gêneros textuais/discursivos (Bakhtin, Marcuschi, Bazerman, Bronckart) em diálogo com as teorias literárias dos gêneros (Bakhtin, Todorov), buscando aproximações que possibilitem a compreensão do quadro que se quer evidenciar.

Contribuição dos tradutores online para o desenvolvimento de competências linguísticas e cognitivas

Uma vez que os alunos têm a tendência a “consumir” na Web o que primeiro lhes aparece, sem espírito crítico, o principal objectivo desta investigação foi estudar a evolução de um conjunto de alunos desde o início até ao final do ano escolar, em termos de pensamento reflexivo, operacionalizado no uso crítico do tradutor online.

Assim, este trabalho pretendeu aferir/desenvolver as competências necessárias à elaboração de trabalhos escolares de qualidade através do tratamento de informação, da tradução, com apoio de tradutores online, e do sentido crítico de correcção e adequação.

Tratou-se de um estudo de caso (feito no âmbito da elaboração da Tese de Mestrado), realizado com 13 alunos do 8º Ano de escolaridade em Laboratório de Línguas na Escola E.B. 2,3 de Ribeirão, durante um ano lectivo (2008/09).

Partiu-se da necessidade de fazer com que os alunos saibam pesquisar, seleccionar e trabalhar a informação que obtêm na Web.

As conclusões salientam o contributo positivo que os tradutores online, devidamente enquadrados na prática pedagógica, podem ter para o desenvolvimento de competências linguísticas e cognitivas.

Literacia multimodal: o contributo da semiótica social para as multiliteracias

A contribuição principal da semiótica social para o estudo da literacia é o alargamento desse conceito para literacia multimodal e para multiliteracias, as quais inspiraram os estudos multimodais sobre o discurso e particularmente sobre o texto. Fairclough (1992); Kress e van Leeuwen (1996, 2006), entre outros, defendem que as práticas discursivas, por sua natureza social, refletem as mudanças da escrita, tornando-se a instância preferencial para estudar as novas literacias multimodais. A Teoria Multimodal do Discurso (TDM) concentra seus estudos nas semioses sociais que se manifestam em teorias linguísticas e em teorias sociais, em uma perspectiva transdisciplinar, as quais podem efetivamente contribuir para o avanço dos estudos das novas literacias. A escolha do método da TDM permite-nos decompor os discursos multimodais a fim de entender o funcionamento discursivo das materialidades semióticas de qualquer texto. Aqui, investigamos os textos midiáticos e os didáticos. A teoria multimodal procura descrever tanto as escolhas possíveis quanto aquelas realmente efetivadas nos contextos particulares. O pesquisador multimodal procura explicar/interpretar, por exemplo, por que determinadas imagens ocupam lugar central, à direita, à esquerda, em baixo, em cima, ou às margens do papel, ou então o relevo, tamanho das letras, palavras escolhidas, intensidade de cores. A vertente multimodal procura identificar as várias linguagens presentes e suas possíveis combinações em signos, considerando a materialidade presente como discursos, que se articulam para estabelecer determinados significados e excluir outros. A análise destas novas formas de literacia constituirá o foco desta discussão.

Leitores de hoje: há esperança; é preciso ser otimista

Este trabalho foi realizado tendo como fundamento um considerável número de textos produzidos por jovens e adultos, candidatos de um concurso público. Dentre os variados aspectos abordados por eles acerca da importância do ato de ler, percebeu-se em muitos uma atmosfera de otimismo e esperança de que a leitura seja, realmente, a mola propulsora de crescimento individual e coletivo. Essa mostra será passível da leitura que se deseja expor.

Wilson, Victoria

A construção da escrita acadêmica: um constante desafio

No processo de construção do discurso/gênero acadêmico na universidade, os estudantes esforçam-se por seguir as orientações fornecidas pelos professores. Estes, por sua vez, na tarefa de orientar, trabalham com modos de dizer aceitáveis e desejados na academia, muitas vezes, privilegiando a estrutura composicional no trabalho com os diversos gêneros: resenhas, resumos, fichamentos, artigos, monografia. Ao lado, porém, de modos enraizados de dizer padronizados e homogêneos, convive um discurso plural e heterogêneo, refletindo modos de conceber a escrita e o conhecimento, que entram em conflito, competição e tensão com as novas práticas de linguagem que circulam nesse contexto. Ou seja, diante de uma nova situação de aprendizagem, os alunos são levados a reconhecer linguagens sociais mais complexas, a organizarem seu discurso de modo especial, em atenção a essas práticas, o que implica uma atividade social particular que orienta e dá forma e corpo a esse tipo de aprendizagem. Portanto, baseando-me no modelo ideológico de Street (1988) e no paradigma indiciário de Ginzburg (1989), proponho uma abordagem discursiva (Bakhtin) a fim de observar (ou captar) os pequenos detalhes lingüísticos e discursivos que tornam o gênero acadêmico produzido por alunos um gênero com características peculiares que revelam estratégias apre(e)ndidas assim como expressam as relações que se estabelecem entre o sujeito e a escrita.

A arte na construção do espaço de vivência: uma nova forma de ler o mundo

Dulce Helena Couto Alves

Belo Horizonte, Minas Gerais, Brasil

1. Introdução

Grande parte da população brasileira, oriunda de famílias em situação de vulnerabilidade, é atingida por uma questão social que se intensifica a cada ano: a falta de perspectivas para realização de projetos de vida.

Sabemos que a maioria dos alunos que concluem o ensino médio nas escolas públicas brasileiras sai praticamente sem uma base sólida acerca do domínio de conteúdos e compreensão de conceitos imprescindíveis para a continuidade nos estudos ou mesmo na inserção no mercado formal de trabalho.

Sabemos também que a base da educação, muito antes das escolas se inicia no bojo das famílias. Mas como podemos esperar que os pais ou responsáveis por esta nova geração, com histórico de analfabetismo, possam proporcionar um ambiente estimulante para a educação formal de seus filhos? Como uma mãe, que mal cursou as primeiras séries iniciais e precisa trabalhar fora para garantir o sustento do lar pode promover em seu espaço de vivência doméstico um ambiente que incentive seus filhos a sonharem e a desejarem uma realidade diferente daquela que estão inseridos?

Considerando que o território de vivência possui uma função imprescindível no desenvolvimento da cultura de quem nele vive e considerando que este território apresente uma realidade pautada na hostilidade, na violência e na falta de perspectivas perante um futuro, como podemos, a partir de projetos sócio-educativos, estimular a transformação dessa realidade?

Diante de uma realidade, como a qual citamos nas considerações acima e que atualmente assola 75.000 famílias referenciadas nos territórios de abrangência dos programas sociais do município de Belo Horizonte tivemos a necessidade de desenvolver o projeto *“A arte na construção do espaço de vivência - uma nova forma de ler o mundo”* experiência contida nesse relato.

2. Desenvolvimento

A experiência sócio-educativa foi desenvolvida com 50 famílias do bairro Conjunto Paulo VI, localizado na região nordeste da cidade de Belo Horizonte/Minas Gerais/Brasil. Dentre o público participante pode-se contar com membros de uma mesma família como esposo e esposa, mãe e filho, avó e neta, madrinha e

afilhada... todos envolvidos numa teia de relação que transcendia os laços consangüíneos, mas que visivelmente almejavam uma forma ainda não conhecida para eles se compreenderem.

Como recurso metodológico utilizamos a arte nos seus mais variados procedimentos. Acreditamos que tal recurso utilizado nos projetos da Assistência Social alavanca as ações de desenvolvimento das famílias tendo em vista as lacunas deixadas por processos educativos inacabados ou mesmo, enfraquecidas pela própria realidade na qual as famílias estão inseridas. A via pela arte é um exercício constante de liberdade e disciplina e potencializa as iniciativas no cumprimento do objetivo de fortalecer o potencial de cada família, a partir de sua própria história.

Por ser a mais ancestral forma de comunicação, a arte é capaz de desencadear processos de aprimoramento de práticas humanas numa abordagem, não só individual, mas também coletiva, perpassando do espaço real para o fictício, do campo científico para o poético. Além dessas possibilidades, tal linguagem possibilita diferentes formas de leitura, promovendo interpretações variadas, a partir de um mesmo procedimento ou de um mesmo conceito. Portanto, ler o mundo por meio da arte possibilita ao leitor, independentemente de seu grau de instrução e condição social, utilizar um instrumento singular de experiência de liberdade.

Por meio da literatura, dança, música, teatro, poesia, artes visuais e cinema, linguagens universais, os leitores tornam-se capazes de expressar pensamentos e conceitos que podem gerar produções, anteriormente, não possibilitadas por outros meios. Tais produções podem se suceder em forma de textos distintos, idéias, conceitos ou mesmo desencadear um processo que irá promover o desenvolvimento da sensibilidade e criatividade desses leitores.

Considerando todas essas possibilidades que a arte como linguagem nos oferece a utilizamos como meio para desenvolver processos de alfabetização familiar. Vale salientar que o analfabeto em nosso ponto de vista não se restringe apenas a quem não sabe ler, escrever ou fazer contas, mas também aquela parcela da população que detém os conhecimentos básicos, mas que não sabe aplicá-los, que não possuem posicionamento crítico e político, perante problemas do cotidiano, que não sabem defender seus pontos de vista, que ignoram sua própria história, que desconhecem seus direitos ou que não conseguem elaborar conceitos por mais simples que pareçam.

Diante do grau de deficiência causado por anos de defasagem no processo de educação formal e também pela falta de estrutura familiar no qual nossa realidade está inserida, iniciamos o trabalho de educação familiar, a partir da

própria realidade e estrutura encontrada. O trabalho foi desenvolvido durante um período de três meses, com carga horária de 80 horas com um encontro semanal.

As oportunidades educativas foram compostas a partir de um percurso formativo que abordou pesquisa sobre a história das famílias e do território, reflexão sobre o valor dessas histórias, formas de composição das histórias e meios de materialização das mesmas.

A princípio, foram apresentadas várias formas de referências, tendo a arte brasileira como via. Algumas referências contavam histórias de vida, como é o caso da composição musical “*Sete Marias*” de Sá e Guarabira que narra o destino de sete mulheres. Outra contava a história de uma família de retirantes da seca, apresentada por meio da pintura “*Os retirantes*” do pintor modernista brasileiro Cândido Portinari. Outra forma de referência de história familiar foi apresentada por meio da leitura da obra literária “*Faca Afada*” do escritor brasileiro Bartolomeu Campos Queiroz, na qual o personagem principal da história faz uma leitura equivocada em relação às verdadeiras intenções de seus pais.

Utilizamos também referências da literatura mundial, como a obra “*A Santa*” do escritor colombiano Gabriel Garcia Márquez. Em sua obra, o escritor narra a saga de um pai que percorre grande parte do mundo carregando um estojo de madeira com o corpo de sua filha, em busca da canonização para a mesma. Quem era o santo, a menina ou o pai? Nessa vertente literária, o grupo teve a oportunidade, não apenas de conhecer a obra, mas também de dialogar acerca das distintas formas de sacrifícios e desafios que cada um enfrentou ao longo de suas vidas.

Na poesia, o grupo teve acesso aos poemas do escritor chileno Pablo Neruda, no qual foi apresentada a obra “*Canto Geral*” sobre a qual o poeta nos apresenta também as mazelas sociais de seu país. Em todas as referências apresentadas, o grupo foi percebendo e se descobrindo como seres universais, mesmo não compreendendo, com profundidade, as questões culturais ou lingüísticas de cada cultura. Os participantes sempre identificavam pontos em comum com a cultura estrangeira e se mostravam como sujeitos de uma mesma condição humana, contemplados por uma riqueza poética que os impulsionavam a desejar cada vez mais fazer leituras do mundo, por meio da busca pela arte.

As atividades propostas para o grupo foram se intensificando a cada encontro e as produções literárias e artísticas foram surgindo, como resposta ao estímulo proposto. Essas eram permeadas por elementos que recorriam a cargas afetivas e semânticas variadas, a pontos de memórias que recordavam um passado que em alguns momentos se desaguava no presente e a construções que remetiam ao imaginário, a sonhos não realizados ou a desejos contidos.

Várias vertentes temáticas foram abordadas com os participantes e exemplificamos uma intitulada “*Retrato de Família*”. Nesta oportunidade, realizamos previamente atividades de pesquisa e investigação sobre a constituição familiar de cada um. Várias histórias foram escritas sob a forma de narrativas, como o trecho a seguir extraído de uma das biografias:

(...) Nasci em uma família de cinco irmãos , sendo cinco meninas e um menino. Tudo que me lembro foi contado por minha irmã mais velha porque nós éramos muito pequenos e nossa mãe tinha que trabalhar no que aparecia para nos alimentar. Quando ela ficou doente ainda se esforçava para lavar roupa até que não conseguiu mais. (...) Eu e meus irmãos tivemos que ser separados e entregues aos nossos padrinhos (...) Alisânia Souza (43 anos)

Outras histórias ganharam cores e se transformaram em textos pictóricos, cuja composição pode ser visto sob a forma de árvores genealógicas ou em composições figurativas que remetem também aos tradicionais retratos de família. Já outras ganharam tridimensionalidade e foram modeladas na argila fresca que, posteriormente, recebeu uma policromia que traduziu toda a luminosidade das emoções ali contidas. Utilizamos, como referência, a antiga arte clássica de fazer bustos para homenagear uma pessoa importante. Nessa oportunidade, cada participante também escolheu uma pessoa da comunidade ou personagem da literatura que julgou importante para homenagear, de acordo com o depoimento da participante:

(...) Esta é a escrava Isaura, uma personagem da literatura brasileira. O rosto dela me remete á minha própria imagem. Também sou escrava guerreira. Fui muito humilhada igual a ela. Eles aplicam a injeção porque não entendem a cabeça da gente. Geralmente, quem tem o poder sai fazendo coisas com a gente, dão até coisas erradas. A escrava Isaura, para mim, significa a escravidão que nunca acabou .(...) Zilmar Ferreira- 51 anos

Utilizamos, também, a técnica de modelagem para produzir o território geográfico da comunidade, com sua arquitetura simples, mas de uma expressão poética ímpar. As casas foram modeladas no barro fresco e, posteriormente, pintadas. Receberam, também, floreiras nas janelas, sempre emolduradas por cortinas adornadas por rendas brancas, impecavelmente, limpas e bem frisadas. Podemos perceber a realização e o fortalecimento do sonho de uma moradora, arquiteta de sua casa utópica, a partir do trecho extraído de sua história.

*(...) Não gosto de minha casa, não quero ela como está.
Quero uma casa clara com olhos de janela para viver nela.
Quero pintar minha casa com girassóis amarelos para o dia sorrir mais belo
Quero pintar o chão com margaridas para sentir que sou mais querida.(...) Maria Antônia de Jesus – 62 anos*

Algumas histórias também ganharam os muros das ruas do bairro e até mesmo devoraram a arquitetura das casas. As pinturas se consolidaram como referências estéticas para a população, devido à sua extensa proporção no espaço ocupado. Essa atividade proporcionou, anteriormente, a oportunidade de

realização de leituras diversas, por meio de textos e do estudo de obras de arte, no qual o procedimento da pintura mural foi privilegiado. Apresentamos referências da arte primitiva encontrada nas cavernas de Altamira na Espanha e estabelecemos uma relação com as pinturas rupestres encontradas nas grutas de Lagoa Santa em Minas Gerais/Brasil. Dentre as imagens ali expressadas há milhares de anos, os participantes puderam compreender como o homem vivia e quais eram suas expectativas de vida, tendo em vista sua necessidade de sobrevivência.

O percurso das leituras de obras de arte abordou também os murais da antiguidade clássica, os murais egípcios, os bizantinos até chegar às grandes pinturas murais da América Latina, que se destacaram pelas temáticas sociais os artistas Diego de Rivera, David Siqueiros e Clemente Orozco. Utilizamos, também, referências em arte mural de artistas brasileiros como Cândido Portinari e Di Cavalcanti, que traduziram a questão social brasileira e a luta do povo pela conquista de um pedaço de terra.

Durante todo o período em que os participantes se encontraram para realização das atividades, eles estavam sempre atentos em como comunicar suas experiências para todo o grupo social. O formato das produções não importava, o que importava era o significado e como cada autor transmitiria sua narrativa e de como esta produção poderia reformular seus conceitos, a partir da experiência realizada. Cada participante se comunicava de uma forma e não existia um padrão definido de atuação e de expressão. A cada atividade desenvolvida com as famílias, seja de pesquisa, produções artísticas, textuais ou de elaboração de conceitos, estas realizavam uma rica troca de aprendizagens.

Na medida em que as relações se consolidavam, os participantes assumiam uma postura de respeito, cumplicidade, identificação, o que gerava, conseqüentemente, uma relação de socialização, interação grupal e confiança no potencial criativo de cada membro.

A cada oportunidade experimentada, os participantes eram sempre surpreendidos por novos desafios, novos valores, novos conceitos que acionavam seus sentidos e se consolidavam sob a forma de alguma produção artística e literária. Esse movimento de construção constante também impulsionou o grupo a reavaliar seus conceitos, a repensar suas atitudes e a propor e realizar ações que fortaleciam, cada vez mais, o desenvolvimento do espaço de vivência e também o potencial de cada família, tendo em vista uma nova perspectiva empreendedora para as mesmas.

3. Conclusão

Sabemos que não existe uma única maneira de percebermos e trabalharmos na busca de elementos para subsidiar as nossas intervenções na busca de melhores práticas humanas. Acreditamos, porém, em atividades sedimentadas por uma proposta artística, alicerçada numa metodologia capaz de transformar sentimentos em conceitos e conceitos em ações. Tal metodologia auxilia, também, na compreensão do território, antes compreendido apenas como um elemento georeferenciador, como uma multiplicidade de elementos que interfere diretamente no cotidiano das famílias.

Durante o processo de desenvolvimento do trabalho, houve, também, uma convergência entre o tempo e o espaço do grupo, com o tempo e o espaço social; e essa convergência foi o elemento imprescindível para o estabelecimento de toda a dinâmica e consistência do trabalho. Essa convergência ficou elucidada pelas produções artísticas, pelos textos escritos, muitas vezes, por mãos calejadas do trabalho árduo de cada dia.

Além da capacidade de tecer uma narrativa poética de suas vidas, os novos leitores também adquiriram um posicionamento crítico perante as questões de ordem pessoal, social, ambiental e política. Em relação à esfera familiar, assumiram um compromisso de busca permanente por uma educação cada vez mais qualitativa que acontecesse também no ambiente do lar. O grupo também passou a almejar um espaço de convivência, cada vez mais harmônico, tornando possível o exercício de uma cidadania atuante, efetiva e afetiva. Os posicionamentos referidos apontam para a elucidação do fortalecimento dos vínculos, não apenas familiares, mas também com o espaço de vivência ao qual pertencem.

Em relação aos educadores e técnicos envolvidos no processo educativo, o importante foi encontrar uma maneira de submersão no cotidiano das famílias. Esse mergulho na realidade do território possibilitou uma co-participação integrada, proporcionando a formação de um capital social e desenvolvimento de sujeitos autônomos, que hoje podem multiplicar as experiências vividas.

Para as famílias participantes, além de serem hoje, agentes multiplicadores do processo de incentivo à leitura se constituíram como protagonistas de suas próprias histórias. O desenvolvimento da capacidade criativa e os variados métodos de realização de leituras de mundo ficaram consolidados e apreendidos por cada participante, fazendo desses, autores de uma biografia singular, permeada pela ética e pela estética.

Ao final do trabalho, ficou evidenciada a capacidade de realização do supremo milagre da arte: transformar a recordação de uma experiência numa inventiva poética.

Concepções de professores de Língua Portuguesa sobre o(s) uso(s) do manual escolar. Um estudo no 3.º Ciclo do Ensino Básico*

Alice Manuela Ferreira Amaro
Escola E/B 2,3 de Argoncilhe

António Carvalho da Silva
Centro de Investigação em Educação, Universidade do Minho

Introdução

A presença do livro na instrução e na formação dos indivíduos remonta à Antiguidade, afigurando-se, tanto outrora como actualmente, indissociável da acção educativa (Castro, 1995).

Entendido como portador do conhecimento escrito, e como um produto editorial específico intrínseco do processo instrutivo e educativo, «o livro escolar é o principal ordenador da cultura da memória e da acção escolares» (Magalhães: 2006: 5).

Ao longo dos tempos, contudo, os manuais destinados ao ensino e à aprendizagem sofreram significativas transformações não só na sua materialidade, mas também na forma de apropriação dos seus utilizadores, passando de um instrumento de uso tendencialmente colectivo para um instrumento mais manuseável de aquisição e uso individual de cada aluno, ao longo do seu percurso escolar (Castro, 1995: 62).

Considerado por muitos o pilar do processo de ensino e de aprendizagem, o manual escolar é «tão natural quanto a escola» (Paulo, 1999: 355), assumindo mesmo o «estatuto de símbolo» da instituição educativa (Tormenta, 1996: 55).

A natureza multifuncional e polivalente deste instrumento pedagógico-didáctico, bem como a pluralidade vocabular e a ambiguidade lexical empregues na sua classificação geram, no entanto, algumas dificuldades no entendimento de manual escolar (Choppin, 2004).

1. Tipos de manual

Na realidade, consoante o seu contexto de utilização, a abordagem pedagógico-didáctica e os seus usos, o manual assume várias funções e admite múltiplas designações. Como tal, Choppin (1992) distingue dois tipos de manuais de acordo com as suas características e circunstâncias de uso: a) os manuais em sentido

* Este estudo foi desenvolvido no âmbito do Grupo de Investigação Literacias. Práticas e Discursos em Contextos Educativos, do Centro de Investigação em Educação, Universidade do Minho

restrito; b) as publicações que, devido ao seu uso no contexto da escola, acabam por adquirir uma dimensão escolar.

Tendo em conta a sua função no processo de ensino e aprendizagem, Choppin (*Op. cit.*: 15-17) subdivide os manuais em sentido restrito em diversas categorias: i) os manuais e seus *satélites*; ii) as obras de referência; iii) as edições clássicas; e iv) os livros para-escolares, de aquisição facultativa, que, ao apresentarem um resumo dos conteúdos programáticos, exercícios/actividades de aplicação, sistematização e/ou consolidação de conhecimentos dentro de um determinado nível de ensino, visam auxiliar a aprendizagem autónoma dos alunos.

Entretanto, mais recentemente, surgiu o conceito de manual *multimédia* – que disponibiliza, em separata, uma série de materiais de apoio; e o de manual *integrado* – com informações diversificadas para os professores (e, em alguns casos, também para os alunos), inscritas, habitualmente, na margem das páginas, ao longo do manual (Choppin, 1999; 2000).

2. Estatuto e funções do manual escolar

No que respeita às suas funções, actualmente, o manual escolar cumpre uma *função emblemática* – uma vez que se tornou símbolo da escola (para todos) –, mas também uma *função catártica* – na medida em que é alvo de críticas dirigidas à escola, o que, de certo modo, justifica em parte o interesse que aquele tem vindo a despertar enquanto objecto de estudo de historiadores e investigadores ligados à área da educação (Choppin, 2000).

Se é verdade que os manuais escolares traduzem o saber oficial (função simbólica), difundem os saberes elementares (função pedagógica) e concorrem para a aculturação dos mais jovens (função social); também se pode dizer que, implícita ou explicitamente, transmitem valores (função ideológica) e regem-se pelas directrizes emanadas do Estado (função política) (Benítez, 2000). Neste sentido, enquanto suporte de conhecimentos, os manuais revelam-se necessários e *úteis* (Choppin, 2000) não só para apoiar a aprendizagem do aluno, mas também para garantir ao Estado o cumprimento do Programa oficial. Como explica Silva (2008), os manuais exercem um poder regulador sobre as práticas pedagógicas ao mesmo tempo que são regulados pelos programas que, por sua vez, enquanto discurso oficial, procuram, por um lado, supervisionar os manuais e, por outro, as práticas de ensino e aprendizagem.

Na acepção de Gérard e Roegiers (1998), as funções desempenhadas pelo manual escolar dependem dos seus utilizadores, da área disciplinar e do contexto em que aquele é concebido. Por conseguinte, os autores citados (*Op. cit.*) distinguem as funções do manual relativas ao aluno e as que se relacionam com o

professor. No que respeita ao aluno, Gérard e Roegiers (*Op. cit.*: 75-83) consideram as funções: *de transmissão de conhecimentos, de desenvolvimento de capacidades e competências, de consolidação das aquisições; de avaliação das aquisições, de ajuda na integração das aquisições, de referência e de educação social e cultural.* Em relação ao professor, Gérard e Roegiers (*Op. cit.*: 89-91) sustentam que o manual escolar desempenha, sobretudo, funções de formação com vista a melhorar as práticas pedagógicas, nomeadamente: *a função de informação científica e geral, a de formação pedagógica ligada à disciplina, a de ajuda nas aprendizagens e na gestão das aulas e a de ajuda na avaliação das aquisições.*

Todavia, as funções do manual escolar estendem-se igualmente às famílias para quem este instrumento é, em muitos casos, o único meio de comunicação com a escola, o utensílio através do qual os pais acompanham as aprendizagens dos seus filhos, mas também as práticas docentes.

3. O uso do manual escolar pelos professores

Ao contrário do que seria desejável, não é o Programa da disciplina que regula a prática lectiva e orienta o professor na definição de objectivos de ensino, antes é o manual escolar que, assumindo o estatuto de instrumento *todo-poderoso*, influencia e determina a actividade pedagógica em detrimento do recurso a outros materiais passíveis de quebrar a rotina diária que, não raro, se instala no quotidiano escolar dos alunos (Brito, 1999: 142). Isto mesmo é defendido por autores como Apple (2002), Tormenta (1996) Zabalza (2003) ao afirmarem que os manuais escolares se sobrepõem ao Programa oficial e que a organização das aulas é feita em função daqueles dispositivos que acabam por assumir o papel de *guias* da prática docente.

Na perspectiva de Dionísio (2000: 81), a centralidade claramente granjeada pelos manuais escolares no quadro das práticas profissionais docentes não poderá ser dissociada do «facto de se apresentarem como tradução concreta do programa escolar, de serem fruto de experiências aparentemente validadas, de permitirem um acesso imediato a um conjunto de saberes que se apresentam doseados e estruturados», o que facilita a tarefa do professor na organização das suas aulas.

Partindo deste pressuposto, o modo como o professor se apropria do livro didáctico e o uso que dele faz na sala de aula são decisivos para a (in)formação dos seus destinatários mais directos, ou seja, os alunos; cabendo, assim, ao professor rentabilizar as potencialidades oferecidas por este importante instrumento pedagógico, doseando o seu uso numa perspectiva criteriosa e crítica, de modo a torná-lo numa ferramenta vantajosa, ajustada ao nível de desenvolvimento dos alunos e favorável à progressão da sua aprendizagem.

Numa altura em que a componente horária dos professores está sobrecarregada e a sua permanência na escola é cada vez maior, pouco tempo lhes resta para organizarem o seu trabalho docente, o que poderá redundar numa progressiva automatização da sua prática pedagógica confinada às orientações do manual.

4. Objecto e objectivos do estudo

Uma vez que o manual escolar, enquanto instrumento configurador da acção educativa, assume uma presença preponderante no processo de ensino e aprendizagem, considera-se relevante estudar o seu papel nas práticas de ensino, até porque da forma como os professores o utilizam depende, em grande parte, a construção da aprendizagem dos seus alunos.

Com base neste pressuposto, definiu-se como objectivo principal do presente estudo investigar os modos de apropriação do manual escolar pelos professores de Língua Portuguesa do 3.º Ciclo do Ensino Básico e as razões que subjazem à sua relação com este instrumento pedagógico-didáctico, procurando responder à seguinte pergunta de investigação:

– *Qual é o estatuto que os professores conferem ao manual escolar e quais as funções que lhe associam?*

Embora se reconheça a aceitação e a proliferação no mercado editorial dos manuais para-escolares – em grande parte derivadas da ansiedade que a aproximação dos exames gera nos alunos e conseqüentemente nos pais (Huot, 1989; Choppin, 1999) – este trabalho incide sobretudo nos manuais propriamente ditos e nos materiais que os documentam (Choppin, 1992).

Tendo em conta o exercício da profissão docente, na preparação e/ou na concretização das aulas, este estudo desenvolve uma reflexão em torno das perspectivas dos docentes sobre o(s) uso(s) do manual escolar, sobretudo no que respeita ao lugar que este assume nas suas práticas: *quando, como e com que finalidade* os professores o utilizam, e *quais as razões* que presidem à relação que estabelecem com esta ferramenta de ensino e aprendizagem; e gira em torno de oito dimensões de análise que se dão a conhecer na apresentação dos resultados.

5. Opções metodológicas

Como método de análise, optou-se por uma abordagem de tipo qualitativo e seleccionou-se o estudo de casos, como técnica de investigação, por se considerar ser esta a metodologia mais adequada para se compreender os significados que os docentes atribuem ao(s) modo(s) de utilização do manual escolar a partir da sua própria experiência enquanto profissionais do ensino.

A partir da análise de dados – recolhidos por meio de entrevistas presenciais – e da verificação, pelo confronto de respostas, dos aspectos comuns e/ou divergentes, procurou-se extrair conclusões e contribuir para um conhecimento mais vasto sobre o assunto investigado: a relação dos professores com o manual escolar.

5.1. Sujeitos do estudo

Os sujeitos deste estudo, cujas declarações constituíram objecto de análise, foram seleccionados de entre os professores de Língua Portuguesa, a exercer a sua actividade profissional, no ano lectivo de 2008/2009, em escolas públicas do Ensino Básico de 2.º e 3.º Ciclos do concelho de Santa Maria da Feira.

Na delimitação da população a entrevistar, procurou-se seleccionar uma amostra que fosse representativa, mediante a disponibilidade demonstrada pelos docentes para participar neste estudo, e que considerasse uma variedade de sujeitos com graduações profissionais e académicas diferentes, bem como com experiências diversificadas relativamente aos níveis de escolaridade que têm leccionado com maior incidência.

Como tal, a amostra é constituída por quinze professores, tendo sido escolhida aleatoriamente e por conveniência entre os docentes da área disciplinar de Língua Portuguesa que, até ao momento desta investigação, integravam o corpo docente de cinco escolas públicas do concelho citado.

5.2. Instrumentos de recolha de dados

Face à necessidade de utilizar uma técnica de investigação que permitisse averiguar as perspectivas dos professores de Língua Portuguesa relativamente ao(s) uso(s) que fazem do manual escolar, optou-se pela entrevista como instrumento para recolha de informações, por se acreditar ser este o método mais adequado à natureza deste estudo e aos objectivos perseguidos.

À escolha desta técnica de recolha de dados presidiram, assim, princípios subjacentes à sua aplicação, designadamente a possibilidade de aferir informações verbais e não verbais, de clarificar e/ou reformular as questões colocadas, de flexibilizar e adaptar as perguntas ao entrevistado, bem como de assegurar o estímulo de resposta.

De modo a facilitar a posterior análise dos dados, começou-se por categorizar os professores, atribuindo a cada um deles um algarismo por ordem de realização das entrevistas.

6. Apresentação dos resultados a partir das dimensões de análise

Efectuada a recolha de dados e transcritas as quinze entrevistas, passou-se à definição dos critérios para a categorização dos conceitos identificados a partir das informações obtidas, por meio das entrevistas aplicadas à amostra de quinze professores, tendo por base os objectivos e as dimensões de investigação previamente traçados.

Considerando que «os entrevistadores devem reflectir as respostas dos sujeitos e não as suas» (Tuckman, 2000: 349), e que neste estudo se pretende averiguar as perspectivas dos professores relativamente às funções que estes associam ao manual escolar e ao estatuto que lhe conferem, a par da identificação das categorias, ordenadas alfabeticamente (à excepção da categoria *outros* que surge sempre em último lugar), reproduzem-se alguns excertos das entrevistas, procurando-se desta maneira traduzir os pontos de vista dos inquiridos sobre o tema em investigação.

Assim, para a **primeira** dimensão de análise – *Recursos pedagógico-didácticos privilegiados na preparação das aulas e critérios subjacentes à sua utilização* – distinguiram-se as categorias: i) Enciclopédias; ii) Gramáticas; iii) *Internet*; iv) Jornais/revistas; v) Livros de análise; vi) Manual adoptado; vii) Manuais escolares; viii) Obras específicas; ix) Prontuários; e x) *Outros*; definidas de acordo com a noção corrente dos conceitos e no enquadramento do discurso dos professores. No que respeita aos *critérios subjacentes à utilização dos diversos recursos pedagógico-didácticos na preparação das aulas* observaram-se nove categorias: i) Actualização; ii) Alunos; iii) Conteúdos; iv) Disponibilidade; v) Diversificação; vi) Funcionalidade; vii) Interesse; viii) Qualidade; ix) Rentabilização:

- i) «vou procurando as actualizações da matéria» (P12);
- ii) «Vai depender [...] do público-alvo, dos alunos que tenho» (P01);
- iii) «mediante o trabalho, não é, o tema, o conteúdo que quero abordar.» (P04);
- iv) «depende do que disponho em casa» (P07);
- v) «que sejam um pouco diferentes» (P09);
- vi) «às vezes, pesquisar na *Internet* é mais moroso» (P08);
- vii) «considero-os [os recursos] interessantes» (P02);
- viii) «os documentos retirados da *Internet*, logo que sejam fidedignos e filtrados por nós» (P06);
- ix) «Uso à partida o manual, porque é [...] um material que eles tiveram que comprar e, portanto, convém utilizá-lo.» (P05).

Considerando a **segunda** dimensão de análise – *Propostas de trabalho e/ou documentos do manual adoptado seleccionados na preparação das aulas e critérios subjacentes às opções dos professores* – apuraram-se cinco categorias: i) Compreensão textual; ii) Funcionamento da língua; iii) Produção escrita; iv) Textos;

v) *Outros*. Quanto aos *critérios subjacentes às opções dos professores*, estabeleceram-se onze categorias: i) Actualidade; ii) Adequação; iii) Alunos; iv) Conteúdos; v) Diversificação; vi) Eficácia; vii) Extensão do texto; viii) Grau de dificuldade; ix) Interesse; x) Obrigatoriedade; xi) Qualidade:

- i) «textos mais actuais» (P08);
- ii) «estar de acordo com os objectivos e a Planificação inicial» (P09);
- iii) «Depende da turma.» (P12);
- iv) «Depende da temática.» (P05);
- v) «que sejam o mais abrangentes e diversificadas possível.» (P04);
- vi) «actividades e propostas ou os textos [...] facilitadores daquela aprendizagem» (P11);
- vii) «Textos não muito longos; que senão eles dispersam.» (P07);
- viii) «de fácil compreensão para os alunos» (P15);
- ix) «algumas que eu não acho interessantes, então, não as faço» (P02);
- x) «temos que seguir aquele texto, é o texto... obrigatório» (P06);
- xi) «se houver um texto bom, é claro que eu o vou utilizar» (P05).

Para a **terceira** dimensão de análise – *Tarefas propostas aos alunos nas aulas e recursos pedagógico-didácticos utilizados* – destacaram-se sete categorias: i) Compreensão textual; ii) Exposição oral; iii) Funcionamento da língua; iv) Leitura; v) Pesquisa; vi) Produção escrita; vii) *Outros*. Ainda na sequência do exposto, e relativamente aos *recursos pedagógico-didácticos utilizados nas aulas*, observaram-se dez categorias: i) Caderno de actividades; ii) *Internet*; iii) Dicionário(s); iv) Enciclopédia(s); v) Ficha policopiada; vi) Jornais/revistas; vii) Livros específicos; viii) Manual adoptado; ix) Manuais escolares; e x) *Outros*.

No que respeita à *frequência de utilização nas aulas do manual adoptado, propostas de trabalho seleccionadas e critérios subjacentes às opções dos professores* – **quarta** dimensão de análise – as categorias determinadas a partir das respostas dos professores foram: *depende do manual, quase sempre e sempre*. Segundo os relatos apurados, a utilização do manual escolar adoptado está intimamente relacionada com o grau de satisfação dos professores relativamente a este recurso, como o comprovam estas declarações:

- Depende se o manual serve os conteúdos (P04);*
- Difere, por exemplo, [da] própria elaboração do manual... (P09);*
- Acho demasiado confuso, não tem textos que eu goste. (P12).*

De seguida, procurou-se saber quais as *propostas de trabalho do manual adoptado seleccionadas nas aulas*, tendo-se evidenciado cinco categorias: i) Compreensão oral; ii) Compreensão textual; iii) Funcionamento da língua; iv) Produção escrita; v) *Outros*. Uma vez que as opções efectuadas implicam factores diversos, pretendeu-se igualmente averiguar quais os *critérios subjacentes à*

selecção de propostas de trabalho do manual escolar adoptado, tendo-se determinado nove categorias: i) Adequação; ii) Alunos; iii) Conteúdos; iv) Disponibilidade; v) Eficácia; vi) Grau de dificuldade; vii) Orientação; viii) Qualidade; ix) Tempo:

- i) «depende um pouco da competência que eu quero desenvolver» (P06)
- ii) «tendo em conta, realmente, o público-alvo [...] o que cada turma necessita.» (P09)
- iii) «que tenham a ver com os conteúdos que estou a leccionar» (P08)
- iv) «Quer dizer [o aluno] tem com ele o material que pode trabalhar na aula e, depois, em casa. E, será mais fácil, também, porque está registado no livro e será mais fácil para ele estudar» (P14)
- v) «O objectivo principal é, é ensinar e fazer com que o aluno fique a perceber bem aquilo que eu ensino» (P13)
- vi) «o grau de dificuldade e de exigência mediante a turma» (P04)
- vii) «a partir do texto [...] podemos passar para outra actividade.» (P03)
- viii) «algumas que eu não acho interessantes, então, não as faço.» (P02)
- ix) «o tempo também não é muito, sabe, são dois blocos de 90 minutos, quem me dera ter três» (P08)

Hoje em dia, os manuais escolares disponibilizam cada vez mais materiais de apoio à prática pedagógica e, sugerem, inclusive, a consulta de recursos externos (Choppin, 1992; 2000). Como tal, definiu-se uma **quinta** dimensão de análise – *Utilização nas aulas dos materiais e/ou recursos do manual adoptado e critérios subjacentes às opções dos professores* –, cujas categorias apuradas foram sete: i) Acetatos; ii) Caderno de actividades; iii) CD; iv) DVD; v) Imagens; vi) Sites; e vii) Outros. Da dimensão supracitada, em relação aos *critérios subjacentes às opções dos professores*, observaram-se onze categorias: i) Adequação; ii) Alunos; iii) Conteúdos; iv) Disponibilidade; v) Eficácia; vi) Exercitação; vii) Funcionalidade; viii) Interesse; ix) Qualidade; x) Rentabilização; xi) Tempo:

- i) «a qualidade e o direccionar-se para aquilo que eu quero abordar na aula.» (P04);
- ii) «se eu os puser a fazer um joguinho no computador [...], eles até acham piada» (P01);
- iii) «depende também do conteúdo» (P15);
- iv) «tenho que o requisitar e, depois, é via *Net* e tudo e dá muito trabalho.» (P08);
- v) «Pela imagem, acho que os miúdos aprendem bem.» (P13);
- vi) «quando quero que eles exercitem mais [...] e façam mais actividades» (P09);
- vii) «o retroprojector [...] é só ligar, meter lá a transparência e perde-se pouco tempo.» (P07);
- viii) «as transparências, no caso de eu achar que também têm interesse» (P04);
- ix) «o CD [...] para já não tem muita qualidade, a gravação dele» (P05);
- x) «tento aproveitar aquilo que o manual disponibiliza» (P03);
- xi) «Não temos tempo, porque o Programa é extenso, os miúdos têm muitas dificuldades e não dá tempo para estar a dar tudo, tudo, tudo...» (P02).

Atendendo aos objectivos desta investigação, procurou-se igualmente apurar se o manual escolar era utilizado como suporte na marcação para casa dos trabalhos dos alunos. Assim, para a **sexta** dimensão de análise – *Utilização do manual adoptado para trabalho de casa e exercícios/actividades seleccionados* – as categorias de resposta evidenciadas foram: i) Nem sempre; ii) Sempre. Relativamente aos *exercícios/actividades seleccionados*, observaram-se as categorias: i) Compreensão textual; ii) Funcionamento da língua; iii) Produção escrita; e iv) *Outros*.

Entretanto, estabeleceu-se uma **sétima** dimensão de análise – *Os testes de avaliação escrita: saberes e competências aferidos e fontes utilizadas para a sua elaboração* – de que emergiram as categorias: i) Compreensão oral; ii) Compreensão textual; iii) Funcionamento da língua; iv) Produção escrita. Em relação às *fontes utilizadas para a elaboração dos testes de avaliação* foram apontadas nove categorias: i) *Internet*; ii) Jornais/revistas; iii) Livros de análise; iv) Manual adoptado; v) Manuais escolares; vi) Manuais para-escolares; vii) Obras de leitura integral; viii) Testes de anos anteriores; e ix) *Outros*.

Na realidade, e apesar de (pelo menos, aparentemente) as novas tecnologias proporcionarem aos seus utilizadores uma forma mais cómoda e atractiva de aceder à informação e do fascínio que exercem, sobretudo, no público mais jovem, «son pocos los que ven en el desarrollo de estas tecnologías la muerte anunciada del manual.» (Choppin, 2000: 33). Partindo deste princípio, definiu-se uma **última** dimensão de análise – *Estatuto conferido ao manual escolar na prática pedagógica docente e razões que presidem ao(s) modo(s) de apropriação dos professores*. No que concerne ao *estatuto conferido ao manual escolar na prática pedagógica docente*, observaram-se as categorias: i) Imprescindível; e ii) Imprescindível para o aluno. Relativamente às *razões que presidem ao(s) modo(s) de apropriação dos professores* estabeleceram-se sete categorias: i) Acessibilidade; ii) Credibilidade; iii) Disponibilidade; iv) Orientação; v) Rentabilização; vi) Tempo; vii) Tradição:

- i) «facilita a tarefa do professor» (P05);
- ii) «os manuais já [...] estão de acordo com [...] o Programa» (P03);
- iii) «os alunos têm-no à mão, todos têm o livro, não há desculpas de não o terem» (P07);
- iv) «a base está ali» (P01);
- v) «os pais compraram [...] investiram no manual» (P11);
- vi) «é muito trabalhoso para nós estar sempre a seleccionar, a pesquisar... não temos tempo.» (P02);
- vii) «Sempre trabalhei com o manual e sempre os professores que me deram aulas trabalharam sempre com manuais» (P08).

7. Síntese da análise e algumas conclusões

Como se pode depreender dos resultados obtidos a partir das concepções dos professores de Língua Portuguesa, que constituem a amostra desta investigação sobre o(s) uso(s) do manual escolar nas práticas docentes, o *livro* escolar mantém a sua proeminência no processo educativo, surgindo como o dispositivo configurador das aprendizagens legítimas a ensinar e a aprender.

Instrumento de acesso a um conhecimento organizado, capaz de promover a exercitação e a consolidação das aprendizagens elementares numa determinada área do saber, o manual escolar constitui a base de trabalho dos professores, na estruturação e na concretização das suas aulas, facilitando assim a tarefa docente; e é, muitas vezes, o principal recurso dos alunos, meio pedagógico através do qual constroem e consolidam a sua aprendizagem. Com efeito,

Numa época em que se assiste a uma verdadeira explosão de suportes de ensino, informatizados, audiovisuais e outros, o manual escolar continua a ser, de longe, o suporte de aprendizagem mais difundido e, sem, dúvida, o mais eficaz. (Gerárd & Roegiers, 1998: 15)

Tomando como referência os pontos de vista dos professores e procurando responder de forma sumária aos objectivos inicialmente delineados, conclui-se que:

- i) apesar de se verificar uma tendência generalizada para recorrer à *Internet*, sobretudo, para fins de pesquisa; o manual escolar é utilizado pela totalidade dos professores entrevistados, na planificação das suas aulas;
- ii) os critérios que presidem à selecção dos recursos pedagógico-didácticos para preparação das actividades lectivas são, em primeiro lugar, os alunos e, depois, os conteúdos programáticos;
- iii) os textos do manual adoptado, bem como as actividades que a partir dos mesmos se desenvolvem, são as propostas de trabalho preferencialmente seleccionadas pelos professores;
- iv) também neste caso, são os alunos que influenciam as escolhas dos professores que procuram ter em conta as suas preferências, os seus conhecimentos e/ou as suas dificuldades, com vista a estimular o seu interesse e a fomentar um ensino e uma aprendizagem bem sucedidos;
- v) a regularidade com que os professores recorrem ao manual escolar no decurso das suas aulas está intimamente relacionada com o seu grau de satisfação em relação ao mesmo;
- vi) para suprir aspectos omissos ou menos satisfatórios do manual escolar, os professores servem-se de fotocópias, não raro, também de outros manuais escolares;
- vii) todos os professores recorrem ao manual adoptado para marcação dos trabalhos de casa, ainda que alguns o façam apenas pontualmente;
- viii) as propostas de trabalho do manual adoptado seleccionadas com maior incidência para trabalho de casa são os exercícios de compreensão textual e os de funcionamento da língua (neste caso, sobretudo, do caderno de

actividades do manual adoptado); ix) para elaborar os testes de avaliação escrita, a quase totalidade dos professores entrevistados recorre a manuais escolares (saliente-se que o manual adoptado e os manuais para-escolares foram igualmente referidos); x) as principais razões apontadas pela maioria dos professores ao longo do seu discurso relativamente ao(s) uso(s) que fazem do manual adoptado prendem-se com o facto de este instrumento:

- a) servir de ponto de partida para a leccionação dos conteúdos previstos no Programa e contemplados no manual adoptado;
- b) constituir um apoio informativo e documental dos conteúdos básicos para o processo de ensino e de aprendizagem, acessível a todos os intervenientes nas actividades escolares;
- c) possuir uma vertente prática em termos de utilização que facilita a professores e a alunos o recurso ao mesmo;
- d) ser um gasto dos encarregados de educação que querem ver rentabilizado o seu investimento;
- e) facilitar a tarefa do professor que se depara, cada vez mais, com uma sobrecarga excessiva de trabalho no âmbito da escola, que lhe deixa pouco tempo para pesquisar e/ou seleccionar (n)outros materiais de apoio ao ensino.

Ainda que cada professor tenha um modo peculiar de organizar as suas aulas, de interagir com os alunos e de utilizar os meios pedagógico-didácticos de que dispõe (Nóvoa, 1992), os resultados obtidos a partir da análise de conteúdo das respostas dos professores de Língua Portuguesa que participaram neste estudo revelam que as práticas docentes confirmam e perpetuam a supremacia do manual escolar no processo de ensino e de aprendizagem.

Leitura de Jornais Gratuitos em um Escola Portuguesa*

Adriana Pastorello Buim Arena

Faculdade de Educação, Universidade Federal de Uberlândia, Brasil

Introdução

Serão apresentadas neste artigo situações que aconteceram durante observações de aulas em uma escola de Lisboa com a proposta de discutir o conceito de leitura que se fazia presente no ensino de Língua Portuguesa. O texto apresentará a descrição das observações seguidas dos comentários reflexivos. Esse procedimento de exposição dos dados terá como função situar o leitor para as reflexões que emergiram durante o período de realização da pesquisa etnografia no contexto escolar português. Desta maneira, não há a intenção de abordar generalizadamente o ensino em Portugal, mas demonstrar, por amostragem, o que se passa em relação à leitura e à leitura de jornais, na prática escolar portuguesa.

Os dados foram coletados em uma sala de aula de 4º ano, composta por 20 alunos, em uma escola de Educação Básica 1 (EB1) situada na freguesia do Campo Grande, município de Lisboa. No bairro há vários serviços oferecidos à comunidade em área de educação, desporto, apoio de segurança ao cidadão, centros de saúde, áreas de lazer e cultura e transportes. A escola é bastante requisitada pelos pais devido ao fácil acesso a ela pelo transporte que há no bairro. Devido à sua localização, esta área tem uma variável rede de transportes públicos que dão acesso não só a zonas urbanas, como suburbanas por meio de autocarro, metrô e comboio.

O período de observação ocorreu de 15 a 17 de outubro de 2007. No primeiro contato com a professora, disse-lhe que gostaria de observar aulas em que trabalhasse diretamente com textos de jornais. Todos tinham sido alunos da professora no ano anterior e percebia-se um relacionamento afetuoso. Foram três as atividades realizadas pela professora: tiras de banda desenhada, estrutura do jornal e produção do texto notícia. Durante a apresentação do texto, os sujeitos envolvidos na pesquisa serão nominados por letras, não correspondentes aos seus nomes verdadeiros, para garantir o anonimato. A professora será tratada por **D**.

* Apoio CAPES. Grupo de Pesquisa: Processos de leitura e de escrita: apropriação e objetivação

Leitura de jornais

No primeiro dia de observação, a professora propôs uma atividade usando banda desenhada que no Brasil é conhecido como *história em quadrinhos* ou *gibi*. O uso de quadrinhos é um recurso que freqüentemente aparece nos jornais em forma de tiras. A professora tinha confeccionado desenhos ampliados, na seqüência lógica de uma história chamada *O caldo de pedra*, conto bastante popular da cultura portuguesa. **D** colocava quadro por quadro na lousa e pedia aos alunos que comentassem aspectos observados e elementos visuais que os ajudassem a descobrir a trama da história. Embora alguns alunos já conhecessem o conto, nenhum deles descobriu que os quadros se referiam a ele. Depois da seqüência completa na lousa, a professora entregou o texto narrativo para cada aluno. Uma criança, imediatamente ao receber a folha, disse “*Ah, é uma pedra*”. O aluno fazia referência ao quadro que mostrava o frade com algo na mão, a respeito do qual algumas crianças levantaram hipóteses, mas não suspeitaram que poderia ser uma *pedra*. Aqui temos um dado interessante para a reflexão sobre o conceito de leitura. Nos desenhos na lousa, em preto e branco, não era possível reconhecer o objeto como uma pedra. Julgo que nem mesmo para quem conhecesse o conto, mas não estivesse com o foco de atenção voltado para ele, poderia tê-la reconhecido. Ao receber a folha, o aluno encontrou a palavra *pedra* no título e já pôde responder a uma das perguntas feitas pela professora durante a apresentação dos quadros. A atitude docente de plantar perguntas orais antecipadas criou, entre os alunos, a necessidade de procurar respostas imediatas, por meio de leitura rápida, para satisfazer a curiosidade provocada.

A professora leu oralmente todo o conto sem nenhuma interrupção. No texto havia duas lacunas que deveriam ser preenchidas com frases que completassem o sentido. **D** pulou o espaço dizendo aos alunos que prestassem atenção à leitura, porque depois completariam a história quando ela terminasse de ler. Seria uma estratégia facilitadora para a compreensão, pois o conjunto contribuiria para formar o sentido. Ao terminar a leitura, uma aluna perguntou se o conto era uma referência à sopa de pedra servida em diversos restaurantes, cafés e centros de compras de Portugal. A professora confirmou e, então, a classe discutiu as maneiras conhecidas de fazer e servir a sopa. Esse conto tradicional fazia sentido para aquela turma de alunos portugueses, pois tratava de um fato conhecido e vivido pela cultura portuguesa. O mesmo não aconteceria com crianças brasileiras, que não estão habituadas a ler nos letreiros, ou menus dos restaurantes, um prato conhecido pelo nome *sopa de pedra*, a forma como atualmente esse prato é chamado em Portugal. Temos a versão deste conto no Brasil, cujo personagem principal é Pedro Malazartes que, com toda sua malandragem, consegue tirar, de

uma velha avarenta, bons ingredientes para fazer uma sopa, a qual nomeia *sopa de pedra* por ser uma pedra seu ingrediente principal.

Qualquer criança brasileira e portuguesa pode ler com bastante facilidade esse mesmo texto, se conhecer o código lingüístico, a estrutura de um texto narrativo, de natureza humorística. Entretanto, compreender o entorno cultural que está virtualmente impresso nas letras desse conto é uma atividade bem diferente para alunos brasileiros e portugueses. O conjunto de vivências culturais que emergem, quando a leitura é feita, varia muito. Os alunos portugueses lembravam-se do sabor da sopa já degustada muitas vezes por eles. Havia crianças que já tinham morado no interior de Portugal e que tinham guardado como recordação a pedrinha servida juntamente com a sopa nos restaurantes. Os alunos da capital, Lisboa, disseram que a pedra fica na panela dos restaurantes onde a sopa é feita, para conservar seu calor. A discussão feita pelos alunos portugueses, provocada pela leitura do texto *O caldo de pedra*, jamais existiria em salas de aulas brasileiras. *O Caldo de pedra* faz parte da gastronomia e do folclore portugueses. A esperteza de Malazartes é conhecida por boa parte dos alunos brasileiros. Ambos, alunos portugueses e brasileiros, chegariam a uma mesma *moral* da história, mas por caminhos culturais bastante diferentes. Trata-se dessa rede de conexões pessoais acionada pelos elementos gráficos, gerada por condições culturais diversas, que cada indivíduo constrói ao longo de sua existência. Como pesquisadora brasileira, que experimentei o caldo de pedras em Portugal durante o período do estágio de doutorado, tenho hoje uma rede de conexões mais ampla do que tinha anteriormente. A leitura é produzida, mas é preciso determinar o processo e condições de sua produção. Segundo Nogueira, 1993, p. 31 “a atividade de leitura não é apenas decodificação nem apreensão de um único sentido pré-estabelecido. A leitura envolve também a atividade do leitor que atribui sentidos ao texto a partir das relações que estabelece segundo suas experiências”.

Depois de ter garantido que todos os alunos tivessem compreendido a narrativa lida, a professora entregou-lhes os mesmos desenhos colocados na lousa para que recortassem os quadros e os colassem na ordem correta da história para produzirem o texto escrito a que deu o nome *legenda*.

Aqui temos duas situações que gostaria de explicitar. A primeira, o fato de a professora selecionar tiras de quadrinhos como sendo um tipo de texto que aparece nos jornais; a segunda, por referir-se aos balões de fala como sinônimo de legendas, outro tipo de texto comum nos jornais. Entretanto, em nenhum momento a professora explicou para seus alunos que o jornal, como produto cultural, veicula banda desenhada.

Como as tiras e as legendas são tipos de textos encontrados nos jornais, é possível compreender a escolha da professora. Entretanto, esses textos, fora do suporte *jornal* tornam-se diferentes. Vale ressaltar que legendas e tiras são textos jornalísticos estruturalmente diferentes, que foram utilizados pela professora como se fossem complementares. Segundo Faria (2001, p. 159), pode-se entender por legenda “um pequeno texto com informações e/ou comentários sobre a foto ou matéria da foto”. A legenda não deve descrever a foto, mas ajudar ao leitor a compreendê-la. Ainda segundo Faria (2001), ela pode ser informativa, explicativa, interpretativa, irônica, investigadora, mas uma legenda simples normalmente contém os elementos principais da Pirâmide Invertida (quem, quê, quando, onde como, e por quê). Já, a legenda utilizada nos quadrinhos, que é colocada na parte superior e representa a “voz” do narrador da história, deve ser lida em primeiro lugar, pois “situa o leitor no espaço e no tempo, indicando mudança de localização dos fatos, avanços ou retorno no fluxo temporal, expressões de sentimentos ou percepções dos personagens” (Vergueiro, 2006, p. 62).

O pedido que a professora faz aos seus alunos não corresponde exatamente às características de uma legenda, mas às de um texto narrativo de ficção, normalmente usado abaixo de uma figura que representa parte de uma história em um livro ilustrado.

Depois de ter corrigido a atividade de uma aluna, pediu que esta me mostrasse o trabalho terminado. A criança havia feito a colagem na seqüência correta e escrevera abaixo de cada quadro um pequeno texto narrativo que, lido também na seqüência, compunha a reescrita da história. No último quadro desenhara balões de fala entre as personagens. Ao escrever as falas, a aluna corretamente não colocou o sinal de travessão, mas a professora pediu que o colocasse antes de cada fala, mesmo dentro do balão, alegando que poderia esquecer-se de colocá-lo quando fizesse uma narrativa. Como se pode observar, a professora deu importância acentuada ao texto narrativo ao determinar o uso inadequado do travessão no interior do balão. Para cada tipo de texto há uma estruturação própria que precisa ser respeitada, mas **D** estava mais preocupada em ensinar o uso do travessão do que a estrutura da tira e o uso de balões e legendas em banda desenhada.

Podemos considerar que não há uma única montagem para as histórias em quadrinhos. Tudo vai depender do tipo de suporte em que ela será publicada. Segundo Vergueiro, (2006, p. 45), “as tiras de jornal, por sua própria característica, precisam trabalhar temas específicos em dois ou três quadrinhos, algumas vezes de forma isolada, em outras, interligadas com tiras anteriores e posteriores”. As tiras de humor possuem a característica marcante de uma piada por dia de

publicação, em que toda a narrativa se inicia e termina em uma única tira. Entretanto, as histórias de aventura partem de um gancho ou momento anteriormente dado. A tira de aventura publicada no dia anterior lida com a incompletude para que o leitor possa, no dia seguinte, esperar a completude, e assim sucessivamente permitir a compreensão do leitor. Os modelos são diferentes. Enquanto a primeira estrutura tem conteúdo finito, completo, a segunda exige o acompanhamento diário do leitor, caso contrário existe o risco de incompreensão. Pode-se afirmar que produzir legendas abaixo de um desenho não garante a apropriação da estrutura das tiras de jornais. Até mesmo um bom leitor de quadrinhos precisaria de algumas informações específicas para a leitura das tiras publicadas em jornais.

A mídia em geral, assim como também o jornal impresso, chega pouco às salas de aulas. O discurso de que a escola deve desenvolver atividades de ensino em contextos sociais já está desgastado, mas sua prática, na verdade, ainda não chegou de fato a existir com consistência nas salas de aula, exceto em situações particulares. A escola parece estagnada, aprisionada por suas paredes, enquanto o mundo se desenvolve velozmente. O aluno ainda não é preparado pela escola para expandir os conhecimentos que já possui dos *media*, porque as escolas não se prepararam para este tipo de conteúdo e, poderia dizer, nem mesmo o próprio professor.

Pude entrevistar, durante o período de estágio de doutorado em Portugal, a coordenadora do ISEC – Instituto Superior de Educação e Ciências – que acompanha o período de estágio das futuras professoras. Perguntei a ela sobre a apresentação dos *media* durante o processo de formação das alunas como um conteúdo relevante para o ensino. Relatou-me a falta de novas perspectivas didáticas e metodológicas para o ensino e o conservadorismo persistente na formação de professores.

Em visita à *Bulhosa*, grande livraria situada no bairro Alvalade, próximo da Universidade de Lisboa, encontrei o livro *Como usar o jornal na sala de aula* de Maria Alice Faria, editado no Brasil. Tive a curiosidade de perguntar à professora se conhecia o livro ou outro do mesmo gênero. Afirmou que desconhecia orientações desse tipo, tampouco demonstrou interesse em conhecer o livro, porque preparava as aulas em conjunto com a parceira de série com o auxílio de livros didáticos que a escola possuía.

No segundo dia de observação, tanto eu como os alunos, tivemos uma surpresa. Dado o horário marcado para o início das aulas, a professora conduziu todos os alunos para sala e lá se encontravam sobre as mesas dois exemplares de jornais distribuídos gratuitamente: o *Global* e o *Metro*. As crianças se sentavam em

duplas. Em uma única mesa cabiam dois alunos. Como alguns chegavam atrasados, a professora pediu que lessem jornal até que todos chegassem. A leitura aconteceu com naturalidade. Vale dizer que durante os dias em que observei a sala, a professora sempre pedia aos alunos que fizessem silêncio para desenvolver as atividades, mas diferentemente deste comportamento, não fizeram barulho, não correram afoitos para o material, como se fosse uma novidade e se concentraram na atividade de leitura do jornal. Considero que este fato ocorreu devido ao interesse dos alunos pelo material e pelo conhecimento prévio que já possuíam do jornal como veículo de informações sociais. Sabiam que nesse material o discurso tinha como foco a vida social, diferentemente dos livros didáticos.

Uma aluna levantou-se e reclamou com a professora que o jornal tinha sujado sua mão. A professora falou que era natural, próprio da tinta e do papel utilizados para a confecção. A aluna continuou a ler com muita atenção. É preciso que o professor permaneça atento aos indícios que podem dificultar o encontro dos alunos com o material de leitura proposto.

Devido ao grau de concentração na atividade, a professora deixou que lessem por quinze minutos. Então, pediu que fechassem o jornal para começar a explicação do conteúdo a ser trabalhado naquele dia. Imediatamente os alunos obedeceram, mas logo após começar a explicação, cinco alunos voltaram a folheá-lo. A professora observou, mas não fez nenhuma advertência. Embora a professora desejasse que os alunos prestassem atenção a sua explicação, considerou a atitude dos alunos como adequada. O interesse em continuar a leitura é um indício importante de que o jornal é um material aceito pelos alunos da Educação Básica e, portanto, possível de ser inserido nos currículos escolares.

Em Lisboa há distribuição gratuita de alguns jornais; são distribuídos em estações de metrô, cafés, supermercados, pontos de ônibus, enfim, é muito fácil conseguir um exemplar de um jornal gratuito na cidade, fato esse que já não acontece em outras cidades do interior. D disse que vinha todos os dias para o trabalho por metrô, por isso era fácil conseguir os exemplares, mas era a primeira vez que usava um exemplar para cada criança. Suponho que fora por minha solicitação anterior. Uma atitude que merece ser destacada foi a naturalidade com que os alunos lidaram com os jornais. Considero que o fator colaborador para essa prática tenha sido o fato de sempre eles estarem em contato com jornais, dado que pude confirmar ao entrevistar alunos portugueses. Eles sabiam manusear as folhas sem queixas, o que não acontece com alunos no Brasil.

Antes de avançar para o relato da aula, há um aspecto sobre os jornais que poderia esclarecer melhor o fato de as crianças não sentirem dificuldade com o tamanho da folha de papel. A formatação do jornal vendido em bancas é bastante

diferente da do jornal distribuído gratuitamente, em Portugal. No primeiro caso, há edições que chegam a ultrapassar 140 páginas em um único exemplar. A formatação não possibilita a separação por cadernos, o que impede a possibilidade de duas pessoas lerem o jornal ao mesmo tempo, como normalmente ocorre com os leitores do Brasil, onde os cadernos são bem definidos e separados uns dos outros.

Não foi este tipo de jornal que a professora **D** trouxe para a aula, mas o jornal de distribuição gratuita. Leve, com poucas páginas, variando de 20 a 26 por exemplar, apresenta tamanho menor em relação ao do jornal vendido. Podemos comparar seu tamanho com o tamanho da folha usada na produção de suplementos da *Folha de S. Paulo*. Raramente apresenta reportagens; sua maior produção é a notícia; é feito com a intenção de atingir o leitor apressado, que vai ao trabalho de metrô ou de ônibus; é semelhante a um jornal digital: notícias curtas, rápidas e objetivas e muita informação visual. Como as crianças são conduzidas a escolas pelos pais, e a maioria delas pelo metrô, pais e filhos têm acesso diário a esses jornais gratuitos.

Na seqüência da aula, a professora promoveu um diálogo com os alunos a respeito da importância do jornal e seu conteúdo. Pediu que cada aluno contasse o que lera e, então classificava a notícia relatada por tema, respeitando a formatação por assuntos. Embora parecesse bastante intuitiva, **D** contribuía para que o aluno percebesse que as notícias em um jornal não estavam dispostas aleatoriamente, mas em grupos semânticos, e os alunos demonstravam entender sobre o que explicava. Depois dessa etapa, a professora perguntou aos alunos o que eram *notícias*. Um aluno respondeu "*Luis Felipe Scolari bate no jogador*" fazendo referência a um fato que recentemente havia acontecido no futebol português, manchete de jornais. A professora não aceitou a fala como resposta, dizendo "*Isso é apenas uma informação*". A professora não a aceitou como resposta correta, pois para se constituir como notícia seria preciso que o texto apresentasse o relato de uma série de fatos a partir de um que seja mais importante. Embora o aluno não tenha dado uma resposta adequada, a professora também não foi precisa em sua resposta. Nesse momento, a informação citada pelo aluno ocupava um lugar na estrutura do jornal, que se refere a um tipo de texto jornalístico específico, chamado *manchete*. Ela não definiu o que era notícia, e não explicou sua formatação. Poderia ter sido um momento para falar sobre as características da notícia e da manchete, textos específicos de jornal, mas continuou a ouvir os alunos sobre os assuntos lidos. Assim, todos os alunos seguiram o exemplo do primeiro e liam títulos de notícias que lhes chamaram a atenção.

Depois de ouvir todos os alunos, pediu que guardassem os jornais para ler, mais tarde, em casa. Um aluno perguntou a ela porque trouxera os jornais para aula. Sua resposta foi: *“estava a pensar que já era hora de ensinar vocês a ler o jornal”*. E imediatamente o aluno responde *“nós já sabemos ler, professora”*. É interessante observar que na fala do aluno também está implícito o conceito de que ler é saber decifrar o código lingüístico. Ao fazer esse comentário, o aluno demonstrou que não estava habituado a fazer estudos sobre a formatação dos textos, que o ajudariam tanto na compreensão da leitura como também na produção dos diversos tipos de textos. Não bastava ler uma diversidade de textos, sem reconhecer neles sua estrutura. Outra interpretação possível, quanto à leitura deste relato, é sobre o uso diário do jornal pelo aluno. Aquele que toma o metrô todas as manhãs para ir à escola entra em contato com o jornal e possivelmente já sabe o que necessita e qual uso faz dele. A escola não precisa de lhe ensinar o que é jornal, nem para que existe, porque já se apropriou deste meio de comunicação em suas relações sociais. Em comparação aos alunos brasileiros do interior de São Paulo, não se pode considerar o mesmo ponto de observação. Os brasileiros do interior não têm acesso à distribuição gratuita de jornais, exceto em bibliotecas ou setores públicos que os disponibilizam para leitura diária.

A professora respondeu ao que ele havia dito da seguinte maneira *“Sim, é verdade. Mas nunca estudamos como são as notícias, pois já lemos fábulas, textos narrativos, banda desenhada... mas, se calhar, notícias não”*. Na resposta dada pela professora percebemos sua preocupação com a formatação da notícia, embora não tenha explicitado sua estrutura. É possível levantar a hipótese de que está marcada, no processo de formação da professora a idéia que, ao lermos determinado tipo de texto, apreendemos a sua estrutura e assim poderemos facilmente produzi-lo.

A professora começou efetivamente a ensinar como se deve ler um jornal, ao dar as seguintes orientações: *“Bem, a primeira coisa que fazemos é ler os títulos. Depois vamos procurar as áreas que mais nos interessam”*. Durante esse momento da aula, sete alunos liam o jornal enquanto a professora explicava, mas um deles pediu a um amigo que trocasse de exemplar com ele, já que ambos estavam com jornais diferentes. Somente neste momento, devido ao barulho, é que a professora pediu que fechassem os jornais. Então, **D** interrompeu a explicação e entregou uma folha de exercícios para os alunos. Disse que havia escolhido uma notícia que saíra no jornal no início das aulas e que resolvera trazer para eles porque a considerara engraçada. Entretanto, a notícia cujo título era *“Retorno às aulas”*, assinada por José Jorge Letria, fora retirada de um texto de um livro didático produzido por este autor. A produção da notícia era fictícia e não um recorte de um jornal produzido

socialmente. A atividade de interpretação parecia ter interesse em explicar o lide, mas não usou a palavra e nem o fez. Foi apenas um exercício de localização de informações. As questões também eram cópia de livro didático. Abaixo da notícia havia perguntas de interpretação do texto como assunto da notícia; onde aconteceu; quem esteve presente; o que levaram os alunos de volta às aulas. A própria formatação da notícia no material didático apresentava desvios. Abaixo dos quatro parágrafos que compõem a notícia, foram colocadas a data e a assinatura do suposto jornalista que a escrevera.

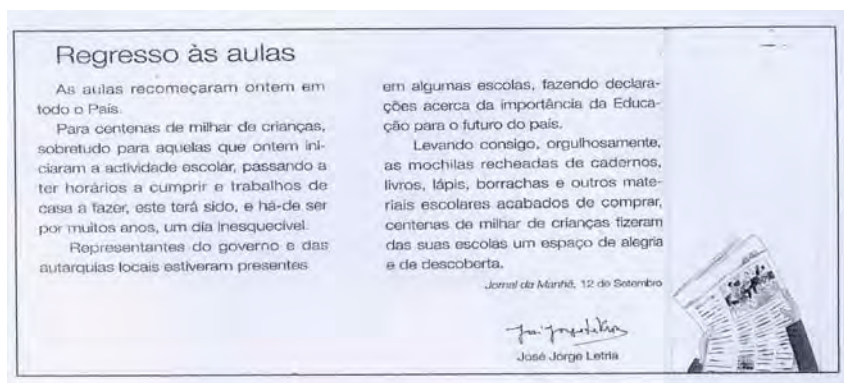

Figura 1 - Fragmento retirado da ficha de atividades propostas

Assim, mais uma vez, entre tantas que conhecemos em nossa história brasileira, são produzidos textos artificiais que tentam imitar a realidade para serem colocados em cartilhas para o ensino da leitura e da escrita. Os alunos da sala da professora **D**, que passaram por esta lição escolar, certamente, em todos os dias, antes de a aula começar, já teriam entrado em contato com o jornal produzido socialmente com função real. Os alunos não perceberiam a farsa escolar? Por que levar o jornal para a sala de aula, permitir sua leitura, conversar sobre as notícias e escolher um texto artificial de jornal para ensinar aos alunos a estrutura de uma notícia? A didática da escola tradicional ainda impera nas ações atuais. A riqueza do jornal foi substituída por atividades desvinculadas da realidade.

Os alunos fizeram a leitura da notícia reproduzida na ficha de atividades em voz alta, mas para que todos lessem, foi necessário repetir quatro vezes a leitura do texto. Em seguida, os alunos deveriam responder às questões em silêncio. A única atividade que levava ao aluno a pensar sobre a estrutura do jornal era a representada a seguir.

5- Faz uma pesquisa num jornal e completa o quadro.

Nome do jornal:			
Títulos de notícias			
Primeira página	Desporto	Música	Outros

Figura 2 - Fragmento retirado da ficha de atividades propostas

A motivação dos alunos, nesse dia, em relação ao primeiro dia de observação, foi superior. Na verdade, a aula ofereceu pouca informação sobre a estrutura do jornal. Entretanto, os alunos tinham informações trazidas de seu contexto cultural, não ensinadas pela professora, mas possivelmente pelos pais leitores e também pelo acesso à distribuição de jornais gratuitos. Os alunos que terminavam a atividade escrita voltavam para a leitura do jornal, demonstrando claramente que ler jornal lhes era mais interessante que preencher a ficha. Terminada a leitura para a escola, voltavam-se para a leitura da vida. No mesmo dia a professora fez a correção coletiva da ficha de exercícios. Um aluno que não tinha terminado sua atividade justificou-se que gastara seu tempo lendo o jornal, o que demonstrava o interesse pelos dados reais apresentados.

No terceiro dia de observação a professora pediu que os alunos criassem uma notícia, como se eles fossem jornalistas. Também neste dia, não fez nenhuma explicação prévia sobre a formatação do texto. Poderia ser uma notícia inventada ou lida, ou conseguida pelos jornais e telejornais. Solicitou a tarefa sem dar subsídios aos alunos, que ao final da aula leram suas produções. Quatro alunos fizeram um texto narrativo utilizando a forma *era uma vez*.

As aulas sobre jornal trouxeram muito pouca informação sobre o que de fato é esse produto cultural e como é elaborado. Entretanto, os alunos demonstraram saber muitas informações sobre a sua complexidade, sem que a escola lhes oferecesse detalhadas. A escola parece caminhar paralelamente ao que acontece no cotidiano da vida social, na qual os alunos estão inseridos sem intenção explícita.

Conclusão

Embora todos os educadores acreditem na importância de criar com os alunos a necessidade de ler, muitos deles apenas utilizam livros didáticos que, devido às suas limitações, mais inibem do que criam verdadeiras situações de leitura. É certo que um professor poderá suprir falhas dos manuais adotados, inserindo um diálogo crítico entre ele e seus alunos sobre o material de trabalho. Contudo, o professor poderá ter o jornal em sala de aula como um aliado que trará oportunidades raras

de realização de leituras efetivas, ampliando a noção de realidade social que permeia as escolas e apresentando, no cotidiano dos alunos, situações reais produzidas pelas relações sociais. Este material é produto cultural e, portanto, deve haver uma correspondência entre os signos lingüísticos sociais exteriorizados pela palavra escrita e os signos internos da criança, também gerados pela ideologia social do contexto em que está inserida. No entanto, os fatos escolhidos para ser notícia estão vinculados ao dia-a-dia de uma classe social que determina os rumos econômicos do país, mas que não é a classe social a que pertence a maioria dos alunos. Muitos alunos não têm o jornal como um veículo de comunicação, e o jornal impresso e falado não abordam questões sociais que são prioridades para as classes de nível baixo. Por essa razão, nem sempre as notícias trazidas pelos jornais correspondem a um imediato diálogo entre alunos e sociedade, porque a imprensa, para veicular suas notícias, pensa no público potencial de leitores, antes de distribuir os exemplares para as bancas. É possível que o aluno compreenda pela leitura do jornal, que é um objeto social fruto das tensões dos diversos grupos sociais, um pouco da História do país, sempre calcada nos interesses de classes dominantes. Embora o jornal traga um grande conjunto de informações, as prioridades daqueles que são vítimas do regime econômico-social não ocupam lugar de destaque.

Essa característica aparentemente negativa, entretanto, pode proporcionar um vasto campo ao professor para ensinar seus alunos a selecionar e organizar os fatos, comparando-os e criticando-os, a fim de desenvolverem estratégias e processos mentais que contribuam para a aprendizagem da leitura significativa, ambos, alunos e leitura, inseridos no fluxo lingüístico que é social e dinâmico.

A relevância da presença do jornal em sala de aula concentra-se em dois aspectos: o social e o pedagógico. O primeiro justifica-se porque “se a leitura do jornal for bem conduzida, ela prepara leitores experientes e críticos para desempenhar seu papel na sociedade” (Faria, 2001, p. 11). O segundo, “porque aborda o jornal como um excelente material pedagógico para todas as áreas, sempre atualizando, desafiando os professores a encontrar o melhor caminho didático” (Faria, 2001, p. 12).

A presença dos jornais nas ruas de Lisboa leva as famílias a lê-los, mas também pode provocar mudanças nas escolas, como levá-las a aderir à leitura em sala de aula, porque nesse veículo cultural circulam o conhecimento, as relações econômicas e políticas da sociedade. A escola não pode estar ao largo disso.

A apropriação da leitura do jornal está nas mãos das escolas, e, mais particularmente, nas mãos do professor em sua relação singular com os alunos.

Portanto, não basta o contato oferecido pela distribuição gratuita; é preciso que o professor ensine como usá-lo com toda sua complexidade e potencialidade.

Considerações introdutórias

Ao representar o uso da linguagem como forma de prática social, na mediação entre o homem e a sua realidade (Fairclough, 2001: 90), o discurso associa-se intrinsecamente ao modo como o texto produz sentidos enquanto objecto não apenas linguístico, mas também social e histórico. A análise do discurso, proposta centrada na investigação do “uso linguístico como uma produção realizada em contextos sociais”, tem, enquanto método crítico, “o propósito de tornar visíveis as relações entre prática social e linguagem” (Moraes, 2004: 106), observando esse processo de interacção e reciprocidade (em que o discurso é socialmente constituído e condicionado) e procurando documentar esferas de existência dos indivíduos e relações que estabelecem com o mundo – sob a perspectiva de que este, não é então, simplesmente, um *dado*, mas “um *constructum*, o resultado da própria elaboração linguística da experiência do mundo” (Rodrigues, 2001:14).

Enquadrado, assim, nos pressuposto de que “a linguagem desempenha um papel primordial na criação dos significados” e de que o seu uso “tem que ser estudado em contexto social, especialmente se estamos interessados na política da significação” (Apple, 1999: 155), o exercício que aqui se apresenta elege, numa abordagem qualitativa e dentro das propriedades de análise, o texto jornalístico como espaço privilegiado para a recolha de *corpora* de amostras discursivas que permitam a (des)construção do processo a que acima nos referimos. Reflectindo sistemas de valores dos indivíduos e da sociedade em que circula, (re)produzindo concepções e posições dominantes e influenciando novos modos de pensar e agir colectivos (Rech & Feltes, 2005: 271), esta prática discursiva, tão frequentemente exercida e por tantas pessoas, impõe-se enquanto “forma de representação simbólica estruturada pelos processos sociais”, moldando-os e sendo por eles moldada (Moraes, 2004: 106).

Aqui concebido, portanto, e essencialmente, como um construto *empírico*, digamos, o discurso é um lugar em que se cruzam percepções sobre uma dada realidade – no caso, a que tomámos como objecto de análise: os resultados obtidos pelos alunos portugueses no PISA – *Programme for International Student Assessment*, ano 2000. Este “estudo internacional sobre os conhecimentos e as competências dos alunos de 15 anos realizado em vários países industrializados”,

lançado pela OCDE em 1997, procurou avaliar “a capacidade de os jovens usarem os seus conhecimentos e as suas competências na resolução de problemas da vida real e não especificamente de acordo com um currículo escolar” (Ministério da Educação [ME], 2001: 1), com a finalidade de “monitorizar, de uma forma regular, os sistemas educativos em termos do desempenho dos alunos, no contexto de um enquadramento conceptual aceite internacionalmente” (Gave - *website*). O PISA organizou-se em ciclos de três anos, sendo que a primeira recolha de informação – à qual se reporta o objecto de estudo deste trabalho – ocorreu em 2000 e teve como principal domínio de avaliação a “literacia em contexto leitura” (significando isto que os instrumentos utilizados incluíram mais questões referentes a este tipo de literacia), definida pela OCDE (2001, *ap.* ME, 2001: 5) como “a capacidade de cada indivíduo compreender, usar textos escritos e reflectir sobre eles, de modo a atingir os seus objectivos, a desenvolver os seus próprios conhecimentos e potencialidades e a participar activamente na sociedade”. Os resultados portugueses mostraram um desempenho, na generalidade, fraco em relação aos valores médios dos países da OCDE, colocando o país numa posição de desconforto.

A análise dos textos estrutura-se em dois momentos fundamentais: um mais ligado à *exterioridade* (descritivo), compreendendo a contextualização/enquadramento que os autores fazem do tema/problema e a representação que dele têm; e outro à *interioridade* (interpretativo), centrado na relação que estabelecem com a realidade social e com o seu próprio enunciado. Assim, e no intuito de fornecer aos textos seleccionados uma dimensão crítica, conforme preconiza Pedro (1997: 23), este empreendimento metodológico visa, essencialmente, encontrar um *lugar* em que – na forma de ensaio – seja possível identificar o que o sujeito diz, o modo como diz e, complementarmente, o modo como assume o que diz, atestando, precisamente, a sua presença nesse *lugar*. Ball (1990: 3, *ap.* Pedro, 1997: 19) resume que “a questão na análise do discurso é porquê, num dado momento, de todas as coisas que poderiam ser ditas, apenas certas coisas foram ditas”, considerando Mainueneau (1997: 124) que “em um discurso não é tanto a palavra que importa, mas a maneira como é explorada” – e é no alicerce destes princípios que, por ora, avançamos.

Abordagem de textos jornalísticos acerca dos resultados do PISA 2000 em Portugal à luz da análise do discurso

1. Objecto

O objecto de análise seleccionado para este trabalho é, como já referimos, o discurso sobre os resultados dos alunos portugueses no PISA 2000, sob a forma de quatro textos publicados no jornal *Público* aquando da divulgação do primeiro relatório nacional sobre o estudo (produzido pelo Ministério da Educação – Gabinete de Avaliação Educacional). As razões que sustentam a escolha deste objecto prendem-se, fundamentalmente, com o interesse pela investigação da temática da literacia (e, particularmente, pela área da literacia em leitura) e, logo, pelo conteúdo dos textos – que, partilhando a característica de discutir o assunto em epígrafe, representam, desde logo, um contexto discursivo específico.

A edição do *Público* do dia 5 de Dezembro de 2001 incluía um total de oito artigos sobre o PISA (pp. 2 a 6), tendo como autores o editor do jornal e três jornalistas da sua equipa de redacção. Numa fase inicial, foram todos lidos e (superficialmente) analisados no que se refere à contextualização/enquadramento do tema – confirmando-se, desta forma, que constituía, na verdade, um *problema* (basta-nos-ia, de resto, uma simples olhadela aos títulos); este procedimento foi determinante para seleccionar apenas um texto de cada autor, ao que também não foi alheio o grau de destaque que lhes era dado, nomeadamente em termos de apresentação e de mancha gráfica.

Assim, os quatro textos que integram o *corpus* de análise são:

1. *Dez por cento dos alunos portugueses aos 15 anos têm dificuldades em perceber o que lêem* – por Andreia Sanches (p. 2)
2. *A nossa tragédia* – por José Manuel Fernandes (p. 3)
3. *Ministro diz que os resultados não surpreendem* – por Isabel Leiria (p. 4)
4. *O bom estudante é filho de “boas famílias”* – por Bárbara Wong (p. 5)

2. Objectivos

A análise estrutura-se, como mencionámos, em dois momentos centrais:

- no primeiro, que caracterizamos como “exterior” e de âmbito global, mais ligado à *circunstância*, serão tidas em conta duas dimensões: a forma como os autores (*sujeitos sociais*) contextualizam/enquadram o tema/problema, estabelecida nos contornos com que o definem, e a sua interpretação/representação acerca do mesmo, consubstanciada, quer nos factos que convocam, quer, sobretudo, nas opiniões que emitem – procurando compreender o sentido global do discurso.

- no segundo momento – delineado a partir do primeiro e complementando aquelas dimensões –, mais ligado ao *conteúdo*, de carácter mais “interior” e específico, a análise centrar-se-á no modo como essa contextualização e interpretação do tema/problema incorporam a construção da relação dos autores (*sujeitos textuais*) com a realidade social e com o seus próprios enunciados – analisando, a partir do modo *como os textos dizem*, as manifestações através das quais se vertem no texto que produzem.

Assim, e concretizando, os objectivos propostos para este trabalho são:

1. *Caracterizar a forma como o autor **contextualiza/enquadra** o tema/problema*, nomeadamente através da identificação de elementos como:
 - o problema (explicitação)
 - os argumentos que traduzem a sua gravidade
 - as suas causas
 - as suas consequências
 - as soluções para o ultrapassar
- 1.a) *Analisar o modo como a contextualização/enquadramento do tema/problema incorpora a **construção da relação do autor com a realidade social***, designadamente através do recurso à categoria analítica “metáfora”, identificando, neste âmbito:
 - os termos e/ou as expressões (eventualmente) metafóricos/as
 - o âmbito possível de enquadramento desses termos e/ou expressões
2. *Conhecer a **interpretação/representação** do autor acerca do tema/problema*, particularmente através da identificação de informações como:
 - os factos mobilizados e as fontes convocadas
 - as opiniões emitidas
- 2.a) *Analisar a maneira como a interpretação do tema/problema incorpora a **construção da relação do autor com o seu próprio enunciado***, concretamente através do recurso à categoria analítica “modalidade”, focalizando, neste âmbito:
 - os termos e/ou as expressões passíveis de indicar a relação do autor com o enunciado
 - o tipo de relação que estabelece com o enunciado

A representação esquemática deste enquadramento traduz-se em:

		Momento 1 circunstância ----- "exterior"	"interior" -----	Momento 2 ----- conteúdo
Perspectiva do autor	<i>Contextualização/enquadramento do tema/problema</i>	≈		<i>Relação com a realidade social</i>
	- problema - argumentos - causas - consequências - soluções		Metáfora	- termos/expressões - âmbito(s) de enquadramento
	<i>Interpretação do tema/problema</i>	≈		<i>Relação com o enunciado</i>
	- factos / fontes - opiniões		Modalidade e	- termos/expressões - tipo(s) de relação
				Perspectiva do autor

3. Procedimento de análise

Assumindo claramente o pressuposto, expresso por Fairclough (2001: 275), de que “não há procedimento fixo para se fazer análise de discurso; as pessoas abordam-na de diferentes maneiras, de acordo com a natureza específica do projecto e conforme suas respectivas visões do discurso”, a metodologia adoptada para a análise do *corpus*, naturalmente centrada nos objectivos atrás enunciados, estabelece como princípio-base que a caracterização da forma como os autores contextualizam/enquadram o tema/problema e a aproximação às suas representações acerca do mesmo (*circunstância*) se alicerçam em determinados elementos que, num primeiro momento, nos facultarão uma percepção do sentido global do seu discurso enquanto *sujeitos sociais*. Seguem os exemplos desta incursão.

▀ **Exemplo** – contextualização/enquadramento do tema/problema:

Problema	Argumentos que traduzem a gravidade do problema	Causas	Consequências	Soluções
“Metade dos alunos portugueses com 15 anos de idade tem níveis de literacia em leitura muito baixos”	- “dez por cento dos jovens em Portugal não conseguem sequer atingir o valor mínimo de literacia em leitura (...), ficando abaixo do nível 1”	- “ano de escolaridade frequentado” - “ficar para trás um ou mais anos”	- “dificuldades de integração no mercado de trabalho ou em qualquer esquema de educação e formação ao longo da vida”	

[texto 1]

■ **Exemplo** – interpretação/representação do tema/problema:

Factos	Fontes	Opiniões
- “os alunos portugueses com 15 anos são dos pior preparados da OCDE”	- “o estudo da OCDE”	- “Como disse o Ministro (...), estes resultados não surpreendem – mas não era isso que ele devia constatar. O que devia sublinhar é como são inquietantes. E não se desculpar (...). Tudo isso já nós sabemos. O que precisamos de saber é como é que vamos ultrapassar o pior dos nossos atrasos”
Nº	Há uma discrepância assinalável entre o número de opiniões (muito maior) e de factos.	
Factos	Os factos dizem respeito: a) aos estudantes b) ao país	
Fontes	As fontes associadas são o Relatório PISA (...) e “o ministro da Educação”.	
Opiniões	As opiniões centram-se: a) no enquadramento social b) no estudo	

[texto 2]

No segundo momento da análise, a estas dimensões da contextualização/enquadramento do tema/problema e sua interpretação, associamos, respectivamente, a observação do modo como se constrói a relação do autor com a realidade social e com o próprio enunciado que produz (*conteúdo*), procurando as “marcas que o *dizer* imprime no próprio discurso” (Marques, 2000: 17), por princípio reveladoras dos *sujeitos textuais* aí presentes. Assim, para a microanálise da relação do autor com a realidade social erigimos como estruturante a categoria “metáfora”, enquanto para a da sua relação com o enunciado utilizámos a “modalidade”. Estas categorias foram seleccionadas em função da perspectiva teórico-metodológica que as enforma e decorreram, naturalmente, da parte comum que considerámos existir entre as dimensões a que se reportam (contextualização/enquadramento – relação com a realidade social; interpretação/representação – relação com o enunciado). Passamos a enquadrar os princípios gerais que sustentam a sua conceptualização, bem como os exemplos relativos à sua aplicação.

A metáfora, cuja relevância analítica podemos situar, precisamente, no âmbito da “construção da realidade social” (Fairclough, 2001: 211), é, de acordo com Fairclough (2001: 242), determinante “na estruturação da realidade de uma forma

particular”. Assim, e apesar de, usualmente, ser concebida enquanto recurso estilístico e associada sobretudo à linguagem literária, tem sido possível demonstrar a sua utilidade na análise de todos os tipos de discurso e reconhecer as suas potencialidades na sinalização de aspectos e convenções dos sujeitos sobre o mundo: a observação da forma como um domínio particular da realidade ou da experiência é metaforizado permitir-nos-á, pois, uma aproximação aos valores e preocupações subjacentes a um sujeito – ou, mesmo, a uma cultura (tome-se como exemplo o caso da imprensa) –, acrescentando, a esta consideração, o facto de, como assevera Fairclough (2001: 241), algumas metáforas serem “tão profundamente naturalizadas no interior de uma cultura particular que as pessoas não apenas deixam de percebê-las na maior parte do tempo, como consideram extremamente difícil escapar delas no seu discurso, pensamento ou ação”.

Partindo destes princípios, procurámos, então, **a)** identificar, nos textos, alguns termos e/ou expressões metafóricas/as (ou, pelo menos, que isso nos sugeriram), passíveis de indiciar a perspectiva dos autores relativamente à forma como apreendem a realidade social, almejando, *in limine*, e como instiga Fairclough (2001: 289), “caracterizar as metáforas usadas na amostra discursiva, em contraste com as metáforas usadas para sentidos similares em outro lugar”. De notar que não concebemos a metaforização no sentido (estritamente) gramatical, salientando, sobretudo, termos/expressões que considerámos revestidos/as de um carácter mais ou menos simbólico no contexto em que são enunciados/as. Tentámos, seguidamente, **b)** estabelecer um paralelismo entre estes termos/expressões e (possíveis) âmbitos em que são/podem ser usados/as com sentidos aproximados ou equivalentes, procurando, desta forma – e ultrapassando a simples questão da lexicalização (no sentido em que não existe apenas “por existir”, mas com fundamento) –, evidenciar o(s) domínio(s) privilegiado(s) pelo autor na estruturação da realidade social.

■ **Exemplo:**

Termos e/ou expressões	Âmbito(s) de enquadramento
- “Portugal está no <u>pelotão</u> dos mais fracos” [texto 1]	guerra relação social (poder)
- “ <u>submeter-se</u> ao primeiro «exame»” [texto 1]	adversidade
- “o <u>abismo</u> entre Portugal e a Europa” [texto 2]	pessoal (personalidade)
- “« <u>modesto</u> » desempenho português” [texto 2]	economia/gestão
- “ <u>meio</u> para atingir os seus <u>fins</u> ” [texto 3]	
[texto 4]	

A modalidade, “dimensão da gramática da oração” (Fairclough, 2001: 199) que se enquadra no âmbito da “construção das relações sociais e do eu”, centra-se, portanto, nas propriedades analíticas dos textos associadas à forma como as relações e as identidades sociais são manifestadas e construídas no discurso (Fairclough, 2001: 175). Tratando da relação sujeito-enunciado, ela é reveladora do “comprometimento ou, inversamente, do distanciamento entre produtores e proposições: seu grau de ‘afinidade’ com elas” (Fairclough, 2001: 180) e expressa “la posibilidad que tiene el hablante de introducir sus propias actitudes y su propia perspectiva en el enunciado, tanto en el dominio intelectual como en el dominio emocional” (Calsamiglia Blancafort & Tusón Valls, 1999: 136). Refere-se, em essência, ao *modo* como se dizem as coisas, e torna, assim, claro que “os enunciados posicionam os sujeitos (...) de formas particulares” (Fairclough, 2001: 68), demonstrando a sua afinidade relativamente a uma certa representação de mundo, interseccionada com a significação da realidade e o estabelecimento de uma identidade social no/através do discurso.

No entendimento da modalidade como uma categoria gramatical, a literatura de referência estabelece a sua *realização* através do recurso a elementos como: tipos de frase (‘assertiva’, ‘exclamativa’, ‘interrogativa’, ‘imperativa’); verbos auxiliares modais (nomeadamente ‘poder’ e ‘dever’); tempo e modo verbal; formas não pessoais de verbo (infinitivo, gerúndio, participio); advérbios modais (como ‘provavelmente’, ‘possivelmente’, ‘obviamente’, ‘definitivamente’); e adjectivos equivalentes aos advérbios modais (como ‘provável’ e ‘possível’). Concebe ainda a existência de uma gama um tanto difusa de formas de manifestação de vários graus de afinidade, como sejam indeterminações (‘uma espécie de’, ‘um pouco’, ou ‘uma coisa assim’), padrões de entoação, fala hesitante, e assim por diante. Já no que diz respeito aos seus *tipos*, a modalidade pode ser: epistémica (eixo saber/não saber - eixo certeza/possibilidade, exprimindo graus de certeza, possibilidade ou probabilidade e, assim, afirmando ou negando um saber sobre a realidade: ‘certo’, ‘provável’, ‘duvidoso’, ‘improvável’); deôntica (eixo obrigatório/proibido - eixo permitido/facultativo, exprimindo graus de prescrição, ou não, de um fazer, i.e., dever/não dever: ‘obrigatório’, ‘permitido’, ‘facultativo’, ‘proibido’); apreciativa (recorrendo a adjectivos, advérbios, entoação, exclamação); de vontade (‘querer’, ‘desejar’, ‘procurar’, ‘recusar’); de frequência (‘sempre’, ‘às vezes’, ‘nunca’); de quantidade (‘tudo’, ‘nada’, ‘algo’; ‘todos’, ‘nenhum’, ‘algum’); de espacialidade (‘em todo o lado’, ‘em nenhum lado’, ‘em lado algum’); e expressiva (declarando a emoção do sujeito) (Calsamiglia Blancafort & Tusón Valls, 1999; Fairclough, 2001).

Mas, por se apresentar como um aglomerado de processos e mecanismos nem sempre claramente definidos, “estudiado desde múltiplas perspectivas:

gramaticales, pragmáticas o lógicas, en función del objetivo del analista” (Bisbal, 2006: 37), tornando-se, por isso, “difícil estabelecer tipologias” (Marques, 2006: 156), urge revelar a perspectiva que privilegiámos na análise da relação do sujeito/locutor com o seu enunciado. Assim, procurou-se, **a)** mediante a selecção, no campo das opiniões emitidas pelo autor, de termos e/ou expressões considerados/as passíveis de anunciar o seu grau de afinidade/comprometimento ou descomprometimento (mais ou menos categórico) com as proposições, ensaiar uma determinação de “padrões” no texto – procedimento possibilitado pela identificação de termos/expressões através de cores, com respectiva “legendagem”. Delineado esse processo, procedeu-se à **b)** caracterização, tão específica quanto possível, do(s) tipo(s) de relação que esses/as termos/expressões poderiam pronunciar, por referência a uma grelha de análise, então elaborada, que contempla dimensões relacionais amplamente referenciadas na literatura especializada – como “certeza”, “possibilidade”, “dever”, “vontade”, “apreciação” e “frequência” – e outras que se foram encontrando/instituindo no decurso do processo de análise e a que assentimos também dar lugar: “comparação”, “marcação”, “classificação”, “implicação”. A este ponto, a oportunidade para explicitar que, uma vez mais e tal como aconteceu com a metáfora, não circunscrevemos a modalidade – e, mais especificamente, a sua realização – ao sentido (estritamente) gramatical, e que, não obstante serem tidos em consideração alguns tópicos desse âmbito, destacaram-se, fundamentalmente, termos e/ou expressões que, pela forma como surgem no texto, entendemos capazes de evidenciar a forma como o autor se relaciona com o seu enunciado.

■ **Exemplo** dos dados relativos a estas dimensões de análise:

→ “legendagem” das cores utilizadas para caracterizar o *tipo* de relação do autor com o enunciado e explicitação do sentido em que o concebemos

	Cor	Tipo	Sentido
pré-existentes		certeza	é-se firme e explícito nas asserções
		possibilidade	é apenas provável ou possível
		dever	há uma ordem ou prescrição
		vontade	demonstra-se um desejo, uma intenção
		apreciação	há uma caracterização
		frequência	diz-se quanto ou quantas vezes
encontradas		comparação	há confrontação entre elementos
		marcação	há uma expressão que marca uma diferença de sentido ou há especificidades de linguagem
		classificação	exprime-se um modo de entender, através de uma nomenclatura
		implicação	há um envolvimento pessoal

exercício permitido pela “legendagem”:

Opiniões	Tipo de relação
<p>“Não é surpreendente, mas os investimentos que nos últimos anos o estado tem feito na educação poderia fazer acreditar que melhores «performances» seriam possíveis, tendo em conta o que se passou noutros estados da OCDE”</p> <p>[texto 1]</p>	<p>certeza; apreciação; classificação; possibilidade; marcação</p>
<p>“Como disse o Ministro (...), estes resultados não surpreendem – mas não era isso que ele devia constatar. O que devia sublinhar é como são inquietantes. E não se desculpar (...). Tudo isso já nós sabemos. O que precisamos de saber é como é que vamos ultrapassar o pior dos nossos atrasos”</p> <p>[texto 2]</p>	<p>certeza; <i>marcação</i>; dever; apreciação; <i>implicação</i>; vontade; <i>comparação</i>; <i>classificação</i></p>

Na fase seguinte do procedimento, o objectivo foi, relativamente a cada texto, **c)** reunir todos/as os termos e/ou expressões específicos/as que (na etapa anterior) entendemos perspectivar determinada relação do autor com o enunciado, indicando ainda, complementarmente, o número de vezes que, na totalidade, surgiam – isto é, encontrar o tipo de modalidade mais frequente. Segue o **exemplo**:

Cor	Relação	Expressões	Nº de vezes
	classificação	fragilidades; atrasos; constrangimentos; pistas [texto 3]	4
	possibilidade	podem; pode; por exemplo; pode; pode ser; tendem a; pode ser; podem; pode ser; serão; terão [texto 4]	11

Finalmente, procurou-se **d)** observar se o discurso do autor indicaria uma *matriz* predominantemente *objectiva* ou *subjectiva* de modalidade, seleccionando, no quadro das opiniões, as asserções que considerámos pertinente integrar nesta análise. A literatura do género contempla a distinção entre estes dois tipos de matriz fundamentada na explicitação (ou não), pelo autor, do grau específico de afinidade com uma proposição. Assim, e de acordo com Fairclough (2001: 200), na modalidade *subjectiva* fica explícito esse grau de afinidade (penso/suspeito/duvido/acho), enquanto a modalidade *objectiva* se consubstancia numa ambiguidade de pontos de vista: o seu ou universal? (pode ser/é provavelmente).

■ **Exemplo:**

Matriz objectiva	Matriz subjectiva
<p>- “Tudo isso já nós sabemos. O que precisamos de saber é como é que vamos ultrapassar o pior dos nossos atrasos...”</p> <p>[texto 2]</p>	
<p>- “Bom relacionamento em casa pode ser determinante...”</p> <p>[texto 4]</p>	

Como vimos, e porque “por vezes, para se ter a visão do todo que é o discurso, é preciso fazer estudos mais direccionados para algumas unidades mais pequenas como sejam as palavras ou as frases” (Oliveira & Duarte, 2004: 9), passíveis de revelar pistas (mais ou menos pronunciadas) para a compreensão de alguns aspectos da enunciação, as categorias metodológicas privilegiadas no sentido de caracterizar a posição dos diferentes autores, mantendo os possíveis padrões de objectividade – ancorados na explicitação do significado de que se revestem, para nós, estas categorias, nomeadamente a clarificação do que considerámos na análise –, pretendem constituir, única e exclusivamente, uma proposta, pois, naturalmente, e dada a complexidade e a interactividade inerentes ao objecto de estudo (o discurso, *per se*), poderiam ter sido definidas outras categorias, como também as seleccionadas poderiam ter sido adoptadas na sua formulação original, digamos (i.e., recorrendo aos procedimentos mais “lineares” que a sua natureza gramatical define).

4. Descrição e interpretação de resultados

No ponto anterior, demos conta das diversas etapas do procedimento metodológico utilizado na análise dos textos, cujos resultados específicos fomos apresentando através de breves exemplos retirados de grelhas analíticas evidentemente mais extensas e detalhadas. Entendemos que essas grelhas englobam já, de certo modo, uma matriz interpretativa – eventualmente mais evidente nuns casos do que noutros –, na medida em que o trabalho desenvolvido conduziu, por si só, e espontaneamente, a essa interpenetração. Nesta sequência, e porque, na esteira de Fairclough (2001: 246), se considera que “a análise não pode consistir simplesmente em descrição de textos levada a efeito isoladamente de sua interpretação”, cabe-nos, aqui chegados, proceder a um maior detalhe dos resultados obtidos, sustentando-se esta etapa, fundamentalmente, no cruzamento dos dois momentos previamente estabelecidos para a análise. Passamos, pois, a apresentar alguns **exemplos** mais específicos do modo como, para cada um dos textos, foi realizada a descrição/interpretação dos resultados:

1. Contextualização/enquadramento do tema/problema

Andreia Sanches centra o problema nas dificuldades dos alunos, que “não conseguem” atingir o que seria esperado, sendo mesmo “Os piores entre os piores”. Os argumentos utilizados focalizam-se, essencialmente, na comparação com os outros países que participaram no estudo (de onde Portugal não sai favorecido), passando também pela relação (discrepante) entre os resultados e o investimento económico feito na educação. As causas radicam na escola (ano frequentado, reprovação) e as consequências traduzem-se na desvantagem comparativa do país no que toca à “competitividade” e às oportunidades de emprego e formação, não sendo apresentadas soluções. [texto 1]

1.1 Relação com a realidade social – Categoria : *Metáfora*

José Manuel Fernandes ancora o seu discurso em termos e/ou expressões que consideramos maioritariamente enquadradores de uma concepção de relação social, sobretudo enquanto poder, no sentido do domínio de um sobre outro – em termos comparativos (o *atraso*, a capacidade de *dar o salto*), de recursos materiais (a *riqueza*, o *petróleo*, os *diamantes*) e de hierarquia social (a *bandeira* da maioria, o *condenar*) –, mas também do sentido do mérito (os «cérebros»). Apela também à vertente emocional (a *nudez crua* ou a *crueza*, a inquietação), e muito orientada para um panorama de adversidade/negatividade (começando por essa *nudez crua*, *crueza* e inquietação, passando pelo *abismo* e pelo que está que está *desfeito*, e terminando no *poço onde mal penetra a luz*). Associa ainda o seu dizer a características pessoais, em regra pouco abonatórias (o *desenrascanço*, o laxismo e a falta de exigência) e, isoladamente, aflora campos como a religião (nos *milagres*), a representação (no *protagonismo*) e a economia (no *desperdício*). [texto 2]

2. Interpretação do tema/problema

Isabel Leiria convoca equiparado número de factos e de opiniões. Os factos centram-se, sobretudo, nas palavras expressas pelo Ministro da Educação e abordam principalmente os estudantes (resultados e desempenho – relativamente a este, também características e causas) e as soluções para o problema. As fontes a que recorre são o Relatório e o Ministro da Educação, e as suas opiniões contemplam o estudo (informação que “sugere”), os resultados (características e causas) e os estudantes (características). [texto 3]

2.1 Relação com o enunciado – Categoria : *Modalidade*

2.1.1 tipo(s) privilegiado(s) de relação com o enunciado

Bárbara Wong elege, nas suas opiniões, a *classificação* e a *apreciação*, oscilando entre a *certeza* e a *possibilidade*, embora se concentre ligeiramente mais na última. Foca-se, também consideravelmente, na *marcação*, e menor número de vezes na *comparação*. Nunca recorre ao *dever*, à *vontade*, à *frequência* ou à *implicação*. [texto 4]

2.1.2 matriz predominante

José Manuel Fernandes, apesar de se implicar diversas vezes no que diz (“nós”, “precisamos”, “vamos”, “atrasados”), privilegia a matriz objectiva ao não usar marcas que indiquem que aquele é, em rigor, o seu ponto de vista – apresenta-o, antes, como o de um sujeito colectivo (*nós todos*). [texto 2]

5. **Conclusões**

Delineados os principais focos de atenção dos autores, e estabelecido, desse modo, o “quadro situacional” corporizador da sua presença nos textos, centrámo-nos, enfim – e com vista a ultrapassar o carácter tendencialmente parcial das dimensões analisadas –, no cruzamento, primeiro, dos dados recolhidos em cada uma das fases e, depois, das duas fases, tendo por objectivo o desenho de um cenário global de onde fosse possível extrair conclusões. Cabe-nos aqui salientarmos que, ao aclarar, da forma meramente praticável, o modo como os quatro autores contextualizam e interpretam os resultados dos alunos portugueses no PISA 2000 e

como os seus discursos comunicam a sua relação com a realidade social e com o próprio enunciado – por via de uma metodologia de análise que mobilizou as dimensões e categorias que considerámos susceptíveis de pronunciar, ainda que superficialmente (dada a própria natureza do exercício), a sua significação do mundo e da sociedade e os seus sistemas de conhecimento e de crença –, concebemos a linguagem, acima de tudo, como um caminho exequível rumo a essa clarificação. E avançamos finalmente para a síntese do percurso.

Na contextualização/enquadramento do tema/problema, o foco dos autores não é muito variável: as dificuldades e fragilidades dos jovens e a sua fraca preparação; a comparação dos jovens e/ou do país com os outros jovens e/ou países envolvidos no estudo; a conjuntura económico-social e espaço-temporal desfavorável; os maus resultados; o investimento a que não correspondem; a competitividade gorada. E, partindo, no essencial, da expedição a este *território*, assim centralizador e estruturante, também naturalmente se compreende que a relação que estabelecem com a realidade social, dificilmente isenta da incorporação num cenário de contrariedade e desventura, se congregue, portanto, e de modo fulcral, em domínios como a gestão e/ou a economia, bem como numa concepção de relação social estribada no poder.

Complementarmente, as suas interpretações, sustentadas, ora mais em factos (ou num conjunto de informações que, partindo da representação do próprio autor, é apresentado como facto), ora, sobretudo, em opiniões (como é particularmente o caso do autor do segundo texto) – denunciando o seu carácter mais informativo (textos 1, 3 e 4) ou mais opinativo (texto 2) – dispõem-se, uma vez mais, ao redor de dimensões análogas: o contexto social, o país, os resultados do estudo, os estudantes. Não explicitando o grau de afinidade particular com os enunciados – e cedendo, portanto, lugar à ambiguidade no que concerne ao ponto de vista representado, plasmada numa perspectiva parcial passível de universalização –, os autores, manifestando, no *modo como dizem as coisas*, uma predileção por asserções positivas e negativas, registadas com maior ou menor grau de convicção, revelam a sua apreciação do objecto e a sua maneira de o entender, ora estabelecendo comparações, ora marcando a sua posição e, certas vezes, implicando-se, enquanto parte integrante de um *nós* que fala das preocupações subjacentes às suas convenções sobre o mundo.

Considerações finais

No entendimento da linguagem, antes de mais, como prática discursiva, inscrita numa concreta troca de palavras entre interlocutores, importou-nos, sobretudo – como cremos ter deixado claro nas páginas precedentes –, compreender como os

autores dos textos que seleccionámos fizeram uso dela e com ela estabeleceram contacto, instaurando um espaço (simbólico), um *lugar*, que – consideramos – precede e constitui a sua experiência do mundo. E nesta evidência de que nos tornamos sujeitos “no processo em que somos praticamente obrigados a nos posicionar desta ou daquela maneira, escolhendo estas e não aquelas palavras, usando este tom em vez daquele”, ocupando assim um sítio determinado, *de onde falamos* (Machado e Jacks, 2001: 3), não nos resta senão a convicção de que é, enfim, prestando atenção ao texto, às suas frases e palavras e, sobretudo, à maneira como são exploradas – delimitando, geralmente, poucos espaços, porquanto as suas fronteiras são, muitas vezes, ténues e esquivas –, que se torna possível a interacção com o *outro*, através de uma prática que, fazendo parte da sociedade, é também por ela determinada.

Assim, e precisamente porque só somos alguém em relação ao *outro*, sendo a palavra “uma espécie de ponte lançada entre mim e os outros” (Bakhtin, 1986: 113), o discurso vem desse lugar *de onde falamos* e vai a outro, assumindo-se essencialmente como *derivação*, digamos, mais do que como causa. Enquanto parte, não apenas da estrutura social, mas da vida concreta dos *falantes*, ele mostra-nos, resultando o seu sentido da forma como, em cada acto linguístico, nos colocamos *em situação*.

Na perspectiva de Bordieu (1998: 71), “Os discursos são sempre, em parte, *eufemismos* inspirados pela preocupação de «bem dizer», de «falar como deve ser», de produzir os produtos conformes às exigências de um certo mercado”, e no *mercado* dos discursos de imprensa, em que nos situámos, os *produtos* não estão fora do mundo que ela retrata, sendo, também eles, imperfeitos, complexos, inacabados. Queremos com isto dizer que os textos jornalísticos, ao constituírem, reforçarem ou até mesmo renovarem a (re)produção e/ou (re)criação de concepções e a construção de posições dominantes na sociedade em que circulam, descrevem, simultaneamente, a sua situação sociocultural, significando, não raras vezes, mais do que *dizem*. Em todo o caso, e sobretudo porque “O discurso ficaria petrificado, negar-se-ia a si próprio, se tivéssemos a ideia peregrina de querer explicitar tudo o que significamos” (Marques, 2000:35), a observação é sempre, também ela, parcial, imperfeita, inacabada. A análise do discurso é, evidentemente, algo de muito mais complexo e sofisticado do que o que aqui ensaiámos e os trilhos por onde nos aventurámos mais não constituem do que movediças propostas de reflexão – onde reconhecemos algumas pistas, mas, sobretudo, semeámos interrogações. Ou apenas um fugaz olhar à nossa própria *imagem do mundo*.

Herbert Timóteo; João Carlos Andrade; Mariano Alves

Rede Municipal de Ensino de Belo Horizonte, Brasil

As tecnologias de informação e comunicação aplicadas à educação – TICE

A invenção da imprensa produziu um grande avanço para a educação tornando as informações mais acessíveis. O ensino deixa de ocorrer somente na presença do professor e torna-se mais individualizado. Séculos se passaram e, atualmente, com o desenvolvimento de tecnologias cada vez mais complexas, os modos de aquisição e trocas de conhecimentos estão sendo modificados. São proporcionadas novas formas de comunicação e interação entre as pessoas no mundo, diluindo gradativamente os limites geográficos e temporais.

A tecnologia tem o potencial de aproximar o real do virtual, o visual do sensorial, o conhecimento acadêmico do operacional, tornando esses ambientes mais interativos, concretos e dinâmicos para a tarefa de aprender com as tecnologias. Vivemos hoje a introdução de novas práticas sociais de leitura/escrita propiciada pelo computador e Internet.

Neste contexto, e para atender às novas exigências da sociedade da informação (Hargreaves, 2001), a escola precisa se modernizar e repensar seu papel. Cabe a ela adaptar-se e inserir-se neste processo de virtualização do conhecimento, que vai além do uso da linguagem oral e escrita, dos recursos do giz, quadro negro e livro didáticos. O novo papel é educar para a multimídia, para o desenvolvimento do conhecimento tecnológico e a aprendizagem cooperativa, mediante à utilização das tecnologias das imagens, dos bancos de dados, das telecomunicações, dos novos produtos de hardware e software, das hipermídias pedagógicas e das redes de computadores (Internet e Intranet) como tecnologia para a educação presencial e à distância.

Assim como Kenski (2003), entendemos que a evolução tecnológica não se restringe aos novos usos de equipamentos e/ou produtos, mas aos comportamentos dos indivíduos que interferem/repercutem nas sociedades, intermediados ou não pelos equipamentos. Neste sentido, nesta investigação usaremos o termo TICE (Tecnologias da Informação e da Comunicação aplicadas à educação), ao referir-nos a toda forma de adquirir, gerar, armazenar, transmitir,

processar e reproduzir informação, todas as ferramentas de comunicação e recursos tecnológicos como vídeo, câmera sendo que, nesta investigação, todas as variáveis e os aspectos envolvidos nesse processo deverão ser de natureza essencialmente pedagógica. Estaremos também igualmente atentas às mudanças que se operam nos sujeitos e nos ambientes que em se faz uso das TICE, conforme assinado por Kenski (2003).

O computador pode ser visto como uma tecnologia educacional ou não. Como observa Cysneiros (2003), acreditamos que apenas o objeto material em si não é suficiente para caracterizar a especificidade da tecnologia. Ou seja, não consideramos que o uso do computador como 'máquina de escrever', calculadora ou artefato, mesmo estando em um ambiente escolar, possa ser educacional. O computador pode ser considerado educacional, quando é parte de um conjunto de *praxes* na escola, no lar ou noutro local com o objetivo de ensinar ou aprender, envolvendo uma relação com um professor ou um aluno. No entanto, o computador não é uma tecnologia educacional quando empregado para atividades sem qualquer relação com ensino e aprendizagem, como o controle de estoque em uma empresa.

Entendemos que o uso do computador como ferramenta mediadora do processo ensino e aprendizagem pode proporcionar mudanças qualitativas na educação, desde que os educadores compreendam, vivenciem, aceitem, flexibilizem as inúmeras possibilidades da ferramenta, adaptando-a de forma a contribuir com a educação.

Nesse sentido, a apropriação das ferramentas tecnológicas acontece de acordo com a necessidade de recursos envolvidos no trabalho a ser executado. Há troca de experiências entre alunos e professores de forma que todos se sentem em processo de aprendizagem natural, permitindo experimentar, cometer enganos, explorar e descobrir. Cada participante, dessa forma, busca seu próprio caminho. E, no processo final, a sensação é de que o trabalho não está pronto, porque está em permanente construção. O aluno sente-se confiante. Cada um pode adequar-se às suas próprias necessidades de trabalho, permitindo maior motivação. Há respeito ao ritmo de cada participante e estímulo à troca entre colegas. Isso permite a cooperação que se caracteriza pela coordenação de pontos de vista diferentes, pelas operações de correspondência, reciprocidade ou complementaridade e pela existência de regras autônomas de condutas de respeito mútuo.

As propostas curriculares para o ensino de História, como o ensino de outras disciplinas, teria muito a ganhar com a implementação efetiva de ações pedagógicas mediadas pelas tecnologias de informação e comunicação na

perspectiva de se repensar as metodologias que favoreçam a formação de sujeitos letrados.

A escola e o ensino de História, em especial, precisam acompanhar o ritmo intenso de modificações pelo qual vem passando nossa sociedade, sob pena de transmitir informações e conteúdos já ultrapassados. Isso significa que as aulas de História devem incorporar os temas e as inovações tecnológicas com os quais os alunos já lidam no seu cotidiano.

A utilização direta dos diversos tipos de documentos históricos nos processos de ensino e aprendizagem, proporcionados pelas facilidades das TICE, pode auxiliar na necessária transformação da estrutura do ensino de História, incorporando a idéia de que essa é uma disciplina viva e construída a partir do presente. Ou seja, uma 'visita virtual' ao museu do Louvre ou uma busca de documentos antigos na Internet são atividades muito mais dinâmicas, produtivas e vivas que muitas propostas mais tradicionais.

Estas atividades abrem ao aluno a porta da pesquisa, da autonomia face ao conhecimento, tornando-o agente da própria formação, ao mesmo tempo em que relativizam o papel de único detentor do conhecimento atribuído ao professor. Dessa forma, as TICE oferece a possibilidade de se utilizar o computador não apenas como instrumento de representação que auxilie na aprendizagem de conteúdos programáticos, mas também como estimulador da pesquisa e da criação de hipertextos.

As contribuições metodológicas, decorrentes das tecnologias da informação e comunicação, são importantes elementos para o fazer histórico. Nesse sentido, a utilização do computador, aliado há metodologias de ensino nas quais o aluno passa a ter um papel distinto do tradicional 'ouvinte atento', mostra-se como um recurso didático para o fazer cotidiano da sala de aula. A participação dos alunos no processo de ensino e aprendizagem é potencializada, eles são estimulados a desenvolver atividades de pesquisa vinculadas ao ensino de História, e o papel do professor passa a ser o de orientador/mediador do processo de ensino e aprendizagem, e não mais o proprietário do conhecimento (Ferreira, 2004).

Nesse processo de transformação, o professor de História ocupa um papel chave. É ele quem, efetivamente, implementa as propostas de ensino em suas salas de aula e influencia a visão que os alunos construirão acerca dessa disciplina. Dessa forma, não se pode falar em reformulação da escola sem se levar em conta o professor, suas concepções sobre a Educação, o ensino de História e sua prática. É justamente por meio de sua ação que a inovação se faz presente.

É importante, portanto, que os professores desenvolvam uma postura crítica diante das TICE, repensando sua prática docente, buscando descobrir novas

possibilidades de uso para este recurso. Nesse sentido, não basta ser um usuário da Internet e/ou saber utilizar o editor de texto, bem como dominar o computador a partir da participação em treinamentos estritamente técnicos para o seu uso. O professor precisa ser preparado pedagogicamente para inserir a tecnologia em suas práticas educacionais, seja na graduação ou em outras oportunidades.

É preciso enfatizar, mais uma vez, que utilizar as TICE no ensino de História não significa obrigatoriamente melhorar a qualidade da aprendizagem nessa disciplina. De nada adianta dar uma aparência de modernidade ao ensino de História, se os conteúdos e os métodos continuarem os mesmos.

Como professores de História, acreditamos que as TICE propiciam a participação do educando na construção do conhecimento, torna o professor mediador do processo de ensino e aprendizagem, possibilitando uma nova relação professor-aluno-conhecimento.

Um exemplo claro dessa nova relação é a internet-professor-aluno. As possibilidades de uso da Internet como ferramenta educacional estão crescendo e os limites dessa expansão são desconhecidos. A cada dia, surgem novas maneiras de usar a Internet como recurso para enriquecer e favorecer os processos de ensino e aprendizagem. Da mesma forma, ela não deve ser simplesmente uma versão ampliada dos atuais métodos de pesquisa e busca de informação, mas sim uma ferramenta de complementação que possa enriquecer e contribuir para uma melhoria na sua qualidade, valorizando o papel do professor como mediador e orientador do processo de busca, seleção e utilização da informação relevante, bem como no processo de comunicação das comunidades escolares entre si.

Em nossa sociedade contemporânea, globalizada, as TICE são importantes meios que as escolas podem usar para dinamizar os processos da leitura e da escrita. Esse movimento pode contribuir para inserir os educandos nos processos de inclusão digital do mundo contemporâneo. Paulatinamente, os educandos ao trabalharem nas escolas com pesquisas na internet, produção de textos individuais e coletivos nas ferramentas do próprio computador estarão ampliando suas experiências de letramento e construindo saberes necessários para relacionar-se como cidadãos ativos na sociedade atual. Nesse sentido, a seguinte afirmação de Ribeiro (2007) corrobora a importância da incorporação das novas tecnologias nas práticas de leitura:

Considerando a sociedade um organismo marcado pelo digital, novas formas de leitura devem ser consideradas, a fim de que se detone um processo educativo de alfabetização e letramento significativo, que leve em conta a multiplicidade tecnológica que hoje se apresenta e que não pode ser negada (Ribeiro, 2007, p.87)

As TICE, numa compreensão mais alargada, podem ser compreendidas

como novos portadores de textos nas sociedades do início do século XXI. Ler e escrever no computador pode significar para os educandos estar interagindo e ampliando as possibilidades de pesquisar, por exemplo enciclopédias virtuais, relacionar – se com a escrita e o texto-iconográfico, com o texto-imagem-ação (a ferramenta fílmica). Ou seja, a partir do uso das TICE pode – se dizer que o leque de contato com ferramentas que vão ampliar e facilitar a construção do hábito e de novas práticas de leitura e escrita pode ser quase ilimitado. Essas práticas, podem inclusive ser socializadas quase instantaneamente ao seu término com colegas de outras salas, escolas e cidades. Ler e escrever a partir das TICE pode se tornar então uma prática para ser construída em rede, socializadora, superando desafios temporais e espaciais.

Pode – se afirmar que aprender a ler e escrever usando as TICE é hoje parte integrante do fazer educativo da práxis dos Historiadores – Educadores. Não só no que se refere ao movimento de codificação e decodificação da linguagem em si mas também no que este processo pode contribuir para ampliar na leitura e compreensão de textos históricos, na escrita dos mesmos e ainda da leitura de documentos que os alunos pesquisarão na internet.

Mais especificamente sobre o movimento da escrita no computador Soares (2002) faz a seguinte afirmação:

(...) a tela, como novo espaço de escrita, traz significativas mudanças nas formas de interação entre escritor e leitor, entre escritor e texto, entre leitor e texto e até mesmo, mais amplamente, entre o ser humano e o conhecimento. (Soares, 2002, p.151)

Sabe – se que esse processo de reflexão e práticas é relativamente novo no cotidiano dos Educadores – Historiadores e alunos e que está em construção. Em grupo e diante do computador, a escrita não é mais um pensar solitário mas torna-se um pensar social na medida em que os alunos/escritores colocam e debatem suas idéias procurando completar o pensamento organizando gradativamente no texto.

O blogue como ferramenta para o ensino de História

Blogue é a abreviatura de weblog. O termo weblog foi criado por Jorn Barger. De acordo com Gomes (2005) um weblog é uma página na Web que se pressupõe ser atualizada com grande frequência através da colocação de mensagens – que se designam “posts” – constituídas por imagens e/ou textos normalmente de pequenas dimensões (muitas vezes incluindo links para sites de interesse e/ou comentários e pensamentos pessoais do autor) e apresentadas de forma cronológica, sendo as mensagens mais recentes normalmente apresentadas em primeiro lugar. A estrutura natural de um blogue segue portanto uma linha cronológica ascendente.

Os blogues podem ser utilizados para comunicar, discutir e analisar assuntos além de possibilitar o contacto entre pessoas distantes que partilham ideias e objetivos comuns. A acrescer a tudo isto está o fato de poderem ser criados e mantidos facilmente sem requerer nenhum conhecimento de programação para a Web.

Ao contrário da WebQuest, o blogue é uma ferramenta que foi concebida sem fins educativos. No entanto, vem sendo cada vez mais utilizado na educação abrangendo uma elevada diversidade de abordagens educativas. O blogue pode ser criado pelos professores, alunos, coordenadores, diretores entre outros. Há blogues de autoria coletiva, focalizados em temáticas de disciplinas específicas e outros que procuram alcançar uma dimensão transdisciplinar. Há blogues que se constituem como portfólios digitais do trabalho escolar realizado e blogues que funcionam como espaço de representação e presença na Web de escolas, departamentos ou associações de estudantes. O leque de possibilidades de utilização e o número de professores e alunos envolvidos vem crescendo cada vez mais.

Gomes (2005) difere a utilização dos blogues na educação enquanto recurso pedagógico e enquanto estratégia pedagógica. Enquanto recurso pedagógico os blogues podem ser: um espaço de acesso a informação especializada e um espaço de disponibilização de informação por parte do professor. Enquanto estratégia pedagógica os blogues podem ser: um portfólio digital, um espaço de intercâmbio e colaboração, um espaço de debate – role playing e um espaço de integração.

Acreditamos que os blogues utilizados no ensino, quando considerados como estratégia pedagógica, podem proporcionar um grau maior de interatividade e colaboração pois permite uma maior interlocução e troca entre alunos e professores / alunos e alunos / professores e professores.

Além de possibilitar a troca de ideias e de informações, o blogue também é um excelente meio para divulgar trabalhos desenvolvidos pelos professores ou pelos alunos. A maioria dos alunos possuem computadores em casa e/ou na escola. Motivá-los a produzir trabalhos que possam ser vistos e avaliados por outras pessoas ou pedir que os trabalhos sejam disponibilizados pode trazer benefícios para toda turma. Neste sentido, podem promover o respeito pelos trabalhos de cada um proporcionando um crescimento cooperativo.

Para os professores, o blogue pode ser usado como uma extensão da própria aula, onde ele pode indicar tarefas para os alunos, outras referências bibliográficas, materiais de consulta entre outras inúmeras possibilidades.

Concordamos com Barbosa e Granado (2004, p. 72) que os blogues podem, por exemplo, trazer uma valorização da cultura local e das tradições típicas de uma

região. Além da necessidade de pesquisar informação sobre estes assuntos, os alunos poderão compreender que as raízes culturais são valorizadas por outros e adquirirão, desta forma, uma nova visão face ao mundo que os rodeia.

Podem ser também, fontes documentais importantes para o ensino de História. Destacamos alguns exemplos: o blogue 'Where Is Raed'² foi ao longo do período da guerra do Iraque o epicentro da informação e das opiniões sobre os acontecimentos em Bagdade e suas repercussões. O blogue 'História e Ciência' traz diferentes concepções de História ao longo dos tempos e uma abundante referência bibliográfica.

Ao possibilitar refletir e analisar o próprio texto construído, o blogue pode se tornar uma boa estratégia para melhorar e potencializar a escrita. A composição do texto e a tomada de consciência de que poderia ter feito melhor ensinam a auto avaliação crítica e positiva do trabalho.

Relato de uma experiência

Abaixo relatamos uma experiência de utilização do blogue como uma estratégia de leitura e escrita.

Esta sequência didática mediada pelas TICE foi realizada na Escola Municipal Professora Eleonora Pieruccetti, localizada no bairro Cachoeirinha em Belo Horizonte/ Brasil. Essa escola atende alunos do ensino fundamental a partir de dez anos de idade.

Esta escola é integrante do projeto 'Escola Parceiras'³ que tem como objetivo de promover ações que pretendem aproximar o que se realiza na academia com o que se realiza nas escolas, e podem se constituir numa experiência bastante reveladora de novas possibilidades de ações educativas que tratem de modo dialógico a teoria e prática no ensino da História. Nesse sentido, estaríamos buscando formas de relacionar teoria e prática, dimensões de formação que tem sido vistas e, muitas das vezes tratadas de forma dicotômica.

Nas escolas da rede municipal de ensino de Minas Gerais o uso do laboratório de informática ainda é pequeno. Em muitas escolas faltam recursos e a prática não consta na rotina escolar dos professores.

O trabalho foi desenvolvido na disciplina História com alunos de uma turma de final de segundo ciclo (5ª série). A turma é composta por 30 alunos com idade entre 10 e 12 anos. São alunos moradores do bairro Cachoeirinha, Nova Cachoeirinha, Santa Cruz, Parque Riachuelo, Aparecida, entre outros bairros adjacentes à escola. A turma possui alunos que se destacam no aproveitamento escolar e alunos que apresentam muita dificuldade cognitiva, além de ter um aluno com necessidades especiais.

Os alunos desta turma estudavam acerca da temática 'o homem primitivo' e no intuito de potencializar a compreensão da mesma, planejou-se uma intervenção na sala de informática.

A sala de informática da escola conta com 17 computadores o que permite um trabalho em duplas ou trios. A vantagem de se trabalhar em grupos é possibilitar a socialização dos conhecimentos adquiridos, a troca de informações, ou seja, a ajuda de um aluno a outro na aprendizagem de novos conceitos.

O objetivos da sequência didática descrita foi desenvolver um trabalho de História mediado pela tecnologia; promover a autoria dos alunos; construir um conjunto de informações sobre assuntos relacionados ao homem primitivo e divulgar as informações aos outros alunos do mesmo ciclo.

Acreditamos que a utilização do laboratório de informática deve ser precedida de um planejamento metodológico. É necessário também combinar anteriormente com os alunos o que será feito e qual o objetivo esperado.

Uma estratégia adotada ainda em sala de aula foi o 'combinado' de regras para o comportamento dos alunos no laboratório de informática. Sabemos que o deslocamento de um ambiente para outro deixa os alunos ansiosos e agitados.

Outra estratégia foi dividir a turma em 6 grupos. Cada grupo recebeu um sub-tema (Fogo, pintura rupestre, alimentação, moradia, trabalho e liderança e aprendizagem) e com o auxílio da internet iria pesquisar sobre o mesmo e registrar com imagens e textos as informações coletadas.

A turma foi acompanhada ao laboratório de informática onde foi orientada a procurar, em um site de buscas, informações sobre o tema divulgado em sala de aula. Os alunos selecionaram textos e imagens sobre o assunto e salvaram essas informações em pastas específicas. Conforme orientação prévia, os alunos produziram textos ilustrados sobre o assunto, utilizando o editor de textos do linux.

Ao final da aula, muitos grupos conseguiram cumprir as etapas mostrando um trabalho de qualidade. Os professores que acompanharam a turma relataram algumas dificuldades: Problemas no sistema (em alguns computadores o editor de textos não abria, não se conseguia salvar as informações na área pública); agitação da turma, falando muito alto e andando pela sala; alguns alunos sem intimidade com o computador.

Apesar dessas dificuldades, os professores avaliaram que a atividade foi positiva, pois houve o aprendizado de pesquisar na internet, escrever textos utilizando um editor, trabalhar fontes (tamanhos, cores, outros recursos), dividir tarefas, socializar informações, entre outros.

Foi construído um blogue⁴ para que os alunos comentassem a experiência. O blogue foi apresentado aos alunos que responderam às perguntas sob a forma de

comentários. As respostas dos alunos no blogue dão uma dimensão da importância do trabalho mediado pela tecnologia, pois todos avaliaram a atividade como positiva, como exemplificamos a seguir, ressaltando dificuldades normais do trabalho, na busca de imagens, informações, em lidar com os recursos do computador.

Eu gostei de fazer muito o trabalho que fizemos, pois adoro muito historia desde da 4 serie.(...) por mim o trabalho no laboratorio de historia esta tudo bem está ate muito legal,estou gostando!! Aprendi muito com isso...Obrigado por me ensinar professores... (aluna 1)

Eu gostei de fazer o trabalho porque a gente buscou mais informações sobre o que a gente já tinha estudado e interresante por que a gente teve essas informações mais detalhadas sobre esse assunto. (aluna 2)

Foi muito legal porque nos ajudou a aprender mais o tempo antigo. (aluna 3)

Conclusão

O computador, como qualquer outro recurso tecnológico usado nas escolas, por si só não é capaz de fazer milagres. Ele é ferramenta a ser usada de acordo com um planejamento, que norteie a prática docente, sendo indissociável a uma metodologia de ensino.

Entretanto, a adoção dessa opção pelo educador, certamente, exige um nível de conscientização e envolvimento significativo na efetiva elaboração de um novo fazer pedagógico (baseado na 'revisão' da sua prática pedagógica antiga), mesmo sob os riscos de se tornar um processo mais demorado e muito mais desafiador, porque obriga a inevitáveis rompimentos com situações já acomodadas.

Como educadores inseridos nesse contexto, não pretendemos fazer uma apologia acrítica do uso da informática na educação. O computador não pode ser encarado de forma ingênua, como sendo a solução para os problemas da escola. Mas as questões a serem repensadas na escola, hoje, independem do uso efetivo da informática na sala de aula, no entanto, sofrem grande influência quando há sua utilização.

O que muitas vezes é desconsiderado, em grande parte dos debates e discursos, a favor ou contra, sobre computadores nas salas de aula, é o caráter democrático desses recursos tecnológicos, quanto ao acesso a informações de todos os tipos - científicas, artísticas, econômicas, históricas, religiosas abertos a todos quantos quiserem recorrer a essas informações e fazer uso delas. Ignorar os recursos e possibilidades de aprendizagem que essa tecnologia oferece é deixar que todo esse ambiente fique à disposição do mercado de consumo e da superficialidade.

Notas

¹ Pesquisa de doutorado em andamento intitulada “A construção de um grupo colaborativo visando à utilização das TICE no desenvolvimento profissional de professores de História da RME/BH” sob orientação da professora Lana Mara C. Siman realizada na Faculdade de Educação da Universidade Federal de Minas Gerais. A construção deste texto contou com a ajuda de todos os integrantes do grupo.

Da Leitura à Escrita: A Tomada de Notas (TDN) como Estratégia

João Paulo Rodrigues Balula

Centro de Estudos em Educação, Tecnologias e Saúde (CI&DETS), ESEV,
Instituto Politécnico de Viseu, Portugal

1. Introdução

O presente texto, centrado na tomada de notas (TDN) enquanto estratégia de leitura funcional e ponto de partida para o desenvolvimento de competências de expressão escrita, tem por base as conclusões de um trabalho desenvolvido entre 2002 e 2007 (Balula, 2007). Partimos também da convicção de que é necessário desenvolver investigação que aponte caminhos para uma alteração das práticas, nomeadamente ao nível de estratégias de leitura, de modo a promover uma maior adequação às exigências que actualmente a vida em sociedade coloca.

Fazemos parte de uma sociedade em que o acesso ao conhecimento se está a manifestar como uma questão muito importante para todos, atendendo às implicações que tem, quer para os indivíduos, quer para as nações. Quanto mais a Sociedade do Conhecimento evolui, maiores necessidades apresenta o Homem. Para aceder à grande quantidade de conhecimento que a sociedade lhe proporciona, precisa de estar preparado, ou então fica cada vez mais afastado dessa mesma sociedade, que depende da criação desse conhecimento, bem como da sua transmissão, disseminação e utilização.

A alfabetização é, portanto, a primeira condição para que o homem moderno possa participar na sociedade e assim construa conhecimento, que lhe permitirá exercer uma cidadania consciente, na plenitude dos seus direitos e deveres. No entanto, para termos cidadãos capazes de usufruir plenamente das vantagens da Sociedade do Conhecimento, é necessário promover o desenvolvimento de competências que ultrapassem a mera alfabetização. Torna-se indispensável desenvolver neles competências que lhes permitam processar a informação a que têm acesso.

Os resultados que os vários estudos sobre a literacia em Portugal apresentam, bem como os números sobre a realidade do abandono escolar precoce, traçam um panorama que nada tem de positivo e tornam imprescindível que a sociedade portuguesa, em geral, e os seus principais responsáveis, em particular, reflectam e actuem, de forma a inverter a situação desfavorável em que o país se encontra.

Perante esta constatação, a sociedade espera que a Escola seja a primeira instituição a dar resposta a estes desafios e, por isso, «o processo de ensino aprendizagem tem necessidade de uma ligação constante e estreita com o mundo exterior, com a prática, com os problemas concretos com que se debate a sociedade» (Moderno, 1995, p. 32).

A leitura apresenta-se como uma actividade que é determinante em toda a vida do indivíduo, quer no que diz respeito à sociedade em geral, quer no que diz respeito à Escola em particular. Daí que se imponha uma nova atenção ao ensino/aprendizagem da leitura.

Ora, ler para recolher informação é uma das modalidades de leitura mais imediatamente úteis, ao longo de toda a escolaridade (Ensinos Básico, Secundário e Superior) e também de toda a vida. Por conseguinte, importa destacar a modalidade de leitura que maior impacto tem neste processo: a leitura funcional.

Por conseguinte, a leitura funcional é uma das bases da aprendizagem escolar, «pois com ela se obtém informação necessária para ampliar o conhecimento e dar resposta às necessidades de formação e de desenvolvimento do indivíduo.» (Antão, 2000, 27).

Deve-se, portanto, procurar levar os alunos a adquirir e desenvolver estratégias de leitura funcional susceptíveis de serem utilizadas na escola (nas diversas áreas curriculares) e fora da escola (no contexto socioprofissional), capazes de contribuir positivamente para a construção do conhecimento.

2. Enquadramento teórico

2.1. A leitura e a Sociedade do Conhecimento

Nos princípios do século XXI, habituámo-nos a ouvir falar de uma nova concepção da economia, de novos paradigmas que a acompanham e definem, da era da informação e da era da gestão do conhecimento. Hoje, desde o mais humilde cidadão de um país medianamente desenvolvido, até aos governantes das nações mais desenvolvidas, todos sentem, simultaneamente, os benefícios e as consequências mais desagradáveis destas alterações.

A comunicação à distância imprimiu à sociedade actual um ritmo de pensamento/acção de tal modo acelerado que não se compadece de quem não o acompanha.

Trata-se de evidências que não são escamoteáveis e para as quais os cidadãos dos países desenvolvidos não podem deixar de estar preparados, sob pena de, pura e simplesmente, serem marginalizados pela sociedade por falta de meios legítimos de sobrevivência (trabalho legal).

Como diz Quéau (2001, p. 413), «O acesso à informação torna-se um factor chave na luta contra a pobreza, a ignorância e a exclusão social». Mas, o mais importante parece ser, não a informação em si, já que ela está acessível em rede, mas sim a capacidade de a apreender, compreender e transformar em Conhecimento. Por isso, «é importante ensinar a saber enfrentar a evolução do conhecimento científico e tecnológico, em vez de ensinar apenas aquilo que já é conhecido» (Martins, 2002, p. 11).

O fenómeno de globalização que tem caracterizado o percurso recente das sociedades e os avanços tecnológicos no domínio da informação fizeram emergir novas necessidades ao nível da comunicação (Canha & Alarcão, 2004) e realçaram o papel da Língua Materna como pilar estrutural da formação nos tempos actuais.

Da Escola, a sociedade espera que se organize à volta das aprendizagens fundamentais, ou seja, daquilo que, ao longo de toda a vida, será para cada indivíduo a fonte do conhecimento (Delors, 1996). Saberes básicos ou competências essenciais passaram, assim, a ser as apostas para os novos desafios da Sociedade do Conhecimento, que se impõe cada vez com mais firmeza. E a leitura compreensiva tem aqui um papel que nos cabe explorar.

A importância do acesso à Informação e ao Conhecimento é um dado adquirido na sociedade actual e a língua escrita continua a ser uma fonte de informação privilegiada, o que torna a leitura fundamental.

Os primeiros anos de vida são essenciais para o sucesso na aprendizagem da leitura e também da escrita. Como dizem Cassany, Luna e Sanz (1997, p. 208), «En conjunto, los familiares y el entorno transmiten subliminarmente una actitud definida hacia la lectura.»

A leitura deve ser abordada como uma questão de equipa, por todos os professores, em todas as etapas e por todas as escolas. Como nos diz Solé (1998, p. 177): «Aprender a leer requiere que se enseñe a leer. El modelo de lector que ofrece el profesor, y las actividades que propone para la enseñanza y el aprendizaje de la lectura no son un lujo, sino una necesidad.»

Solé (1998, p. 198) diz-nos ainda que aprender a ler significa aprender a encontrar sentido e interesse na leitura. Significa aprender a ser activo perante a leitura, a ter objectivos para ela, a autointerrogar-se acerca do conteúdo e acerca da própria compreensão. Significa ainda ser curioso e aprender a exercer um controlo sobre a sua própria aprendizagem. Estamos perante uma concepção de leitura como compreensão.

Assim, o conteúdo e a estrutura do texto, por um lado, e as motivações do leitor, o tempo de que dispõe, o espaço em que se encontra, por outro, determinam modalidades de leitura variadas.

Depois de analisarmos as características da Sociedade do Conhecimento e a forma como se entende a leitura actualmente, chegamos à conclusão de que esta pode ser o primeiro factor condicionante de uma aprendizagem e enriquecimento pessoal permanentes e necessários.

Para isso, o leitor terá que se envolver na actividade de leitura de forma a construir sentido, em constante confronto com os seus conhecimentos e experiências, podendo, simultaneamente, daí retirar prazer.

Mas é a leitura para recolha de informação que, entre as diversas modalidades, assume um papel preponderante na Sociedade do Conhecimento.

2.2. Da leitura funcional à escrita: a tomada de notas como estratégia

Ler para recolher informação é uma das modalidades de leitura mais imediatamente úteis, ao longo de toda a escolaridade (ensinos Básico, Secundário e Superior) e também de toda a vida. A capacidade de uma rápida e eficiente busca de informação reveste-se, assim, de particular interesse.

A leitura funcional deve ser entendida como uma actividade estratégica que a Escola, em geral, e a área curricular disciplinar de Língua Portuguesa, em particular, devem procurar desenvolver nos alunos.

O ensino/aprendizagem da leitura funcional e o desenvolvimento de competências neste domínio implicam trabalhar o recurso a estratégias como o sublinhar informação relevante (SIR) e a tomada de notas (TDN).

O SIR consiste em destacar as partes mais importantes do texto para poder recuperar mais rapidamente o sentido de todo o texto. A análise e avaliação necessárias para determinar o que deve ou não deve ser sublinhado facilita, desde logo, a sua retenção.

Por sua vez, a TDN é uma estratégia complexa através da qual um indivíduo apreende a informação essencial contida no texto e a regista de uma forma abreviada, numa situação precisa e tendo em conta um objectivo de trabalho bem determinado. A TDN, ao mesmo tempo que exige atenção, também ajuda a mantê-la e favorece a concentração em relação à actividade e aos objectivos que se pretendem atingir, sendo essencial para a aprendizagem, em geral, e para a apropriação de novos conhecimentos, em particular.

O produto da TDN, sendo sempre constituído por informação seleccionada e condensada, pode variar em tamanho, em função de diferentes objectivos, em função da organização espacial, das cores, em função da sua origem e também

em função do seu autor. Isto leva a que diferentes modalidades de TDN possam evidenciar diferenças ao nível da síntese da informação, da organização dos dados recolhidos e da ligação ao texto fonte.

Conclui-se assim que o SIR e a TDN são estratégias centrais de uma actuação destinada a favorecer o desenvolvimento da compreensão ao nível da leitura funcional, que devem ser utilizadas conjuntamente.

A Sociedade do Conhecimento exige de todos uma actuação estratégica face à informação e ao conhecimento. A Escola, em geral, e a área disciplinar de Português, em particular, devem proporcionar a todos os alunos o desenvolvimento de competências de pesquisa, tratamento, selecção e organização da informação necessárias para que possam, em todas as situações da sua vida, em contexto escolar e extra-escolar, seleccionar e processar a informação e o conhecimento relevantes, de modo a responderem aos desafios que a sociedade em que se inserem lhes coloca.

A leitura funcional é um dos domínios que se inserem no que acabámos de dizer. E o recurso a estratégias como o SIR e a TDN, que estão ao serviço desta modalidade de leitura, pode ser incrementado na área curricular disciplinar de Português, de modo a favorecer a aprendizagem nas diferentes áreas curriculares, disciplinares e não disciplinares.

Com este objectivo essencial em vista, concebemos, implementámos e avaliamos um percurso didáctico associado ao ensino/aprendizagem da língua portuguesa, mas com repercussão no sucesso escolar do aluno e na sua formação para a vida em sociedade, de modo a desenvolver competências que favoreçam uma aprendizagem permanente.

3. O estudo desenvolvido

3.1. Questões investigativas e objectivos do estudo

Para o nosso estudo formulámos as seguintes questões de investigação:

- Será possível definir linhas directrizes de um ensino de Língua Materna que promova o desenvolvimento de competências em leitura funcional que permitam a recolha e tratamento de informação numa perspectiva multidisciplinar?

- Que impacto poderá ter um conjunto de actividades didácticas, construído com base nessas linhas directrizes e aplicado em aulas de Língua Portuguesa do 3º Ciclo do Ensino Básico, sobre o sucesso escolar dos alunos nesta disciplina e noutras do seu currículo?

Assim, com este estudo, pretendemos:

- Definir linhas directrizes de um processo de ensino da Língua Materna orientado para o desenvolvimento de competências de leitura funcional,

associadas à recolha e tratamento de informação numa perspectiva multidisciplinar;

- Implementar actividades, definidas com base nessas linhas directrizes, em aulas de Língua Portuguesa do 3º Ciclo do Ensino Básico;

- Avaliar o impacto dessas actividades no aproveitamento dos alunos em Língua Portuguesa e noutras disciplinas do seu currículo.

O primeiro objectivo está relacionado com a primeira questão de investigação. O segundo e o terceiro objectivos estão relacionados com a segunda questão de investigação.

3.2. Metodologia de Investigação

Na realização deste estudo, optámos por uma abordagem metodológica de tipo qualitativo. Esta escolha prende-se com a natureza das questões de investigação e com o facto de a investigação qualitativa decorrer no ambiente natural e ser descritiva, procurando desenvolver a compreensão da problemática em estudo (Bogdan & Biklen, 1994).

O estudo desenvolvido no âmbito deste projecto de investigação corresponde a um estudo de caso, levado a cabo com uma turma do 9º ano de escolaridade, dado que se “analisa, de modo intensivo, situações particulares” (Pardal & Correia, 1995, p. 17) e consistiu na concepção, implementação e avaliação de um percurso didáctico centrado no desenvolvimento de competências em leitura funcional com recurso a duas estratégias essenciais: o SIR e a TDN.

3.3. Principais resultados obtidos a partir da análise dos dados

Neste estudo de caso procurámos respostas para as questões de investigação com base na análise dos dados obtidos a partir da realização de uma experiência que compreendeu vários momentos, agrupados em duas unidades didácticas. Esta experiência foi implementada em aulas de uma turma do 9º Ano de Escolaridade, com dezanove alunos, ao longo do ano lectivo de 2004/05, sendo integrada na planificação da área curricular disciplinar de Língua Portuguesa, embora as actividades realizadas se relacionassem também directamente com a área curricular de História e, indirectamente, com as outras áreas curriculares.

Para levar a cabo esta experiência, preparámos, testámos, revimos e utilizámos um conjunto de materiais: dois questionários, planificações de duas unidades didácticas, materiais utilizados nessas unidades e três testes. Preparámos e realizámos também uma entrevista ao professor da turma em que foi desenvolvida a experiência.

A partir da realização desta experiência recolhemos um conjunto considerável de dados. A análise e interpretação dos dados recolhidos, considerados mais importantes, foram organizadas nos seguintes grupos: caracterização dos alunos, desempenho dos alunos em termos de conhecimentos sobre leitura funcional e desempenho dos alunos em termos de recurso ao SIR e à TDN em tarefas propostas nos testes.

3.3.1. Características dos alunos

Os dados relativos às características dos alunos foram obtidos a partir das respostas dadas a parte do primeiro questionário.

Da sua análise, foi possível depreender que a maioria dos alunos tinha a idade previsível (entre catorze e quinze anos), tinha residido sempre em Portugal, inseria-se em agregados familiares de estatuto socioeconómico médio, privilegiava, como actividades de tempos livres, “ouvir música” e “ver televisão” e raramente se dedicava a “ler” ou a “ir ao teatro” e valorizava sobretudo as áreas curriculares disciplinares de Língua Portuguesa e de Matemática (independentemente do gosto pessoal por elas ou do grau de facilidade que lhes atribuía).

3.3.2. Desempenho dos alunos em termos de conhecimentos sobre leitura funcional

Procurámos também construir uma imagem sobre os conhecimentos efectivamente adquiridos e/ou desenvolvidos pelos alunos relativamente à leitura funcional, ao longo da primeira parte da experiência em que participaram.

Para isso, procedemos à avaliação das respostas a dois exercícios do Teste 1 e do Teste 2, verificando a conformidade entre as respostas esperadas pelo professor e as respostas fornecidas pelos alunos.

A partir da análise destes dados, verificámos que os alunos apresentavam melhoria ao nível dos conhecimentos sobre as finalidades de algumas modalidades de leitura (leitura básica, leitura recreativa, leitura informativa, leitura funcional e leitura integral) e sobre a importância do recurso ao SIR e à TDN em actividades de leitura funcional. Contudo, continuaram a manifestar alguma dificuldade em reconhecer o importante papel desempenhado pelo leitor na compreensão na leitura.

A análise destes dados revelou que os melhores resultados foram conseguidos em relação aos conhecimentos que tinham estado no centro da intervenção didáctica, que teve uma forte componente prática no âmbito do SIR e da TDN.

3.3.3. Utilização do SIR e da TDN nos testes

Os dados relativos à utilização do SIR e da TDN pelos alunos que participaram na experiência correspondem a respostas dadas por eles a alguns exercícios dos três testes que foram aplicados.

Analisámos as respostas aos exercícios centrados no SIR, tendo em conta duas categorias: “O que sublinharam” e “Como sublinharam”.

As respostas aos exercícios relativos à TDN foram analisadas tendo em conta duas categorias: “Notas elaboradas pelos alunos” e “Como tiraram notas”.

Na análise das notas elaboradas pelos alunos, tivemos em consideração o suporte em que as notas tinham sido registadas (folha em que lhes foi apresentado o texto ou folha de resposta), a quantidade de notas que cada aluno tinha redigido, a sua relação com o texto que lhes tinha servido de fonte e o tipo de notas.

Para a categoria “Como tiraram notas”, verificámos os seguintes aspectos: material utilizado para registar as notas (lápiz, caneta de várias cores, etc.), material utilizado como suporte para a TDN (folha de apresentação dos textos ou folha de resposta que foi disponibilizada aos alunos), utilização de sinais auxiliares e utilização de abreviaturas.

3.3.3.1. Desempenho dos alunos em termos de recurso ao SIR

No que se refere ao desempenho dos alunos em termos de recurso ao SIR, após a realização da experiência, verificámos melhorias ao nível da distinção entre ideias principais e ideias secundárias, da consciência da importância de certos elementos do texto para a identificação da informação relevante, do recurso a materiais diversificados e a “traços” e/ou sinais complementares para sublinhar, atribuindo diferentes graus de importância à informação assinalada.

Contudo, verificámos que os alunos continuavam a apresentar alguma dificuldade em destacar elementos do texto relevantes para a identificação das ideias principais através do SIR.

3.3.4.2. Desempenho dos alunos em termos de recurso à TDN

No que se refere ao desempenho dos alunos em termos de recurso à TDN, após a realização da experiência, verificámos um aumento da quantidade de notas tiradas a partir dos textos propostos (embora a relação texto/quantidade de notas seja muito variável).

Verificámos também melhorias ao nível:

- do tipo de notas, implicando a produção de sínteses de informação proveniente de diversas fontes;

- do grau de elaboração das notas, sendo justapostas formulações progressivamente mais complexas das mesmas;

- do recurso a materiais diversificados e a “traços” e/ou sinais complementares para sublinhar, atribuindo diferentes graus de importância à informação retida;

- da consciência relativa aos elementos do texto que tinham servido de base para a tomada de notas.

Contudo, verificámos ainda que os alunos, após a realização da experiência, continuavam a manifestar alguma dificuldade em seleccionar o tipo de notas mais adequado em função das circunstâncias.

3.4. Conclusões e sugestões pedagógico-didácticas

Os resultados apresentados mostram que se verificaram algumas melhorias relativamente aos aspectos que foram objecto de trabalho prático, no decurso da experiência (importância da leitura para a recolha de informação e recurso ao SIR e à TDN).

A partir da análise e interpretação dos dados, verificámos que o trabalho em sala de aula, bem fundamentado e desenvolvido de forma sistemática, contribui, de forma bastante positiva, para o desenvolvimento de competências que têm repercussões benéficas no sucesso escolar do aluno e que podem também interferir positivamente na sua vida extra-escolar.

A análise e interpretação dos dados permitiram inferir que, mesmo quando o grau de êxito relativamente a parâmetros específicos estabelecidos para analisar o trabalho dos alunos é modesto, se podem verificar melhorias apreciáveis, ao nível da avaliação nas diferentes áreas curriculares disciplinares.

Isto pode significar que pequenas melhorias no desempenho dos alunos no que se refere às competências de leitura funcional, ao nível do desempenho no SIR e na TDN, podem conduzir a grandes melhorias no desempenho na vida escolar dos alunos e, a um nível mais geral, no seu desempenho ao longo da vida.

Parece-nos ainda que, com base nos resultados obtidos, se impõe que reformulemos as linhas directrizes inicialmente traçadas e que não se mostraram devidamente ajustadas para que obtivéssemos pleno sucesso em todos os planos.

De acordo com os dados obtidos a partir deste estudo, parece-nos que as linhas directrizes de um processo de ensino/aprendizagem da língua portuguesa, orientado para o desenvolvimento de competências de leitura funcional,

associadas à recolha e tratamento de informação, numa perspectiva multidisciplinar, poderão ser formuladas do modo que se apresenta em seguida.

1- Desenvolver, nas aulas de Língua Portuguesa, um trabalho sistematizado em torno da leitura funcional, que tenha em conta vários aspectos:

- implementar o ensino explícito da leitura funcional;
- conjugar o desenvolvimento de competências em leitura funcional com o desenvolvimento de competências noutros domínios (comunicação oral, expressão escrita, cultura);
- promover o recurso a estratégias de leitura funcional de natureza transversal.

2- Ter em conta o desenvolvimento cognitivo dos alunos na concepção das actividades a realizar com eles, nomeadamente no que se refere às suas implicações ao nível da distinção entre o que é essencial e o que é acessório num texto escrito.

3- Promover o recurso a estratégias de leitura funcional em tarefas variadas e em diversos contextos.

4- Propor actividades que proporcionem ao aluno um desenvolvimento progressivo da sua responsabilidade e autonomia.

5- Promover a meta-reflexão sobre o recurso a estratégias de leitura funcional.

3.5. Limitações do estudo levado a cabo

Este trabalho de investigação, baseado num estudo de caso, não permite fazer generalizações e centra-se num número restrito de estratégias de leitura funcional, o SIR e a TDN, aplicadas exclusivamente a textos escritos.

Uma outra limitação prende-se com o facto de terem sido utilizados apenas dados recolhidos a partir de registos escritos.

Por fim, os resultados obtidos não foram analisados tendo em conta os diferentes tipos de textos que podem ser objecto da leitura funcional.

3.6. Sugestões para outros estudos no mesmo domínio

Tendo em conta que o trabalho desenvolvido nos levou a uma reformulação das linhas directrizes de um processo de ensino/aprendizagem da língua portuguesa orientado para o desenvolvimento de competências de leitura funcional, associadas à recolha e tratamento de informação numa perspectiva multidisciplinar, parece-nos que poderia ser retomado para considerar as linhas directrizes ora propostas no desenvolvimento de estratégias de leitura funcional em outros níveis etários, em outras áreas curriculares (disciplinares e não

disciplinares), no desenvolvimento de materiais a serem utilizados pelos alunos na escola e fora da escola e na formação contínua de professores.

Por outro lado, Noguerol (2002, p. 55) escreve que «Todos los maestros hablan y exigen ser escuchados, pero difícilmente diseñan actividades didácticas para conseguir que los alumnos mejoren la capacidad de captación, elaboración y comunicación de la información oral».

Ora, dada a proximidade que é possível estabelecer entre as estratégias estudadas e o desenvolvimento da recolha de informação a partir da oralidade, parece-nos que se pode revestir de alguma importância o desenvolvimento de estudos que permitam verificar a pertinência das estratégias agora estudadas a propósito da compreensão da linguagem escrita, no contexto da linguagem oral.

1. Introdução

Os estudos sobre as diferentes propostas de relação entre imagens e textos verbais, em materiais utilizados no ambiente escolar, vêm iluminando e relativizando os debates acerca das imagens e sua influência na aprendizagem da língua escrita. Vale lembrar a afirmação de Hébrard (2001, p.105), importante para a cultura da escrita, que pode explicar a necessidade de tornar menos rígida a relação de causa e efeito entre o sucesso ou o fracasso da leitura e da escrita e a presença das imagens. O autor aponta estudos alemães mostrando a relação direta da reforma luterana e a importância das imagens nas gravuras satíricas, para a difusão das críticas endereçadas à igreja e ao papa: “A imagem é, antes do texto, então, sem dúvida, a origem do sucesso da Reforma”. As conseqüências desse tipo de uso apontam para uma abordagem no âmbito da educação em que as dimensões do estético e do pedagógico são apoio para a formação da consciência crítica sobre materiais e métodos utilizados em sala de aula.

Este texto pretende situar um problema, ainda que sucintamente, acerca das relações entre texto escrito e imagens, com o intuito de compreender os sentidos dos atuais embates sobre a predominância de uma cultura visual na escola. Propõe uma direção teórica com a qual justifica a afirmação de que a escrita não se origina somente do oral. Ademais, apresenta alguns exemplos e, com isso, talvez seja possível explicar, ou melhor, compreender, certas dificuldades por que vem passando a escola, no seu exercício de tornar os alunos reais produtores de texto.

A concepção de linguagem, que toma a modalidade oral como ponto de partida para refletir sobre a escrita e a ver como transcrição da fala, tem sofrido severas críticas, uma vez que entende a escrita a partir da unicidade e linearidade da base do alfabeto que utilizamos - o grego -, além de aceitar a finalidade racional que o *logos* privilegia. Nesta direção, as produções de conhecimento originadas do saber Ocidental esqueceram e, como consequência, mascararam a riqueza de sentidos oriundos da escrita do pictograma e do ideograma, já que estas tratam a construção do conhecimento sob outra ótica, mais heterogênea, multidirecional. Apoiadas na integração e na síntese de elementos, essas escritas solicitam uma lógica mais espacial, que divide com os traços e as figuras desenhadas a criação de sentidos.

Uma questão polêmica, mas fundamental e atual, principalmente no âmbito da alfabetização, é o que vem considerando como o mito da origem verbal da escrita, em detrimento da presença da imagem na sua formação. A conhecida perspectiva que aceita a evolução do pictograma ao ideograma, indo para o fonograma e, finalmente, para o sistema alfabético tem sido reavaliada por parte dos pesquisadores que desejam superar um olhar marcado pelo etnocentrismo, que privilegia o conhecimento ocidental, principalmente o europeu: sua organização se dá em torno da escrita logocêntrica, cujo esquema evolutivo culmina com o fonetismo. Isso não impede, porém, de haver concordância com o fato de que a etapa determinante da formação da escrita é a conversão do ideograma em fonograma.

Pesquisas vêm apontando diferentes caminhos para a superação de posições impermeáveis e abrem diálogo com outros sistemas de escrita, sua história e sua permanência entre os povos. Mostram que as escritas chamadas hieroglíficas contêm elementos fonéticos quase desde a sua origem e que a pureza do sistema dos pictogramas de fato nunca existiu; estudos sobre a escrita suméria também indicam a coexistência de traços fonéticos silábicos; reflexões sobre a escrita asteca mostra que a escrita asteca-nahuatl tinha alguns dispositivos fonéticos. Michalowski (1994, p. 60) afirma que escrita foi uma nova forma de comunicação que provocou uma nova semiótica e novas formas de discurso.

Portanto, são as demandas sociais que produzem e distinguem processos de comunicação e de significação. Para muitos, a oposição entre oralidade e escrita é ultrapassada, e sua justificativa seria uma educação institucionalizada que enfatizava a escrita como um componente prioritário. A dicotomia entre oralidade e escrita, conseqüentemente, significava a presença ou ausência de uma aprendizagem institucionalizada. A separação de palavras no fluxo da escrita é um aspecto de suma importância para a quebra do elo que sustentava a lógica da relação entre escrita e oralidade. Sem precisar ler em voz alta para dar sentido ao texto, podia-se olhar para as palavras separadas e lê-las silenciosamente, como uma imagem que se tornava inteligível para o leitor. A pesquisa de Michalowski afirma ainda que, no momento, as crianças japonesas têm apresentado freqüentemente uma intensidade muito maior de usos da escrita, em relação aos jovens norte-americanos, e que parecem ser menores os problemas de leitura entre as crianças japonesas.

O estudo de Mignolo (1994) mostra que os astecas tinham não só uma sofisticada prática de escrita e comportamento verbal, quanto conceitualizações complexas dessas práticas e comportamentos, e que a compreensão de texto desses povos que não conheciam o alfabeto precisaria de uma lógica que não

lidasse com o modo de construção do pensamento logocêntrico. Por exemplo, como relacionar o conceito de tempo, a partir da idéia de narrativa que constrói a memória de um povo, se a sua organização temporal não parte da linearidade imposta pela colocação das letras e palavras umas após as outras? Como entender uma narrativa escrita sem a ajuda das letras? As imagens que construíam o calendário asteca, além de registrar o passado, organizavam os eventos humanos no contexto da ordem cósmica. Comentando as pesquisas do franciscano Juan Torquemada a respeito das atividades dos franciscanos durante o séc. XVI no México, Mignolo (p. 100) reflete sobre a dificuldade do homem de letras espanhol para entender que as narrativas que registram o passado podiam funcionar independentemente da fala e de seu controle pela escrita alfabética.

Portanto, pensar outra forma de fazer narrativa quer dizer aceitar que a escrita dos habitantes da América daquele tempo, através de imagens, não significa somente coisas (eventos, crenças, idéias), mas que ela também pode fazer história. Compreender que os seres humanos formulam conceitos a partir de seu contexto e de suas práticas culturais, é evitar incorrer no erro de perguntar, diz Mignolo, como os astecas *lêem* seus textos e de procurar um equivalente à leitura alfabética de textos escritos. Para o povo Nahuatl, não existe o verbo *ler*, mas algo como estar olhando as figuras enquanto alguém conta oralmente uma história. Provavelmente os sentidos podem variar de acordo com quem interpreta e para quem o intérprete trabalha, explicitando a importância das condições de leitura e das relações de poder para a produção de sentido. Uma espécie de contemplação e comentário, sem que esses enunciados sirvam obrigatoriamente como uma tradução das imagens em palavras.

Buscando a origem da palavra *literati*, Mignolo mostra que o sentido de *ler pela escrita alfabética* foi fixado a partir do sexto século, e que antes disso tinha-se a idéia de discernimento, mais evocativo. O autor noticia que o sujeito que imprimia as informações do povo asteca era, ao mesmo tempo, escritor e pintor, e que essas informações eram interpretadas (ou lidas) por *experts*, os letrados: “Eles lêem o mundo, ao invés de lerem a palavra”. Por isso, o estudioso propõe compreender os acontecimentos de escrita no século XVI como letramentos alternativos, sem uma sobredeterminação do oral sobre a imagem, mas uma retórica própria da oralidade e uma organização própria das figuras no espaço.

Atualmente, os estudos sobre letramento têm tentado problematizar a heterogeneidade de visões sobre esse conceito, que está na raiz das relações do homem com formas de compreensão de mundo e com a sua constituição como sujeito que elabora esse mundo. Essa não fixação do conceito do letramento pode ser utilizada para compreender as relações de leitura *com* e *entre* linguagens. A

presença das imagens nas práticas sociais de leitura e escrita no sistema escolar não é nova; porém, hoje, a presença intensa da mídia na vida social e, portanto, na vida dos alunos, tem dado margem a questionamentos muitas vezes defensivos, responsabilizando as imagens pelo conseqüente afastamento do aluno do texto verbal. Essa discussão deve ser restabelecida por outras vias, a contar com figuras como, por exemplo, Paulo Freire, que prioriza a leitura de mundo como anterior à leitura do texto escrito.

As relações nem sempre estáveis entre letramento e alfabetização são analisadas por Soares (2004, p. 9), que mostra algumas causas e modalidades do atual fracasso escolar. Uma delas é a perda da especificidade da alfabetização, exatamente pelo excesso de especificidade: “a autonomização das relações entre o sistema fonológico e o sistema gráfico [...], ou seja, a exclusividade atribuída a apenas uma das facetas da aprendizagem da língua escrita”. Entre as diversas causas atribuídas a essa perda, interessa aqui destacar aquela que abre caminho para a introdução de diversos e diferentes mecanismos da ação pedagógica e que poderá justificar a presença cada vez maior de múltiplas linguagens nos processos de ensino-aprendizagem da língua escrita.

Com uma série de transformações políticas de organização e de formação profissional, a escola tem constatado que seus objetivos básicos – como ler, escrever, fazer conta, por exemplo – não foram alcançados plenamente e o analfabetismo funcional ou neo-analfabetismo não é prioridade das escolas brasileiras, mas conseqüência de um desconhecimento, ou um despreparo, escolar quase mundial de fatores variados, que vêm se confrontando com a forma como a escola se organiza e que está construindo uma nova mentalidade, em confronto com a mentalidade da cultura letrada. Desse modo, o sistema educacional também tem contribuído para esse tipo de analfabetismo e a democratização gerada pelo estabelecimento da escrita grega torna-se exclusão em tempos atuais.

As chamadas *novas linguagens* é um termo inadequado, pois inclui, na mesma indefinida denominação, linguagens que são antigas e antecessoras da escrita da palavra, como as pinturas ou as histórias em quadrinhos (que tem suas origens nas pinturas das cavernas), as tirinhas (que vieram dos grafismos primordiais), e a tela do computador como um suporte que, disseram alguns, mataria o livro. Juntamente com os fatores acima mencionados, essas linguagens têm sido consideradas como uma das causas da crise da alfabetização. Seja pela diversidade de meios e suportes que carregam as imagens contemporâneas, seja pelos processos cognitivos que essas imagens desenvolvem, o argumento de que elas não acionam os processos *superiores* da escrita afasta-as para outra área, a

das artes visuais. O termo *novas linguagens* carrega implicitamente uma explicação, portanto, pelo que não contém e pela limitação de alcance.

Essa perspectiva alimenta, assim, uma questão, sobre a qual a escola ainda não tem instrumentos para refletir. Frago (1999, p. 182), discutindo a noção de aprendizagem, é decisivo ao afirmar que o que se persegue é modelar a mente de acordo com os pressupostos da razão gráfica e a cultura escrita.

2. A dupla natureza da escrita

Estudos sobre a escrita que propõem uma abordagem mais ampliada das relações da escrita com diversas áreas do conhecimento abrem uma discussão que permite investir numa perspectiva da sua dupla natureza: verbal e gráfica.

Em seu livro *L'Image écrite* (1995), Christin promove uma reflexão sobre a existência do grafismo como constitutivo da escrita, ao lado do fonetismo, permitindo, com isso, o investimento de produção de sentidos nas figuras, com valor de símbolo (portanto, social, convencional) e não como substituto das coisas. Ela nos lembra, por exemplo, que uma placa representando uma bicicleta e sobre ela um xis não é compreendida como uma bicicleta que tem um xis e também não indica uma representação do objeto ausente, mas significa uma interdição, uma ordem; tendo conservado uma aparência de figura, ela não é mais isso; ela é convenção. O milagre da escrita, diz a autora, começa a partir desse momento. Sua tese, portanto, nega a origem da escrita como representação da fala e reafirma seu nascimento por uma estrutura elaborada a partir da imagem, na qual a fala integrou os elementos de seu sistema compatíveis com ela

A superfície, o intervalo

Deve-se, portanto, entender a escrita (Christin, 1995) como uma linguagem de dupla entrada: verbal e imagética, um estudo semiótico ampliado, tendo, cada uma, as suas especificidades. Além disso, há uma preocupação em mostrar que o estudo da imagem não é somente da figura, mas inclui a superfície onde se localiza a figura, e que revelaria a importância do contexto na construção dos significados. Mostra assim que o espaço entre a escrita de palavras, frases e que separa as figuras, permite que suas relações sejam dinâmicas, isto é, uma sintaxe variada que possibilita diferentes sentidos, espaço polissintático, permitindo variadas formas de relação. A importância da categoria *superfície*, que não é mais um espaço vazio, amplia a concepção de escrita por dupla origem.

A frequência dessa característica gráfica da escrita nos lugares sociais pode ser observada, por exemplo, nas formas juvenis de rebeldia, nos grafites espalhados pelas cidades, nos ícones de correspondência pela internet, na

internalização de outra gramática, a verbovisual, que possibilita a construção de sentidos por outra via, enfim, uma orientação intelectual que se firma no solo da (con) figuração.

Conseqüentemente, algumas questões estão em jogo: uma delas é a de que a função narrativa torna-se mais difícil. Inserida nas leis da comunicação verbal, a narrativa prevê um ordenamento linear e temporal, próprio ao sistema alfabético. O que marca a narrativa imagética é a capacidade de as imagens reenviarem o espectador à sua própria memória, humana. A partir dessa evocação pela tela se produz narrativa, é a memória que capta e devolve um modo particular como a cultura se preserva.

Este texto deseja destacar, por um lado, o processo por que passaram as imagens, de intensa absorção de algumas qualidades discursivas, como a descrição, a narração e a argumentação retórica; por outro lado, propõe um movimento contrário, o de as palavras se apropriarem do modelo da espacialidade, como no século XIX, com a poesia visual de Mallarmé e a litogravura, que criaram um modelo de visualidade letrada ou, dito de forma condensada, verbovisual.

O traço

Outro conceito auxiliar a essas reflexões é o de traço. A recorrência à linguagem do desenho, com larga reflexão crítica, é destacada por Mário de Andrade (1965, p.71), que afirma que “o desenho fala, chega a ser muito mais uma espécie de escritura, uma caligrafia, que uma arte plástica”. O desenho está distante não só da pintura e escultura, quanto da poesia e da prosa. Diz ele que “o desenho é, por natureza, um fato aberto”, e acrescenta que as pinturas primitivas participam muito mais da natureza e essência gráfica do desenho do que da pintura propriamente dita.

Sua argumentação compreende o desenho como uma definição. É uma idéia. A caligrafia é, conseqüentemente, o traço que o desenho absorve e que resulta no que chamamos de estilo. Mas é interessante retomar a idéia de fundo, aquela que faz a superfície participar dos sentidos, uma vez que é ela que nos permite ver o traço, a forma. A superfície é o suporte que ampara essa marca. Embora o fundo não seja posto em relevo, a mão do homem necessita desta superfície para realizar seu traço. Christin (2006, p. 66) avança a discussão, apontando o suporte das imagens como o elemento que determina a origem icônica da escrita. Para ela, o ponto de tensão não é o que é visível, mas o que dá a ver o visível. É fundante essa tomada de posição de Christin para enviesar a questão: o traço é o que o homem realiza, mas o fundo é a superfície de que ele se utiliza e não explicita, embora ele saiba da sua existência.

Traço, gesto, escrita, a mão do homem que enuncia. Todavia, as várias possibilidades de realização simultâneas que a superfície oferece devem ser consideradas para melhor compreender esse conjunto de elementos nas manifestações de linguagem, como complementaridade de conceitos verbais e espaciais. Para perceber a dificuldade de compreender essa perspectiva inclusiva de palavra e grafismo, basta ver ainda hoje como se realiza a conquista da escrita nas instituições escolares que reforçam esse mecanismo de apagamento, quando as crianças deixam de desenhar para começar a escrever.

3. Relações entre o icônico e o verbal

A análise de *Desertos* (fig.1), de Roger Mello e Roseana Murray, poderá fornecer meios para melhor compreender as ricas relações do texto e da imagem e a postura imprimida no fazer plástico/literário de alguns livros infantis.

Figura 1
Desertos

Ao abrir o livro, imediatamente somos convidados a buscar nas nossas reminiscências de infância o modo como nos relacionamos com este objeto, isso é, uma postura física e cognitiva de quem vai ver um álbum, imagens, lembrar dos momentos vividos e deixar vir os sentimentos que nos apossam. Chartier (2002, p. 61-62) destaca a importância do suporte para o processo de produção de sentidos do texto e lembra que o mesmo texto, fixado em letras, não é o mesmo, caso mudem os dispositivos de sua escrita e de sua comunicação.

Nesse exemplo, além do suporte livro, o conceito gráfico se desdobra na realização do material impresso, buscando no modo de seqüenciar os desenhos e no formato retangular e horizontal, com duas fitas nas capas enlaçando as folhas, uma atitude de leitura. Este gênero permite ao viajante fazer de suas anotações e comentários um diário de viagem, e oferecê-las a nós para que possamos usufruir seus relatos (fig.2).

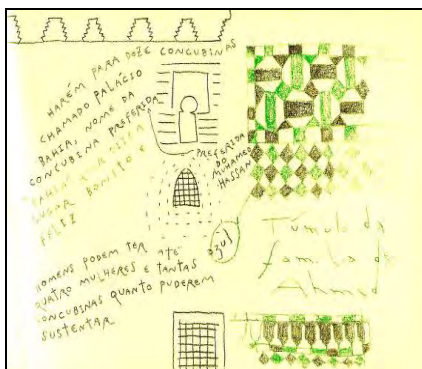

Figura 2
Desertos

Roseana Murray nos confidencia no prefácio: “imediatamente me transportei para estes vastos espaços... Senti um desejo imenso de ilustrar aqueles desenhos com meus poemas” [grifo meu]. Acerca das anotações, ela diz: “pedi ao Roger que me deixasse fazer estes comentários em forma de poema... O Roger viu e desenhou. Eu recordei e escrevi. Embora não conheça pessoalmente o deserto...” Pois essa recordação de Roseana Murray ativa sua memória das tradições e das idiosincrasias, do que está ligado ao seu grupo e dos seus devaneios e reinvenções. E o que provoca nela essas evocações está contido na suavidade ou vigor dos traços, nas cores, na distância entre os elementos, enfim, na superfície significativa para incluir os *entre* como valor de leitura.

O texto se acomoda respeitosamente a partir da disposição das imagens, que se fortalece por outras referências textuais do ilustrador. São dois autores/artistas, de imagens e de texto, que dialogam muito intimamente.

Em *Você sabe gritar?*, de Karin Koch, as condições para uma leitura expressiva pela criança se dão através de diversos recursos: o tamanho, a cor e o formato das letras indicam quem são os interlocutores e a ação proposta, como por exemplo: **gri**tar, **sapo**, **papagaio** (fig.3).

Figura 3
Você sabe gritar?

ou, **gri**tar, **Hélio**, **gri**tar, **tigre**. Também variam de acordo com cada personagem e a intensidade com que eles exprimem sua força.

O espaçamento também é relevante para um conforto visual aos leitores mirins. Na verdade, a apresentação do texto participa ativamente da história, sendo este aspecto um traço marcante do livro: o conteúdo da história é visto pelo leitor. O legível se apropria das características do visível para tornar inteligível a leitura. Ou, apoiando-se na afirmação de Anne-Marie Christin de que a escrita tem dupla natureza, o autor a transforma graficamente em texto verbovisual. Aqui, a idéia de que o texto também é imagem se concretiza de forma onipresente.

Nessa obra, as imagens funcionam de formas diversas: 1- complementam o cenário e dão sequência ao fluxo narrativo, como o macaco que entrega correspondências enquanto lhe fazem pergunta, ou a girafa que parece se alimentar em família, enquanto o Hélio e o tigre falam (fig.4); 2- tomam dimensões que destoam de um modelo canônico de proporção construído pela perspectiva renascentista e estão próximas do modo como se apresentam no imaginário de qualquer um de nós, principalmente pela liberdade representativa da criança; 3- reagem significativamente aos sentidos propostos no texto, representando o que a escrita não alcança. A intensidade, a tonalidade, os outros elementos do cenário, tudo isso nos diz algo além da escrita, pois está *entre* a escrita.

Figura 4
Você sabe gritar?

Em *Cacoete*, de Eva Furnari, a disposição do texto na página acompanha exclusivamente seu conteúdo semântico, reafirmando a idéia de que o texto é imagem, é linguagem gráfica. A autora propõe estilo de letra, orientação de leitura em coluna (p.14-15), história em quadrinhos, mapas (fig.5) para extrair de sua forma composicional os elementos que compõem o discurso estético-literário.

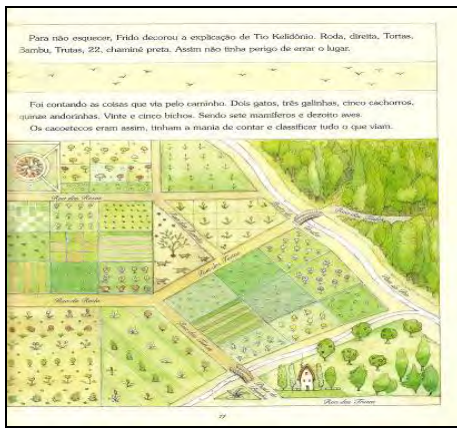

Figura 5
Cacoete, p.11

Nesse livro, as imagens tomam a feição do conteúdo do texto, iniciando a história com uma organização sistemática da cidade de Cacoete até a sua degradação, a tal ponto que palavras e imagens começam a se misturar, a se desalinhar e, nas p.24- 25 (fig.6), letras, menino, faíscas, bruxa, tudo se enfeitiça e o mundo se transforma em uma escrita grafitada. Essa é uma situação exemplar de como as ações com a linguagem e com a plasticidade da imagem podem se integrar numa leitura renovada e paradoxal.

Figura 7
Cacoete, p.25

A Linha de Mário Vale, de Mário Vale, um livro de desenhos na forma de charges e cartuns, é divisão de mundo, é superfície, é perfil de personagem, é uma infinidade de traços que a linha desenha, o mundo sendo formado aos nossos olhos, valor conceitual do traço percebido pelo estilo proposto por Vale. Linha aberta, espiralada, ovóide, formas diversas que recriam os objetos do mundo. Ver a linha como um gesto é compreender a atividade artística de quem deseja organizar o espaço, as áreas de cor (se houver) e o branco do papel (fig.7).

Figura 7
A Linha, página dupla

Figura 8
A Linha, página dupla

Por isso, o desenho de Vale não exagera, não ultrapassa, nem fica a dever, mas brinca, duvida, reflete e sugere aos seus leitores entendimentos sobre o mundo (fig. 8).

O traço realizado com a linha e que denuncia o gesto criador é percebido em diferentes artistas, como é o caso do livro infantil *O Equilibrista*, de Fernanda Lopes de Almeida e Fernando de Castro Lopes. O lúdico que subjaz à história é construído pela denúncia do personagem de que o mundo está em suas mãos e que ele faz seu caminho, traçando fio a fio seu caminhar (fig. 9).

Figura 9
O Equilibrista

A compreensão da página (e da história), portanto, prevê níveis de leitura que possam identificar as metáforas da aventura e da construção do mundo com a flexibilidade necessária do mundo dos possíveis.

3. Conclusão

Vale destacar duas situações que podem ser consideradas fundamentais: a primeira, de ordem teórica, garante à dimensão gráfica (e não apenas ao *design* gráfico do livro, tomado como técnica) constar como um dos elos possíveis entre as

duas instâncias enunciativas, a verbal e a visual, indicando influências mútuas na constituição tanto de uma quanto de outra. A segunda, de ordem pedagógica, indica a relevância de abrir espaços para muitas e possíveis leituras das crianças. O alcance da escrita, quanto da imagem, é, em algum momento, ímpar e, por isso mesmo, singular no seu modo de realização. Cabe aqui lembrar a importância dessas afirmações para a área da educação, que pode ter o sentido da alfabetização revigorado se se lançar mão desses conceitos para compreender o processo de aquisição do sistema da escrita alfabética. Além disso, fica claro que, no momento em que se aprende a escrever, aprende-se, na verdade, o discurso verbal escrito; apreendem-se, em conjunto, os sentidos não ditos verbalmente, mas latentes na discursividade do texto e, finalmente, compreende-se o mundo e suas múltiplas formas de expressão.

A ingerência aí das imagens, seja de qualquer tipo – gravura, desenho, pintura etc. – propicia uma participação ativa da criança no desenvolvimento da escrita e do letramento, sendo a educação visual uma parte de um processo mais amplo de formação cultural dos alunos. É bom lembrar, ainda, que educação visual não é o equivalente à educação estética; educar o olhar significa não só trazer para a sala de aula obras de arte que se consagraram na história da arte ocidental, como também incluir um estudo do nosso cotidiano visual, com o qual construímos a significação do mundo que nos cerca. A “era do visual”, proposta por Debret, suscita uma boa polêmica sobre o nosso tempo tomado por imagens e que certamente refletem um modo particular de conceber o mundo.

Introdução

O presente trabalho é resultado parcial de pesquisa do grupo de pesquisa sobre relações de textos verbais e imagens nos livros de literatura infantil e insere-se como sub-projeto do projeto *Produção literária para crianças e jovens no Brasil: perfil e desdobramentos textuais e para-textuais(2005-2008)*, do GPELL - Grupo de Pesquisa do Letramento Literário, do CEALE-FaE/UFMG - Brasil. Aprofunda as investigações sobre o acervo de obras literárias do GPELL, tomando como *corpus* de análise as obras premiadas nos anos de 2005 a 2007 pela Fundação Nacional do Livro Infantil e Juvenil – FNLIJ –, que integra a seção brasileira do International Board on Books for Young People - IBBY, órgão consultivo da UNESCO, cujo principal objetivo é promover a leitura e o livro de qualidade para crianças e jovens. Tanto a variedade de livros e seus formatos, quanto a multiplicidade de leitores pressupostos, levaram a Fundação à concepção de conjunto de categorizações, a saber: Criança, Jovem, Imagem, Poesia, Informativo, Tradução Criança, Tradução Jovem, Tradução Informativo, Tradução Reconto, Projeto Editorial, Revelação Escritor, Revelação Ilustrador, Teórico, Reconto e Literatura de Língua Portuguesa. No caso da pesquisa em questão, o recorte desejado está centrado nos livros considerados “Altamente Recomendáveis” em cada uma das categorias de análise, publicados entre os anos 2005 e 2007, perfazendo um total de 48 obras. Até o momento, as categorias que mostram ter mais afinidade com o tema da pesquisa (relação entre imagens e textos) são: Criança, Tradução Criança, Poesia, Imagem, Projeto Editorial, Revelação Ilustrador, Melhor Ilustração, Livro Brinquedo.

A principal finalidade deste trabalho é compreender como se estabelecem relações entre imagens e textos verbais em livros de literatura infantil, abrindo um caminho de reflexão em que a concepção de linguagem não só é posta no centro das interrogações, como também facilita um maior diálogo com áreas próximas, como a literatura e as artes plásticas, no campo da educação. As imagens são tratadas na sua dimensão semântica e relacional, podendo participar da construção de significados, ao lado da palavra. O livro de literatura infantil é um exemplo de suporte estudado por diferentes ângulos, ainda que, na sua maioria, a prevalência da linguagem literária se mantenha como foco de interesse. No caso desta

pesquisa, as imagens podem ser compreendidas esteticamente, na sua dimensão a mais expressiva possível, assim como marcadas por uma intenção educativa que, muitas vezes, dão uma conformidade limitadora ao gênero e determinam uma finalidade prévia à leitura.

Os objetivos traçados indicam um interesse em observar o fenômeno das relações entre imagens e textos verbais sem predisposições do ponto de vista lingüístico ou metodológico. São eles: identificar o modo como se estabelecem as relações entre imagens e textos verbais nos livros de literatura infantil do *corpus* analisado; estabelecer critérios de análise a partir do *corpus* analisado; construir eixos analíticos das relações entre imagens e textos verbais.

A metodologia empregada teve, inicialmente, caráter descritivo, com a finalidade de compor um perfil da literatura para crianças produzida no Brasil nos anos de 2005 e 2007, a partir do acervo de obras do Gpell. Esta primeira fase pressupôs a leitura dos livros de literatura e o lançamento de informações em ficha-padrão (autor, ilustrador, categoria, editora, ano de publicação), a fim de que se construísse uma base de dados. Dada a extensão do acervo, foi feito um primeiro recorte centrado nos livros de literatura infanto-juvenis eleitos como “Altamente Recomendáveis (AR)” pela Fundação Nacional do Livro Infantil e Juvenil, a partir de categorias de análise. Devido à extensão desse grupo de obras, tornou-se necessário um novo recorte. Partindo da seleção de “AR”, a Fundação promove o “Prêmio FNLIJ”, distinção máxima concedida aos melhores livros infantis e juvenis em cada uma das categorias de análise. Este novo critério de recorte foi responsável pela redução do *corpus* da pesquisa, sem, no entanto, abalar sua representatividade. Dessa forma, os “Premiados” passaram a integrar a pesquisa, somando 48 obras para análise, entre os anos de 2005 a 2007. Dentre os premiados, as categorias criança, imagem e poesia são as que compõem a atual fase da pesquisa, uma vez que atingem mais diretamente a sua finalidade.

Em uma segunda fase, a pesquisa vem tendo caráter eminentemente analítico, com a interpretação dos dados coletados. A sequência dessa análise pretende verificar a regularidade (ou não) de usos de textos verbais e imagens, como um modo de organização de livros para crianças; além disso, há o interesse em refletir sobre a possibilidade (ou não) de aproximação dessas obras em grandes eixos estruturadores de temáticas, estilos, formas composicionais. Todavia, mantém-se a determinação de compreender as possibilidades expressivas que podem ocorrer no trânsito entre a imagem e o texto, privilegiando os embates discursivos inerentes a cada obra e mostrando que o legível e o visível é que atravessam os trabalhos classificados didaticamente e como o fazem.

Características gerais

Tomando a linguagem como elemento fundante que possibilita as interlocuções, a pesquisa propõe um olhar transversal na análise das obras analisadas, superando enfoques estritamente lingüísticos, metodológicos ou técnicos.

Um aspecto de absoluta importância encontrado nos livros é a dimensão argumentativa subjacente, ou mesmo explícita, nos textos de literatura infantil. Análises desses livros vêm esclarecer como atua o foco narrativo e como as imagens se associam a um conjunto argumentativo para interferir nas atitudes cooperativas do leitor, no seu processo de enfrentamento do texto. Goulart (2007) tem proposto compreender os processos argumentativos na apropriação da língua escrita, tomando com base a concepção de linguagem de Bakhtin. Para isso, ela se apropria do princípio dialógico, já que *todo enunciado é produzido intencionalmente na direção do Outro, no movimento da interminável cadeia de enunciações*. O interesse da autora pelo tema da enunciação e da argumentação *se vincula à necessidade de compreender o movimento de produção de discursos e conhecimentos nas relações de ensino-aprendizagem, em espaços escolares*.

Para o estudo que ora se apresenta, a extensão das possibilidades de aproximações entre texto e imagem faz com que procedimentos próprios da linguagem sejam assimilados pela imagem, sem que ela perca sua capacidade plástica. Essa ampliação de ações que são feitas pela e com a imagem incorpora alguns temas caros aos estudos da linguagem que, para Goulart (2007), ajudam na consideração de que enunciar é argumentar: *o princípio dialógico, a organização de enunciados como gêneros do discurso e linguagens sociais e as categorias de palavras de autoridade e internamente persuasiva*.

Outro aspecto de igual destaque refere-se ao hibridismo de gêneros e estilos a que se propõe a apresentação de diferentes trabalhos para crianças. Apoiadas no terreno movediço das artes e das tecnologias – que, devido à liberdade conceitual e expressiva, por um lado, e às inúmeras opções de ferramentas, por outro, a cada dia nos dão imprevistas possibilidades de uso –, as obras não têm compromisso em manter regularidades ou mesmo um padrão rígido que explicita a narratividade inerente ao pacto ficcional das histórias infantis. Seja por imagens, seja por texto verbal, seja por ambas, essa mestiçagem de linguagens denuncia uma necessidade de repensar as relações de leitura e as estabelecidas pela leitura.

Foram selecionados, para este texto, três livros que exemplificam as três categorias em destaque: 1º) Categoria Poesia: “Poeminha em língua de brincar”, de Manoel de Barros; 2º) Categoria Criança: “Cacoete”, de Eva Furnari; 3º) Categoria Imagem: “A pequena marionete”, de Gabrielle Vincent.

O aspecto da leveza

A obra “Poeminha em Língua de Brincar”, de Manoel de Barros, é uma narrativa poética, ou uma poesia narrativa, tão ao gosto da mestiçagem de gêneros, estilos e linguagens que caracteriza a produção literária contemporânea. As fronteiras, em Manoel de Barros, se tornam impuras e avessas, o que faz da sua aparente simplicidade uma arma contra o lugar-comum. O livro *Poeminha em língua de brincar* se organiza com poucos elementos, sem muitos adereços paratextuais, mas com imagens que fazem uma releitura do texto de Barros, mostrando que caminham juntos, texto e imagem, com a mesma finalidade, como diz ele, de “chegar ao grau de brinquedo para ser séria de rir”.

O projeto editorial trabalha com o intuito da essencialidade, o que permite um enxugamento de elementos visuais e uma concentração no texto verbal. Este, sim, é o resultado de uma leveza que faz os sentidos acordar. Calvino (1990, p. 28) lembra uma passagem de Paul Valéry, para quem é necessário ser leve como um pássaro, não como a pluma; por isso, acredita que a leveza *está associada à precisão e à determinação, nunca ao que é vago ou aleatório*. Manoel de Barros também lembra que seu protagonista *falava em língua de ave e de criança*. Nada mais leve e essencial. A preocupação de Calvino em não se acomodar, pelas vicissitudes do peso de viver, leva-o a buscar deslocamentos constantes para fora do círculo fechado da conservação, que é uma forma de opressão. Descartando a fuga para o sonho ou para a irracionalidade, propõe um deslocamento para outra lógica, em que seja possível três acepções da leveza: um despojamento da linguagem, narração ou descrição que comporte um alto grau de abstração e uma imagem figurativa que assuma valor emblemático.

Essas acepções são corporificadas no texto de Barros de forma definitiva, obrigando a que sua leitura compreenda “essa mesma rarefeita consistência”. A elaboração de sua linguagem dá consistência discursiva ao seu texto, com o frescor de deslocamentos inesperados para alimentar a existência de seus personagens e de seus leitores: *E jogava pedrinhas: Disse que ainda hoje vira a nossa Tarde sentada sobre uma lata ao modo que um benteví sentado na telha*. Essa outra ótica, que dispensa pensar, permite sentir, extravasar o encantamento das palavras livres, que o pensamento solto em forma de pipa, com a linha presa ao coração, faz-de-conta que é verdade. São imagens do texto poético que orientam um modo de entender o mundo. Por isso é possível compreender, nessa outra ótica (fig.1), *que certa rã saltara sobre uma frase dele e que a frase nem arriou. Decerto não arriou porque não tinha nenhuma palavra podre nela*.

Fig.1
Poeminha em língua de brincar

Nesse caso de Barros, as imagens verbais caracterizam um mundo que deve ser ainda construído, são imagens inaugurais, fluidas e abertas para interpretação do leitor. Para a terceira acepção da leveza, *uma imagem figurativa da leveza que assuma um valor emblemático*, o autor faz a apresentação, logo no início do texto, do rosto do menino: *ele tinha no rosto um sonho de ave extraviada* (fig. 2), e que se repetirá no meio da história, enfatizando que sua expressão poética é a maneira com a qual se arremessará para o mundo dos sentidos.

Fig.2
Poeminha em língua de brincar

Barros fala das coisas da natureza como as coisas de um mundo mais palpável, todavia nada nele é palpável, o que resulta em uma concretude sem peso. Calvino fala de Lucrécio, reolocando-o como o poeta em que o conhecimento do mundo se transforma em dissolução da compacidade do mundo, na percepção do que é infinitamente minúsculo, móvel e leve. A poesia do invisível, das potencialidades imprevisíveis, a poesia do nada não nutre qualquer dúvida quanto ao caráter físico do mundo. Esse é o paradoxo que Barros quer nos ofertar.

A natureza da obra de Manoel de Barros é um labirinto em direção ao Nada, ao enfrentamento que elimina a *Dona Lógica da Razão*, para ir em direção à compreensão das coisas na sua inteireza, na sua natureza irrestrita. O questionamento do autor sobre a lógica da racionalidade supõe embate com a perspectiva de *síntese pacífica*, portanto, uma crença na fratura irreduzível da lógica que sustenta o discurso. Isso é o que possibilita a existência daquelas imagens

visuais do livro: pois o texto de Barros, mantendo a *opacidade enunciativa* de seu discurso poético, sustenta a tensão criadora com outros sistemas, dando margem à autonomia das imagens em relação ao texto fonte. Por outro lado, a posição autônoma do artista, que faz suas imagens dialogarem com o texto verbal, possibilita a realização de um intercâmbio com o texto literário fora do parâmetro linguajero, operando no âmbito da plasticidade. Esse é o meio pelo qual imagem e texto se assentam na natureza leve de suas dimensões discursiva e plástica. O que os aproxima, portanto, é a possibilidade de a imagem falar a partir do texto, havendo espaço para que cada dimensão melhor se aproprie de suas modalidades expressivas. Mantendo a opacidade significativa como característica comum entre a literatura e o plástico, esses registros não funcionam como espelho, um assemelhando-se ao outro. Do ponto de vista da sua realização, as imagens, que são desenhos pintados, não intentam explicar nem descrever coisa alguma, não se interessam em fazer o leitor compreender, mas incentivam uma postura frente ao ato criador. Essa ritualização contemporânea da imagem que dá autoridade à realização autoral se aproxima da linguagem bakhtiniana que vê na autoridade poética o traço de encantamento cuja força significa o homem que fala sua palavra.

Manoel de Barros não se preocupa só em ser entendido, mas em fazer de seus versos uma “coisa-nada”, uma língua a ser criada, para brincar, como um evento próprio da poesia. Sentencia: “Se o Nada desaparecer a poesia acaba” (fig.3).

Fig. 3
Poeminha em língua de brincar

Nesse sentido, o discurso poético se ausenta do cotidiano e constitui um monólogo, no sentido bakhtiniano, uma construção, quase um objeto conceitual. Essa é a forma de, transgredindo a fala prosaica, submetê-la à sua própria essencialidade. Sua proposta é desfazer os lugares-comuns, deixar que as experiências verbal e visual sejam o resultado de uma disponibilidade para o sensível.

O texto começa pelo pronome pessoal ele: “Ele tinha no rosto um sonho de ave extraviada. Falava em língua de ave e de criança”. Quem seria ele? Há um contrato de antemão com o leitor, sendo esse o espaço de diálogo instituído; afinal, “dispensava pensar”. A consideração de que aí está implícita a estrutura clássica do

gênero *conto*, que se consagrou infantil, possibilita subentender o “Era uma vez um menino”. Já no começo, pois, o autor anuncia o tom que o faz original, distanciado do já sabido. Mesmo mantendo a estrutura canônica do conto, a sua linguagem poética transgride as normas clássicas da narratividade e seu texto começa a desconcertar um leitor distraído, mais afeito a uma leitura mecânica. Esse mundo particular da linguagem, em que o Nada é língua de brincar, é a própria casa do jabuti, a poesia, onde o menino se interna e ali se salva: “E se internou na própria casca ao jeito que o jabuti se interna”. E sendo o Nada língua de brincar, o é também na plasticidade oferecida ao leitor/espectador: o desenho, altamente conceitual, traduz em seus traços, como que tocando levemente a lembrança de um figurativismo, a manifestação de um Nada significativo.

Por outro lado, tomando um novo ponto de vista a respeito do projeto discursivo da obra, as imagens assumem uma funcionalidade, mostrando plena interação com a proposta: a técnica e o material dos desenhos, menos que reproduzir um modo infantilizado de expressão, desejam cultivar um olhar que traduza a liberdade infantil da livre expressão e do livre compreender. Do ponto de vista da construção dessas duas instâncias – verbal e plástica –, portanto, é o vazio preenchido pelo Nada que tudo significa. Texto e imagem caminham juntos brincando com os sentidos, com as percepções, nos convocando ao estado de criação. Esse livro se abre para acolher a arte, a estética, onde o Nada é o todo.

O aspecto gráfico

Tomando o livro de literatura infantil dos nossos dias, observa-se a contribuição de projetos editoriais ao conjunto interpretativo da obra com a forte presença do projeto gráfico como criador de um produto que facilita a entrada do leitor no mundo ficcional, seja pelo texto, seja pela imagem. Essa é uma das funções desse suporte de nossa época. Contudo, algumas obras privilegiam a pura existência do projeto gráfico, distanciado da elaboração discursiva do texto e da plasticidade da imagem, o que resulta, muitas vezes, em uma estética empobrecida de sentidos.

No livro selecionado, a preferência foi congregar não só aspectos comuns auxiliares à compreensão da obra, mas também destacar elementos particulares que dão a feição de originalidade ao livro. A numeração das páginas, o formato das folhas, a distribuição de texto e imagem, a concepção da capa são aspectos cujas finalidades abrangem uma extensão desde o inteiramente educativo ao extremamente estético, sabendo que essa linha não é linear nem limitada.

Uma característica do suporte que vem sendo reforçada ultimamente e que indica atenção especial com a legibilidade de leitura é a opção de numeração das páginas. É notável o cuidado de alguns livros em não numerar as páginas sobre o

desenho nela contido que, às vezes, ocupa página inteira. Alguns projetos não se importam em marcar as páginas com números, outros organizam texto e imagem de tal forma que o numeral ficará em espaço em branco, e outros ainda não numeram folha alguma, possivelmente por considerar como infração ao espaço ficcional da história. Percebe-se, contudo, que essas opções estarão, na maioria das vezes, em harmonia com as demais opções do trabalho gráfico do livro. No livro *Cacoete* de Eva Furnari, os números das páginas assumem funções de inteligibilidade textual: dividem os parágrafos (p. 13), as cenas (p. 13), (fig.4), blocos de texto como pequenos capítulos (p.15, fig.5), dão visibilidade às transformações da narrativa (p. 20 em diante), sem que a numeração das páginas volte ao normal:

Fig. 4 *Cacoete* p.13

Fig. 5 *Cacoete* p.15

Fig. 6 *Cacoete*, p.10

A disposição do texto na página acompanha exclusivamente seu conteúdo semântico, reafirmando a idéia de que o texto é imagem, é linguagem gráfica. A autora propõe estilo de letra, orientação de leitura em coluna (p.14-15), história em

quadrinhos (fig.6), mapas para extrair de sua forma composicional os elementos que comporão o discurso estético-literário.

A distribuição de texto e imagem em *Cacoete* é uma brincadeira prazerosa para o leitor: as imagens e o texto caminham juntos, marcando, um e outro, as mudanças de comportamento, as ações trágicas da bruxa, transformando o mundo ao contrário: a simetria na imagem equivale a comportamentos regradados, nas p. 3,4,5; o enquadramento centralizado tem sua contrapartida no ajuntamento de formas semelhantes, na p. 5; o uso de letras manuscritas explicita o efeito dos *raios desorganizadores*, como nas p. 21, 22 etc. As letras são específicas para cada tipo de uso, como discurso direto, fala do narrador, letreiro da quitanda, legenda de desenhos, fala de personagens encantados etc., denunciando a existência das diferentes vozes no texto. Essa especificidade serve como orientação de leitura, marcando núcleos narrativos específicos:

Fig.7 *Cacoete* p.24-25

As imagens tomam a feição do conteúdo do texto, iniciando a história com uma organização sistemática da cidade de Cacoete até a sua degradação, a tal ponto que palavras e imagens começam a se misturar, a se desalinhar e, nas p.24- 25 (fig.7), letras, menino, faíscas, bruxa, tudo se enfeitiça e o mundo se transforma em um grafismo total. Essa é uma situação exemplar de como as ações com a linguagem e com a plasticidade da imagem podem se integrar numa leitura renovada, paradoxal. Com isso, pode-se considerar essa proposta de relação icônico-verbal como uma área de ação do *paradoxo*, movimento de síntese texto/imagem, e que vem apontar o tratamento de um projeto gráfico-editorial como um projeto ético-estético no âmbito da formação dos sujeitos leitores.

O aspecto temporal (ou da narratividade)

Seguindo pelas ruas, uma criança é surpreendida por um teatrinho de marionetes. O titeriteiro fica contente com a chegada inesperada e dá início à sua apresentação. A pequena marionete começa sua atuação e a criança se encanta por ela, trocam

olhares e sorrisos, se divertem a cada cena, a criança se identifica com a marionete. Eis que de repente, em um canto do palco, surge a imagem ameaçadora de um lobo que apavora a pequena marionete e o menino. Em meio ao desespero da intimidação, a criança corre para o palco e, para surpresa do titeriteiro, resgata sua amiga e sai em disparada pelas ruas.

O velho homem tenta correr atrás do menino e explicar-lhe o mal entendido. Passam por várias ruas, trocam-se os cenários. Depois de algum tempo, o garoto resolve parar e devolver a marionete ao dono do teatro. Este, comovido com a atitude da criança, lhe entrega a pequena boneca, como se dissesse: É sua! Os dois se entreolham com cumplicidade, unidos por uma mesma emoção e nasce ali uma nova amizade, que é festejada com alegria pelas ruas da cidade.

A linguagem literária, por si só, é um campo aberto a interpretações, oferece situações que podem acarretar diferentes “finais”, o leitor pode fazer previsões, pode “sair” do texto, estratégia tratada por Umberto Eco como *passeios inferenciais*. Especialmente no caso dos livros de imagem, em que não há a determinação do enunciado do texto verbal, as possibilidades de evocação de narrativa são ampliadas. Para o autor e ilustrador de obras infanto-juvenis, Rui de Oliveira, o psiquismo infantil pode reter imagens até a vida adulta, uma vez que elas são mais pregnante do que qualquer palavra. (Oliveira, 2008, p. 45).

A *pequena marionete* é uma obra que oferece oportunidades de interação com o leitor, despertando sua imaginação, desejos, medos e admirações. Pode-se considerar essa obra como um verdadeiro “pacto metaficcional”, já que a criança da narrativa se transporta para o mundo da pequena marionete e passa a fazer parte dele, da mesma forma que o leitor, ao adentrar a historietta pela via da leitura de imagens, integra-se ao universo ficcional de ambas.

A obra da artista belga Monique Martin, pseudônimo Gabrielle Vicent, é um livro de textualidade exclusivamente visual, com exceção da capa e paratextos; sendo a única linguagem que conduz o enredo, as imagens em sequência exploram os aspectos da narrativa e situam o leitor, mostrando as ações realizadas pelas personagens, contando a história, explorando cenas e sentimentos. As gradações do traço negro sobre o branco do papel instigam o leitor a participar da construção

da descrição, da narração, da simbolização, da brincadeira, dos sentimentos, da persuasão e da pontuação, pela linguagem plástica. Essa obra não abre mão de oferecer os recursos essenciais ao pacto ficcional e, por isso, um elemento gráfico tradicional da paginação do livro, a numeração das páginas, está ausente, em respeito ao branco como composição do conjunto formativo das cenas. Para contar, não precisa numerar.

Gabrielle Vicent explora a folha como enquadramento natural, não apresentando bordas, piso ou teto. As imagens são marcadas pela incompletude e solicitam do leitor, para concluí-las, colaboração na composição dos traços, do cenário, proporcionando uma complexa elaboração cognitiva. A cena ao lado, por exemplo, utiliza um simples traço vertical, ladeando expressões semiformadas de uma face, para representar a criança escondida atrás de uma parede, observando os

movimentos do titeriteiro que a perseguia pelas ruas. A arte de Vicent é um convite à participação ativa do leitor que segura um grafite e desenha, em sua mente, o restante dos traços que dão forma e vida à narrativa.

Conclusão

A pesquisa, em sua segunda fase de desenvolvimento, pode observar, em caráter geral, alguns indícios de um panorama mais abrangente da produção para crianças. Em primeiro lugar, o fato de tratar-se de literatura e, mais especificamente, infantil, o elemento estruturante de toda obra é a narratividade inerente ao gênero. Esse é um dos motivos pelos quais se vêm designando alguns materiais de formas tão variadas: os livros de literatura infantil sem palavras têm sido definidos como “álbum de imagens”, “livro de imagens”, entre outros, em tentativas de melhor tradução dos *picturebooks*. Uma vez que se analisa um suporte com características e finalidades específicas, a preferência dessa pesquisa é pela denominação “literatura visual”, explicitando a narratividade como uma qualidade tanto da linguagem verbal, quanto da linguagem visual. Vale lembrar que as imagens, situadas em outros suportes, ativam sua natureza plástica, sem necessariamente assumir um contorno linguajeiro.

Outro aspecto realçado nas obras analisadas é a variedade de técnicas na produção plástica do enredo e sua interação na produção de sentidos. Cada vez mais, os ilustradores têm-se postado não só como um intérprete da história, mas

como presença autoral, que, em diálogo com o autor, acrescentam intenções e orientações de leitura.

O trabalho de pesquisa observou igualmente uma tendência à flutuação de funções entre texto verbal e imagens e, algumas vezes, uma inversão dessas funções. Um excelente exemplo de proposta que permite um jogo ágil e profícuo entre imagem e texto verbal é a proposta do livro “Desertos”, de Roger Melo e Roseana Murray. É o texto que ilustra os desenhos do criador. Essa é a afirmação da poeta Roseana na apresentação do livro: *imediatamente me transporte para estes vastos espaços... Senti um desejo imenso de ilustrar aqueles desenhos com meus poemas.*

Outra possibilidade de aproximação dessas duas linguagens encontra-se no uso criativo da moldura (ou a importância da sua ausência): não só fixando o enquadramento das imagens, no momento narrativo, mas, ao revés, desconcertando esse enquadramento e denunciando este procedimento clássico de representação. Moldura sobre moldura, desenho debordando o fio enquadrate, personagens sentados sobre o limite do enquadre e, muitas vezes, o próprio enquadre como parte da história.

Sabe-se que há muito ainda por interrogar as obras, compreender o diálogo com os autores que são também os ilustradores, a exemplo de Roger Melo, Eva Furnari, entre outros, que apresentam uma inteireza tal de significação do texto verbal com as imagens que sugere, algumas vezes, o limite possível entre essas duas linguagens que se tensionam paradoxalmente e que, em sua essência, define as produções dos dias de hoje.

Modelos de literacia em práticas de escrita acadêmica¹

Maria Auxiliadora Bezerra

Universidade Federal de Campina Grande – Brasil

Introdução

Em trabalho anterior (Bezerra, 2009), analisamos a escrita de estudantes de Curso de Letras Modernas, no Brasil, com o intuito de descrever como eles se apropriam da escrita acadêmica, fundamentando-se nas teorias de escrita estudadas nesse curso. Os resultados encontrados indicam que, mesmo o professor apresentando modelos de textos acadêmicos variados, sendo estudadas teorias sobre escrita, essas não são mobilizadas, de imediato, pelos alunos, que escrevem seus textos acadêmicos (do tipo resenha) fundamentados em conhecimentos trazidos de outras experiências com a escrita. Pudemos associar essa conclusão aos novos estudos de literacia (Barton & Hamilton, 2000), que propõem uma abordagem da escrita situada em seus diversos contextos.

Essa conclusão nos levou a procurar identificar que formas de escrita são praticadas em Curso de Letras, com base em que perspectivas teóricas e com que finalidade. Assim, escrevemos este artigo com o objetivo de descrever modelos de literacia identificados em trabalhos de estudantes brasileiros de Letras Modernas, que se preparam para serem professores de língua portuguesa e que atuarão na Educação Básica do Brasil (Ensino Fundamental e Médio).

Trata-se de uma pesquisa interpretativa, que analisa textos produzidos em sala de aula, em situação de ensino e de avaliação da aprendizagem. Os sujeitos desta pesquisa são dois professores e 25 alunos iniciantes do Curso de Letras de uma universidade pública brasileira de médio porte. Esses alunos cursaram as disciplinas Prática de Leitura e Produção de Textos I e II (PLPT I e II), no primeiro e segundo período letivo, respectivamente, do ano 2008. Os conteúdos específicos dessas disciplinas são o estudo de teorias e práticas de leitura (PLPT I) e de teorias e práticas de escrita (PLPT II) e o exercício efetivo dessas competências (leitura e escrita), no domínio discursivo da academia. São analisados textos de gêneros diferentes (resumos, resenhas, provas, questionários), escritos pelos estudantes sobre assuntos variados, atendendo a comandos e objetivos específicos, com anotações posteriores dos professores (ou não), a título de avaliação e com orientação (ou não) para reescrita. Além disso, também faz parte de nossos dados entrevistas e depoimentos dos dois professores das disciplinas citadas (aqui representados por P 1 – da disciplina PLPT I; e P 2 – da disciplina PLPT II).

Para nossa análise, recorreremos, principalmente, às contribuições teóricas sobre literacias (Lea & Street, 2007, 1998; Barton & Hamilton, 2000; Street, 2007, 2003, 1984). Com esses autores, vemos que o conceito de escrita como um objeto em si mesmo, resultante de processos cognitivos e dissociada de seus contextos sociais, foi sendo revisto à medida que estudos sobre a linguagem e seus usos, desenvolvidos pelas ciências humanas (Etnografia, Sociologia, Antropologia) influenciavam os estudos predominantemente linguísticos. Como resultado, novo conceito de escrita passou a fundamentar as pesquisas sobre essa modalidade da língua: uma prática social situada que envolve interlocutores, objetivo, contexto e registro de língua adequado a esses componentes situacionais.

Concordando, então, com esse conceito, para realizarmos nosso estudo da escrita na academia, descreveremos, de início, o que entendemos por literacia acadêmica.

2. Literacia acadêmica

Para abordar a literacia acadêmica e suas características, partiremos do conceito de literacia, de forma ampla: um conjunto de práticas de comunicação social relacionadas ao uso de materiais escritos, e que envolvem ações de natureza não só física, mental e linguístico-discursiva, como também social e político-ideológica (Signorini, 2001, p.8-9). Esse conceito abrange não só os aspectos linguísticos (do código) e cognitivos, que são necessários à apropriação da escrita, como também o valor e a importância atribuídos à escrita, em uma sociedade letrada, de tal modo que àquele que tem domínio dessa modalidade da língua é dado poder e autoridade.

Desde a contribuição de Street (1985) sobre literacia, propondo um modelo autônomo e outro ideológico, os estudos se desenvolveram e se ampliaram, envolvendo outras perspectivas de abordagem, outros conceitos, como atores, *habitus* e multimodalidade, que terminaram por mostrar a impropriedade de usar-se o termo literacia no singular, apontando apenas para a 'letra'. Visto que as práticas de comunicação social relacionadas ao uso de materiais escritos são sempre situadas, com objetivos definidos e que incluem outros recursos além do código escrito, tais como formas, imagens, cores, ambientes virtuais e outros, temos hoje, literacia crítica, midiática, literária, virtual, acadêmica, etc.etc. Ou seja, cada contexto social, com seus atores e ações e recursos diversos (não apenas a escrita), constrói uma prática de literacia, que é utilizada e reconhecida como tal pelos participantes desse contexto.

Em se tratando da literacia acadêmica, o termo pode ser entendido em um sentido amplo e outro restrito. De um ponto de vista amplo, podemos afirmar que se

trata de toda e qualquer atividade de escrita e leitura (quer para aprender-se algo, quer para demonstrar ter-se aprendido algo) realizada em cursos superiores, no âmbito das disciplinas, das áreas de conhecimento ou de programas. Em sentido restrito, corresponde a um modelo que focaliza as relações de sentido, de poder, de identidade que estão implícitas em práticas letradas em um contexto acadêmico particular (Lea & Street, 2006). Em outras palavras, a literacia acadêmica diz respeito aos usos da escrita e da leitura em instâncias de ensino superior vistas como lugar de/e constituído por discursos e poder (Street, 2004).

Esse sentido restrito é percebido no âmbito da abordagem proposta por Street (2004) e Lea e Street (2006), para a escrita em contextos acadêmicos, em oposição aos estudos cujo foco principal é a escrita deficitária (ou seja, estudos sobre a 'boa' ou 'má' escrita). Esses autores propõem que as práticas de escrita acadêmica podem ser mais bem compreendidas por meio de três perspectivas ou modelos: 1) estudo de formas linguísticas ('skills'); 2) socialização acadêmica; e 3) literacias acadêmicas.

O primeiro modelo concebe a escrita como uma habilidade cognitiva e individual. Enfatiza o estudo das características da superfície linguística (gramática e pronúncia, por exemplo), procurando sua correção, e presume que os estudantes conseguem transferir, sem dificuldades, seus conhecimentos de escrita de um contexto para outro. É um modelo autônomo e reducionista de escrita, baseado no treinamento (influência da psicologia comportamental), com o objetivo de fazer os alunos fixarem as formas linguísticas.

O segundo modelo (socialização acadêmica) vê a escrita como um meio transparente de representação. Procura ensinar os gêneros e discursos de uma determinada área do conhecimento ou de uma disciplina, com o intuito de que os estudantes assumam uma 'nova' cultura (a da área de conhecimento que eles estudam), ocorrendo assim um processo de aculturação (fundamenta-se na antropologia e na psicologia social). Presume que os discursos e gêneros acadêmicos são relativamente estáveis e que os estudantes, tendo aprendido as regras principais de uma determinada área do conhecimento estão aptos a reproduzi-los com desenvoltura. A escrita parece ter uma função instrumental: possibilita ao estudante falar, escrever e pensar como os membros típicos de um grupo do saber.

O terceiro modelo (literacias acadêmicas), que estamos focalizando neste artigo (em seu sentido restrito), concebe a escrita como prática social, como uma atividade retórica incluída em diversas disciplinas ou discursos das comunidades acadêmicas. Põe em destaque a natureza institucional do que é 'reconhecido' como conhecimento em um determinado contexto acadêmico. Presume que o estudante

venha a refletir sobre a linguagem e a ficar atento às práticas linguísticas, aos significados sociais e identidades, e às comparações disciplinares. Por essas características, percebemos que esse modelo está influenciado pelos novos estudos de literacia, pela análise crítica do discurso, pela linguística sistêmica e antropologia cultural. Ainda conforme Lea e Street (2006), esse modelo se assemelha ao de socialização acadêmica em vários aspectos, tais como, enfatizam os gêneros e discursos de uma área, enfocam as relações entre epistemologia e atos de escrita em áreas do conhecimento e em disciplinas. Mas o modelo de literacias acadêmicas aborda os processos envolvidos na aquisição efetiva e apropriada dos usos da escrita, de forma mais complexa, incluindo as relações de poder entre pessoas e instituições e identidades sociais.

Considerados isoladamente, os dois primeiros modelos remetem para o modelo autônomo de literacia e o terceiro, para o modelo ideológico, conforme propôs Street (1984): por um lado, a ênfase na apropriação da língua escrita e dos componentes formais dos gêneros escritos, de forma independente de seus usos sociais; e, por outro, o interesse em ensinar-se a escrita em função dos propósitos comunicativos a que ela se presta, baseada em visões de mundo diferentes, logo, isento de neutralidade. Mas é importante ressaltar que esses modelos autônomo e ideológico não são polarizados: o primeiro “disfarça as suposições culturais e ideológicas sobre as quais se baseia, que podem então ser apresentadas como se fossem neutras e universais” (Street, 2003, p.4) e o segundo “consegue perceber as habilidades técnicas envolvidas, por exemplo, na decodificação, no reconhecimento das relações entre fonemas e grafemas” (Street, 2003, p.9).

Os três modelos encontrados na academia não se excluem mutuamente, se sobrepõem, podendo ser aplicados em um determinado contexto acadêmico, como, por exemplo, o estudo das práticas de escrita em Letras e como os estudantes chegam a entender e usar essas práticas de literacia nesse contexto.

Street (2007) descreve esses modelos numa ‘nova ordem’, ou seja, conforme os usos sociais da escrita, de modo que essa escrita não seja vista apenas como apropriação do código, nem como apropriação de gêneros em seus aspectos mais estruturais. O quadro abaixo, retirado de Street (2007, p.6) demonstra essa ‘nova ordem’.

Quadro 1 - Literacia acadêmica e as 'novas ordens'

Modelos	Nova ordem de trabalho	Nova ordem epistemológica	Nova ordem comunicativa
Estudo de formas linguísticas (escrita como precisão linguística)	Hierarquia e disciplina; linguagem policiada.	Unidades atomizadas de conhecimento transmitidas e testadas; controle de qualidade; performatividade.	Incluídas como unidades não linguísticas práticas e modos – visual, gestual, etc., nova obediência de modos.
Socialização acadêmica (escrita como canal)	Múltiplos discursos em grupos multidisciplinares; ênfase nas trocas comunicativas.	Ensino de novos conhecimentos por caminhos velhos ou por novos caminhos; acesso amplo; conhecimento em uso.	Aprender/tornar-se socializado em novos modos. Por exemplo, aula de retórica das ciências.
Literacias acadêmicas (escrita como debate)	Hierarquia atenuada; trabalho em grupo; novas práticas (skills) de linguagem; usos privilegiados.	Reflexão crítica sobre linguagem e conhecimento como processos/fontes.	Reflexão crítica sobre usos da linguagem e modos não-linguísticos, na representação do conhecimento.

A proposta de Street (2007) amplia o modelo de estudo de formas linguísticas, ao incluir, do ponto de vista comunicativo, outras unidades de estudo que não são linguísticas, tais como recursos multimodais (visuais, gestuais, etc.). Assim, embora esse modelo continue enfatizando as formas (na ordem do trabalho), busca-se a precisão linguística, isto é, o uso de formas linguísticas adequadas aos contextos sociais, sem desconsiderar-se unidades não-linguísticas, que constituem textos multimodais (na ordem epistemológica).

Já o modelo de socialização acadêmica se reconfigura, levando em consideração, na ordem do trabalho, grupos multidisciplinares, que possibilitam novos conhecimentos, a serem aprendidos ou socializados de modos diferentes. Procura-se não se limitar a uma aculturação, sem questionamento.

Por fim, o modelo de literacias acadêmicas, do ponto de vista epistemológico, procura a reflexão crítica sobre a linguagem e o conhecimento, para, na ordem do trabalho, desenvolver estudos em grupos, sem assimetrias. É essa visão engajada, sócio-historicamente, que reorienta os modelos anteriores, de tal modo que não basta aprender a escrever o código linguístico corretamente, é preciso saber usá-lo, juntamente com outros recursos multimodais, em consonância com as práticas de escritas presentes na academia.

3. Práticas de escrita presentes no Curso de Letras Modernas

O estudo da escrita na academia, influenciado por teorias de literacia, tem identificado práticas de escrita diferentes na sala de aula. Os processos envolvidos na aquisição dos usos efetivos e apropriados de literacias são complexos,

dinâmicos, situados e envolvem processos sociais incluindo relações de poder entre pessoas e instituições. Por isso, esses processos de aquisição da escrita são contestados, de acordo com as visões particulares de mundo que têm professores, pesquisadores e participantes em geral do ambiente acadêmico.

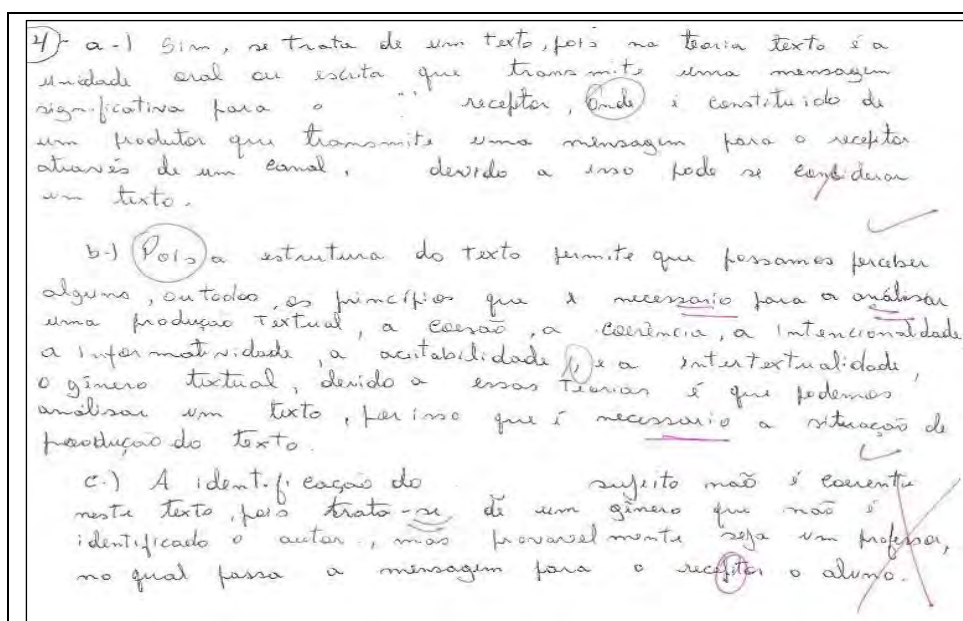

No conjunto de textos produzidos pelos alunos de Letras, em atendimento às solicitações dos professores, podemos identificar os três modelos propostos por Lea e Street (2006). Há textos com circulação restrita à sala de aula, embora tenham sido solicitados para circulação extra-classe; há textos com observações exclusivamente referentes às formas linguísticas; há exercícios com finalidade exclusiva de proporcionar aos alunos o domínio da estrutura de gêneros textuais; depoimentos do professor indicando avaliar os textos baseado na perspectiva enunciativa de escrita e o texto dos alunos apontando o contrário; e textos com função social e circulação ampla.

Isso confirma a afirmação, feita no primeiro parágrafo deste tópico, de que os processos de aquisição da literacia são complexos e situados sócio-historicamente. Considerando-se ser a escola local de aprendizagem, mesmo o professor tendo o objetivo de fazer os alunos conviverem com a literacia acadêmica, ele pode terminar por propor um modelo reducionista de escrita, com o intuito apenas de repetir um modelo e acreditar que garantiu a aprendizagem dos alunos.

3.1. Estudo de formas linguísticas

Esse modelo é observado em nossos dados (em torno de 10%), restringindo-se a uma correção linguística, demonstrando uma exigência para que o aluno domine o código. É o que podemos ver no exemplo 1:

Ex.1

(Respostas de um aluno a um exercício em PLPT I)

A intervenção de P 1 no texto do aluno demonstra uma concepção de escrita reduzida ao domínio do código linguístico (círculo em volta de uma palavra inadequada – *onde, pois*; sublinha em palavras com acentuação errada – *necessario, analisar*). Não há preocupação com o uso social desse texto: refere-se a uma avaliação da aprendizagem, incluindo concepção de texto e ortografia, acentuação gráfica, entre outros aspectos. Essa única exigência do uso do código sem erros leva-nos a entender que aprender uma língua é uma atividade cognitiva e individual, depende do envolvimento do aluno com a atividade, sem participação de outros atores ou fatores.

Essa mesma postura também foi identificada em dados recolhidos na disciplina PLPT II. O professor, em entrevista, afirma adotar a reescrita dos textos, quando necessário e possível, mas parece não estar envolvido com o funcionamento social do texto, como podemos ver no exemplo 2.

Ex. 2

P2: Então, eu eu tento sempre passar pra eles essa ideia: que querendo é possível trabalhar nessa perspectiva da da reescrita e não da simples higienização do texto, sempre... motivando o aluno a ter o maior contato possível com os gêneros os mais diversos pra que ele vá... é... alimentando mesmo esse conhecimento dele e não ficando naquelas coisas bem estanques da escola tradicional, né?

Entrevistador: Você trabalha reescrita?

P2: Bem... não não não sem/não todas as todas as atividades escritas é... na questão da prova dificilmente tem, entendeu? Mas quando é trabalho envolvendo resumo, resenha, análise de livro didático, é... algum artigo que eles/por mais simples a formatação, a formatação mais simples que seja, mas eu... trabalho a reescrita a reescrita eles sempre têm essa essa chance, digamos assim, de ir trabalhando esse texto, pra ele ir visando o que ele melhora.

(Entrevista com P 2)

Pelas respostas dadas, P 2 reconhece um procedimento de escrita que enfatiza apenas o código, de forma que, se o aluno não dominá-lo, deve fazer correções microestruturais em seu texto (*higienização do texto*) e um outro procedimento que destaca a produção de um texto, passando por modificações diversas (*trabalhar nessa perspectiva da da reescrita e não da simples higienização do texto*). É esse segundo procedimento que P 2 afirma realizar em suas aulas: proporcionar aos alunos a análise de seu texto e sua reescrita, se for necessário (*trabalho a reescrita a reescrita eles sempre têm essa essa chance, digamos assim, de ir trabalhando esse texto*).

Entretanto, ao dizer que, mesmo os alunos escrevendo um texto com formatação simples (*algum artigo que eles/por mais simples a formatação, a formatação mais simples que seja*), podem reescrevê-lo, para melhorar (*de ir trabalhando esse texto, pra ele ir visando o que ele melhora*), P 2 demonstra enfatizar o estudo das estruturas linguísticas e composicionais, como um objeto em

si mesmo, de forma neutra, independente de seus usos sociais e dos aspectos ideológicos que subjazem a essa escrita padronizada.

3.2. Socialização acadêmica

Esse se apresenta como sendo o modelo mais presente nos dados: cerca de 80% das atividades de escrita esperam que os estudantes elaborem seus textos de acordo com os usos e as normas da comunidade acadêmica, demonstrando um processo de aculturação. Ou seja, os estudantes de Letras Modernas escrevem resenhas, resumos, ensaios, seguindo os modelos desses gêneros, que são relativamente estáveis e, assim, são esperados pelos membros desse grupo. Vejamos um exemplo de bilhete deixado ao final de uma resenha crítica de um aluno, no qual a professora dá um modelo estrutural que o aluno deve seguir.

Ex.3

Seu texto está confuso. Tem marcas de resenha em alguns pontos, em outros não. Estrutura padrão a ser seguida numa resenha prototípica:

- 1) Contextualização do artigo/livro analisado
- 2) Síntese das ideias defendidas no artigo/livro
- 3) Comentários sobre o artigo (neste ponto você se saiu bem!)
- 4) Indicação do artigo

(Comentário escrito por P 2 no texto 'resenha' feito pelo aluno)

Embora se trate de um gênero textual, o foco da atividade não é uma prática de escrita social, mas a apropriação adequada do gênero, como se ele fosse sempre estável, e do componente composicional do texto (enumeração das partes que compõem uma resenha). A ênfase posta no bilhete reforça o princípio de que se os alunos aprenderem bem as regras básicas de uma resenha (ou de outro gênero) saberá produzi-la em qualquer situação em que esse gênero for solicitado.

Outro exemplo ilustra o interesse de fazer com que os estudantes se apropriem dos modelos de escrita, mas sem o foco nas atividades sociais. Trata-se de depoimentos orais de alunos sobre suas expectativas na disciplina PLPT e comentários do professor.

Ex. 4

A) Espero aprender a fazer resumos, resenhas, artigos. A senhora falou sobre a dificuldade que as pessoas têm em saber escrever sobre algo que leu sem transcrever o texto mudando algumas palavras, sem enrolar, digamos assim, e eu tenho essa dificuldade.

(Depoimento do aluno – disciplina PLPT I)

B) Então você está lendo um capítulo deste livro [Bronckart] com mais tranquilidade, porque você sabe o contexto desse capítulo dentro de um sumário dentro de um tópico. Então isso é um nível de proficiência, que talvez você não tivesse antes. Qual é o título desse livro? Qual a relação desse título com a discussão desse capítulo? Entendeu? Me interessa que capítulo desse livro? Isso é nível de proficiência de leitura. Aí de escrita eu sempre estou recomendando: leiam, sistematizem, resumam, façam um roteiro [...] a meta é formá-los proficientes em textos acadêmicos (...).

(Depoimento de P 1)

Em 4.A, o aluno reconhece sua pouca habilidade em escrita acadêmica (*eu tenho essa dificuldade*) e, em 4.B, o professor afirma que tornar os alunos proficientes na produção escrita de textos acadêmicos é sua meta (*a meta é formá-los proficientes em textos acadêmicos*). E essa será alcançada com o exercício constante e contínuo dos textos em questão (*Espero aprender a fazer resumos, resenhas, artigos; leiam, sistematizem, resumam, façam um roteiro*), pois o foco do professor está nas orientações para a escrita, dirigidas aos estudantes, e na correção das falhas das características retóricas da escrita.

Assim, as regras para a escrita de gêneros textuais acadêmicos são dadas uniformemente a todos, que devem segui-las e demonstrar ter delas se apropriado. Logo, houve uma socialização dos conhecimentos sobre literacia e espera-se que os estudantes os aprendam e os utilizem nas diversas situações, em que esses conhecimentos forem necessários. A escrita parece ser mais um instrumental a ser conhecido do que uma prática social do mundo acadêmico.

Literacia acadêmica

Por estarem sendo analisadas, só recentemente, à luz dos novos estudos de literacia, as práticas de escrita na academia ainda são abordadas levando-se em conta os textos consagrados pela comunidade (resenhas, artigos, relatórios, projetos...), que circulam entre seus pares.

Podemos perceber, em nossos dados, atividades que são realizadas com o intuito de, efetivamente, fazer circular os textos dos alunos, em outros ambientes diferentes da sala de aula, conseqüentemente, com interlocutor que não é seu professor. Mas essas atividades têm pouca representatividade (em torno de 10%). Podemos demonstrar nossa interpretação, através do exemplo 5, que se refere à produção de um artigo de opinião.

Ex.5

Produza UM ARTIGO DE OPINIÃO, considerando:

Objetivo: defender uma concepção de ensino de língua e de leitura que deve privilegiar diferentes fatores, não apenas o material linguístico.

Público-alvo: professores do ensino fundamental e médio e pais de alunos do ensino fundamental e médio.

Circulação: publicação em um site ou em uma revista impressa que atinja esse público-alvo.

(Comando da atividade dirigido a alunos de PLPT I)

A preocupação em apresentar as condições de produção do texto (um tema, um destinatário, um objetivo e local de circulação) faz-nos ver a escrita como uma prática que ultrapassa os muros da escola. O que os alunos têm a dizer não é do interesse apenas do professor da disciplina, mas também de outros atores sociais (*professores do ensino fundamental e médio; pais de alunos*) envolvidos com a temática (*ensino de língua e de leitura*). Além disso, a indicação de que o ensino de

língua e de leitura não deve se restringir ao material linguístico aponta para um discurso inovador na escola, que se mostra como agência de literacias múltiplas, não só a que se liga à letra. E, por fim, o fato de o texto vir a ser publicado em um espaço virtual (*publicação em um site*) confirma a complexidade da literacia acadêmica, que não se restringe ao uso da língua, à publicação impressa, aos destinatários da academia, mas é uma atividade retórica que está envolvida em comunidades discursivas variadas.

Mesmo que haja um trabalho com a escrita associado a seus usos efetivos, não encontramos em nossos dados momentos de contestação, de debate, levando alunos e professores à reflexão sobre linguagem, usos (hegemônicos ou estigmatizados) de escrita e de recursos multimodais. Isso implica dizer que a literacia acadêmica, no sentido aqui descrito, apenas se insinua no curso em questão.

Considerações finais

Embora se defenda a concepção de língua como interação, o tratamento dado ao texto escrito ainda se respalda pela obediência aos moldes canônicos, estudados de forma autônoma e destituídos de reflexão crítica tanto do ponto de vista temático quanto formal e ideológico.

Enfatiza-se uma prática de literacia que favoreça aos alunos familiarização e domínio de gêneros textuais recorrentes na academia, num processo de socialização acadêmica, ou seja, aos estudantes recém-ingressos na universidade são oferecidas oportunidades de se apropriarem, por um processo de aculturação, das práticas de escrita consagradas, sem se proporcionar uma reflexão sobre essas práticas, nem sobre as experiências com a escrita dos estudantes.

Assim, com base na concepção de escrita deficitária, são estudados (e praticados) princípios teórico-metodológicos sobre literacia, com o intuito de amenizar essa deficiência. Embora haja alunos que conseguem mobilizar esses conhecimentos construídos na academia, há muitos outros que ainda têm dificuldades, de forma que não conseguem facilmente ultrapassar as práticas de literacia autônoma.

Para encerrar, o que nos parece mais pertinente, embora não mais simples, é desenvolver-se um trabalho, no Curso de Letras em estudo, com base na literacia acadêmica, considerando-se o estudo da língua, dos gêneros textuais, dos usos e práticas de escrita, de forma mais sensível ao contexto, às necessidades e aos atores envolvidos. Portanto, um trabalho que se realize à luz da reflexão crítica, que esses modelos identificados não sejam polarizados.

Nota

Texto e Gramática em Livros do PNLD 2010: as atividades de Leitura

Delaine Cafiero

Universidade Federal de Minas Gerais (FALE/CEALE) Brasil

O Programa Nacional do Livro Didático (daqui para frente PNLD) é uma iniciativa do Ministério da Educação do Brasil (MEC) e tem por objetivo distribuir gratuitamente livros didáticos a alunos das escolas públicas do país. Desde 1996, os livros são avaliados por uma equipe de especialistas e os resultados da análise são publicados em forma de GUIA, com um conjunto de resenhas, que tem a finalidade de orientar a escolha de livros pelos professores do ensino fundamental. As resenhas indicam as características das coleções didáticas em relação ao trabalho com leitura, produção de textos escritos, oralidade, conhecimentos linguísticos, além de destacar também a funcionalidade do manual do professor que orienta a coleção.

Nosso objetivo, neste texto, é refletir sobre o trabalho com a leitura que as coleções aprovadas pelo PNLD 2010 proporcionam aos alunos do ensino fundamental. Destacam-se, principalmente: 1. as contribuições que a seleção de textos pode trazer para a formação geral do leitor e para a formação do leitor de literatura; 2. as capacidades que as coleções pretendem desenvolver no aluno no uso do texto como leitor.

O contexto

Já há algum tempo temos trabalhado na análise de textos e atividades de leitura dos livros didáticos avaliados por esse programa. Sobre o PNLD 2002, em Cafiero & Correa (2003), observamos apenas a seleção de textos apresentada pelas coleções de 5ª. à 8ª. séries, verificando em que medida elas poderiam contribuir para a formação do aluno como leitor, ampliando suas experiências estéticas e desenvolvendo nele o prazer e o gosto pela leitura. Considerando que muitos alunos, muitas vezes, só têm acesso ao texto literário por meio do livro didático, aquela pesquisa levantou questões como: os gêneros selecionados são diversificados? Os autores são representativos no espaço da produção literária? Os textos selecionados contribuem para ampliar o repertório literário do aluno? Os recursos estéticos e estilísticos são explorados com pertinência? Há incentivo para leitura de outros materiais como, por exemplo, uma obra literária completa? Naquela época, interessava-nos, particularmente, observar como os textos literários marcavam as coleções. Os resultados apontaram que, embora as coleções

cumprissem os requisitos para sua aprovação no programa do governo brasileiro, ainda faltava um trabalho sistemático para contribuir efetivamente para a formação do leitor de literatura. Faltava um trabalho que levasse o aluno a reconhecer nos textos suas singularidades, de modo a aguçar o olhar estético do aluno e a estimular a fruição pela leitura.

Em texto sobre o PNLD 2008, Corrêa & Cafiero (no prelo), analisamos não só a seleção de textos como também as atividades de leitura propostas em coleções de 5ª. à 8ª. séries. Foi possível observar, na avaliação do PNLD 2008, que pela primeira vez, as fichas de análises que subsidiavam a elaboração das resenhas do GUIA contemplavam, como um dos requisitos de avaliação, a especificidade do texto literário. Observando de que modo os gêneros do domínio literário/ficcional participam das coleções, buscamos responder às questões: a) quais as consequências da nova configuração dos livros didáticos de Português para o ensino de leitura; b) qual é o lugar do texto literário nas novas coleções; c) que gêneros da literatura são trabalhados; d) em que medida o tratamento dado ao texto literário pode contribuir para a formação do leitor de literatura.

Como resultado da pesquisa de 2008, observamos que uma das novidades que vem se concretizando nos livros didáticos brasileiros é certo distanciamento das coleções de Língua Portuguesa dos modelos de organização por conteúdo gramatical e por temas, que tradicionalmente marcaram a estruturação do livro didático de português. Seis das 24 coleções aprovadas consideraram os gêneros em sua organização. Ou seja, os gêneros efetivamente ganharam espaço como objetos de ensino nos livros didáticos. Outra observação importante desse resultado diz respeito ao tratamento do texto literário. Embora não tenha sido evidenciado um trabalho sistematicamente orientado para exploração das singularidades dos gêneros da literatura por meio das atividades propostas, foi possível observar como o conto, a crônica, o poema e fragmentos de romances tomam lugar na seleção de textos. Contribuições para levar o aluno à fruição estética e à apreciação da produção literária, ainda que tímidas, se revelaram presentes nas coleções.

Agora, com base nas fichas de análises e nas 24 resenhas das coleções aprovadas, que compõem o GUIA do PNLD 2010, destinadas à escolha de livros para o 3º. 4º. e 5º. ano do Ensino Fundamental, buscamos responder às perguntas: a) que gêneros as coleções colocam à disposição dos alunos para as tarefas de leitura? b) Essa seleção de gêneros é representativa do que a cultura escrita disponibiliza para crianças dessa faixa de escolaridade? c) As atividades de leitura podem contribuir para a formação geral do leitor? d) As atividades de leitura podem contribuir para a formação do leitor de literatura? e) Quais as principais

capacidades que as coleções se propõem a desenvolver visando à proficiência do aluno? Duas diferenças marcam esta nova pesquisa: a primeira é que se observam agora coleções destinadas a alunos mais novos (de oito, nove e dez anos), porque se encontram nas séries iniciais do ensino fundamental; a segunda é que se estende o olhar para os gêneros de diversos domínios e não somente os da literatura.

Fundamentação teórica

Neste trabalho, assumimos que tomar os gêneros como objeto de ensino pode contribuir para um trabalho efetivo com a língua na sala de aula, e, além disso, é uma forma de aproximar os alunos das diferentes práticas de leitura, incluindo-se aí os textos da literatura.

Acreditamos que a partir da perspectiva de gêneros é possível pensar em propostas de ensino que efetivamente levem os alunos a construir competência no uso dos textos. A exploração dos gêneros em atividades didáticas pode ser produtiva se levar em conta a forma de organização e distribuição das informações, e, simultaneamente, considerar os conteúdos esperados em cada texto e os recursos linguísticos utilizados bem como as escolhas do autor para dizer, para imprimir sua marca individual. Concordamos, então, com Marcuschi (2002) para quem “o trabalho com os gêneros textuais é uma extraordinária oportunidade de se lidar com a língua em seus mais diversos usos autênticos no dia-a-dia”. Os gêneros são como famílias de textos que apresentam características comuns como, por exemplo, certas restrições de natureza temática, composicional e estilística (Bakhtin, 1997). Mas as características são apenas comuns, não quer dizer que haja uma forma fixa para todos os gêneros: mesmo possuindo certas semelhanças, pode haver variação entre textos considerados do mesmo gênero. Por exemplo, o fato de estar num determinado suporte (na enciclopédia, na revista de divulgação ou no livro didático), ter uma dada extensão, certo grau de formalidade/informalidade faz com que um texto se diferencie de outro. Um relato de pesquisa, por exemplo, escrito em forma de uma dissertação de mestrado ou de uma tese de doutorado será um gênero diferente de um artigo, sobre o mesmo tema de pesquisa, em uma revista de divulgação científica, escrita para crianças.

Se acreditamos, como Bakhtin (1997), que os gêneros são aprendidos quase que do mesmo modo como se assimilam as formas da língua, isto é, pelo contato e uso nas situações de comunicação, para aumentar a competência dos alunos em interações sociais, é necessário que, nas atividades de ensino, se contemple a diversidade dos gêneros, partindo-se dos gêneros mais conhecidos (os de discurso

primário) para atingir os menos conhecidos (os de discurso secundário), mas que é preciso dominar.

Assim sendo, há que se ressaltar que o trabalho com os diferentes gêneros em sala de aula não pode ser visto como um exercício classificatório dos diferentes textos que circulam socialmente. Principalmente em relação ao texto literário, pressupõe-se um ensino que destaque as singularidades e propriedades de composição que caracterizam esse tipo muito particular de escrita. Não se trata, por exemplo, de apenas identificar e/ou distinguir um conto de uma crônica, ou de cobrar respostas únicas em atividades limitadas de compreensão, mas trata-se, como afirma Martins (2007) de “não se negligenciar o pacto ficcional que o jogo da linguagem e do imaginário tentam estabelecer com os leitores e que somente estes serão capazes de instaurar, ou de ignorar, no seu comportamento participativo”.

O ensino de gêneros na sala de aula não pode ser entendido também como pretexto para o ensino de gramática, pela mera identificação de categorias gramaticais. Os recursos linguísticos envolvidos na construção dos textos podem e devem ser explorados, mas, muito mais importante do que saber categorizar esses recursos em classes gramaticais, é perceber os múltiplos efeitos de sentido gerados pelas construções utilizadas. As categorizações são importantes na organização de nossa experiência, porque levam a perceber as regularidades presentes na diversidade de enunciados. Todavia, o fato de se dar esse ou aquele nome às categorias importa pouco, essas são úteis na medida em que ajudam a apreender os princípios subjacentes à organização e funcionamento dos textos.

Uma ideia produtiva é que os diferentes gêneros das várias esferas façam parte do universo de leituras do aluno, a fim de que ele aprenda por experiência própria os modos de ler cada um deles. Por isso é muito legítima a entrada da diversidade de gêneros textuais no livro didático e na sala de aula. Por outro lado, essa entrada talvez tenha feito com que o texto literário tenha perdido mais do que sua hegemonia na sala de aula, um espaço privilegiado. Não se lê os textos da mesma maneira e não se aprende a ler os diversos textos usando as mesmas estratégias, por isso, não adianta substituir alguns gêneros por outros. É importante que se aprenda a lidar com uma variedade desses gêneros de modo a permitir a ampliação das diferentes formas de letramentos dos alunos. Dessa forma, estudos recentes sobre o letramento utilizam essa palavra no plural, letramentos, com o objetivo de mostrar a multiplicidade de formas de interagir com os diferentes gêneros e domínios.

Os resultados da pesquisa

Para organizar as reflexões sobre o trabalho realizado com a leitura nas coleções aprovadas pelo PNLD 2010, destacamos cinco tópicos: 1. Os gêneros nas coleções; 2. Representatividade dos gêneros selecionados; 3. Contribuições para formação geral do leitor; 4. Contribuições para a formação do leitor de textos literários.

1. Os gêneros nas coleções

Diversidade

Gêneros diversificados aparecem nas coleções. São vários também os domínios ou esferas sociais em que esses textos circulam: privado (bilhete, carta, e-mail), literário (conto, história, crônica, poema), publicitário (anúncios de todo o tipo), jornalístico (notícia, reportagem, artigo, divulgação científica) entre outros. Embora haja diversidade de domínios, é possível perceber um resgate do texto literário nas coleções.

Os gêneros que mais aparecem

Há gêneros que são mais utilizados tanto numa mesma coleção quanto no conjunto das coleções. Por exemplo, do domínio literário aparecem com mais frequência o poema e o conto, a crônica também marca presença nas coletâneas. O que se convencionou chamar de gênero “história” também é muito frequente. Por trás dessa designação podem estar fragmentos de livros, histórias populares ou até mesmo contos. Do domínio jornalístico, a notícia e a reportagem são mais presentes nas coleções. Muito recorrentes são os textos denominados de divulgação científica, desses que aparecem em revistas como *Ciência Hoje*, *Superinteressante*. Do domínio publicitário, os classificados são mais recorrentes, há propagandas ou peças publicitárias também, mas em menor quantidade. Outro gênero muito utilizado pelas coleções é a história em quadrinhos, que aparece praticamente em todos os volumes de todas as coleções.

Os gêneros que menos aparecem

São pouco frequentes, no conjunto das coleções avaliadas, os artigos de opinião, também especificados como textos argumentativos. E-mail e blog são gêneros que começam a aparecer nas coleções, mas sem presença significativa. O fato de estarem presentes nas coleções, no entanto, dá uma indicação de que existe a preocupação de inserir o aluno de alguma forma no mundo digital. O mangá, uma espécie de quadrinho japonês, aparece em apenas uma das coleções.

A dificuldade com os nomes

Nas formas de nomeação dos gêneros há muita variabilidade. Isto é, vários nomes são indicados para designar o que seria um mesmo gênero, como por exemplo: texto informativo, texto expositivo, texto de divulgação científica, artigo científico são usados para nomear o que poderia ser considerado um mesmo gênero. As noções de tipo e gênero também se misturam com frequência. Há coleções que optam por lidar com gêneros e há poucas coleções que se organizam por meio de tipos ou por sequências tipológicas.

2. Representatividade dos gêneros e de autores selecionados

A lista de gêneros presentes nas resenhas indica que a coletânea das coleções consegue ser bem representativa do que o universo da cultura da escrita disponibiliza para alunos da faixa etária a que os volumes se destinam. Isso é importante quando consideramos que muitas crianças somente terão acesso a alguns gêneros pela via do livro didático, já que em muitas regiões do país é precária a circulação de suportes de leitura.

Há textos multimodais contemplados, como os cartuns, tirinhas, histórias em quadrinhos, gráficos, cartazes e anúncios publicitários. Os autores dos textos selecionados são representativos na literatura, já consagrados pela crítica, e podem favorecer experiências significativas de leitura. Como exemplos podem ser citados: Luís Fernando Veríssimo, Sérgio Caparelli, Ziraldo, Tatiana Belinky, Luiz Vilela, José Paulo Paes, Maria Clara Machado, Leo Cunha, Ruth Rocha, Carlos Drummond de Andrade, Rachel de Queiroz, Monteiro Lobato, Elias José, Lygia Bojunga, Pedro Bandeira, Heloisa Prieto, Moacyr Scliar, Millôr Fernandes, Rubem Braga e Paulo Mendes Campos entre outros. Há presença de textos que se referem a diferentes épocas (desde fábulas de Esopo, os contos de fadas e os contos populares antigos até os contos e histórias mais recentes).

Por outro lado, as resenhas destacam um ponto recorrente: o fato de as coletâneas de textos praticamente não representarem a variedade de contextos culturais do Brasil. Isso significa que, embora haja diversidade de gêneros e autores, os temas abordados contemplam, em geral, a realidade dos grandes centros urbanos, deixando de fora outros contextos socioculturais como a vida de pescadores, de moradores de fazenda e dos indígenas. Nos textos buscados em jornais, por exemplo, fica evidente que publicações de estados brasileiros da região sudeste como São Paulo, Rio de Janeiro e Minas Gerais são as privilegiadas em detrimento das regiões Norte, Nordeste, Centro-Oeste e Sul.

3. Contribuições para formação geral do leitor

Contribuir para formação geral do leitor significa dizer que as coleções respeitam as convenções e os modos de ler constitutivos de diferentes gêneros praticados em diferentes esferas de letramento; tratam a leitura como processo de interlocução, promovendo o diálogo leitor-texto-autor (isto é, levando o aluno a refletir sobre os objetivos do autor e a se colocar diante do texto); situam as práticas de leitura em seu universo de uso social; resgatam o contexto de produção do texto (esfera, suporte, função social, contexto histórico); definem objetivos plausíveis para a leitura proposta; trabalham as diferentes estratégias cognitivas do processo de leitura (ativação de conhecimentos prévios, predição de conteúdos, localização/reprodução de informações explícitas, inferência); exploram aspectos discursivos (interdiscursividade, intertextualidade, marcas enunciativas, efeitos de sentido, pressupostos e subentendidos, polifonia - vozes, marcas da presença do discurso alheio), argumentatividade etc. As coleções aprovadas cumprem esses critérios com atividades que se aproximam em maior ou menor medida da situação ideal. São frequentes nas resenhas as indicações para o professor atentar sobre alguns pontos não cumpridos ou não tão bem cumpridos pela coleção. Os pontos mais problemáticos são em relação 1. à definição de objetivos de leitura para os alunos; 2. à exploração dos recursos discursivos; 3. ao resgate das condições de produção.

O conjunto de atividades propostas pelas coleções leva ao desenvolvimento de diversas capacidades de leitura. Entre essas importa destacara a ativação de conhecimentos prévios e levantamento de hipóteses, por exemplo, que são estratégias de leitura importantes que as coleções permitem desenvolver, embora nem sempre haja propostas para checagem das hipóteses levantadas. São capacidades recorrentes nas coleções: localizar informações; produzir inferências; comparar informações; identificar o sentido de uma palavra a partir de seu contexto; compreender globalmente o texto; reconhecer o suporte, o gênero e o contexto de produção do texto; construir relações intertextuais; identificar recursos linguísticos característicos de determinados gêneros; compreender as relações entre texto verbal e imagem. Por outro lado, são pouco trabalhadas em atividades as capacidades de identificar os efeitos de sentido decorrentes dos recursos linguísticos utilizados pelo autor; ler silenciosamente, com compreensão; posicionar-se criticamente frente às questões propostas.

4. Contribuições para a formação do leitor de textos literários

Serão dadas contribuições para a formação do aluno como leitor de textos literários na medida em que as coleções não somente apresentarem uma seleção de autores representativos do universo da literatura, como também puderem proporcionar

atividades interessantes e substanciais para a compreensão das singularidades dos textos. É importante que as atividades orientem a leitura, situando os textos em relação à obra de que fazem parte; estimulando a leitura da obra completa; levando em conta a organização particular do texto e sua relevância para a apreensão dos sentidos possíveis; aproximando adequadamente o aluno do padrão linguístico do texto (vocabulário e recursos sintáticos pouco usuais, variedades linguísticas etc.).

Poucas coleções passam bem por todos os critérios. Em geral, os autores são representativos, mas há pouca ou nenhuma contribuição para que o aluno conheça a obra como um todo, para que perceba as especificidades dos textos da literatura. Outro problema que se evidencia é a fragmentação dos textos literários. São frequentes os recortes de textos, que embora resguardem a unidade de sentido, prejudicam o contato do aluno com o todo do texto, tal como ele circula na sociedade. A fragmentação pode ainda acarretar, para os alunos, a falsa concepção de que texto de escola, texto de aula de português, é sempre “pedaço” de texto. Outro problema é a exploração privilegiada de sentidos literais, isto é, o foco do trabalho não é levar o aluno a perceber efeitos de sentido, mas apenas a identificar informações explícitas. Compromete também o trabalho de exploração dos textos literários o fato de que muitos são usados apenas como base para a realização de exercícios gramaticais e/ou de ortografia. Um último problema verificado é o de tratar os gêneros, em geral, mas especialmente os da literatura, como formas fixas. Em muitos casos a exploração dos textos visa a apenas destacar características de sua forma composicional como, por exemplo, situação inicial, complicação, clímax e desfecho, nas narrativas; ou a lidar com categorizações sem considerar o funcionamento dinâmico dos textos.

Assim, como já pôde ser observado em outras edições do programa, no PNLD 2010, as contribuições para a formação do leitor literário são ainda pontuais nas coleções aprovadas. Mas, a exemplo, do que já se constatou, embora não haja ainda um trabalho que possibilite ao aluno uma experiência singular de leitura, as propostas começam a contribuir para a fruição estética e a apreciação da produção literária. São bons exemplos desse trabalho: 1. o cuidado de manter a fidelidade ao suporte original, principalmente nos textos em que essa manutenção contribui para a compreensão; 2. o fato de a atividade situar o texto em relação à obra de que faz parte, por meio de apresentação de dados do autor e de sua obra, de contextualização histórica do texto, de informações sobre o tema; 3. os estímulos para o aluno conhecer a obra completa, concretizados nas coleções pela apresentação de resenhas, ou da capa do texto original, de entrevistas com o autor, de recomendação explícita como: “se você quiser ler o livro todo...”; 4. a exploração da organização particular do texto e a discussão de sua relevância para a construção dos sentidos, o aluno-leitor é levado observar, por exemplo, a organização e a linguagem do poema em contraposição com a organização e a

linguagem do verbete de uma enciclopédia; 5. o respeito ao pacto ficcional; 6. a exploração de imagens, desenhos e figuras, que contribuem para a compreensão do texto; 7. a aproximação do padrão linguístico do texto por meio de atividades que ultrapassam a consultas a dicionários; 8. a exploração do texto por meio de atividades que instauram o lúdico e resgatam o prazer da leitura.

Considerações finais

Consideramos que os livros didáticos de Língua Portuguesa têm um papel fundamental: o de aproximar o aluno de textos aos quais ele poderia não ter acesso por outras vias. A análise das coleções aprovadas em 2010 revela que há uma tendência de melhoria no trato com a leitura nos livros didáticos. Essa melhoria pode ser percebida tanto no resgate de textos literários que ganham espaço nas coletâneas, quanto na diversidade de gêneros de outros domínios. As atividades de leitura têm, cada vez mais, orientado a compreensão do texto, contemplando a reflexão e o diálogo entre leitor e autor e considerando o uso social dos diversos textos. Se a seleção de textos for de boa qualidade e se as atividades de leitura forem adequadas, muito provavelmente mudanças significativas chegarão ao ensino.

Embora reconhecendo que há um longo caminho a percorrer, temos observado que o PNLD tem trazido contribuições, em suas sucessivas edições, pela definição de parâmetros importantes para a melhoria dos livros didáticos. Tem ficado mais claro com que critérios operar para um efetivo trabalho com a leitura na sala de aula. Os livros didáticos de Língua Portuguesa postos à disposição de alunos e de professores estão apresentando uma melhor qualidade a cada nova edição desse programa.

Talleres de Animación a la Lectura en la Biblioteca Municipal de Cuenca.

Cristina Cañamares

CEPLI. Universidad de Castilla La Mancha, España

Olga Muñoz

Biblioteca Municipal de Cuenca, España

El *lector* no nace, se hace; pero el *no lector* también: nos hacemos *lectores* o *no lectores* con el paso del tiempo, a lo largo de un proceso formativo en el que interviene el desarrollo de la personalidad y en el que vivimos experiencias lectoras motivadoras y desmotivadoras, que tienen como principales contextos la familia y la escuela. A pesar de lo que la sociedad, a través de los medios de comunicación, afirma a veces, la responsabilidad del buen desarrollo de ese proceso no es sólo de la *escuela*; la familia, las bibliotecas, las instituciones o los propios medios de comunicación deben asumir su parte de responsabilidad: “los hábitos lectores de los niños y jóvenes no sólo dependen de la motivación que encuentren en la familia, en la escuela y en la biblioteca, sino que pueden verse fortalecidos o no por la comunidad en la que viven.” (Corrionero, 2008: 132).

Tradicionalmente se han tomado como sinónimos conceptos como *promoción*, *animación* o *mediación*, referidos a la lectura, a veces se confunden y, en ocasiones, se malinterpretan. Cuando hablamos de *promoción* de la lectura, solemos recurrir a diversas técnicas y estrategias de la que llamamos animación a la lectura, que nos permitan hacer nuevos lectores, y la *promoción* es algo más amplio, que está muy relacionado con las políticas culturales de las colectividades de que, en cada caso, se trate.

En la *promoción de la lectura*, sobre todo cuando los destinatarios de las mismas son niños o adolescentes, es muy importante la figura del *mediador*, un papel que suelen cumplir adultos con perfiles específicos (padres, maestros, educadores sociales, trabajadores sociales o bibliotecarios). Pero, ¿por qué es necesaria la mediación de un adulto en las prácticas lectoras de los escolares? Porque en la infancia y en la adolescencia, los lectores tienen niveles diferentes y progresivos en sus capacidades de comprensión lectora y recepción literaria; por eso, es necesario el *mediador*, como puente o enlace entre los libros y esos primeros lectores que propicia y facilita el diálogo entre ambos; y lo es porque cumple el papel de primer receptor del texto, siendo el lector infantil el segundo receptor, algo que se da en la Literatura Infantil, porque es una literatura que, recordémoslo, se dirige a unos lectores específicos.

La mediación lectora

La mediación lectora exige hoy el uso de estrategias que se sustenten en sólidas bases metodológicas; por eso, es tan importante que el *mediador* conozca y domine los recursos e instrumentos que le van a ser necesarios para facilitar el acceso de cualquier lector escolar a todo tipo de lecturas (Vid. Cerrillo y Cañamares, 2008).

El mediador tiene que seleccionar las lecturas¹ por su calidad literaria y por su empatía y grado de adecuación a los intereses y competencia lectora de los destinatarios de las mismas. Asimismo, ha de ser capaz de elaborar y poner en práctica programas coherentes de promoción lectora, en los que las técnicas y actividades de animación serán sólo una parte de la programación, pues parece que estas actividades, cuando se realizan al margen de programas de promoción, no han contribuido a lograr una mejora sustancial y duradera de los hábitos lectores, aunque no se puede poner en duda la eficacia estratégica que, en determinados momentos, pueden tener; probablemente, esa disfunción sea la consecuencia del enfoque que se le suele dar a la animación a la lectura, que se entiende más como un mero juego/estrategia/técnica para leer un libro concreto que una actividad organizada para el fomento general de la lectura.

La *animación a la lectura* necesita, cada día con más firmeza, una reflexión profunda sobre la *Lectura*: sobre qué, por qué y para qué leer; y, quizá también, en qué soportes, es decir, dónde leer. Y en esa reflexión es necesaria la participación de mediadores debidamente formados.

La biblioteca Municipal de Cuenca

La Biblioteca Municipal de Cuenca funciona desde abril de 2005; consta de cuatro salas, que prestan servicios de préstamo de documentos –libros y audiovisuales–, lectura en sala, consulta de material de referencia, hemeroteca, consulta de Internet, y sala infantil-juvenil. Asimismo, desde su apertura se han realizado diversas campañas de animación a la lectura con las que se pretende contribuir a la dinamización cultural de la ciudad, atraer lectores a la biblioteca, crear usuarios asiduos a la misma, y fomentar el hábito lector de la población. Para los niños y jóvenes de la ciudad se han puesto en marcha dos líneas de trabajo principales: las visitas guiadas, concertadas con los centros educativos, y los talleres de animación a la lectura. Ambos tienen una duración anual y se programan cada curso académico. En la biblioteca también se llevan a cabo otras actividades relacionadas con el mundo de la lectura como talleres de prelectores, concursos, actuaciones de títeres, cuentacuentos, etc., pero en esta comunicación nos centraremos solamente en los talleres de animación a la lectura.

Los talleres de animación a la lectura en la Biblioteca Municipal de Cuenca

Los talleres organizados por la Biblioteca Municipal de Cuenca están dirigidos a niños de entre 6 y 12 años. La participación es libre y gratuita. Sólo es necesario inscribirse en la sala infantil de la biblioteca y tener la tarjeta de lector. Los talleres de animación a la lectura persiguen crear hábito lector: acercar los textos a los niños mediante una actividad lúdica, promocionar el uso de la biblioteca como recurso cultural, informativo y de ocio y dar a conocer la biblioteca.

A diferencia de las actividades que se realizan en el aula, los talleres en la biblioteca tienen un componente lúdico, derivado del hecho de que la biblioteca es un espacio para el ocio, que aunque esté íntimamente relacionado con la actividad educativa y los centros de enseñanza, se visita en horario extraescolar.

El libro, además de un instrumento para el estudio y la lectura obligatoria, también es una opción para el ocio y el entretenimiento. En este sentido, se prefieren actividades que promuevan la participación activa de los niños, aunque siempre sin perder de vista que el punto de partida y el objetivo es la lectura, bien a través de un texto, sus personajes, una colección de libros, una temática, etc. No obstante, es de gran importancia no caer en el simple “juego” y desviar la atención de la actividad de su objetivo principal: los libros.

La biblioteca es un espacio al que tiene acceso toda la población de manera libre y gratuita. La realización de actividades de animación a la lectura y de promoción del libro ayuda a promocionar y difundir la biblioteca y sus fondos. Por tanto, las actividades persiguen también un objetivo más allá de la creación de hábito lector: atraer usuarios a los que dar a conocer la biblioteca. Para ello se fomenta en el usuario la asimilación de estrategias de búsqueda y localización de información en la biblioteca, en este caso, en la sala infantil. Muchas veces, el desconocimiento de dichas estrategias de búsqueda limitan al usuario respecto a las posibilidades que ofrece la biblioteca: cómo se busca un título en concreto, o dónde se encuentra físicamente; cómo se localizan libros de una materia, un autor; qué son las obras de referencia, etc.

Los talleres de animación a la lectura de la Biblioteca Municipal de Cuenca se inscriben en el programa de actividades de animación a la lectura y promoción del libro que se desarrollan en dicha biblioteca. Los mediadores que intervienen en esos talleres son estudiantes de las titulaciones de Diplomado en Magisterio y Licenciado en Humanidades que se imparten en la Universidad de Castilla La Mancha. A cada uno de estos alumnos se le ha expedido un certificado de 20 horas de duración por la realización de los talleres, en las que se incluyen las de asistencia a la biblioteca y preparación de la actividad.

A todos los alumnos de estas titulaciones se les ofreció realizar prácticas en la Biblioteca Municipal de Cuenca gracias al convenio² firmado entre la *Fundación de Cultura Ciudad de Cuenca* y la *Universidad de Castilla La Mancha*, en concreto con la *Escuela de Magisterio* y el *CEPLI (Centro de Estudios de Promoción de la Lectura y Literatura Infantil)*. Con este convenio se perseguía, por una parte, contribuir a la formación de estudiantes de Magisterio en la práctica de realización de actividades de animación a la lectura, que completara su formación académica, y por otra, apoyar a la biblioteca en el desarrollo del programa de animación. La finalidad última del programa es contribuir a crear hábito lector, acercar los textos a los niños mediante actividades lúdicas y promocionar el uso de la biblioteca como recurso cultural, informativo y de ocio.

Para ello era necesario planificar las actividades dentro de una programación continuada dentro de la biblioteca, y trabajar con el personal especializado y con las herramientas adecuadas. A pesar de tratarse de una actividad que hemos denominado “lúdica”, la lectura debe ser el punto de partida y el objetivo final de todas las estrategias desarrolladas.

Dividimos a los estudiantes que se inscribieron en estas prácticas en dos cuatrimestres para evitar la sobrecarga de trabajo y tomamos la decisión de no admitir a más de catorce niños por taller. Por otra parte, dividir los talleres en dos cuatrimestres da la oportunidad de participar en los mismos a un mayor número de niños, que de otra forma quedarían en lista de espera cuando realizan la inscripción en septiembre.

Los talleres están dirigidos a niños de 4 a 12 años, divididos en tres grupos: un primer grupo con niños de 4 y 5 años (grupo de prelectores); otro grupo con niños de 6 a 8 años (grupo 1); y un último grupo con niños de 9 a 12 años (grupo 2). Se celebraron tres sesiones semanales: los martes se llevaba a cabo el taller con el grupo de prelectores (4 y 5 años); los miércoles se trabajaba con el grupo 1 (de 6 a 8 años) y los jueves se producía el encuentro con el grupo 2 (de 9 a 12 años).

El taller de prelectores lo realizaba el personal de la biblioteca, concretamente la responsable de la sala infantil. Los talleres denominados “grupo 1” y “grupo 2” estaban a cargo de estudiantes universitarios, bajo la supervisión del personal de la biblioteca, en base al convenio al que nos referimos anteriormente.

Los talleres se llevan a cabo desde principios de octubre a finales de mayo. Se dividió la celebración en dos cuatrimestres: el primero de octubre a enero y el segundo de febrero a mayo. Tal y como se acordó por los responsables del proyecto y como figura en el convenio de colaboración, las prácticas no deben interferir en el normal desarrollo del curso académico, por lo que en las semanas anteriores al comienzo de las prácticas, en época de exámenes y a petición de los

estudiantes, los bibliotecarios se hicieron cargo de la planificación y desarrollo de los talleres.

Al inicio de cada taller los estudiantes mantenían una reunión con la coordinadora de las bibliotecas en las que se les repartía el material y se explicaban brevemente los objetivos y estructura de los talleres. En la documentación entregada, se incluía un calendario detallado de actividades y un dossier con estrategias de animación a la lectura realizadas expresamente en bibliotecas. Entre ellas hemos de destacar las publicadas en la página Web de las Bibliotecas Municipales de Madrid, las tomadas en la página Web del Plan de Fomento de la lectura elaborada por el Ministerio de Cultura y las recogidas en *La Biblioteca, un espacio para la convivencia* (Mercé Escardó i Bas, 2003). Durante todo este tiempo los estudiantes de Magisterio han contado con el apoyo y asesoramiento del profesorado universitario y del personal de la biblioteca, en especial de la sala infantil, tanto para la selección de los textos como para el desarrollo de las estrategias y la preparación de materiales y/o espacios.

Conclusiones

Finalmente hay que reseñar que, aunque no se haya realizado una evaluación objetiva por parte de la biblioteca entre los usuarios asistentes a las actividades, una toma de contacto informal con los padres y los niños devuelven un resultado muy positivo respecto a los talleres. Tanto por la labor de fomento de la lectura y de familiarización de los servicios bibliotecarios, como por la imagen de las instituciones implicadas como dinamizadores de la vida sociocultural de la ciudad. Por tanto hemos continuado con la labor comenzada en el curso académico 2007-2008 durante este curso y la prolongaremos en años venideros pues estamos completamente de acuerdo con Isabel Blanco cuando afirma que “la lectura es un proceso global y complejo que va más allá de la simple codificación mecánica de unos signos gráficos. No sólo se trata de identificar y nombrar correctamente palabras y frases, sino que, además, la lectura significa interpretar un texto, atribuirle un significado y comprenderlo” (Blanco, 2008: 114).

Notas

¹ Sobre criterios para la selección de lecturas por edades remitimos al lector al monográfico publicado por Pedro Cerrillo, Elisa Larrañaga y Santiago Yubero (2002: 89-100).

² A partir de la solicitud de la Biblioteca Municipal de contar con la colaboración de estudiantes de Magisterio y/o Humanidades como animadores, se iniciaron las gestiones necesarias por parte de Martín Muelas, director de la Escuela Universitaria de Magisterio, Pedro Cerrillo Torremocha, director del CEPLI y Cristina Cañamares Torrijos, profesora del departamento de Filología Hispánica y Clásica de la Facultad de Humanidades, para la redacción del convenio de colaboración, la definición de la carga de trabajo de los estudiantes (número de asistentes y monitores por grupo, periodicidad y temporalidad de los talleres, etc.), la publicitación en las

dependencias universitarias de la actividad y la negociación con los estudiantes de la compensación académica en créditos por el desarrollo de las prácticas.

Projeto Luz & Autor em Braille: a Leitura como Fator de Inclusão Social

Dinorá Couto Cançado

Biblioteca Braille Dorina Nowill – DF – Brasil

1. Introdução

O presente trabalho objetiva compartilhar as experiências bem sucedidas de um projeto pioneiro, um verdadeiro exemplo de inclusão social, envolvendo leitores especiais, na cidade de Taguatinga, Distrito Federal, Brasil. Nascido junto com a Biblioteca Braille Dorina Nowill, em 1995, o Projeto Luz & Autor em Braille foi criado com o objetivo de incentivar leituras, dinamizar a Biblioteca recém-inaugurada e promover a socialização dos deficientes visuais, por meio da integração com os escritores brasileiros. Começou com 17 escritores brasileiros, com a proposta de cada autor ligar-se a um leitor deficiente visual. O Projeto foi crescendo a cada ano, tanto em número de participantes, quanto em atividades realizadas. Começou com grandes encontros entre escritores-patronos e seus leitores especiais, exposição de obras lidas com produções literárias dos deficientes visuais e apresentações artísticas relacionadas à literatura.

São muitos os objetivos do Projeto, embora os recursos, em todos os sentidos, sejam escassos. O Projeto Luz & Autor em Braille é um modo de ver o mundo, um estímulo a uma infinidade de ações que tornam a vida dos deficientes visuais bem mais bonita, mais digna e mais cidadã. Tem como objetivo geral o estímulo a leituras, promovendo a socialização dos leitores. O incentivo à leitura, à criatividade, à produção literária, à participação em eventos e à integração com alunos regulares são algumas ações desenvolvidas, no decorrer da realização do projeto, ao longo de cada ano letivo, para atingir, cada vez mais, novos objetivos que surgem e também novos leitores. Trata-se de um projeto bem flexível.

Ao ser contemplada com uma vaga em curso de pós-graduação em Educação Inclusiva que tanto almejava, vi-me impelida e no dever de aliar essa prática de leituras, já consolidada, à teoria sobre deficiência visual, educação inclusiva e ensino médio, transformando-a num trabalho científico, portanto este trabalho de pesquisa, como exigência final do Curso de Especialização em Educação Inclusiva no Ensino Médio, foi inspirado e baseado em experiências vivenciadas com leituras, envolvendo os deficientes visuais na Biblioteca Braille Dorina Nowill, da cidade de Taguatinga, Distrito Federal

Logo que se começou a falar em monografia, na especialização, veio o desejo de aproveitar esta prática com leituras, acrescentando algumas

inovações, próprias de um trabalho científico, como a pesquisa de campo. Nas primeiras orientações recebidas, houve a recomendação de incluir, na pesquisa, deficientes visuais que cursam o ensino médio, uma vez que o curso é destinado à capacitação dos profissionais deste grau de ensino, possibilitando conhecer, cadastrar e pesquisar novos participantes.

Esta pesquisa, portanto, contempla um público leitor especial – o deficiente visual. Alguns já possuem o hábito de ler, em Braille, outros não, mas leem o mundo. Segundo Silva (1997),

[...] em sociedade, são múltiplos e diversificados os usos da leitura. Lê-se para conhecer. Lê-se para ficar informado. Lê-se para aprimorar a sensibilidade estética. Lê-se para fantasiar e imaginar. Lê-se para resolver problemas. E lê-se também para criticar e, dessa forma, desenvolver posicionamento diante dos fatos e das idéias que circulam através dos textos. As competências de leitura crítica não aparecem automaticamente: precisam ser ensinadas, incentivadas e dinamizadas pelas escolas no sentido de que os estudantes, desde as séries iniciais, desenvolvam atitudes de questionamento perante os materiais escritos.

2. Desenvolvimento

Considero necessário ao leitor que conheça a trajetória do projeto que inspirou a pesquisa “A leitura como fator de inclusão social”, para que veja a história anterior ao que é proposto. O meu primeiro contato com deficientes visuais se deu em 1995, quando, na função de coordenadora de bibliotecas escolares, tive o privilégio de contribuir na criação da Biblioteca Braille de minha cidade. Nesse ano, foi criado o projeto literário, intitulado *Luz & Autor em Braille – PLAB*, que consiste na integração de escritores brasileiros e deficientes visuais, visando sua socialização. Este projeto ofereceu o suporte à pesquisa e o público-alvo especial, pois ao criá-lo, tornei-me voluntária na Biblioteca recém-inaugurada. Na época, em que ele se iniciou não se falava em Educação Inclusiva. No Distrito Federal, existia uma escola especial, o Centro de Ensino Especial do Deficiente Visual (CEEDV), localizado em Brasília, distante de Taguatinga, cerca de 30 Km, que atendia aos alunos com deficiência visual; enquanto um número bem considerável de adultos deficientes visuais não freqüentava escola e nem a única Biblioteca que havia junto ao CEEDV; segundo o Ministério da Educação “há necessidade das escolas estimularem leitura de obras literárias e de textos diversos que contribuam para formação do cidadão, bem como a de uma sociedade verdadeiramente inclusiva” (MEC/SEE, 2002).

O projeto começou com 17 escritores, com a proposta de cada autor ser patrono de um leitor deficiente visual. O Projeto foi crescendo a cada ano, tanto em número de participantes, quanto em atividades realizadas. Houve grandes encontros entre escritores-patronos e seus leitores especiais, exposição de obras

lidas com produções literárias dos deficientes visuais e apresentações artísticas relacionadas à literatura. A busca de estratégias para favorecer que a leitura pudesse contribuir para a diminuição da exclusão, facilitando o processo de socialização, foi a problemática inicial, no começo do projeto. O impulso inicial da proposta foi a vontade de levar a leitura àqueles que ainda não têm o hábito de ler e a certeza de que os espaços que promovem a leitura e o lazer são escassos e os disponíveis, muitas vezes, não são bem aproveitados. Assim, a Biblioteca passou a contar com as mais variadas formas de dinamização. Nos primeiros cinco anos, as ações previstas e executadas repetiram-se até a Biblioteca ser bem conhecida dos deficientes visuais e também colher um número bem considerável de textos produzidos pelos leitores especiais. “O potencial criativo é inerente ao ser humano; na maior parte das vezes, o que se precisa é oferecer oportunidades”, afirma Aguiar (2002). Essa oportunidade de espaços é fator considerado fundamental para a inclusão.

Para democratizar o acesso à leitura Braille, livros de escritores brasileiros e textos de jornais e revistas foram transcritos para a linguagem Braille, servindo de inspiração, para que o leitor/deficiente visual criasse a sua obra. Com o tempo, além da inovação do escritor brasileiro ver suas obras transcritas em Braille, também o leitor criou a sua produção literária, inspirado no que leu, resultando na edição do livro *Revelando Autores em Braille*, contendo produções de 83 deficientes visuais e 58 escritores brasileiros participantes.

Livros infantis, de contos, crônicas, poemas, trechos de romances de escritores, acrescidos de artigos de jornais, fazem parte da bibliografia utilizada no Projeto. A leitura, muito estimulada e trabalhada, possibilitou uma aprendizagem interdisciplinar, embasada na obra transcrita e na produção literária criada pelo deficiente visual. Muitos temas transversais foram abordados e discutidos, principalmente, quanto à saúde e ao meio-ambiente, surgindo textos exemplares sobre esses assuntos, produzidos pelos leitores especiais. Foi um trabalho de incentivo à sensibilidade, possível graças a doações dos autores e voluntários, que pretendeu resgatar a auto-estima dos excluídos, conquistando-os para uma prática de cidadania, distante de suas possibilidades. Com as atividades, o futuro autor em Braille participou de discussões e momentos de relatos sobre o ato de produção de textos, entre outros temas, e cresceu em empoderamento e capacidade, produzindo o próprio texto e ansiando pelo dia de conhecer o escritor que o inspirou, que foi luz para a sua produção literária. O grupo que conduziu o projeto precisou contar com pessoas que acreditavam no poder transformador da educação pela leitura e que se dedicavam aos leitores especiais. Alquéres diz que:

[...] ainda hoje, e cada vez mais, a cultura representa a melhor maneira de integração do indivíduo na sociedade e a leitura é o mais eficiente instrumento para o acesso ao conhecimento. Dizem que o gosto pela leitura é um hábito que se consolida a partir da prática cotidiana, devendo, portanto, ser estimulado desde a infância, até tornar-se uma necessidade (Alquéres, 2008).

A partir de 2001, o projeto passou a ter uma versão mais abrangente, mais fomentadora de ações diversificadas. Pôsteres ocupam lugar de destaque na Biblioteca e servem de referencial a inúmeras ações que ali ocorrem. Em eventos, o Luz & Autor em Braille serve de exemplo de cidadania e de persistência para uma educação melhor.

Quatorze anos se passaram e, nesse tempo, o projeto consolidou-se, ações inovadoras continuam a acontecer, tais como Boletim da Inclusão, Bazar Literário, Painel da Inclusão, etc. Nesse período, houve reconhecimentos relevantes, como: Instituição Social do Ano (2002), Concurso Leia Comigo (2004), Destaque ODM (2005), Prêmio Viva Leitura (2007), Prêmio Mãos da Cidadania (2008).

A Biblioteca Braille, sede do Projeto

A Biblioteca Braille Dorina Nowill - BBDN veio minimizar a dificuldade de acesso aos livros dos alunos com deficiências visuais. Ler é uma questão de cidadania e essa questão passa tanto pela inclusão social quanto pela inclusão escolar. Segundo o Ministério da Educação, o conceito de cidadania, em sua plena abrangência, engloba direitos políticos, civis, econômicos, culturais e sociais.

[...] começou a ser delineada a necessidade de construção de espaços sociais inclusivos, ou seja, espaços sociais organizados para atender ao conjunto de características e necessidades de todos os cidadãos, inclusive daqueles que apresentam necessidades educacionais especiais" (MEC, 2004).

Os livros são volumosos e o atendimento ao quadrilátero das cidades – Taguatinga, Samambaia, Ceilândia e Brazlândia - se fazia necessário. A proposta para dinamizar esta Biblioteca foi o incentivo à leitura, a partir de um trabalho interdisciplinar de literatura e outras áreas do conhecimento, com a criação de projeto literário. Nesta Biblioteca, a leitura é explorada com apresentações lúdicas e o auxílio da arte com suas várias linguagens.

Cerca de dois mil livros em Braille compõem o acervo da Biblioteca, que é consultado pelos leitores especiais em atividades de pesquisas, reforço, lazer, cultura e aprendizagem.

Desde o início, a Biblioteca contou com a dedicação de voluntários, com atividades específicas ao atendimento diferenciado. Duas funcionárias, deficientes

visuais, cedidas pela Secretaria de Cultura como auxiliares de atividades culturais, pioneiras desde os tempos de implantação da Biblioteca, levaram adiante as atividades literárias e culturais, convidando outros amigos deficientes visuais. O espaço que a Biblioteca ocupava, uma sala de aula da Escola Classe 06 de Taguatinga – EC 06, era insuficiente para as atividades, as necessidades e as possibilidades. Uma ação incisiva a favor da mudança, junto a autoridades competentes, para local apropriado e, à altura do empreendimento, obteve sucesso e a realização foi reinventada em espaço próprio, bem maior, ao lado do Centro Cultural Teatro da Praça, localizado em região central, cedido pela Secretaria de Educação.

As atividades que a Biblioteca desenvolve, atualmente, são variadas e de cunho educacional, cultural e social, sempre focando a leitura. O Projeto Braille, ainda, é considerado o carro-chefe da Biblioteca com as seguintes ações: alfabetização Braille, jornada de leituras, atendimentos diversos referentes a empréstimos de livros, orientação a pesquisas, integração de alunos de escolas regulares que visitam a Biblioteca e uma série de eventos literários.

Seções do estudo com os deficientes visuais

O estudo feito, inspirado n projeto Luz & Autor em Braille, está organizado da seguinte maneira: na introdução são abordados os motivos da escolha do tema, um histórico do projeto que inspirou a pesquisa, o funcionamento da Biblioteca, sede do projeto Braille, a delimitação do problema, o objetivo geral e os específicos da pesquisa.

A segunda seção trata-se do Referencial Teórico, com o conceito de educação inclusiva no contexto da deficiência visual e da leitura.

Na seção seguinte, encontramos a metodologia aplicada, com as subseções: contexto e participantes, instrumentos de coleta, procedimentos de construção dos dados, sobre os questionários aplicados e sobre as observações nos eventos socializadores.

A quarta seção refere-se aos resultados e discussão. Um mapeamento mostrando o perfil dos leitores deficientes visuais, seguido da análise dos dados coletados, de gráficos e quadros ilustrativos, de histórias de vida de alunos de ensino médio e o que resultou desses dados analisados e discutidos.

E, nas considerações finais – a última seção, as conclusões sobre o tema “Leitura: fator de inclusão social de alunos com deficiência visual”.

O Problema e os Objetivos da Pesquisa

Espera-se que o relato da experiência, aliada ao referencial teórico e à pesquisa de opinião realizada junto aos deficientes visuais, dê a resposta ao problema que moveu o estudo: no ensino médio, os indivíduos com necessidades especiais de visão, quando vivenciam a experiência da leitura, vivenciam também a inclusão social? Esta é a pergunta-problema que norteou a pesquisa.

O objetivo geral foi o de analisar o desenvolvimento da leitura dos deficientes visuais, incluídos no ensino médio, em escolas do Distrito Federal. Os objetivos específicos foram:

- analisar a compreensão leitora, no dia-a-dia dos deficientes visuais;
- conhecer o perfil-leitor dos deficientes visuais do Distrito Federal
- verificar habilidades de apresentação, com o uso das linguagens artísticas por alunos com deficiência visual;
- constatar como a leitura contribui no desenvolvimento do leitor deficiente visual;
- avaliar se a leitura, aliada com a arte, pode ser fator de inclusão social.

O tema da pesquisa, na visão dos deficientes visuais

Ao ser proposto, no questionário, que os pesquisandos comentassem a frase “A leitura como fator de inclusão social, por meio de linguagens artísticas”, de maneira bem livre, os comentários demonstraram respostas positivas quanto à inclusão social alcançada com leituras. Na linguagem deles, de forma espontânea, as respostas mostraram a presença dos objetivos específicos do estudo, apesar de muitos terem respondido de forma objetiva, o que pode ser considerado como um sinal de cansaço, normalmente o que acontece em final de provas: respondem às questões objetivas e deixam de responder as subjetivas. Mesmo assim, as colocações foram bastante satisfatórias.

O dia a dia da Biblioteca, sede do Projeto

O quadro administrativo conta com 6 funcionários, lotados pela Secretaria de Educação, sendo que dois têm deficiência visual, além de mais duas, também deficientes, cedidas pela Secretaria de Cultura. Desde o início da criação da Biblioteca, foram muitas as realizações, e as possibilidades são infindáveis. Como todo processo, porém, há muitas metas a atingir. Uma delas é conseguir apoio para a transcrição e impressão do livro “Revelando Autores em Braille”, para o Braille. A realização previa essa ação, como forma de incentivo a todos os participantes e evidência de possibilidades iguais, apesar das diferenças. Já se abriu a porta que vai favorecer essa meta, anseio dos mais de 80 deficientes visuais, participantes do

livro, que querem ler também a obra de seus companheiros e a biografia dos 58 escritores brasileiros envolvidos.

São variadas e de cunho educacional, cultural e social as atividades que a Biblioteca desenvolve, no seu dia-a-dia, sempre focando a leitura, como sua atividade principal, e fortalecendo o Projeto Braille, considerado o carro-chefe da Biblioteca:

- Alfabetização Braille – Os funcionários recebem os frequentadores, trabalham com atividades voltadas ao resgate da auto-estima e ensinam o método Braille. A partir daí, atuam como professores de Braille, disseminando o conhecimento. Um exemplo concreto e digno de menção é o de um voluntário que, além de repassar seus conhecimentos e habilidade com a técnica, já ensinou para seus dois filhos jovens, para uma nova funcionária da Biblioteca e, hoje, é o “professor” voluntário mais disputado.
- Jornada de Leituras – Um escritor do DF, voluntário da Biblioteca, lê textos literários para os deficientes visuais, promove debates após a leitura e coloca-os a par de notícias de revistas e jornais. Também uma escritora brasileira, professora de universidade local, voluntária pioneira no Projeto, participa dessa atividade.
- Atendimentos diversos referentes a empréstimos de livros, orientação a pesquisas, integração de alunos que vêm à Biblioteca para conhecer o trabalho, sendo recebidos e orientados pelo grupo que esteja no momento. O tema instigante cativa universitários que procuram a biblioteca para desenvolver pesquisa e escrever suas monografias, ou dissertações, possibilitando a aprendizagem mútua e disseminando uma ação efetiva de inclusão social.
- Informática na Biblioteca - Enriquecida, graças à aquisição de uma Impressora Braille, doada por voluntária. A Biblioteca recebe um telecentro, com 9 computadores adaptados às necessidades dos deficientes visuais, proveniente da Secretaria de Cultura. O telecentro foi inaugurado em 11-09-09, sendo, portanto, implementada a oferta e facilitado o uso e acesso às facilidades da informática/internet.
- Hemeroteca eletrônica – Com ênfase nas “Dicas de Português”, coluna de jornal de grande circulação.

Educação inclusiva itinerante

A literatura passou a ser presença na vida de todos os que se beneficiam do Projeto e participam em todos os eventos que permitem atividades com leituras, como a Feira de Livros, que ocorre todo ano, na capital do país; ou em escolas; bibliotecas; centros culturais. Bastante entrosados e dispostos a evidenciar o trabalho resultante da dedicação, os deficientes visuais apresentam teatro, música, poesia, relacionados à literatura trabalhada no Projeto. Exemplo de educação inclusiva, acontecendo de uma forma lúdica, prazerosa, exemplar.

3. Considerações finais

Resultados relevantes foram obtidos, desde a implantação do Projeto. As principais vitórias alcançadas foram visíveis, desde o seu primeiro ano de lançamento, conforme relatos que constam no livro “Revolucionando Bibliotecas”, que registrou

depoimentos de vários participantes. Reportagens publicadas, após cada evento realizado, dão uma visão geral dos aspectos positivos alcançados, destacando-se: (1) melhoria nas produções literárias de cada deficiente visual; (2) criatividade para outras produções artísticas (música, teatro, artes visuais); (3) interesse por cursos, estudos e eventos; (4) expansão quantitativa do círculo de amizades; (5) abertura para relacionamentos afetivos, resultando em casamentos; (6) oportunidades de emprego; (7) convívio e interação com alunos do ensino regular, desenvolvendo uma cultura solidária; (8) melhoria da qualidade de vida.

Cabe destacar a publicação da coletânea “Revelando Autores em Braille”, uma hemeroteca eletrônica, com as principais reportagens, e toda a trajetória do Projeto, em fotos legendadas, evidenciando, em exposição de slides, qualidade nos resultados.

Evidência de que se trata de um Projeto passível de aplicação e desenvolvimento; apropriado à disseminação. Ao longo de sua existência, o Projeto e/ou a Biblioteca foram reconhecidos pela comunidade brasiliense, destacando-se em eventos de premiação aos empreendimentos sociais, educacionais e culturais, como: Instituição Social do Ano, Concurso Leia Comigo, Destaque ODM 2005, finalista no Prêmio Viva Leitura 2007, Prêmio Mãos da Cidadania 2008.

Hoje, o Projeto Luz & Autor em Braille continua crescendo e provocando mudanças. A partir de 2001, passou a ter uma versão mais abrangente, mais fomentadora de ações diversificadas. Pôsteres ocupam o lugar de destaque na Biblioteca e servem de referencial a inúmeras ações que ali ocorrem. Em eventos, o Luz & Autor em Braille serve de exemplo de cidadania, de inclusão social e de persistência para uma educação melhor.

Socialização, um ponto forte, é o resultado mais visível. São jovens, adultos e até idosos, todos deficientes visuais, muitos estudando em escolas do sistema educacional, vivendo a educação inclusiva. Na Biblioteca Braille, a prática da inclusão acontece desde 1995, ano de sua inauguração, com os participantes da Biblioteca convivendo com alunos do sistema regular, na escola onde funcionava, ou recebendo visitas de turmas de outras escolas da cidade. Hoje, encontra-se em localização privilegiada, de mais fácil acesso, tendo, ao lado, o Teatro da Praça e, à frente, a Biblioteca Pública Machado de Assis e a Academia de Letras de Taguatinga. Visível e estatisticamente, o número de visitantes cresce. Sem dúvida, o grande facilitador dessa prática inclusiva, beneficiária de toda a comunidade brasiliense, foi o desenvolvimento do Projeto Luz & Autor em Braille, integrando os escritores com seus leitores especiais, promovendo sua socialização.

Brincando de Biblioteca com Programa Literário e a Arte de Ler e Criar

Dinorá Couto Caçado

FAC-Secretaria de Cultura do DF-Brasil

1. Introdução

Destaca-se como um problema longe de ser resolvido, a aquisição da leitura e da escrita, especialmente pelas crianças das escolas públicas. Depende de praticar essa leitura, depende de ter livros disponíveis e atraentes, depende de políticas de incentivo. Está entre os desafios que a escola pública continua a enfrentar no Brasil.

Este artigo traz o relato do desempenho de um Projeto de leitura, em escolas públicas do Distrito Federal, que vem sendo desenvolvido ao longo de seis anos. Projeto que foi idealizado com o objetivo de dar condições de acesso a livros apropriados à idade e interesse de alunos do ensino fundamental. A idealizadora desenvolve as atividades como voluntária e busca a integração/intersecção da teoria e da prática.

Neste artigo, o objetivo é o relato do processo, o debruçar-se sobre a prática da pedagogia, no aspecto da incentivação ao hábito de ler como arte/ciência em busca do bem estar, da formação e da arte. E optou-se por relatar dois anos. Foi feito um estudo de caso (Ludke & André, 1986): foram focalizados diferentes eventos, em diferentes instituições de ensino, em função de um mesmo projeto, denominado Projeto Brincando de Biblioteca, desenvolvido por meio de uma série de oficinas ministradas na rede pública de ensino do Distrito Federal.

À proporção que o relato vai sendo desenvolvido, percebe-se que as ações fundamentadas neste Projeto possibilitam que alunos do ensino fundamental evidenciem, de maneira prazerosa, em apresentações lúdicas, a compreensão do que leram. E que com o auxílio da arte, com suas várias linguagens, pode-se contribuir muito para a Educação de qualidade.

O impulso inicial da proposta nasceu da vontade de levar a leitura àqueles que ainda não têm o hábito de ler; um grande problema enfrentado pelas escolas. Infelizmente, triste realidade de exclusão cultural. Além de que os espaços, que promovem a leitura e o lazer, mostram-se escassos e, os que estão disponíveis, nem sempre, são bem utilizados. Diante de tal situação e considerando os mais de trinta anos dedicados à área de educação, surgiu a idéia de levar as bibliotecas ao encontro de futuros leitores, uma vez que a experiência vivenciada ensinou que o espaço da biblioteca é uma ferramenta transformadora. Na biblioteca podem ser

usadas as mais variadas formas de dinamização. Além disso, é onde se podem promover as linguagens artísticas, pois cabe à biblioteca potencializar o professor e a escola e permitir que aconteça uma revolução no seu cotidiano (Antunes, 2000).

O baixo nível de compreensão, interpretação e reflexão dos alunos do Ensino Fundamental e Médio vem sendo apontado, em pesquisas nacionais e internacionais (Sistema Nacional de Avaliação da Educação Básica (SAEB); Exame Nacional do Ensino Médio (ENEM); Programa Internacional de Avaliação dos Estudantes (PISA) que revelam que, tanto alunos de escolas públicas como os de escolas privadas apresentam dificuldades/incapacidade de leitura para além dos códigos lingüísticos (Rossi, 2006). Cabe aos educadores brasileiros identificar as causas e encontrar caminhos para alterar esta realidade. Há muitas fragilidades no sistema educacional do país. São muitas as carências que vão além da preocupação excessiva com o conteúdo e passam bem perto da falta de (ou pouco) cuidado com a linguagem. Há carência de livros e de bibliotecas.

A partir dessa percepção de eficácia do ambiente de uma biblioteca e, considerando a necessidade de boas iniciativas culturais, própria das regiões mais carentes, o Projeto já foi realizado por seis anos, com o apoio do FAC – Fundo da Arte e da Cultura, que é um Programa de apoio aos artistas locais, iniciativa da Secretaria de Cultura do DF.

O Projeto “Brincando de Biblioteca com Programa Literário” é desenvolvido por meio de uma série de oficinas, regularmente ministrada na rede pública de ensino do Distrito Federal, e vai além da tarefa de incentivar e sensibilizar, pois dissemina a prática ao capacitar alunos do ensino fundamental para atuarem como multiplicadores de leituras na escola, em casa, na sua comunidade.

2. Desenvolvimento

O Projeto e suas propostas

Promover a cultura do hábito de ler, com a aquisição de livros infantis, é uma das metas batalhadas pelas escolas. Também o Projeto “Brincando de Biblioteca com Programa Literário” prevê a necessidade de aquisição de livros. Setenta e duas obras de literatura infantil são distribuídas em seis minibibliotecas para os alunos participantes que as leem, apreciam, planejam e apresentam um programa literário. Neste programa, trabalha-se com linguagens artísticas como o teatro, a música, a poesia... Os alunos confeccionam cartazes e compõem um varal criativo. As equipes organizam-se e escolhem funções para apresentarem um espetáculo literário. As funções, pré-definidas e expostas em cartaz, em cada grupo, são: apresentador, atores, cartazistas, críticos, cronometristas, humoristas, jornalistas, jurados, investigadores. Uma prática que permite descobrir e evidenciar os talentos

existentes no grande grupo. Ao final, acontece um show, denominado Alunos/Talentos. Em apresentações, lançando mão de várias linguagens e manifestações artísticas, evidenciam a reflexão que lhes foi permitido fazer, a partir da instigante leitura. Vestem-se com uma “capa de artista”, para vivenciar o apoderamento da possibilidade e sentirem que todo indivíduo desenvolve seu dom, dentro das suas possibilidades. Ao final, avaliam a oficina, registram seus nomes, e recebem dicas e certificados. Segundo Kuhlthau

“um dos objetivos da educação escolar é que as crianças e jovens aprendam a conviver em grupos... aprenderem uns com os outros, terem experiências socializadoras como, dialogar, aproveitar críticas, explicar um ponto de vista, coordenar ações em uma tarefa conjunta” (Kuhlthau, 2002).

Despertar a criança para o mundo da cultura, por meio de leituras, tem sido a proposta essencial do Projeto, pois “é fato que apesar das inovações tecnológicas no campo do ensino, o livro continua sendo o principal veículo de transmissão e aquisição de cultura” (Silva, 97). Com três horas de duração, a oficina é desenvolvida e busca despertar o desejo de criar e de manter a capacidade de lidar com o sonho e a esperança, sem os quais a infância perde a expectativa de dias melhores, cedendo, às vezes, lugar à violência. Também proporciona, às escolas mais carentes de eventos culturais, uma aula prazerosa, com orientações para a continuidade da ação na comunidade, de maneira simples, acessível e econômica. Algumas mídias são utilizadas no desenvolvimento da oficina: mostra de jornais para construir suas hemerotecas; aparelho de CD, com música ao fundo; e, em alguns casos, reportagens são gravadas e divulgadas em programa educativo de TV.

Dentre as 72 obras literárias trabalhadas, são priorizados os autores do DF. Trata-se de valorizar e divulgar a cultura local, além de mostrar aos alunos que, na mesma realidade em que vivem, há pessoas compondo histórias cheias de encanto e magia. Com isso, pretende-se incentivá-los e evidenciar que escrever é atividade acessível. O trabalho é desenvolvido em conjunto com as escolas. Cabe ao corpo docente formar o grupo de alunos a ser atendido, comunicando aos pais, por escrito, sobre a atividade. Depois da oficina realizada, há a continuidade e disseminação, pois surge um elo entre o Projeto e cada Leitor/Multiplicador. Ou seja, é dado às escolas o suporte para estender a prática a todos os seus alunos.

O foco no desenvolvimento e reconhecimento da importância do Projeto

Embora o Projeto já venha sendo desenvolvido há seis anos, neste artigo foi feita a opção por focar os anos de 2005 e 2006, no intuito de evidenciar o alcance, o crescimento numérico de participantes e a disseminação da prática das atividades.

O quadro abaixo traz a síntese dos dados referentes ao desenvolvimento do Projeto em 2005:

Nº	DRE/Escola	Dia	Nº Alunos	Nº Prof.	Destques
01	Sobradinho – EC 01	18/10	50	01	Visita de professora da Secretaria de Educação e da Regional de Ensino.
02	Brazlândia – EC Incra 09	20/10	60	02	Participação ativa de aluno com necessidades especiais.
03	Santa Maria – CEF 308	26/10	40	01	Uso de Espaço Cultural da Escola e teatro dos alunos.
04	Gama – EC Casa Grande	27/10	54	06	Participação de 3 professoras de creche vizinha e artista na escola.
05	Núcleo Bandeirante – CEF 03 (Riacho Fundo)	01/11	50	01	Utilização da Biblioteca, muito bem equipada, mas sem professor que atue.
06	Paranoá – EC 05	03/11	40	01	Notícia da oficina no jornal lida pela professora aos alunos.
07	Planaltina – EC 03	09/11	45	01	Literatura em rodinhas. Foto da estante que anda nas salas, criatividade do diretor.
08	Recanto das Emas – CEF 306	10/11	48	02	Aluno-revelação na voz, no teatro – um show!
09	Ceilândia – EC 02	17/11	56	02	Doação de livros infantis por professor-escritor presente.
10	Taguatinga – CEF 09	29/11	40	02	2 professoras atuantes na Biblioteca extremamente comprometidas.
11	Samambaia – EC 604	05/12	38	01	Visita do diretor às salas de aula, convidando os alunos para a oficina.
12	São Sebastião – EC Cerâmica da Benção	06/12	38	01	Modelo de Sala de Leitura, com professora criativa e interessada. Declaração com diferencial – rica.

Total de alunos: 559 - Total de Professores: 20 - Outros participantes: 51
(Relatório final do Projeto Brincando de Biblioteca com Programa Literário)

Foram, portanto, doze oficinas, contemplando 630 novos multiplicadores.

Em 2006, foram aprovadas 14 oficinas literárias, na rede pública de ensino do DF, e as atividades foram iniciadas em 07 de novembro do mesmo ano. Conforme especificado em quadro abaixo, o total atendido nas escolas foi de 599 alunos e 41 professores, com presença de 3 deficientes visuais e 4 alunos de uma turma especial, atendendo-se assim, também, à educação inclusiva. Cabe aqui ressaltar que algumas das escolas participantes são da zona rural, portanto mais carentes de eventos culturais.

Nº	DRE/Escola	Dia	Contato presente na oficina	Fone	Comentário/Nº alunos e professores atendidos
01	Brazlândia/EC 01 do Inkra 08	07/11 3ª f Mat	Sheila R. Alecrim Freire - Coordenad.	39018325	Escola rural, oficina na sala de vídeo, 42 alunos e 3 prof.
02	São Sebastião/EC Jataí	09/11 5ª f Vesp	Eliza Regina Batalha Góes-Profª	35002152	Escola rural no ECCO-Espaço Cultural Contemporâneo, 40 alunos, 2 prof e 2 def. visuais.
03	Gama/ EC 07	10/11 6ª f Mat	Silvana Cláudia – vice-diretora e Nely Áurea - Coord.	39018114	Na Biblioteca, 40 alunos e 2 profs.
04	Recanto das Emas/EC 104	13/11 2ª f Mat	Kátia Rosane Dias Assistente e Lizandro Ramos-Coord.	39013353	Na videoteca, 56 alunos e 07 profs, presença de alunos de aceleração

Total de alunos: 599 - Total de professores: 41

(Relatório final do Projeto Brincando de Biblioteca com Programa Literário)

Todas as oficinas do ciclo/2006 aconteceram em novembro, a pedido das escolas, com algumas inovações bastante significativas, como o acréscimo de parcerias; divulgação com o uso de novo banner, do Projeto criado pelo setor de Artes da Secretaria de Cultura e exposto no Centro de Convenções; minibibliotecas, mais modernas em termos de apresentação visual; e coletes para a oficineira e assistente. Iniciativas que evidenciam cuidado com a aparência e com a divulgação e refletem qualidade no ambiente, onde as oficinas são desenvolvidas.

O reconhecimento ao valor do Projeto também foi evidenciado pelo fato de ter sido cadastrado no Programa Viva Leitura e no Plano Nacional do Livro e Leitura,

ambos do Ministério da Cultura. O sítio do PNLL, na internet, dá acesso a especificações do Projeto e gera interesse de expansão em outras localidades, a exemplo de manifestação neste sentido, recebida, por meio de mensagem eletrônica, de Campinas/SP e de Arraias/TO.

À proporção que vai sendo disseminado, oportunidades de desenvolvimento vão surgindo. Por 4 anos, as Feiras do Livro de Brasília permitiram e incentivaram oficinas que foram oferecidas a professores da Secretaria de Educação. Inscrição do Projeto em concursos nacionais colocou-o em destaque, destacando:

- O 1º foi no Concurso Arte na Escola Cidadã, com pólo na UnB – Universidade de Brasília;
- O 2º foi no Concurso “Nós fazemos a nossa parte” na categoria Governo, dentro da programação da III Conferência Mundial de Relações Internacionais, e o pôster do Projeto foi exposto no Centro de Convenções.

Parcerias que enriquecem e facilitam a realização das oficinas, com:

- a Divisão de Cultura da Administração de Taguatinga (fornecimento de cópias xérox);
- o ECCO-Espaço Cultural Contemporâneo (espaço para as oficinas e transporte dos alunos);
- a Pacta Internacional Consultoria (doação de revistas para as Hemerotecas Criativas, nas escolas atendidas);
- a Secretaria de Educação (sedia as escolas atendidas e imprime certificados).

Somam-se iniciativas, compartilham-se benefícios, de maneira prática

Durante as atividades das oficinas, é possível observar que os alunos assimilam um novo olhar para eventos e assistência a *performances* de grupos artísticos. Ou seja, a arte em várias manifestações passa a ter a atenção deles. Depoimentos de alunos sobre livros lidos, exposições e filmes assistidos, ou outras manifestações artísticas evidenciam que o desenvolvimento das ações, nas oficinas, permite maior interação, resultados mais eficazes, agregando interesses e gerando criatividade.

Cada oficina tem três momentos: (1) inicia-se com o momento da “sensibilização prévia”, em que os participantes são despertados para a importância da leitura e da biblioteca, por meio de: cenário previamente preparado, discussões, histórias, música; (2) trata-se do momento “ações compartilhadas”, em que são formados os grupos de trabalho, verificando as tendências, de acordo com os talentos artísticos que já se identificam. Neste momento é imprescindível o estímulo e orientação para o trabalho. Em seguida, dá-se um pequeno intervalo para a montagem da sala para os espetáculos literários e o show dos artistas; (3) é o momento da “tomada de decisão”, em que acontece a avaliação e os alunos

recebem dicas escritas e certificados para atuarem como Multiplicadores de Leituras.

Busca-se atingir, com o Projeto, desde a sensibilização dos alunos para que percebam a importância da arte, até sua mágica socialização. Para estabelecer e alcançar metas específicas, em cada uma das etapas da execução da oficina, que é a metodologia do desenvolvimento do Projeto, destacam-se os seguintes objetivos:

- formar alunos-multiplicadores de leituras nas escolas;
- estender a prática de brincar de biblioteca em casa e na comunidade;
- estimular a leitura por prazer, por meio de atividades lúdicas;
- enriquecer os recreios com atividades culturais de leitura, teatro, música, dança, etc;
- divulgar a literatura brasileira e outras obras nacionais;
- educar os alunos para a recepção da arte, como platéia, expectadores, leitores e como mediadores;
- desenvolver o hábito de trabalhar em equipes;
- incentivar a prática de hemerotecas;
- descobrir e estimular talentos em várias linguagens artísticas;
- despertar vocações profissionais;
- valorizar bibliotecas e vê-las como espaços privilegiados da cultura nas escolas;
- mostrar que diferentes leituras contribuem para uma cultura viva.

As atividades desenvolvidas respondem a necessidades da população local, pois promovem a leitura em diferentes linguagens, no intuito de diminuir os números assustadores do analfabetismo funcional. É também uma forma de valorizar a literatura local. É cada dia mais preocupante a falta de gosto pela leitura.

Busca-se estimular o gosto pela leitura. É imprescindível que o oficinairo seja um leitor dedicado e consciente do valor da leitura; só assim as crianças serão estimuladas a ler. Segundo Alves (2001) “o professor deverá criar um clima favorável, estimulando e provocando o interesse dos alunos por meio de diálogos acerca da importância... uma chamada efetiva que incentive nos alunos o entusiasmo e a vontade de agir”. A experiência tem revelado que não há nenhuma restrição para o “Brincando de Biblioteca”. O Projeto cabe em qualquer contexto e público, inclusive envolvendo adultos ou idosos. Afinal, ao contrário do que se pensa, nunca é tarde para se envolver com a leitura. Também se acredita que a idéia possa ser aplicada em relação a outros conteúdos curriculares. Segundo Silva (1997), “o processo de educar é contínuo e inacabável e a leitura permite descortinar novos horizontes para que seja efetivo o seu projeto e o trinômio

educação-leitura-cultura passe a fazer parte da vida do educando, sem restringir-se apenas ao período em que cuida da sua educação formal”.

Outros grupos podem desenvolver o Projeto, adaptando as atividades a outros interesses. Pode-se, por exemplo, brincar com música, em vez dos livros, ou brincar de hemeroteca, utilizando-se o jornal. Percebe-se ser bastante apreciado, e depoimentos dos participantes confirmam ser extremamente agradável aprender de forma lúdica.

3. Conclusão

“Brincando de Biblioteca” é uma resposta simples, entretanto séria e eficiente, frente a tantos problemas que ameaçam a educação de qualidade; pois se trata de dinâmica que conquista para a leitura e desperta para um mundo de diferenças, com arte e ludicidade.

Em acordo com os objetivos, com base nos dados levantados e analisados, vários resultados são alcançados, após os alunos participarem de uma sensibilização prévia, ações compartilhadas, e tomada de decisão, os momentos básicos de cada oficina. Destacam-se os resultados: o surgimento de alunos-multiplicadores de leituras nas escolas; a prática de brincar de biblioteca em casa e na comunidade; a leitura por prazer, com atividades lúdicas; os recreios enriquecidos, com atividades culturais de leitura, teatro, música, dança, etc.; a divulgação de literatura brasileira e outras obras nacionais; a preparação/transformação de alunos para a recepção da arte, como expectadores, leitores e como mediadores; a incorporação do hábito consistente de trabalhar em equipes; o despertar para o hábito de lerem e guardarem recortes de jornais e revistas; o despertar de talentos, em várias linguagens artísticas, e até vocações profissionais; o despertar para a valorização de bibliotecas, como espaços privilegiados da cultura nas escolas; o acesso a diferentes leituras, contribuindo para uma cultura viva.

Os participantes sentem-se motivados a ler, descobrem novos horizontes e percebem a importância da sua própria atuação, no processo, uma vez que recebem o desafio de multiplicarem a experiência. Os depoimentos colhidos durante o desenvolver das oficinas permitem uma avaliação constante do Projeto.

A prática favorece as trocas de experiências entre as pessoas envolvidas. Orienta-se enfaticamente cada participante a relatar experiências, contando as histórias dos livros que leram, das peças a que assistiram, de tudo que viram, em casa, na sala de aula e até na comunidade.

O Projeto Brincando de Biblioteca é, pois, oportunidade de disseminação e apoderamento da capacidade de transformar, pela leitura, o olhar interior que dá cor e forma à vida. Um projeto acessível que estimula a arte de ler e criar.

Ler, Falar, Escrever, Pensar: Projecto para melhorar Competências na Língua Portuguesa

Joaquim Jorge Carvalho
Universidade de Coimbra

I - O professor e a sua circunstância

Professor de Língua Portuguesa e de Literatura há cerca de vinte e quatro anos, nunca me dispensei o direito (e, em boa verdade, o dever) de reflectir sobre a minha prática profissional, no sentido de – tanto quanto possível – melhorar o meu desempenho e, em concomitância, o dos meus pares e o dos meus alunos. Inscrevo-me, portanto, nessa condição de investigador que, embora atento aos contributos teóricos que há sobre o objecto de estudo, não se demite da possibilidade de operar positivamente sobre a realidade que convocou a atenção. É este um modelo de investigação com provas dadas, como defende, entre outros especialistas na matéria, Cristina Mello (2004): “O modelo de investigação que mais tem resultado nesse domínio é a investigação-acção, porque só ele permite compreender a intervenção nos diversos níveis escolares do sistema educativo” (p. 349).

A história deste projecto (origem, âmbito, finalidades) começou, em termos formais, nos primeiros meses do ano lectivo de 2007/2008. À época, era presidente do Conselho Pedagógico do Agrupamento de Escolas de Arco de Baúlhe (concelho de Cabeceiras de Basto, distrito de Braga). Nessa condição, fui obrigado a enfrentar institucionalmente o problema (repetidamente glosado em actas de grupo, de departamento, de conselhos de turma, *etc.*) dos fracos resultados obtidos pelos alunos em provas de avaliação (interna e externa). Ao nível mais restrito da minha actuação enquanto docente de Língua Portuguesa, a data da constatação do problema é obviamente anterior ao referido ano lectivo. De modo formal ou informal, no quotidiano das escolas, tornou-se comum a percepção de que os nossos alunos se exprimem cada vez mais deficientemente, quer ao nível da oralidade quer ao nível da escrita. Esse défice de competências compreende também a dimensão da leitura/interpretação de textos. A verdade é que, embora tal situação prejudique o ensino e a aprendizagem de qualquer matéria, em qualquer disciplina, o problema atinge particularmente o universo da literatura. Sem aprender a andar, dificilmente o aprendente chegará um dia a saber correr.

Por outro lado, alguns professores defendem, de forma mais ou menos discreta, a ideia de que a questão da literatura é um problema menor, se comparada com o problema da língua; nessa perspectiva, parecem entender que é

possível leccionar Português recorrendo pouco ou nada a textos de cariz literário. A opção (mais tácita que institucional) por tal separação de territórios parece-me errada e perigosa.

No âmbito necessariamente delimitado da prática pedagógica que pessoalmente exerço, venho pondo em prática, desde há vários anos, com resultados animadores, estratégias diversificadas, que deliberadamente procuram privilegiar uma correlação *dinâmica* no estudo da Língua e da Literatura (entendidas como espaços concomitantes e, ousado dizer, indissociáveis). Mas este esforço poderá, se estrategicamente aplicado num agrupamento escolar, alcançar patamares de eficácia e sucesso bem maiores.

Cruza-se com esta ideia a situação académica que supra-referi; com efeito, a frequência do Curso de Doutoramento em Literatura Portuguesa (Investigação e Ensino) representou uma extraordinária oportunidade de reforço de conhecimentos e competências na área da didáctica e da cultura e formação literária, que importava não desperdiçar.

É deste entroncamento pessoal, profissional, académico e institucional que surge o projecto de intervenção de que ora me ocupo. A tutelá-lo está, desde logo, a fundamental noção de que o saber é por natureza útil, bem como a ideia de que o (re)conhecimento de um problema implica a ontológica necessidade de procurar soluções. O contrário seria tornarmo-nos cúmplices do erro, ou tristes escravos da resignação.

O Departamento de Línguas da Escola onde trabalho não estava satisfeito, repito, com o nível de conhecimentos e a qualidade das competências dos alunos, na disciplina de Língua Portuguesa. A docente que, no ano lectivo anterior, foi responsável pela leccionação do 9.º ano deu conta, ainda durante o primeiro período lectivo, da sua frustração: os alunos – sublinhava – nem sequer conseguiam pensar ou falar; como ensinar-lhes literatura?

A queixa não era exclusiva dos docentes do 9.º ano. Outros confessam, em variados fóruns, a suas mágoas e as suas (moderadas) desistências. Mas a angústia dos professores do 4.º ano, do 6.º ano e do 9.º ano tem a ver também com os exames ou as provas de aferição: em dias de procissão, é mais pública a noção de que o rei vai nu...

Que fazer? (A pergunta decorre de um imperativo ético-deontológico: não ser possível ficar parado; não ser possível não agir). Sugeri, logo no dealbar do ano lectivo de 2007 / 2008, que atacássemos o assunto, a dois níveis: no imediato, procurando melhorar as nossas práticas lectivas; a prazo, tentando intervir estrategicamente, desde a base. Formei uma comissão de professores, composta por elementos do 1.º ciclo, 2.º ciclo e 3.º ciclo, para enunciar devidamente o

problema e, logo que possível, procurar ultrapassá-lo (ou, pelo menos, limitá-lo em termos de profundidade e de dimensão).

A frequência do Curso de Doutoramento em Literatura Portuguesa (Investigação e Ensino) não foi despicienda, como se adivinhará: a empresa que eu levemente sonhara, em meados de Outubro de 2007, foi acrescentada de um cunho académico e tomou uma forma mais lata, mais séria. O projecto cresceu – e eu (aliás, nós) com ele. Em termos práticos, o que começou por mudar foi o enquadramento científico-pedagógico. Em vez de ceder ao impulso generoso e voluntarista da experimentação pontual, obriguei-me a um posicionamento mais sério, alicerçado em literatura de comprovado mérito e interesse. Não me despedi da dimensão prática que ser professor, *no terreno*, significa; não me afastei das experiências já havidas (feitas com os alunos), dos programas, das planificações, dos contextos. Mas ousei ir mais longe: questioneei a utilidade (e o interesse) do estudo da língua e da literatura, no quadro da moderna escola portuguesa; interroguei-me sobre a eventual prevalência, na leccionação, da língua sobre a literatura (ou vice-versa); trouxe ao trabalho as questões da leitura e literacia. Andei seriamente, por textos e estudos, à procura de bases sólidas para a minha intervenção. Em termos grosseiramente sucintos, tratava-se de saber onde estávamos para, depois, decidirmos por onde ir (e como ir). Bem dizia Séneca que não há bom vento para marinheiros sem rumo definido.

Delineei um projecto. Apresento-o a seguir.

II - Reflectir, Agir: uma perspectiva ética

A bibliografia sobre projectos de investigação/acção sugeria, implícita ou explicitamente, a necessidade de um básico trabalho de campo, junto dos agentes do processo educativo, que possibilitasse a correcta enunciação do(s) problema(s). Recorri a inquéritos junto de alunos e de professores; solicitei cópias de enunciados de testes e exames (e igualmente de respostas dadas por alunos, em situação de avaliação); pedi ainda, a um vasto conjunto de alunos (do 1.º ciclo, do 2.º ciclo e do 3.º ciclo), composições à roda do tema “Sonho”.

Relativamente aos inquéritos feitos a alunos e professores, julgo importante realçar alguns dados entretanto objecto de compilação:

1. No caso dos professores, sublinho o facto de os oito inquiridos terem todos mais de doze anos de serviço (há, aliás, três com um número superior a vinte anos de experiência profissional). As perguntas que formulei foram as seguintes: *I*. Que importância atribui ao estudo do texto literário no contexto das aulas de Língua Portuguesa? *II*. Qual é o género literário que pessoalmente prefere? *III*. Qual é o género literário que, em seu entender, é mais apelativo para os alunos (e porquê)?

IV. Quais são as principais dificuldades que identifica no ensino da literatura? V. Que sugere para melhorar o ensino da literatura?

1.1. É consensual, nos professores inquiridos, a ideia de que o texto literário é importante para as aulas de Língua Portuguesa. Refiro algumas respostas: “É importante, porque vale a pena dar a conhecer a nossa literatura, desde muito cedo.” [C.R., 1.º Ciclo] // “É muito importante porque permite uma pluralidade de actividades (ao nível da oralidade e ao nível da escrita), possibilitando ainda dar asas à imaginação e ao espírito criativo dos alunos.” (P. C., 2.º Ciclo) // “É bastante importante porque, tendo em conta os diferentes géneros literários, é possível trabalhar vários modos de ler e compreender os textos.” (J. M., 2.º Ciclo) // “A literatura é fundamental para contactarmos com a excelência da língua.” (M. P. O., 2.º Ciclo) // “O texto literário é uma viagem pelo melhor que a Língua tem.” (N. M., 2.º Ciclo) // “É fundamental, porque permite observar, a partir de textos, a evolução da língua, dos valores e dos modos de perceber o mundo.” (E. O., 3.º Ciclo) // “É importante, até para que os alunos entendam a diferença entre esse texto [literário] e o texto não literário.” (T. M., 3.º Ciclo) // “É importante que o aluno se habitue ao contacto com o texto literário nas aulas de Língua Portuguesa e aprenda a ver a dimensão artística da linguagem.” (R. M., 3.º Ciclo)

1.2 Sobre o género literário preferido pelos professores inquiridos, é interessante notar a unanimidade à volta do género narrativo.

1.3. É também este o género indicado como mais apelativo para os alunos (cerca de 75%). Dois professores indicam igualmente o género dramático e uma professora sublinha o facto de os alunos do 1.º Ciclo aderirem bem à poesia.

1.4. Como principais dificuldades, os professores apontam a resistência à leitura; a falta de motivação para o estudo da língua e da literatura; a dificuldade de abstracção (que impede o acesso a patamares superiores de sentido); a falta de vocabulário; a falta de maturidade intelectual (visível nos alunos mais crescidos); o fraco domínio da língua, quer ao nível da oralidade, quer ao nível da escrita.

1.5. As sugestões para melhorar o ensino da literatura passam por articular níveis de ensino; escolher melhor as obras a estudar (tendo em conta o público-alvo); instituir um clima de ensino-aprendizagem agradável (com investimento estratégico na motivação); criar hábitos de leitura; sublinhar a importância e utilidade dos livros (que “não são objectos de museu”); reforçar, nos alunos, o sentido do esforço e do brio; ensinar a falar, a ler e a escrever devidamente (porque a leitura literária pressupõe o domínio de competências essenciais da língua).

2. Por seu turno, os alunos responderam a um questionário mais simples: I. Acha útil o estudo de textos literários (porquê)? II. Qual é o género literário que prefere - narrativo, dramático ou lírico (e porquê)?

2.1. Em 61 respostas, apenas 7 não reconhecem a importância da literatura. Há alunos que dizem, sobre a leitura de textos literários, que “geralmente é uma chatice [*sic*]”, ou mesmo “uma grande chatice”; outros dizem que, “muitas vezes”, “é uma seca”;

2.2. Os géneros preferidos são sobretudo, entre os alunos do 1.º e 2.º ciclo, a narrativa e a poesia. No 3.º Ciclo, entre os alunos do 7.º e 8.º anos, há um equilíbrio entre poesia, drama e narrativa. No 9.º ano, embora alguns dos inquiridos refiram a poesia, a maioria diz preferir a narrativa. As justificações para as escolhas, nos 1.º e 2.º ciclos, são pouco elaboradas (“porque gosto”, “porque é bonito”, “porque sim”). No 3.º ciclo, há alguma inclinação para o drama “porque é movimentado” ou “porque é mais vivo”; para a poesia “porque expressa sentimentos”, “porque tem rima”, “porque fala de sentimentos e emoções”; e para a narrativa, sobretudo na opinião dos alunos do 9.º ano, “porque conta histórias”, “porque é um género de texto menos aborrecido”, “porque tem personagens” e “porque tem emoção”.

3. Na leitura que fiz de composições sobre o tema “Sonho” (encomendadas expressamente para o estudo levado a cabo), pude confirmar uma série de deficiências ao nível da escrita, que não têm apenas a ver com a dimensão estritamente linguística (ortografia, sintaxe, léxico). Há, em muitos, uma clara dificuldade em pensar com clareza, correcção e coerência.

O problema é, pois, também da esfera da organização mental dos alunos (o que se repercute na organização do enunciado escrito).

É opinião de professores e alunos que a maior dificuldade para a maioria dos estudantes, nesta área da escrita, reside na organização do texto (mais ainda que na questão da ortografia, do léxico ou da sintaxe). Perante a página em branco, sob a pressão de construir um enunciado expositivo-argumentativo, a maior parte dos alunos parece sentir grandes inibições, recorrente falta de ideias e ausência de métodos e técnicas de composição escrita.

A performance dos nossos alunos fica, com infeliz frequência, geralmente aquém do razoável. Mas acredito que é possível mudar para melhor este panorama; acredito que é possível melhorar, a este nível, as competências dos nossos jovens. Acredito que é possível tornar a Escola onde trabalho numa Escola mais *eficiente* e mais eficaz, no sentido que Góis e Gonçalves (2007) dão a estes conceitos: “Ao conceito de *eficiência* está associada a ideia de optimização de recursos, enquanto ao falar-se de *eficácia* se pensa numa intencionalidade, ou seja,

numa acção deliberada, tendo em vista a consecução dos objectivos definidos” (p. 21).

Acredito que a literatura é um instrumento excelente para a mudança desejada; e acredito ainda que, em formosa concomitância, a aquisição/consolidação de competências essenciais, pelos alunos, ao nível da língua, significará o seu crescimento enquanto leitores de literatura (aumentando-lhes a capacidade de compreensão e a fruição lúdica e inteligente dos textos lidos).

Como se compreende, subjacente a este projecto de mudança, está a ideia de que a objectiva avaliação dos resultados obtidos implica a assunção de consequências, na organização do trabalho futuro. Christopher Day (2001) lembra a necessidade de, tanto quanto possível, envolver todos os profissionais implicados no projecto: “Existem três princípios sobre o desenvolvimento e a mudança que devem ser tidos em consideração para que a avaliação contribua para o desenvolvimento do indivíduo e de culturas de aprendizagem corporativas: // - o desenvolvimento profissional não é algo que se possa impor, porque é o professor que se desenvolve (activamente) e não é desenvolvido (passivamente). // - A mudança que não é interiorizada será provavelmente cosmética, “simbólica” e temporária. // - A mudança, a um nível mais profundo e contínuo, envolve a modificação ou transformação de valores, atitudes, emoções e percepções que informam a prática e é improvável que estes ocorram, a não ser que haja participação e sentido de posse nos processos de tomada de decisões sobre a mudança” (Day, 2001: 153).

Em registo próximo, Luísa Cortesão (2000) lembra a necessidade de novas formas de encarar a profissão de professor, que passam pela reflexão e acção: “A formação (estruturada agora numa escola que se interroga sobre a sua quota-parte de responsabilidade nos problemas educativos com que se confronta) procura então estimular nos professores o desenvolvimento de um interesse pelo conhecimento do contexto em que trabalham e por uma atenção às situações de adversidade presentes no seu quotidiano, bem como de problemas de interacção de poderes. Procura assim desencadear nos docentes em formação uma permanente atitude indagadora, reflexiva e crítica da sua própria actuação, bem como das propostas educativas e da organização e funcionamento das instituições educativas em que se movimenta” (pp. 49-50).

Pressuposto fundamental do projecto: Literatura é um problema para quem não sabe a Língua. A Língua dificilmente se ensina sem Literatura.

Não é este o espaço para falar de outros problemas, mas não resisto a levantar a possibilidade (trágica) de, entre os próprios professores de Língua Portuguesa, haver quem convictamente menospreze a utilidade e interesse da

leitura e dos livros, pessoal e profissionalmente, ou (embora reconhecendo o *valor* da leitura), não conheça/domine competências pedagógicas adequadas à função de ensinar a ler. Roberto Carneiro (2005) arrepiá-se, justamente, com essa possibilidade: “[...] matricular uma criança no 1.º ciclo do ensino básico é, em pleno século XXI, um risco... Pode sair-lhe pela frente um professor que não a saiba ensinar a ler, simplesmente porque ele próprio não foi preparado para isso” (p. 49).

Desde o início, achei necessário o reforço das actividades de leitura, por se tratar de uma básica condição para o crescimento intelectual dos alunos, bem como por se tratar de um ponto de partida crucial para o trabalho que, em sede de comissão de trabalho, congeminámos ao nível da oralidade e da escrita. Não é esta uma proposta pacífica, aos olhos de muitos alunos, que reagem frequentemente com desinteresse, indiferença (ou até resistência) a convites para a leitura. Mas tal é, afinal, um sintoma do próprio problema que queremos debelar (ou atenuar), como explica Cristina Mello (2004): “O baixo rendimento nas actividades de leitura tem uma relação directa com a falta de competências específicas (discursiva, textual, vocabular) que intervêm na realização das actividades cognitivas acima exemplificadas. Tais lacunas cognitivas são geradoras de problemas de aprendizagem também em outras disciplinas, assim como explicam o fraco desempenho linguístico do indivíduo em situações reguladas do ponto de vista social, sobretudo nas menos informais” (p. 346).

Quisemos, contudo, que esta actividade leitora tivesse a acompanhá-la, de modo sistemático, uma outra tarefa, por norma relacionada com os textos lidos e analisados: a escrita. Como atrás se refere, trata-se de atacar, com a eficácia possível, um problema prioritário que afecta muitos alunos e traduz, em grande medida, alguma incapacidade de pensamento e expressão, *i. e.*, de organização e clareza de ideias e discurso.

Feito o reconhecimento dos problemas; elaborado um geral diagnóstico; estabelecidos os objectivos; constituída uma equipa de trabalho para coordenar a actuação (concertada, estratégica, eficaz) do agrupamento escolar, nos diversos ciclos de ensino; conseguida a aquisição / consolidação de um conhecimento teórico essencial, tão profundo e actualizado quanto possível (que científica e pedagogicamente autorizasse a análise e a formulação de propostas de resolução para os problemas identificados), foi finalmente delineado um plano de trabalho para os vários ciclos envolvidos [1.º, 2.º e 3.º do ensino básico - e, se tudo correr de acordo com o previsto - alargamento da oferta do agrupamento até ao 12.º ano -, o ensino secundário nos próximos anos].

1. Uma vez por semana, sem prejuízo do normal cumprimento dos programas legalmente instituídos, os alunos do agrupamento (desde o 3.º ano) lerão um texto

(de preferência, narrativo; de preferência, impregnado de um certo teor ético-didático; de preferência, próximo do universo de interesses do público-alvo). Idealmente, o nosso projecto concretizar-se-á sobretudo nas horas de Estudo Acompanhado, Área de Projecto, Formação Cívica e aulas de Apoio Pedagógico Acrescido. Esta ideia, contudo, carecerá de aprovação pelos diversos Conselhos de Turma, cujas prioridades e disponibilidades não são necessariamente (só) as que o Departamento de Línguas elegerá como fundamentais. O que, à partida, queremos garantir é a actividade de leitura e escrita (nos moldes que enuncio no ponto 8).

1.2. No final dessa leitura, após discussão à roda de acção e personagens, elegerão um tema e sobre ele obrigatoriamente escreverão um texto de opinião. Desde o 3.º ano de escolaridade, os alunos serão habituados a escrever segundo determinado modelo, obrigatoriamente condicionados por uma estrutura que contemple introdução, desenvolvimento e conclusão.

1.3. Numa primeira fase, os articuladores de discurso serão muito simples, mas recomendar-se-á que paulatinamente os alunos incorporem, em suas construções, articuladores mais refinados, do mesmo modo que a variedade e excelência vocabulares deverão ser constantemente perseguidas (ainda que com o auxílio do omnipresente dicionário).

1.4. Pretende-se que, por alturas do 5.º ano, após sistemáticos exercícios de escrita (utilizando fórmulas e modelos que se repetem com poucas variações), os alunos sejam, regra geral, capazes de enfrentar sem angústia a folha em branco e de, com um quase adquirido automatismo, redigir textos claros, coerentes e organizados. (A criatividade é bem-vinda, se não significar o gratuito sacrifício da norma.) A ideia fundamental é, para além de ensinar a escrever, *ensinar a pensar*. No caso dos alunos do 7.º, 8.º e sobretudo do 9.º ano (finalistas do 3.º ciclo), a exigência será obviamente maior, mas estes discentes – se submetidos ao longo do 1.º e 2.º ciclos – ao necessário *treino*, estarão já em condições de responder adequadamente ao desafio.

III. - A Naturalização da Literatura

Sublinhe-se: há hoje a clara percepção de a condição económica e social dos agregados familiares influir notoriamente no desempenho escolar dos alunos, com óbvio benefício dos que, em casa, têm acesso a meios e recursos mais avançados. A constatação não é, como se sabe, nova. Bourdieu e Passeron (como Bernstein e outros) estudaram detidamente esta correlação estrato social e económico / expectativas e rendimento escolares. O passo que transcrevo, a seguir, põe em evidência os problemas causados por um défice de linguagem que é, digamos, *socialmente* determinado: “Dado que o rendimento informativo da comunicação

pedagógica existe sempre em função da competência linguística dos receptores, a desigual distribuição pelas diferentes classes sociais do capital linguístico escolarmente rentável constitui uma das mais ocultas mediações que servem a instaurar a relação entre origem social e sucesso escolar” (Bourdieu e Passeron, 1970: 143).

É hoje consabida a vantagem, para o sucesso no estudo da língua, que constitui o convívio (precoce e constante) com os livros e a leitura. Esta ideia é claramente equacionada por Isabel Veiga, embora a autora se reporte ao domínio específico da biblioteca (e, ainda mais precisamente, da biblioteca *escolar*): “Estudos sobre a literacia têm vindo a demonstrar que existe uma relação estreita entre a acessibilidade a espaços e recursos de leitura e o nível de desempenho dos alunos. Verifica-se também que é nos países com tradição no domínio das bibliotecas escolares e das bibliotecas públicas que os hábitos de leitura da população se encontram mais enraizados, sendo também esses países que registam níveis mais elevados de desenvolvimento cultural e científico” (Veiga, 1997: 7).

O agrupamento compromete-se a promover e consolidar aquilo a que, à falta de melhor expressão, chamarei a *naturalização da literatura*. Desiderato fundamental: tornar o texto literário, neste contexto que *somos* – agrupamento inserido num meio rural, do interior - uma presença constante, habitual, *amável*, querida. O Plano Anual de Actividades do Agrupamento nunca, como no presente ano lectivo, teve tamanha quantidade e variedade de propostas emanadas do Departamento de Línguas (a que pertenço). Eis algumas iniciativas que poderão concorrer para o reforço dos conhecimentos e das competências linguístico-literárias dos nossos alunos:

1. Os professores de Língua Portuguesa investirão muito esforço na dinamização da Biblioteca (com exposições, sessões de poesia, debates, encontros com escritores). É claro que o (bom) funcionamento da biblioteca é de vital (estratégica, estruturante) importância. Isabel Veiga sublinha que, entre outras finalidades a atingir, a biblioteca “deverá tornar-se um núcleo da vida da escola, atraente, acolhedor e estimulante, onde os alunos [...] se sintam num ambiente que lhes pertence e se habituem a considerar o livro e a informação como necessidades do dia-a-dia e como fontes de prazer e de desenvolvimento pessoal” (Cf. Veiga, *ob. cit.*: 8).

2. A Escola levará a efeito a segunda edição da “Eleição do Poema Preferido” (os alunos lêem e, depois, escolhem o *seu* poema, entre os vinte escolhidos pelos professores). Esta actividade põe em acção a competência linguístico-literária dos alunos, o seu espírito crítico e o seu gosto estético. Acresce que a cerimónia de revelação do poema vencedor é acompanhada de uma sessão de divulgação de autores e obras, bem como de actividades de declamação de poesia, canto e dança.

3. A Escola organizará concursos literários, compreendendo as diversas modalidades genológicas (premiando dignamente os participantes, *inclusive* com a publicação dos trabalhos vencedores).

4. A Escola promoverá a recolha, junto da comunidade educativa, de *livros-testemunhos*, que serão acrescentados aos que já existem num espaço especial da biblioteca - uma estante a que chamámos “Este armário, para mim, é mágico”. A dita estante está

preenchida, para já, com livros oferecidos pelos professores do agrupamento. São livros que, em idade infantil ou adolescente dos ofertantes, impressionaram, marcaram, alcançaram o estatuto de livros *mágicos*. Dentro dos livros, há uma pequena folha, com a fotografia do(a) professor(a) de época (com 9, 10, 11, 12, 13, 14, 15 anos...) e um textinho que explica sucintamente o que a leitura do livro em causa significou para aquele leitor em particular. Espera-se que também pais, funcionários e outros elementos da comunidade contribuam para o enriquecimento deste espólio literário e humano. Os alunos interessados poderão requisitar estes livros e levá-los para casa, tornando-se cúmplices (ou não) de quem os ofereceu. [Pormenor: o livro que ofereci foi *Aventuras de Tom Sawyer*, de Mark Twain e a fotografia que juntei é talvez a única onde se não notam as borbulhas da minha antiquíssima adolescência.]

5. A Escola levará a efeito um Campeonato de Ortografia (iniciativa que fundámos no sentido de valorizar o mérito de bem escrever).
6. A Escola potenciará a participação (sistemática) na dinamização do jornal escolar, havendo lugar, neste espaço, à criação e à crítica literárias).
7. A Escola comemorará *literariamente* as datas tradicionais do Natal, do S. Martinho e do S. Valentim (com recurso à narrativa, à poesia e ao teatro).
8. A Escola promoverá os (já habituais) “Contratos de Leitura”.
9. A Escola levará a cabo “cordões de narrativas” (em jeito de folhetim colectivo).
10. A Escola agendará palestras sobre autores e obras, ao longo do ano lectivo.
11. A Escola investirá na dramatização de obras lidas / estudadas.

Idealmente, as diversas iniciativas (que serão concretizadas, de acordo com Plano oportunamente elaborado e, assim que possível, avaliadas) deverão envolver, de maneira sistemática, a comunidade educativa. Filipe Reis lembra, a propósito do combate à iliteracia, a necessidade de articular esforços, recursos e estratégias com outros elementos, agentes e instituições da comunidade educativa: “Desenvolver as competências literárias da população, e de modo particular das crianças e jovens, pressupõe a necessidade de envolver outras instituições para além das escolas: famílias, as autarquias, as bibliotecas, as empresas, as associações de cidadãos e os organismos do Estado [...]” (Reis, 2005: 78).

Entendemos ainda que a Escola não pode ignorar, entre os vários públicos que tem em mãos, aquele que se constitui dos alunos com maior ritmo de aprendizagem e, no que à leitura diz respeito, aqueles cujas necessidades são de mais sofisticado jaez. Refiro-me a discentes que têm (já) o hábito de ler, que gostam de descobrir novos autores, que não dependem já da estratégia motivacional mais elementar. Se há programas, na área das ciências, para os bons alunos da área de ciências (robótica, por exemplo), por que não oferecer *espaços de vanguarda*, também, na área da literatura, a públicos mais avançados? Propus à Direcção do agrupamento a criação de um “Círculo de Leituras”, onde semanalmente se encontrassem (em regime de voluntariado) rapazes e raparigas com interesse na literatura, para discutir leituras, visões, autores, e igualmente para escrever (ficção, poesia, crítica, recensão). Uma vez por período, haveria lugar à

publicação de textos destes literatos e (talvez) a sessões de leitura e conversa com elementos da comunidade educativa.

IV - Discurso de esperança: do chão ao sonho

Não é concebível, à luz de uma visão ética do fenómeno educativo, que nos fiquemos pelo patamar (improdutivo e até pouco decente) da mera lamúria e da desistente resignação. O profissional da educação, professor de língua e literatura, deve estar consciente de que, hoje, está em jogo – e perceber que existir implica, perante a adversidade, resistir.

Nos últimos anos da guerra colonial, já nos anos 70 do século XX, houve militares (sobretudo, graduados) que descreiam já do valor da luta que travavam em solo africano, quer porque (lucidamente) não acreditavam na justiça da causa, quer porque desconfiavam da possibilidade de vitória. Paradoxalmente, mantinham-se na carreira, por questões de subsistência económica. Era, aquela, uma *má guerra*; e eram, aqueles, *maus soldados*. Não pode acontecer isto na *boa luta* que na Escola se trava contra o fim da literatura (e, simultaneamente, contra a degradação da língua portuguesa).

Acredito que os problemas, em matéria de ensino/aprendizagem da Língua Portuguesa e da Literatura, são magnos e complexos. Mas julgo que há espaço na Escola para o ataque a esses problemas. É preciso que esse ataque seja feito com inteligência, competência e sentido estratégico. O meu sonho não é feito de haustos ultra-românticos, de desabafos patéticos e preguiçosos, de queixumes fadistas. O meu reino é deste mundo. E o sumário do meu projecto é simples: penso, logo, ajo; ajo, logo, existo.

Nota final: Falta só dizer que o projecto arrancou oficialmente no dia 2 de Outubro de 2008, com uma magna reunião de professores de Língua Portuguesa de todo o agrupamento. A reunião teve lugar na sala (recém-estreada) da biblioteca, entre livros e janelas viradas ao sol. Bateu tudo certo.

Letramento e formação de professores na era pós-construtivista: impactos no cotidiano das classes de alfabetização

Idalena Oliveira Chaves

Centro Universitário de Belo Horizonte – UNIBH-Brasil

1. Introdução

A perspectiva construtivista redefiniu, na década de 80, a figura do aluno como sujeito ativo da aprendizagem e, conseqüentemente, a do professor e o seu papel na relação ensino-aprendizagem. É inegável a importância do conhecimento docente no processo de construção do conhecimento pelos alunos e da necessidade de um novo posicionamento pedagógico em consonância com tais fundamentos teóricos.

A língua falada desempenha um importante papel no trabalho com a escrita. Quanto mais a criança pratica a sua oralidade, interagindo com situações de escrita, tanto em casa quanto na escola, melhor será o desempenho na sua aquisição da escrita. O jogo do “faz-de-conta que lê, ou faz-de-conta que escreve” é uma das práticas interacionais que proporcionam o reencontro social da escrita. E todo este trabalho não é mérito só da escola ou do próprio aprendiz, pela sua convivência com materiais de escrita; mas também, e talvez, muito mais, pelas estratégias que os professores alfabetizadores utilizam para favorecer a transição da fala para a escrita, conduzindo o aprendiz a descobrir por si mesmo que escrever nada mais é que codificar a fala. Como os recursos disponíveis para as formas orais são mais variados, é preciso deixar diversos materiais escritos à disposição da criança para que ela possa compreender o funcionamento comunicativo da escrita. O ato de ouvir e discutir textos escritos de variados gêneros é uma maneira de estabelecer conexões entre a linguagem oral e as estruturas de um texto escrito. É preciso ter o cuidado de não passar para a criança que o aprendizado da escrita é difícil. É fundamental que ela sinta desejo de aprender e sinta prazer em praticar a leitura e a escrita. O processo de aquisição é minucioso e delicado e deve interagir com todas as áreas do conhecimento. Como no início da alfabetização formal, o aprendiz constrói todas as relações entre os sons da língua e sua representação gráfica, transformando o seu registro escrito em codificação da fala, a pesquisa que desenvolvemos no Centro Universitário de Belo Horizonte¹ procurou investigar como os alfabetizadores lidam com isso. Indagamos: que compreensão eles têm sobre o sistema de escrita com o qual as crianças vão se deparar no seu processo de escolarização? Percebemos, na

maioria das vezes, que há uma certa falta de clareza, entre os docentes, quanto à necessidade de ensinar, de maneira sistemática, as propriedades e as convenções da escrita alfabética. Uma das alfabetizadoras, informantes desta pesquisa, relatou que uma criança de seis anos perguntou por que Gustavo começa “com G” e girafa também. É necessário que o docente possua uma base teórica para dar conta de resolver dúvidas sobre as relações entre sons e letras. É isso que irá subsidiar a construção dos conhecimentos do aprendiz sobre o sistema de escrita, como foi bem sinalizado pelas teorias psicogenéticas. Assim como o aprendiz levanta hipóteses para tentar descobrir como a escrita representa a linguagem, ele o faz para o sistema ortográfico. Acompanhar as suas hipóteses para que ele adquira a escrita padrão é uma tarefa que exige um saber específico sobre a língua.

As etapas da evolução cronológica da escrita não podem ser tomadas como fixas; o mais importante é compreender os mecanismos que estão subjacentes a esta aquisição. Teorias, como a linguística e a psicolinguística vêm tentando compreender as habilidades envolvidas no processo de aprendizagem da escrita, ressaltando a importância das grafias do aprendiz, no processo de alfabetização, como indício relevante para o trabalho com a ortografia. Alguns trabalhos nesta área podem dar suporte para o professor, principalmente Lemle (1991), Faraco (1994) E Cagliari (1989, 1997, 1999) dentre outros. Ao atingir o nível alfabético², os aprendizes se apóiam fortemente no sistema fonológico da língua oral e vão, gradativamente, caminhando para a escrita considerada padrão (cf. Alvarenga, *op.cit.*). Mas foram as pesquisas desenvolvidas por Ferreiro e Teberosky, na década de 80, que deram destaque às hipóteses desenvolvidas pelo aprendiz, na aquisição da escrita, e isso, sem dúvida, contribuiu bastante para o desenvolvimento das pesquisas sobre leitura e escrita na alfabetização, principalmente na educação infantil. As pesquisadoras, embora tenham sido muito criticadas, inclusive pelos linguistas, tinham razão quanto ao processo de evolução da escrita (1991:181-237). O problema era a falta de fundamentação específica a respeito da apropriação do sistema de escrita pela criança, principalmente no tratamento que não foi dado à ortografia da língua, o que promoveu confusões e mal-entendidos entre os alfabetizadores, no início da década de 90, na época em que as idéias das pesquisadoras começaram a repercutir nas classes de alfabetização.

Atualmente as pesquisas destacam o modo como as crianças se apropriam do sistema de escrita apontando o percurso para se chegar à escrita oficial (Morais, 2003, Oliveira, 2005, Zorzi, 1998). Estudos desta natureza têm, atualmente, mais respaldo da linguística e buscam levar o professor-alfabetizador à compreensão de como aprendemos a língua escrita, para que ele saiba como agir diante dos desvios ortográficos cometidos por seus alunos. Ressaltamos, no entanto, que conhecer este

processo é tão importante quanto saber em que condições o aluno adquiriu a linguagem oral, pois o apoio na oralidade é um dos entraves para a escrita ortográfica. Deve-se permitir que o aprendiz levante hipóteses, experimente, erre e construa um sistema de significados sobre a sua língua, como o faz com a linguagem oral. É necessário que se respeite o estágio de desenvolvimento da linguagem em que se encontra o aprendiz, considerando ser este um processo paulatino, constituído de várias etapas que são vencidas, cada qual, no seu tempo e ritmo próprios.

Muitos relatos dessa nossa pesquisa, demonstraram a preocupação dos professores em relação à ortografia, principalmente no que diz respeito à falta de correspondência entre o sistema de fonemas e o sistema de grafemas da língua. Procuramos mostrar que as condições oferecidas para a interação com materiais escritos possibilitariam a evolução na aquisição da escrita e fariam com que o aprendiz, aos poucos, se desvincilhasse da oralidade na sua produção gráfica. O maior desafio para o professor, como afirma Abaurre (1996:14), é ser capaz de interpretar as hipóteses que o aprendiz levanta nesta fase de aquisição e utilizá-las para trabalhar a escrita convencional. Sendo assim, a nossa pergunta é: o alfabetizador tem conhecimentos adequados para ensinar a língua materna? E ainda: os professores sabem que tudo que se discute hoje, vinte anos após o termo construtivismo passar a fazer parte do vocabulário das classes de alfabetização, foi desencadeado pelas ideias construtivistas? Sabem o que realmente significa *construtivismo, psicogênese, base alfabética? Alfabetização e letramento?*

Com as respostas a essas perguntas, pretendemos fornecer elementos para a construção de conhecimentos teórico-metodológicos que ampliem a compreensão da problemática da alfabetização, que afeta não somente crianças, mas também milhares de jovens e adultos na nossa cidade e no nosso país.

Alfabetização: a mudança de paradigmas

O projeto “Letramento e formação de professores na era pós-construtivista” foi pensado e discutido com o entendimento de que a formação de professores da Educação Básica (Educação Infantil e Anos Iniciais do Ensino Fundamental) que se exige para os dias atuais deverá garantir, dentre outros, a compreensão histórica dos processos de formação docente, a ressignificação das teorias, e o desenvolvimento crítico e criativo da ação pedagógica, a partir de uma articulação entre teoria e prática, na aquisição, produção e socialização do conhecimento.

A proposta de formação de professores, em conformidade com as Diretrizes Curriculares estabelecidas pelo MEC, contempla, dentre outras, a construção de competências referentes ao:

- Domínio dos conteúdos a serem socializados, de seus significados em diferentes contextos e de sua articulação interdisciplinar;
- Domínio do conhecimento pedagógico;
- Conhecimento de processos de investigação que possibilitem o aperfeiçoamento da prática pedagógica.

Nesse contexto, os estudos sobre os processos da aquisição da Leitura e da Escrita assumem lugar privilegiado, pois a construção desse processo não se reduz a mero inventário de palavras e regras de bem usá-las: implica a construção de sentidos, que se dá, necessariamente, no processo de interlocução, isto é, nas interações que um sujeito estabelece com o outro, em um determinado contexto social, histórico e cultural.

Dessa forma, tanto os Referenciais de Educação Infantil como os Parâmetros Curriculares Nacionais para os anos iniciais do Ensino Fundamental sustentam a importância de que a ampliação das competências discursivas e linguísticas dos alunos decorra de uma rica atividade com a linguagem.

Temos clareza de que o processo de aquisição da leitura e da escrita insere-se, hoje, em um quadro bastante complexo, explicitado principalmente pelos estudos e teorias de Emília Ferreiro. Segundo a autora, esse processo implica em descobertas de como codificar a fala e decodificar o escrito, assim como as decisões que o aprendiz precisa tomar para selecionar os caracteres para representar a fala e, ainda, as habilidades que precisa desenvolver para traçar cada uma das letras para poder escrever.

Além desses aspectos, o processo de aquisição da leitura e da escrita envolve os complexos usos e as múltiplas funções que a língua escrita assume em uma sociedade como a nossa. Assim, aprender a ler e a escrever não se restringe apenas ao “ba-be-bi-bo-bu” (Cagliari, 1999). Pressupõe desenvolver uma série de capacidades que permitam ao aluno inserir-se no mundo da cultura escrita, apropriando-se dos usos da linguagem nas diversas práticas sociais (Marcuschi: 2003).

Essas considerações exemplificam de maneira sucinta a revolução conceitual que abalou profundamente os pressupostos norteadores do processo de alfabetização e que vem orientando tanto as análises e reflexões sobre o ensino e aprendizagem da língua materna quanto direcionando estudos, cujos conteúdos têm se constituído como orientadores da formação dos professores nas últimas duas décadas.

Entretanto, falta aos formadores, indicativos mais precisos desse movimento, nas práticas e nas ações que efetivamente acontecem no interior das escolas. A compreensão da mudança de paradigmas, das práticas efetivamente desenvolvidas

e dos avanços obtidos pós a psicogênese da leitura e da escrita, irão contribuir de forma bem mais efetiva, para a construção de competências imprescindíveis ao processo de formação dos professores alfabetizadores.

Os novos paradigmas e sua transposição (ou não) para a prática pedagógica

Nosso projeto de pesquisa, acima citado, pretendeu averiguar a articulação entre a formação e as ações desenvolvidas pelos alfabetizadores de escolas particulares e públicas de Belo Horizonte, no que concerne aos conhecimentos teóricos sobre a apropriação da língua escrita nas classes de alfabetização e séries iniciais, no momento atual, em que há uma variedade de informações, pesquisas e publicações sobre a aquisição e desenvolvimento da escrita. Para alcançar tal objetivo, realizamos as seguintes ações:

- Caracterização do discurso produzido pelos professores sobre alfabetização e letramento observando os seguintes aspectos: termos utilizados, definições de conceitos, prática na sala de aula;
- Comparação de como a construção do conhecimento pelos professores é efetivada nas classes de alfabetização de escolas públicas e de escolas particulares de Belo Horizonte;
- Categorização do saber do professor alfabetizador de acordo com o seu ambiente de trabalho, formação e experiência docente.
- Identificação dos indicativos de mudanças das práticas docentes dos professores alfabetizadores, a partir de uma fundamentação teórica.

Por seu caráter qualitativo, esta pesquisa traçou o perfil do professor alfabetizador em algumas escolas de Belo Horizonte. Embora saibamos que a alfabetização e o letramento não são ações separadas, o professor que alfabetiza é aquele que define a trajetória dos seus alunos e, portanto, ele apresenta uma identidade profissional associada à valorização de um conjunto de saberes, no que diz respeito ao cognitivo, pedagógico e prático. Não conseguimos compor um banco de dados que pudesse nos fornecer informações sobre as fragilidades detectadas na formação do professor alfabetizador de Belo Horizonte e que implicações isso possa ter na prática em sala de aula, pois isso demandaria um tempo bem maior que esta pesquisa teve. Sendo assim, espera-se que outras surjam e possam fazer esta outra parte.

Utilizamos outros dois procedimentos metodológicos: o primeiro, que consideramos da maior relevância, diz respeito à caracterização do local da

pesquisa, ou seleção das escolas que fizeram parte da investigação, levando em conta a localização para contemplar diferentes pontos da região de Belo Horizonte. Em seguida, selecionamos os informantes e sujeitos da pesquisa: professores alfabetizadores com formação superior. Os professores foram separados em dois grupos:

- A) com prática pedagógica nos últimos vinte anos;
- B) com prática pedagógica nos últimos cinco anos ou menos.

Estes informantes, previamente indagados se gostariam de participar da pesquisa, foram submetidos a uma entrevista oral sobre alfabetização, letramento, construtivismo e seus termos (quadro 1, abaixo). Essas entrevistas foram gravadas e transcritas. Em seguida, estes mesmos informantes foram submetidos a um questionário escrito, cujas respostas possibilitaram-nos obter informações sobre a fundamentação teórica que possuíam e sua utilização na prática pedagógica.

Quadro 1- modelo da entrevista

PESQUISA: Letramento E Formação De Professores Na Era Pós-Construtivismo: Impactos No Cotidiano Das Classes De Alfabetização.	
NOME: (não divulgar o nome)	
INSTITUIÇÃO: E MN S A.Médio porte	
FORMAÇÃO /CURSO: Pedagogia	ANO DE CONCLUSÃO: 2007
(x) GRUPO DE 20 ANOS OU MAIS DE ALFABETIZAÇÃO ()GRUPO DE 05 A 10 ANOS DE ALFABETIZAÇÃO .	
<p>QUESTÕES:</p> <p>1-Você tem quantos anos de sala de aula? 26 anos de Estado e 16 de rede municipal</p> <p>2-Você já alfabetizou? Em que ano? Em 1996 e no estado em 1978</p> <p>3-O que mudou da época em que alfabetizou ate os dias atuais? Nos anos 70 usava o método global mas intercalava-se com o método silábico,hoje,só se fala em projetos e demora-se mais para alfabetizar do que antigamente.</p> <p>4-Quais as maiores dificuldades que você encontrou na sua atuação em sala de aula em relação ao ensino aprendizagem da língua escrita e da leitura? O aluno tem preguiça de escrever e de ler .Não concentra, se distrai e é desinteressado.</p> <p>5-O que você sabe:</p> <ul style="list-style-type: none"> • Sobre construtivismo? O aluno constrói seu próprio conhecimento, e valido enquanto este motivado, mas o professor devera ficar muito atento dirigindo, quer dizer conduzindo sempre. • Sobre letramento? E a continuidade da alfabetização, o aluno devera ler e entender o que leu. <p>6- Qual a relação entre Letramento e alfabetização ? Letramento é continuação e aperfeiçoamento, e compreender. E um processo continuado.</p> <p>7-Você ou sua instituição investe na formação profissional? Com que frequência? Sim</p> <p>8 O que você sabe sobre os termos abaixo?</p> <ul style="list-style-type: none"> • Hipótese Silábica E a hipótese que a criança tem quando alfabetizado na qual ela escreve para cada som de uma palavra. Por exemplo: faca→f-a-f –a. • Grafema /fonema/consciência fonológica Grafema e a letra, e fonema e o som e consciência fonológica e perceber o som de uma palavra: rimas, terminações. • Escrita icônica e não icônica Na primeira a criança usa símbolo e na segunda e outro tipo de registro sem ser sinais. • Realismo nominal E quando a criança acha que a palavra e do tamanho que ela representa.Ex:boi→ ele acha que vai ter muitas letras ,pois boi e grande e Formiguinha→ vai ter poucas 	

Buscamos, em um primeiro momento, levantar o referencial teórico sobre o assunto disponível na mídia impressa. Constatamos que o material bibliográfico sobre este tema é vasto e variado e que as publicações foram aumentando em um determinado período. Tivemos muitas publicações em toda a década de 90, e depois essas publicações, com tratamento específico sobre construtivismo na escola, foram diminuindo. De 1990 até 2005 encontramos 108 publicações, desde periódicos institucionais a publicações vendidas em bancas de revistas, como Nova Escola, Revista da Educação, entre outras, e 61 livros. Na entrada do ano 2000, a palavra-chave das publicações passou a ser “letramento”. Sobre esta temática multiplicaram-se as publicações neste período. Uma das nossas bolsistas teve a idéia de investigar no **Orkut**, a rede social filiada ao Google, criada em 19 de Janeiro de 2004, período contemplado na nossa busca de publicações. Como um dos objetivos desta rede é ajudar seus membros a criar novas amizades e manter relacionamentos, resolvemos verificar se havia alguma comunidade sobre o construtivismo. Qual não foi a nossa surpresa ao encontrarmos seis comunidades: 1. Odeio Construtivismo; 2. O Construtivismo; 3. O construtivismo para a Mudança; 4. Vivenciando o Construtivismo; 5. Nós odiamos o construtivismo; 6. Gosto do construtivismo. Ao pesquisarmos nesta rede, constatamos que as duas opiniões, contrárias e favoráveis ao construtivismo, também são compartilhadas pelos professores entrevistados.

Atualmente fala-se pouco sobre o termo construtivismo no ambiente escolar e muito sobre letramento. Em todo encontro que vem acontecendo no Brasil, nos últimos anos, direcionado aos professores da educação básica, há sempre uma palestra ou curso sobre “letramento e alfabetização”. Já se tornou chavão a frase: “é preciso promover um ambiente letrado na sala de aula”.

Conforme Soares (2003:15) “uma das primeiras ocorrências da palavra Letramento está em um livro de Mary Kato, de 1986 “ No mundo da Escrita”, da editora Ática, ou seja, este termo surgiu praticamente no mesmo período da divulgação das pesquisas da Emilia Ferreiro no Brasil. O tratamento que deve ser dado ao letramento nas salas de alfabetização, nada mais é do que foi postulado nas teorias construtivistas³ em relação ao contato que o aprendiz deve manter sempre com a escrita para interagir com este objeto de conhecimento. Investigar a respeito da veiculação das informações sobre alfabetização, escrita e leitura nos

daria alguns indícios acerca do que os alfabetizadores sabiam sobre o construtivismo. Ouvi-los e observar como eles vêm compreendendo as características de cada nível de desenvolvimento da escrita, nos serviria, concomitantemente, de instrumento de análise de suas trajetórias profissionais, dos processos de formação docente e das leituras feitas sobre o assunto. Desta forma teríamos uma base para fazer uma análise qualitativa do que estávamos pretendendo investigar: como os professores articulam teoria e prática e quais os indicativos de mudança na prática docente com base na teoria construtivista. Nas entrevistas com os alfabetizadores sempre perguntávamos sobre uma publicação do CEALE editada pela formato em 1996, da prof.a Maria das Graças de Castro Breguncci, respondendo 70 perguntas sobre construtivismo. Entrevistamos 30 professores de escolas estaduais, municipais e particulares, que estavam atuando nos últimos 10 anos, mas ninguém conhecia este livro

Poucos conseguiram, de fato, verbalizar a relação entre a sua prática e as teorias de aprendizagem. Os professores se confundem muito ao lidar com os termos letramento e construtivismo e suas definições. No entanto, os professores de escolas municipais que entrevistamos se mostraram mais embasados teoricamente e conseguiram articular a prática com os postulados do construtivismo, relatando que realizam diagnósticos com seus alunos para acompanhar a evolução da leitura e da escrita. Muitos dos informantes se mostraram confusos em relação à abordagem da ortografia. Uma das entrevistadas fez o seguinte questionamento: “O que fazer com as crianças que atingiram o nível alfabético em relação à forma correta de escrever as palavras?”

Durante a pesquisa percebemos que há muita promoção de cursos de formação na cidade, inclusive, na época, estava acontecendo um congresso de educação em Belo Horizonte. Aproveitamos e abordamos esse fato nas entrevistas e os professores reclamaram do preço destes eventos. Contudo havia escolas, tanto particulares quanto públicas que ofereciam ajuda para aqueles que quisessem participar. Na amostra que obtivemos, embora pequena, em relação ao número de escolas e professores da cidade de Belo Horizonte, não conseguimos identificar indicativos reais de mudanças das práticas docentes dos professores alfabetizadores, a partir destes discursos atuais sobre as teorias de aprendizagem e o trabalho com a leitura e a escrita nas classes de alfabetização. Continuamos vendo professores fecharem a porta de suas salas e “atacarem” com o bom e velho método silábico. As dúvidas sobre as propostas das teorias psicogenéticas ainda são muitas.

Diante deste quadro, apresentamos, então, uma proposta semelhante à abordagem do livro “*Construtivismo: grandes e pequenas dúvidas*”, verificando,

atualmente, em meados dos anos 2000, quais seriam as dúvidas de professores e futuros professores da educação básica. Elaboramos um questionário com algumas perguntas e respostas extraídas deste livro e solicitamos aos informantes que elaborassem perguntas que pudessem explicitar dúvidas que ainda tinham sobre o construtivismo. Em um teste piloto já havíamos constatado que muitos professores atuantes desconheciam a teoria construtivista, o que era demonstrado nas respostas dadas no momento das entrevistas. Muitas estavam ligadas ao senso comum: “foi um método que não deu certo, como outros no Brasil”, o construtivismo bagunçou a alfabetização”, etc.

Inicialmente solicitamos a todos os alunos do curso de Pedagogia do UNI-BH, no ano de 2007, que propusessem uma questão sobre o construtivismo. Obtivemos um total de 710 perguntas dos estudantes, futuros professores, e 30 perguntas dos alfabetizadores de escolas estaduais e municipais de BH. Organizamos um banco de dados com 730 perguntas. Destas, selecionamos as que não estavam contempladas no livro da Bregunci e elaboramos as respostas. Observamos que as dúvidas dos alfabetizadores, agora, são de origem linguística. Todas estavam relacionadas ao sistema de escrita, ao trabalho com a língua materna. Questões estas que não foram bem fundamentadas na era construtivista⁴.

Ex. Como trabalhar além da hipótese alfabética quando o aluno ainda está trocando os grafemas como no exemplo abaixo: QROQRODILO (crocodilo)

Após a análise das questões coletadas propomos as respostas e elaboramos uma cartilha sobre o construtivismo: “ construtivismos 20 anos depois...”. Esta cartilha seria publicada, mas com o fim do tempo da nossa pesquisa não foi possível concluir esta parte do trabalho. Esperamos que ela possa ter continuidade e possamos publicar este material em tempo, pois no próximo ano já estaremos completando 30 anos de construtivismo no Brasil.

Conclusão

Não sei se podemos falar em conclusão, pois esta pesquisa representa uma amostra dos saberes dos alfabetizadores. A pesquisa deveria ser mais ampla, contemplando um número maior de alfabetizadores e estudantes dos cursos de Pedagogia. Se faz necessário um mapeamento dos conhecimentos teóricos dos professores e futuros professores para que possamos apresentar propostas de intervenção de maneira mais eficaz nos cursos de formação. O governo acaba gastando muito em formação continuada de professores em um aspecto que deveria ser resolvido nos cursos de formação básica. Ao exteriorizarem seus conhecimentos atuais, durante a pesquisa, podemos perceber como os professores saem dos cursos superiores despreparados tanto do ponto de vista teórico quanto

prático, mas a prática se adquire na atuação, já a teoria requer um tempo de estudo e dedicação. A conclusão deste trabalho nos remete aos cursos e ações diversas de formação que considerem importante valorizar os saberes (e não-saberes) docentes, superando, assim, a relação de “repasso” de conhecimentos, ainda tão frequente nas “capacitações” proporcionadas aos professores. Os resultados aqui apresentados poderão sensibilizar profissionais formadores na área da alfabetização para a necessidade em reconhecer o saber do professor e para, a partir dele, desenvolver novos conhecimentos.

Notas

- ¹ Letramento e formação de professores na era pós-construtivista: impactos no cotidiano das classes de alfabetização. Bolsistas envolvidas: Alcione Aparecida Ferreira, Magna de Magalhães, Cláudia Lobo, Polyanna Phillips. Voluntárias: Aline Tadeu, Kelly Tainara
- ² Entendemos nível alfabético como a etapa em que o aprendiz já escreve palavras através da relação som/letra, apresentando as dificuldades ortográficas peculiares a esta fase.
- ³ Moraes (2006) em trabalho apresentado no XIII ENDIPE, utiliza o termo construtivismo no plural (construtivismos), ao falar das várias teorias de aprendizagem que tendem a conjugar contribuições da teoria da psicogênese da escrita com evidências do campo do letramento.
- ⁴ O novo caderno Construtivismo foi editado pela Editora Autêntica em 2009, com o título: *Construtivismos-grandes e pequenas duvidas*.

Profissão: Leitor

leituras de professores universitários brasileiros e portugueses

Hércules Tolêdo Corrêa
Universidade Federal de Ouro Preto

I - Uma proposta de categorização das leituras

Kenneth Goodman (1994:1115-1117) afirma que as pessoas leem textos escritos com diferentes objetivos e reconhece que, para entender como a leitura é feita, é preciso entender por que as pessoas leem. No trabalho citado, Goodman apresenta os seguintes tipos de leitura: ambiental, ocupacional, informativa, recreativa e ritualística.

Um tipo de leitura não exclui outro. Por exemplo, o ato de fazer a chamada em sala de aula é ao mesmo tempo uma leitura ritualística e uma leitura profissional da parte do professor. Trata-se de um ritual presente nas aulas, mas também de uma obrigação do professor. No senso comum, costuma-se falar em “leituras por obrigação” e “leituras por devoção”, quando se pensa em uma tipologia da leitura. Essa dicotomia parece ser pouco produtiva do ponto de vista científico. Normalmente, quando se fala em leitura por devoção, refere-se à leitura daqueles textos que se faz por mera distração, próximo à leitura recreativa. A leitura por obrigação seria aquela próxima à leitura ocupacional. Nada impede que uma leitura ocupacional possa ocorrer como forma de prazer. Para pesquisadores, por exemplo, a leitura de textos científicos pode ser extremamente prazerosa. Acredita-se, de maneira geral, que leituras recreativas e leituras ocupacionais estejam intimamente ligadas aos domínios discursivos (v. Bakhtin, 1952) dos textos que são objeto do ato de ler, e não aos pactos de leitura (v. Lejeune, 1975) estabelecidos pelos sujeitos.

II - Sujeitos, métodos de coleta e análise de dados

Esta comunicação reconstrói histórias e memórias sobre o processo de formação de leitura e de leitores, objeto de nossa pesquisa. Para discutir como esses leitores se tornaram professores universitários, de diferentes áreas do conhecimento, bem como o lugar que a leitura tem em suas vidas, fizemos uso dos seguintes métodos qualitativos: entrevistas temáticas, observação participante, conversas informais e currículos públicos.

Entrevistamos seis professores brasileiros e seis professores portugueses. A aproximação com os entrevistados se deu da seguinte forma: no Brasil,

procuramos, no âmbito de nossa atuação profissional, colegas de diferentes áreas de formação que se dispuseram a colaborar com o trabalho, aceitando participar das entrevistas e dar seus depoimentos.

Em Portugal, a partir do contato com docentes do Instituto de Educação e Psicologia - IEP da Universidade do Minho, quando da realização do estágio avançado, e da colaboração do Professor Rui Vieira de Castro, que fez os primeiros contatos com professores de diferentes áreas da Uminho, pudemos nos aproximar dos professores, que gentilmente se dispuseram a colaborar com a pesquisa.

Com relação aos professores brasileiros, pudemos ter acesso, em alguns casos, a suas bibliotecas pessoais e ao seu escritório particular. Em Portugal, tivemos acesso apenas aos gabinetes de trabalho dos professores, na Universidade do Minho. A observação participante se deu de forma mais intensa em alguns casos mais do que em outros, pois variou conforme o nosso grau de proximidade com o entrevistado. Não entendemos essas diferenças como problema para a nossa coleta de dados, uma vez que procuramos analisar os dados a partir daquilo que deles emerge, na tradição que se tem constituído na área dos estudos educacionais de orientação etnográfica.

Os currículos públicos nos permitem a investigação da trajetória profissional dos docentes, com suas titulações, produção bibliográfica, áreas de interesse e projetos de pesquisa, desenvolvidas ou em desenvolvimento, temáticas de orientações concluídas ou em andamento, bem como tantos outros dados profissionais, que aqui não destacaremos, mas que nos serviram de base para certas inferências na análise das entrevistas.

O que e como leem os professores universitários? Com que finalidade leem? Quais são as representações que esses profissionais têm da leitura? Como se formaram esses leitores? Quais foram as principais influências nos processos de letramento? Essas são as perguntas básicas que propusemos aos entrevistados, formuladas com base no questionário do Indicador Nacional do Alfabetismo Funcional – INAF, pesquisa por amostragem realizada no Brasil. Fica aqui registrado o esforço de diálogo entre as pesquisas em escala macro, como o INAF, e as pesquisas em escala micro, de natureza qualitativa, como a nossa.

Para analisar os dados coletados nesta pesquisa fizemos a opção de usar a metodologia das narrativas temáticas. Neste trabalho, apresentamos apenas os dados relativos à categoria temática das leituras cotidianas, com algumas incursões também em outras práticas culturais, e selecionamos cinco colaboradores.

III - Profissão: professor ou Profissão: leitor – uma possibilidade de análise

Optamos por mencionar os professores através da seguinte notação: identificamos primeiramente o leitor pela sua nacionalidade: BR para brasileiros e PT para portugueses e, em seguida, numeramos de acordo com a realização cronológica das entrevistas realizadas.

O professor BR1 é graduado em Letras, com mestrado em Literatura Brasileira e doutorado em Literatura comparada. Tem um pouco mais de quarenta anos e mora sozinho, num apartamento de bairro classe média de Belo Horizonte.

Por sua entrevista, o professor BR1 deixa transparecer o seu compromisso com as leituras ocupacionais: menciona a preparação das aulas, ressaltando que normalmente são mantidas as suas disciplinas no curso de graduação, o que diminui um pouco esse trabalho, mas enfatiza a leitura dos textos relacionados ao seu trabalho de pesquisa. O entrevistado, pela disponibilidade em contribuir como sujeito desta pesquisa, pela maneira de responder às questões formuladas e por responder reflexiva e ponderadamente as questões formuladas, deixa entrever o seu comprometimento com a sua formação, revelando a realização de um projeto acadêmico. Do seu discurso, emergem expressões como “formação própria” e “garantir uma discussão, uma reflexão”, o que, a nosso ver, também demonstra esse compromisso com o trabalho, mostrando-nos a importância que ele atribui à atividade de pesquisador. Ao mesmo tempo em que desenvolvia a sua pesquisa institucional, esse professor realizava um projeto de pesquisa pessoal, relacionado à memória do homoerotismo em Belo Horizonte, e também preparava um livro, uma espécie de romance-reportagem, que demandava pesquisas em arquivos públicos para leitura de jornais e outros materiais da época do evento pesquisado, também relacionado à questão da memória homoerótica.

Com o desenvolvimento de tantos projetos, o entrevistado diz que “Falta tempo para as leituras de prazer, a literatura propriamente dita, que é o meu campo de trabalho, a gente fica consolado, estou lá relendo *Memórias Póstumas de Brás Cubas*, que é o próximo texto literário que vai ser discutido em uma das disciplinas... ficam lá vários livros aguardando um feriado, um período de férias, para serem lidos”.

Por seu discurso, pode-se notar que o professor BR1 classifica as suas leituras como ocupacionais, predominantemente, relatando que as leituras recreativas ficam à espera de um feriado ou das férias. Ressalte-se, entretanto, que o discurso do entrevistado deixa entrever também a sua satisfação quando realiza as suas leituras ocupacionais. Não apenas no “consolo” que é reler *Memórias póstumas de Brás Cubas*, mas também por suas opções ao desenvolver projetos de pesquisa paralelos ao seu trabalho acadêmico.

A resposta à pergunta sobre as leituras informativas aponta para a disciplina do leitor, que assina um jornal diário e que, “quando não dá para ler o jornal do dia”, lê o jornal no dia seguinte, ou nos dias subsequentes.” Além desse jornal diário, o entrevistado diz comprar “outros jornais, por causa dos suplementos literários e também para variar um pouco o ponto de vista editorial, a forma de abordagem das notícias”, no final de semana. E ainda conclui: “Compro também, no final de semana, um jornal de Belo Horizonte que tem uma coluna que me interessa”, coluna essa que se relaciona à comunidade identitária que pesquisa.

Nas entrevistas realizadas posteriormente, não encontramos nenhum outro leitor que tenha revelado, no seu discurso, a disciplina do professor BR1. O entrevistado demonstrou ser um leitor muito assíduo. Possui uma biblioteca pessoal com cerca de 3.500 exemplares reunidos durante sua trajetória acadêmica. Sobre seu acervo de livros, jornais e revistas, destaca que: “vez por outra eu seleciono os livros e revistas que não serão de uso constante e doo para alguma biblioteca.”

A fala do entrevistado mostra também o seu forte investimento em uma determinada prática cultural, que é a sua relação com o cinema. Tem o hábito de ir ao cinema praticamente todas as semanas.

O professor BR2 é graduado em Comunicação Social, habilitação jornalismo, mestre em Comunicação Social e doutorando em Comunicação Social. Mora sozinho em um apartamento de classe média em um bairro de Belo Horizonte. Tem um pouco mais de quarenta anos.

O professor BR2 também deixa clara a predominância das leituras ocupacionais na sua fala: de um lado, as leituras relacionadas ao seu trabalho docente, “é impossível que as minhas leituras mais frequentes não sejam as leituras que eu chamo de técnicas. Embora não sejam exclusivamente técnicas, elas são também teóricas [...] teorias das comunicações, teorias do jornalismo”, de outro, as leituras para a sua tese de doutorado: “eu vou ter que me aprofundar mais agora [nas leituras] sobre sexualidade, gêneros de sexualidade, que tem uma relação com o tema do meu doutorado, então, essas são leituras mais recorrentes” e se ressentido de não ter disponibilidade para ler literatura: “nesse período eu lamento não ter muito tempo para a literatura, que é o tipo de leitura que eu considero imprescindível, é uma leitura por prazer, é uma leitura que eu faço por descanso, diferentemente de quem está mergulhado na literatura para dali fazer considerações teóricas, eu leio por prazer, embora, claro, no meu diletantismo, depois de ler um livro [literário], eu me meta lá a querer fazer algumas avaliações.”

Sobre as leituras informativas, BR2 afirma que faz uma leitura seletiva do jornal *Folha de S.Paulo* todos os dias “eu leio no computador, pela internet”. Afirma também ler o *site* jornalístico, já extinto, “No Mínimo”, que tem uma coluna que

muito lhe interessa: Tutty Vasquez. Afirma que consulta também muitas revistas e quando tem algum tema que lhe interessa, em uma revista informativa, ele a adquire – naquele mês, citou ter comprado a revista *Cult*. BR2 afirma que neste momento suas leituras informativas estão concentradas no meio eletrônico, através da Internet. Também se concentram bastante, na tela, a leitura de trabalhos dos alunos: matérias e monografias. BR2 parece ter-se adaptado muito bem à leitura na tela.

Sobre a leitura literária, BR2 afirma que geralmente a leitura da literatura é espaçada. Em virtude das aulas e pesquisa, às vezes passa mais de um ano sem ler um livro literário, mas diz ler cerca de três livros literários por ano, provavelmente quando está em férias ou em finais de semana prolongados. Cita Machado de Assis como um de seus autores favoritos e diz que adora reler os romances do escritor. Diz que não gosta de ler autoajuda nem *best-sellers*, e ainda cita *Cem anos de solidão* como uma de suas obras favoritas.

O professor BR3 é graduado em Física, mestre e também doutorando na mesma área. Dá aulas no curso de Matemática em um centro universitário particular de Belo Horizonte e também trabalha como pesquisador num centro de pesquisas de energia nuclear, na mesma cidade. Tem por volta de quarenta anos. É casado com uma jornalista e tem uma filha, ainda criança. Reside também em apartamento em bairro de classe média.

No discurso do professor BR3, percebe-se também uma grande evidência de leituras ocupacionais, voltadas para a sua área de trabalho acadêmico: o professor encontrava-se, naquele momento, em fase de conclusão de tese de doutoramento, na área da Física, com o tema “magnetismo em estruturas”. O professor explica que sua opção de leitura “... é bem voltada para o trabalho. Como estou fazendo uma tese para o doutorado, então hoje eu leio basicamente artigos em inglês e diretamente relacionados ao tema de trabalho. Não só artigos, mas muita coisa de internet, dos grupos de pesquisa. É bem voltado ao trabalho de doutorado, no caso.”

Em suas horas de lazer, o professor revela que lê “um pouco jornal e revista”, mas muito superficial: “São reportagens mais ligadas à área de cultura, um pouco mais fora do que eu faço.” Pela análise da entrevista, nota-se a concepção restrita do que é leitura, pois afirma: “Eu sempre gostei muito de ler, mas não tenho o hábito de leitura”. O entrevistado deixou transparecer que leitura para ele tem a ver apenas com textos literários, pois fez questão de dizer que faz mais de dez anos que leu um livro de literatura. Declarou que esporadicamente gosta de abrir e ler um livro “de poemas e contos de Carlos Drummond de Andrade.”

Ao ser interrogado se possuía uma biblioteca particular, o entrevistado declarou que há algum tempo ele possuía alguns livros. Porém, em uma determinada época, desfez-se deles e hoje possui poucos, pois prefere consultá-los em outras bibliotecas, em laboratórios ou tomá-los emprestado de colegas. Portanto, dentre os livros que possui em casa, a maioria é de sua esposa, que é formada em jornalismo e que gosta de literatura.

Sobre suas escolhas relativas à formação acadêmica, o professor BR3 admitiu que teve dúvida se faria arquitetura ou artes. Entretanto, em uma viagem para a França encontrou com um professor de Matemática que lhe perguntou com que área tinha mais afinidade. Respondeu que era Física e o professor o encorajou a seguir esse caminho: “guardei isso e acabei fazendo Física.”

De acordo com o perfil do entrevistado, pode-se dizer que vem de uma família com capital cultural alto, já que sua mãe é professora universitária na área de Letras e o pai também tem uma formação universitária em Agronomia.

Dos brasileiros selecionados para esta análise, o professor BR3 é aquele que advém de uma família com mais alto capital cultural, principalmente na sua modalidade institucionalizada, como designa Pierre Bourdieu às formas de capitais culturais mensuráveis pela presença de diplomas e títulos acadêmicos. Curiosamente, é aquele que menos demonstrou interesse pela leitura e pelos livros, não tendo a intenção de construir um capital cultural objetivado – como a posse de livros. Concluir que isso se deve à sua formação na área de Exatas, exclusivamente, é bastante precipitado, acreditamos. Provavelmente, há outros fatores, difíceis de identificar através de uma única entrevista, que conduzem a essa forma de ser e de agir do entrevistado.

Passemos agora à análise de duas entrevistas realizadas com professores portugueses.

O professor PT1 é licenciado em Ensino de Português (atualmente, Estudos Portugueses), fez prova de aptidão pedagógica e capacidade específica na Universidade da Madeira e doutorou-se, em 2007, em Educação, na Universidade do Minho. Com pouco mais de quarenta anos, é casado, possui um filho e vive na cidade de Braga, em Portugal. A entrevista realizada com o professor PT1, pouco tempo depois que ele havia defendido a sua tese de doutoramento, revela a sua dedicação quase que exclusiva às leituras ocupacionais específicas do seu trabalho acadêmico. Essa é uma situação típica vivida pelos doutorandos de diferentes áreas do conhecimento, tanto no Brasil, como demonstra a minha própria experiência e a minha inserção no mundo acadêmico brasileiro, como em Portugal, pelo que pude presenciar no tempo em que realizei meu estágio.

O investimento em atividades culturais do professor PT1 é dificultado por sua forma de configuração familiar. Ao ser perguntado sobre sua frequência a cinema, *shows*, museus, enfim, programas culturais, o professor esclarece: “infelizmente, agora não por causa da tese, mas sobretudo por causa do nascimento do nosso filho e do fato de nós não termos ninguém que nos possa apoiar, ficando com o miúdo para uma ida ao cinema, ao teatro ou a outra atividade qualquer, nos últimos anos tenho visto muito reduzidas essas participações.” O entrevistado diz reconhecer a importância de participar de atividades desse tipo, até mesmo para estabelecer relações entre literatura, cinema e outras artes, por exemplo, mas ressalta sempre que suas condições pessoais não permitem.

O professor PT1 relata que, no período de sua formação universitária, suas leituras mais frequentes eram os clássicos da literatura portuguesa: “(...) que nunca eram lidos como uma leitura de fruição e de conhecimento (...)”, esclarecendo que depois, durante seu percurso intelectual, fez uma movimentação “no sentido de reler alguns desses clássicos.”

No momento em que foi feita a entrevista, depois de concluído o seu doutoramento, o professor PT1 disse que tinha “uma série de livros clássicos da literatura universal que gostaria de ler por prazer exclusivamente”, mas não os citou.

Sobre sua formação acadêmica, especificamente a escolha pela área do Ensino de Português, o entrevistado relacionou-a à formação humanística que lhe foi oferecida pelo colégio interno de frades franciscanos no qual estudara. O professor afirmou ter tido influências positivas de professores de Português, sendo que a curiosidade de conhecer melhor a língua, a literatura e a cultura portuguesa adveio bastante disso.

Com relação ao universo cultural de sua família, o entrevistado disse que seu pai tinha um comércio, “um botequim como vocês dizem”, e que sua mãe e os irmãos dele na aldeia sempre trabalharam na agricultura. PT1 fez questão de afirmar que, de acordo com sua mãe, o dia “mais feliz de sua vida [mãe] foi quando ela deixou a escola”. Com seu pai, a situação era diferente, pois era um homem que gostava de se informar e de discutir muitos assuntos.

O professor PT1 em alguns momentos pareceu não saber se suas influências maiores de leitura foram escolares ou se advieram de seu pai que, mesmo com pouca instrução, era um homem que gostava de se informar. Vale aqui uma observação: algum tempo depois de realizada a entrevista, após refletir melhor sobre as questões propostas, o colaborador me procurou para reafirmar a importância que os frades tiveram em sua formação de leitor, dizendo que em casa

não tinha livros e que, portanto, não havia incentivo à leitura, a despeito da peculiaridade paterna.

Pelo perfil construído a partir da entrevista, o professor PT1 não parece ter herdado um capital cultural em seu meio familiar, tendo sido os primeiros responsáveis pela transmissão desse capital os frades franciscanos com os quais ele estudou.

O professor PT2 é formado em Bioquímica, com doutorado em Biologia. Trabalha na Universidade do Minho, no curso de Medicina. Vive em Braga, Portugal. Também tem cerca de 40 anos. O professor PT2, já no início de sua entrevista, enfoca ter sido a escolha pela área bioquímica uma opção pessoal, embora mencione também a influência que teve de uma professora de Química. Dado extremamente relevante, que nos fez optar pela análise neste momento da pesquisa, foi o interesse de um professor dessa área pelas questões da Educação. O professor PT2 diz estar mais preocupado com as questões de ensino do que com as questões mais técnicas de sua área de formação. De sua fala emerge essa preocupação: “A minha atividade investigadora foi, durante o doutoramento, algo excepcional. Encontrei na via do ensino o prazer que não encontrava na parte de investigação pela qual me interessei.”

Questionado quanto às suas leituras, de maneira geral, pode-se perceber a ênfase que dá às leituras ocupacionais, relacionadas a seu trabalho, mas enfatiza gostar muito da literatura e ter interesse em conhecer a história das coisas. O entrevistado demonstra certo embaraço ao relatar suas leituras, como se pode perceber neste trecho da entrevista: “[...] Também tenho livros que tenho em casa que não têm nada, tenho alguns que têm a ver com estes, e tenho neste momento é a minha aposta de leitura que será mais direcionada para uma literatura mais consagrada, clássica [...]” Demonstra também o desejo de voltar às leituras de “quando era moleque, que ficaram para trás”.

Um fato interessante é que, ao ser interrogado por sua relação com poesias, o entrevistado informa que neste momento não tem relação alguma com esse gênero textual por causa do trabalho, mas que, anteriormente, há mais ou menos uns cinco anos, existia um pequeno grupo de amigos que, por iniciativa dele, encontravam-se informalmente em sua casa para ler poesias e depois fazer comentários sobre elas. Ele diz: “E era uma coisa que dava imenso gozo”. De todos os professores entrevistados nesta pesquisa, este foi o único entrevistado que falou nesta espécie de “clube de leitura”.

O entrevistado disse que não tem muito tempo para atividades culturais, como ir ao teatro e ao cinema: “O mais próximo disso seria alugar a um filme e assisti-lo em casa”. Percebe-se, entretanto, certa contradição, quando o

entrevistado menciona seu interesse pela música brasileira: “Raramente perco um espetáculo de música brasileira. Tento não perder o mínimo daquilo que é muito bom. Mas estou a fazer meu trabalho, neste momento”.

Seu processo de alfabetização se deu na escola e demonstra a sua ligação com o magistério através da profissão dos pais: o pai era professor de Física e Química e a mãe, professora de Matemática. Dessa forma, sua alfabetização não foi somente na escola, pois PT2 também mencionou a avó e sua relação com a leitura: “Ela lia, lia, lia... imenso Jorge Amado, lia imenso Eça de Queirós, lia imenso Camilo Castelo Branco, lia, lia, lia...”. Outro dado importante era o oferecimento de livros em aniversários, pelos pais. Enfim, vivia em um ambiente voltado para a leitura, numa casa onde existiam livros e leitores.

O ambiente familiar e a trajetória do professor PT2 apontam para um herdeiro cultural. Filho de professores, mesmo sem ter optado por uma carreira inicialmente ligada ao magistério, o intelectual opta por ser professor universitário e seu trabalho de investigação é um campo bastante inusitado, pelo menos para nós. Numa escola de Medicina, a opção de pesquisa do docente foi analisar os enunciados das avaliações, do ponto de vista de seus aspectos pedagógicos. Observa-se, dessa maneira, o interesse de investigação do professor-pesquisador, que se volta para as questões do ensino, deixando de lado áreas mais prestigiadas no campo acadêmico das ciências médicas.

Uma visão geral dos dados coletados aponta claramente para uma predominância das leituras ocupacionais, em detrimento das leituras recreativas, que são sempre relegadas a um “quando der” e a um “se calhar”. Podemos argumentar, entretanto, que essas leituras ocupacionais podem proporcionar prazer e satisfação tanto quanto algumas leituras recreativas, embora não sejam feitas de modo “descompromissado” ou “desinteressado”.

É importante destacar que, apesar dessa aparente unidade, existe uma especificidade na maneira como cada um dos colaboradores se relaciona com suas leituras ocupacionais. Enquanto se percebe atitudes de um leitor extremamente disciplinado, como é o caso de BR1, encontra-se também um leitor “displicente”, como BR3, que não faz questão de acumular livros. Outra especificidade digna de destaque é o caso do professor PT2, que participou de uma espécie de “clube de leitura”. Ao mirarmos os dados, no seu conjunto e da forma como os organizamos acima, percebemos que o *habitus* de cada um dos professores, apesar de parecer uniforme, apresenta diversidades. Também é válido destacar os comportamentos relativos às conformações familiares dos colaboradores. Aqueles que moram sozinhos normalmente têm muito mais tempo de se dedicar à leitura. Quanto às famílias de origem dos entrevistados, os dados evidenciam herdeiros culturais,

como os casos de BR3 e PT2, ao lado de sujeitos que vieram de meios mais populares e conseguiram ascender ao campo acadêmico. Assim, é possível afirmar que as trajetórias de alguns desses docentes permitem que se relativize a questão de um determinismo social, econômico e cultural. Através da interação constante entre *habitus* e disposições individuais, os sujeitos podem construir e constituir seus capitais culturais, o que lhes permitirá alçar outras posições no campo acadêmico. Aqui, seguindo as análises de Lahire (1997 e 2006), enfatizamos a importância das disposições individuais, isto porque percebemos uma grande conquista de capital cultural por parte de alguns dos entrevistados, capital que, mais que herdado, foi engendrado no cotidiano das relações com os diversos atores sociais.

Para concluir, retomamos o título deste texto, bem como o trocadilho feito no título da última seção. As tarefas cotidianas de um professor universitário demandam, o tempo todo, uma carga de leitura bem maior do que qualquer outra atividade. As leituras ocupacionais “roubam” o tempo da leitura daquele livro que se quer ler ou que se quer reler, por pura distração ou prazer do reencontro com as palavras. Fica aqui a pergunta: são esses sujeitos profissionais professores ou profissionais leitores?

Literatura infantil: as crianças e as leituras

Patrícia Corsino

Universidade Federal do Rio de Janeiro, Brasil

Ao inventar histórias, as crianças são cenógrafos que não se deixam censurar pelo “sentido” (...). Que se indique quatro ou cinco palavras determinadas para que sejam reunidas em uma frase curta, e virá á luz a prosa mais extraordinária: não uma visão panorâmica do livro infantil, mas um indicador de caminhos. De repente as palavras vestem seus disfarces e em um piscar de olhos estão envolvidas em batalhas, cenas de amor e brigas. Assim as crianças escrevem, mas assim elas também lêem seus textos. Walter Benjamin (1993,p.223).

Neste fragmento, Benjamin traz a leitura das crianças como entradas em caminhos nos quais o texto dá apenas uma indicação. As crianças criam as cenas a partir do que têm diante de si, reúnem pequenas coisas, reordenando e recompondo. É ainda o autor que ao comentar uma história de Andersen na qual tudo no livro estava vivo e ao virar a página voltava à antiga ordem, diz que *não são as coisas que saltam das páginas em direção à criança que as contempla, mas a própria criança* penetra-as no momento da contemplação (p.55). As crianças produzem as semelhanças. Pensar a literatura infantil, as crianças, e as leituras exige perceber os textos como entradas, portas e janelas por onde as crianças entram sem cerimônia. Entradas múltiplas e imprevisíveis. Os livros infantis, desde a sua origem, contam com o dialogo entre o texto verbal e o não verbal. E é justamente este espaço dialógico que se abre às ampliações. Algumas imagens, afirma Benjamin, pela descrição ostensiva do conteúdo, *despertavam na criança a palavra* (idem, p.56).

O objeto livro com sua materialidade tátil e visual é um produto cultural histórica e culturalmente situado e a leitura que se faz dele é resultado da interação de sujeitos históricos inseridos também em tempos e espaços determinados. Benjamin ressalta que a leitura das crianças inclui o ver, o apreciar, o imaginar, o sentir e, ainda, o ver, o apreciar, o imaginar e o sentir de novo. Recomeçar mais uma vez do início, recriando o vivido a cada leitura. As observações do autor, crítico da modernidade e colecionador de velhos livros infantis, provoca indagações: que caminhos o livro infantil e a leitura têm tomado no contemporâneo? Que leituras as crianças fazem nas instituições de Educação Infantil?

Este texto tem com objetivo discutir literatura infantil, leituras e apropriações de crianças na idade pré-escolar. Na primeira parte, discute as relações entre literatura e infância, dois conceitos historicamente construídos, trazendo questões

para se pensar a produção literária para as crianças; na segunda parte, aborda a leitura e a literatura como experiência e formação do sujeito; o texto finaliza trazendo mediações do texto literário e apropriações infantis, a partir de eventos retirados de observações do campo empírico da pesquisa *A infância, a cultura contemporânea e a literatura nos espaços de Educação Infantil*, desenvolvida na UFRJ, realizada em cinco instituições de educação infantil da cidade do Rio de Janeiro.

Literatura e infância

Literatura e infância são dois conceitos construídos, portanto, variam conforme a época, o lugar, os grupos sociais e seus valores. Ambos os conceitos se inter-relacionam já que a literatura infantil surge quando se passa a conceber a criança de forma diferenciada do adulto. Por sua vez, a literatura adjetivada como infantil é produzida no seio de uma cultura que define o que é ou não literatura e também o que é ou não infantil ou adequado à infância.

Eagleton (2003) ao se perguntar sobre o que seria literatura tece considerações que problematizam algumas definições. Assim, refuta a idéia de literatura como escrita “imaginativa”, uma vez que não apenas a distinção entre “fato” e “ficção” seja questionável como também a suposição de que os textos históricos, filosóficos, das ciências naturais e outros seriam destituídos de criação ou imaginação. Discute a definição de literatura apresentada pelos formalistas russos que a concebem como uma “forma especial” de linguagem em contraste com a “linguagem comum”. Argumenta que a “estranheza” de um texto não é garantia de que ele sempre foi, em toda parte, “estranho” e, ainda, que o que os formalistas fazem é considerar e tratar toda literatura como poesia. Além disso, todos os tipos de escrita podem, se trabalhados com a devida engenhosidade, ser considerados estranho. Neste caso, *a literatura pode ser tanto uma questão daquilo que as pessoas fazem com a escrita, como daquilo que a escrita faz com as pessoas* (p.9). Outro ponto que questiona é pensar a literatura como um discurso “não-pragmático”, sem finalidade prática imediata, em oposição aos manuais e bilhetes, por exemplo. Argumenta que esta definição deixa a *literatura dependente da maneira pela qual alguém resolve ler e não da natureza daquilo que é lido* (p.11) e, ainda, que em muitas sociedades a literatura teve funções práticas como a função religiosa. O autor traz os julgamentos de valor como tendo muita relação com o que se considera ou não literatura, tirando a idéia de literatura como categoria objetiva, no sentido de ser “eterna” e “imutável”. Entende que as afirmações descritivas se fazem dentro de uma rede, freqüentemente invisível, de categorias de valores, em que há uma partilha de certas maneiras de ver e de

valorizar ligadas à vida social. O autor entende, assim, que a estrutura de valores que informa e enfatiza as afirmações é parte da ideologia, isto é, *da maneira pela qual aquilo que dizemos e no que acreditamos se relaciona a estrutura do poder e com as relações de poder da sociedade em que vivemos* (p.20). Conclui afirmando que a literatura não existe da mesma forma que os insetos e que os juízos de valor que a constituem são historicamente variáveis, mas que esses juízos têm, eles próprios, uma estreita relação com as ideologias sociais. *Eles se referem não apenas ao gosto particular, mas aos pressupostos pelos quais certos grupos sociais exercem e mantêm o poder sobre outros* (p.22).

Nesta perspectiva, considerar um texto como sendo ou não literário significa assumir um ponto de vista partilhado por um grupo que, por sua vez, têm suas concepções sustentadas ideologicamente. Para tecer nosso ponto de vista, tomamos como pressuposto a literatura enquanto arte, independentemente da classificação – se infantil ou não e as teorias de Bakhtin (1926) e de Vigotski (2001) que tratam a literatura nesta perspectiva.

Bakhtin (1926) entende a arte como sendo imanentemente social: *o meio social extra-artístico, afetando de fora a arte, encontra resposta direta e intrínseca dentro dela. Não se trata de um elemento estranho afetando outro, mas de uma formação social, o estético, tal como o jurídico ou o cognitivo, é apenas uma variedade do social* (p.1). O autor faz uma crítica a dois pontos de vista. O primeiro que define como a *fetichização da obra artística* enquanto artefato, uma atitude que restringe a obra de arte a ela própria. Inclui aí o método formal, o qual toma o verbal na perspectiva de sua organização, de sua forma. O verbal não como um fenômeno sociológico, mas como fenômeno lingüístico abstrato, compreendido independentemente da situação social que o engendra. O segundo ponto de vista, ao contrário, restringe-se ao estudo da psique do criador ou do contemplador, resumindo a arte às experiências da pessoa contemplando ou da pessoa criando. Para o autor ambos os pontos de vista pecam pela tentativa de descobrir o todo na parte: *o “artístico” na sua total integridade não se localiza nem no artefato nem nas psiques do criador e contemplador consideradas separadamente; ele contém todos esses três fatores. O artístico é uma forma especial de interrelação entre criador e contemplador fixada em uma obra de arte* (p.3). A arte se torna arte na interação entre o criador e o contemplador, fora disso é um mero artefato ou exercício lingüístico.

Bakhtin sustenta a idéia de que a forma de um enunciado artístico é a expressão direta de avaliações sociais. Julgamentos de valor determinam a seleção de palavras do autor e a recepção desta seleção pelo ouvinte/leitor. Para Bakhtin, cada expressão selecionada é um ato avaliativo orientado em duas

direções – em direção do ouvinte e em direção do herói. *Ouvinte e herói são participantes constantes do evento criativo, o qual não deixa de ser nem por um instante um evento de comunicação viva envolvendo todos os três* (p.11). Assim, embora a forma esteja fixada num material, a significação da forma tem relação não com o material, mas com o conteúdo. A seleção do conteúdo e a seleção da forma constituem um único ato estabelecendo a posição básica do criador; e neste ato uma e a mesma avaliação social encontra expressão. O artista, pela mediação da forma artística, assume uma posição ativa com respeito ao conteúdo. Neste sentido, forma e conteúdo são indissociáveis e marcam a posição do criador.

O autor, herói e ouvinte são fatores constitutivos essenciais da obra. Eles são determinantes da forma e do estilo desde dentro. Mas o ouvinte/leitor é *participante imanente* é um fator intrínseco da obra e não coincide com o público leitor, localizado fora da obra cujos gostos e exigências podem ser conscientemente levados em conta. Para Bakhtin, este “levar em conta” *é incapaz de um efeito direto e profundo sobre a forma artística no processo de sua criação viva. E mais, se o fato de levar conscientemente em conta o público leitor vem ocupar uma posição de alguma importância na criatividade do poeta, esta criatividade inevitavelmente perde sua pureza artística e se degrada a um nível social mais baixo* (p.12).

O ouvinte/leitor não pode ser confundido com uma pessoa real. O interesse externo do autor indica a perda do ouvinte imanente e a cisão do *todo social* que determina intrinsecamente os julgamentos de valor e a forma artística de seus enunciados poéticos.

Para o filósofo da linguagem, a forma de um enunciado artístico é determinada: pelo valor hierárquico do herói ou evento funcionando como o conteúdo do enunciado; pelo seu grau de proximidade com o autor, e pelo ouvinte e sua inter-relação com o autor, de um lado, e com o herói, de outro. *Todos esses fatores são os pontos de contato entre as forças sociais da realidade extra-artística e a arte verbal. Graças precisamente a esta espécie de estrutura intrinsecamente social que a criação artística possui, que ela é aberta em todos os lados à influência dos outros domínios da vida* (p.15).

A concepção bakhtiniana provoca questões em relação às obras de literatura infantil. Ao analisar cada produção cabe indagar: como se estabelece a relação autor, herói e ouvinte/leitor? Que *ouvinte imanente* está manifestado na sua obra? Com que julgamento de valor o autor constrói o herói em correlação com este ouvinte/leitor infantil? A concepção de infância do autor é, portanto, determinante do seu texto. O exemplo a seguir, fragmentos do livro João Felpudo, de Heinch Hoffman (tradução brasileira com 1ª edição em 1942), evidencia não apenas um

leitor infantil presumido, como também um público leitor que parece ocupar uma posição central na obra:

Quando o menino é bonzinho,
Vem do céu o Anjo-da-guarda
Com soldado, cavaleiro,
Tambor, espada, espingarda...
E um livro lindo também,
Como este que vocês lêem.

Quando é mau... Vocês vão ver
O que pode acontecer...

Paulina Pega Fogo

Estão em casa, sozinhos,
Paulina e seus dois gatinhos.

Paulina é um tanto levada
Brincou muito e então cansada
Do que foi se lembrar?
Vendo um fósforo na mesa
Disse- "Que bom! Que surpresa!
Vamos ter um novo jogo"
Miau, miau não brinque com fogo
Diz o gatinho a Paulina
-Deixa os fósforos, menina!"

Paulina desobedece.
Risca um...dois... A chama desce

E o vestido se incendeia.
Paulina grita, esperneia,
E quanto mais ela tenta
Correr, mais o fogo aumenta!

Que triste história foi esta!
De Paulina eis o que resta:
Uma gatinha chorando,
Um gatinho soluçando,
Dois sapatinhos no chão,
Uma fumaça e um carvão!

É evidente um ouvinte/leitor/criança a ser educado, a forte intenção moralizante da obra expressa no herói como conteúdo materializado no texto e nas ilustrações. Quando foi escrito, a visão de infância como período de preparo e de criança em falta em relação ao adulto, restringia a literatura infantil à função educativa-instrucional, com perda do valor artístico.

A literatura infantil surge a partir do registro de contos de tradição oral que eram exemplares não apenas para as crianças. Os contos de fadas, mesmo com cunho moralizante, segundo Benjamin (1993) são os primeiros conselheiros das crianças e trazem uma característica que os distingue dos textos meramente educativos como João Felpudo: a cumplicidade da natureza com o homem e a sua libertação do pesadelo mítico. E é justamente essa possibilidade do ouvinte/leitor dos contos de fadas vencer o mundo místico com astúcia e coragem que dá à moralização o status de conselho. A centralidade destas narrativas na mensagem e no herói provoca o imaginário à continuidade da história pela ambigüidade que se abre no leitor e no não apenas nos fatos narrados. Nos contos de fadas a voz autoritária do adulto sobre a criança se dilui nesta ambigüidade que se instaura, pois vencer o mito é também a libertação do narrador cúmplice e partícipe de uma infância da própria humanidade.

Segundo Yunes (1984) é só a partir do século XX, depois das pesquisas de cunho psicanalítico e pedagógico, voltadas para a criança, que a linguagem dos

textos infantis se desloca da mensagem para poder prevalecer a função pedagógica. A literatura infantil passa a ser então confundida com a pedagogia. Desta forma, a informação e não exatamente o conselho passa a ser predominante. O reflexo dessa concepção no texto aparece na forma como a narrativa é conduzida: é a voz de um adulto, que sabe e conhece, que passa uma mensagem para um menor que recebe, compreende e copia.

Mas foram também os estudos deste século que deram base para a construção de um novo paradigma no qual a criança passou a ser pensada na sua singularidade e especificidade em relação ao adulto, concebida como agente social pleno, sujeito ativo constituído na cultura e também produtor de cultura, cidadão de direitos desde o nascimento cujas ações no mundo passam a ser entendidas como formas de re-elaboração e re-criação. Este sujeito histórico social passa a ser pensado também na pluralidade e diversidade de sua vida, portanto não mais como uma criança em abstrato e uma infância idealizada, mas as crianças e suas infâncias. Este novo paradigma convoca os adultos a olharem as ações das crianças na sua dinâmica de constituição da subjetividade e de transformação do mundo. E voltamos a pergunta: como as crianças ouvintes/ leitores participam intrinsecamente das obras literárias contemporâneas?

Como mudanças paradigmáticas não são simples e não se fazem de formar linear, diferentes concepções de infância e literatura infantil coexistem e subjazem os julgamentos de valor dos adultos/autores. A infância como construção social, está em permanente construção e comporta posições até mesmo antagônicas. Assim, enquanto uns apostam nas competências e capacidades das crianças, outros enfatizam as faltas e incompletudes. A inter-relação entre o autor, o herói e o ouvinte/leitor se faz nesta arena, convivendo concepções diversas, conforme a escala hierárquica de valores do autor/criador. Basta fazer uma rápida observação na produção literária destinada ao público infantil para se observar as diferentes posições: do texto que intentam tutelar, dirigir, educar, informar o ouvinte/leitor e suas leituras aos que o convoca a participar da obra, a fazer suas entradas singulares, que favorecem o pensar, o interagir, o brincar, o refletir, o inferir, o opinar, o sentir, o apreciar, o rir, o chorar.

À guisa de se traçar um paralelo com os poemas do livro de João Felpudo, trazemos a história de *João Felizardo, o rei dos negócios*, uma adaptação de Ângela Lago do conto dos irmãos Grimm. Neste livro, de projeto editorial bem cuidado, frases curtas e ilustrações detalhadas, há um intenso diálogo entre texto verbal e visual. O leitor/apreciador é convidado a participar das trocas de João Felizardo, um menino que ganhou uma moeda de herança e a troca por um cavalo e vai trocando um animal por outro até ficar com um pássaro, que voa. As

ilustrações, de página inteira, vão acompanhando as trocas e afastando o herói da cidade. Ao final, na praia, resta uma pena e João Felizardo, o rei dos negócios, foi feliz por um imenso segundo. O herói é um menino autônomo que conduz sua própria vida nas trocas de seu trajeto até a praia.

Muitos seriam os comentários sobre este livro, mas trago duas questões à luz do já exposto; Quem é o leitor presumido desta obra? O que o leitor aprende com esta leitura? O que este livro provoca no leitor/contemplador?

Vigotski (2001) faz considerações sobre a arte que dialogam com as discussões Bakhtin e as amplia. Seu enfoque estético tem fundamento psicossocial, ou seja, a arte deve combinar as vivências individuais com a recepção do produto estético percebido como produto social e cultural: *a arte é o social em nós. Mesmo que o seu efeito se registre em um indivíduo à parte, isso não nos autoriza a afirmar que as raízes e a essência da arte sejam individuais, assim como seria ingênuo imaginar o social apenas como coletivo* (idem p.xii). O autor destaca a importância da emoção na arte tanto na produção da obra quanto na apreciação. Para o autor, a arte deve ser capaz de abordar emoções contraditórias, de forma a construir um curto-circuito emocional no apreciador.

Vigotski e Bakhtin entendem o artístico nas interrelações entre criador, contemplador e obra. Cada um destes três elementos constitutivamente sociais. O social expresso na própria obra e no que ela desencadeia do outro e o social constitutivo tanto do artista-criador quanto do contemplador-apreciador.- sujeitos históricos, socialmente situados.

Leitura, literatura e experiência

A produção e a recepção de uma obra literária se interrelacionam. Na materialidade de um livro destinado ao público infantil está um leitor presumido. O leitor, diante da materialidade da obra que se dar a ler, faz sua leitura. Yunes (2003) afirma que *a leitura antecede a escrita e é sua matéria prima, uma vez que decifrar um código é insuficiente para dizer-se o que é um texto.* (p.8). Para a autora, num exercício de leitura do mundo, a palavra materializa-se em texto. Antes, só o mundo era dado a ler. Agora o texto, o relato do mundo, que pode estar sobre diferentes suportes, dá

a impressão de ser a única legibilidade possível. Trazendo as palavras de Guimarães Rosa afirma: *A vida é também para ser lida. Não literalmente, mas no seu supra-senso.*

Na relação entre leitura de mundo e leitura da palavra. Paulo Freire (1997) postula que a primeira antecede a segunda. Entretanto, a leitura da palavra implica numa continuidade da leitura de mundo e também na sua reescrita. Ao mesmo tempo em que o sujeito lê o mundo, também o (re)-escreve e, ao fazê-lo, torna-o legível para si mesmo e para o outro. Assim, o mundo - espaço/meio/ambiente sócio-histórico e cultural - vai sendo construído enquanto texto, possibilitando novas leituras e novos textos. E neste movimento a leitura dos textos produzidos torna-se também uma aproximação do mundo.

Segundo Benjamin (1993), em todo ato de leitura está presente a semelhança extra-sensível do mundo, o que confere à leitura sua dupla significação: profana e mágica. Os antigos encontraram semelhanças, por exemplo, entre a posição dos astros no instante do nascimento e as pessoas, criando a astrologia, cuja semelhança está na ordem do extra-sensível. Esta semelhança extra-sensível está presente na linguagem e na arte. A escrita transformou-se assim, ao lado da linguagem oral, num arquivo de semelhanças, de correspondências extra-sensíveis. Desta forma, desenvolveu-se a dimensão “mágica” junto à dimensão semiótica da linguagem. O texto, seja oral ou escrito, *é o fundo do qual emerge o semelhante num lampejo.* E como esta semelhança extra-sensível está presente em todo ato de leitura: *mesmo a leitura profana, para ser compreensível, partilha com a leitura mágica a característica de ter que submeter-se a um tempo necessário, ou antes, a um momento crítico que o leitor por nenhum preço pode esquecer se não quiser sair de mãos vazias* (p.113).

Nesta perspectiva é necessário um tempo para deixar emergir a semelhança extra-sensível dos objetos, dos sons, das imagens e das palavras. Tempo de encontro do sujeito consigo mesmo, com a sua história, com a sua subjetividade, com suas experiências de vida, com seu acervo particular de imagens recolhidas e de textos lidos. Tempo de processar, de ler tanto o traço visível, quanto o invisível de uma obra, de um gesto ou texto, trabalho de reescrita do vidente, do adivinha e também de cada um. Este tempo que não é apenas cronológico e linear, mas psicológico e fragmentado, portanto subjetivo. Tempo próprio da infância, que se transforma no curso da vida de cada um, tempo também reflexo do nosso tempo sócio histórico e cultural.

Em cada texto que lê, o sujeito-leitor aumenta seu acervo podendo fazer novas leituras de si mesmo, do outro e do mundo. Num processo contínuo, leitura de mundo e leitura da palavra se valem mutuamente, pois uma amplia a outra. A

leitura da palavra abre outras possibilidades para a leitura de mundo e vice-versa, num movimento sem rupturas. A dimensão da leitura enquanto experiência está justamente na possibilidade de ir além do momento em que se realiza, podendo desempenhar importante papel na formação.

Para Todorov (2009), a função primordial da literatura é *de permitir que cada um responda melhor à sua vocação de ser humano* (p.24). Pois a literatura tem a capacidade de ampliar diante do homem sua própria humanidade, descortinando outras realidades diante de si, bem como o poder de emocionar e sensibilizar o leitor. *A realidade que a literatura aspira compreender é, simplesmente a experiência humana* (p.77). O autor anuncia que a literatura está em perigo, reduzida a análises históricas, que partem do princípio que o texto é um objeto silenciado, estéril, morto, passível apenas da dissecação: *na escola, não aprendemos acerca do que falam as obras, mas sim do que falam os críticos* (p.27). Perdendo seu status de arte, o texto literário sequer dialoga com o homem. Postula o autor que o ensino da literatura seria possibilitar que *aquele que a lê e a compreende se torne não um especialista em análise literária, mas um conhecedor do ser humano* (p.93).

A seguir trazemos episódios de turmas de educação Infantil, colhidas em campo empírico de pesquisa, para discutir relações, interações e apropriações de crianças na idade pré-escolar a partir da leitura literária.

A título de considerações finais: as crianças e a leitura na educação infantil

As observações nas turmas de educação infantil nas quatro escolas observadas e no centro cultural reiteraram o quanto as concepções de infância e de literatura dos professores são determinantes das leituras das crianças. Das escolhas dos livros, passando pelo ambiente e clima da turma no momento da leitura, ao que se faz com o texto e o objeto livro tudo corrobora para as interrelações e continuidades da leitura de mundo a da palavra e vice-versa. A relação leitor/apreciador-obra-autor, para as crianças pequenas passa pelo mediador da leitura. É ele quem compõe o acervo, quem seleciona o que será lido, quem organiza o ambiente e o tempo para a leitura, quem lê e interpreta o texto dando seus acentos e entonações, quem articula os sentidos apreendidos e os coloca em negociação no coletivo, quem dá maior ou menos espaço para as vozes dos textos e ilustrações e para as interações das crianças. Perguntas e intervenções feitas antes, durante e depois de uma leitura oralizada são determinantes da experiência que se abre ao leitor, assim como o tempo aberto para cada criança manusear os livros e fazer suas leituras.

Os eventos observados no campo evidenciam as inter-relações entre autor/obra/leitor e a dialética desta relação. Uma obra literária cujo leitor criança

presumido é chamado a participar do texto, que apresenta heróis e situações que incitam o imaginário e provocam risos e brincadeiras, concebida de forma aberta para crianças co-autoras do texto, pode se tornar fechada quando a leitura é conduzida de forma linear. Sob a tutela da professora, imaginação e realidade são postas em oposição, o texto literário se quebra para dar lugar à mera informação. Assim, mesmo as obras consideradas de qualidade literária, só se realizam enquanto literárias na leitura.

A professora estava explicando às crianças como iriam fazer a atividade sobre o livro a Arca de Noé, de Vinícius de Moraes.

Professora: Para entrar na Arca de Noé pode entrar sozinho?

Todos: Não.

Luisa: Tem que entrar de par em par. O macho e a fêmea.

Professora: Então, nós temos o cavalo e a...?

José: Cavala.

Professora: Não é cavala, é égua. A Tartaruga macha e a tartaruga?

Todos: Fêmea.

Professora: O Papagaio macho e a papagaia fêmea. Agora, que cor nós vamos pintar o cavalo?

Marina: Azul.

Professora: Azul, não existe cavalo azul. Fechem os olhos e agora imaginem um cavalo azul, agora vermelho e um roxo. Agora abre o olho. Todo mundo imaginou?

José: Eu não imaginei nenhum dos três !!!

Professora: Vocês se lembram da história do *Pinote*, o *fracote* e o *Janjão*, o *fortão*. Que ele não conseguia mandar na imaginação do menino? Na nossa imaginação, a gente pode tudo, mas vocês já viram cavalo azul de verdade?

Todos: Não.

Professora: Então vamos pintar de cor de verdade e depois eu posso dar uma folha para pintarem como quiserem (E2).

A professora da E1 contou a história do livro *Vizinho, vizinha*, de Roger Mello, que tem três ilustradores: Mariana Massarani, que ilustra a casa do vizinho, Graça Lima, desenha a casa da vizinha e Roger Mello, autor do texto verbal que ilustra o corredor, entre os apartamentos do vizinho e da vizinha. O texto verbal mantém um intenso diálogo com as narrativas visuais. Trata-se da história de um vizinho que tem e faz coisas inusitadas na sua casa- como molhar plantas com um escafandro- e de uma vizinha que também faz e tem muitas coisas interessantes – uma estante de livros do tamanho do mundo, um rinoceronte embaixo da pia. Ambos só se encontram no corredor. Dizem bom dia, boa tarde e nada mais. Um dia a sobrinha do vizinho foi visitá-lo no mesmo dia em que o neto foi à casa da vizinha. Quando as portas se abrem as crianças começam a brincar e misturam as coisas das duas casas. No final da história, as crianças vão embora e o vizinho e a vizinha ficam

imaginando as coisas interessantes que cada um tem e nas possibilidades de se encontrarem.

As crianças gostaram bastante deste livro e tiveram a oportunidade de fazer suas leituras contando para os amigos e conversando durante a leitura:

As crianças brincam de ler. Na biblioteca as crianças se juntam e Maria começa a contar a história que a professora havia lido: Era uma vez uma cidade chamada Rio de Janeiro, o vizinho, a vizinha (mostra o livro). De repente (olha o livro escondidinha) ... um jacaré dormindo (vira o livro mostrando para o grupo). É, mas olha o que aconteceu, ele não disse que tinha uma máquina de chover. Porque tinha embaixo da pia dela (mostra o livro para o grupo) um ceronte! O jacaré está dormindo (falando baixinho)... Foi embora o jacaré porque ele não morava naquela casa e acabou a história (fecha o livro).(E1)

Menino: O tapete mudou

A professora voltou às páginas anteriores para conferir se o tapete havia mudado mesmo e constatou que sim e exclama: Ah! Eram notas musicais, agora são ondas.

Paulo: Como pode o tapete ter mudado, se ela foi na rua, não estava em casa e o tapete mudou?

Professora: Isso é um desafio

Miguel: Eu acho que foi o faxineiro

Maria: Mas como se ninguém viu?

Joana: Mas como ele limpa, ele tem o direito de trocar

Paulo: Mas como ele pode trocar se os tapetes ficam dentro de casa?

Miguel: Ah! Já sei, parece que ela coloca um em cima o outro e aí troca

Luis: Sabia que o meu tapete troca sozinho?

Ana: A vizinha está parecendo a Marieta (E1)

Os diálogos trazem re-elaborações das crianças no contar a história para os amigos, trazem as leituras de detalhes percebidos nas ilustrações, abrindo um diálogo intertextual e também inter-semiótico. Já que imagem, texto verbal, leituras de mundo se entrelaçam. Ana aponta a semelhança entre a vizinha e um outro personagem- Marieta- da mesma ilustradora, revelando reconhecimento do estilo de Massarani. Enfim, as crianças entram de forma singular no texto verbal e no visual. Suas leituras polissêmicas se ampliam na medida em que se abre espaço para enunciarem suas idéias. O texto polifônico ganha ainda mais vozes quando esta enunciação tem garantido o espaço da liberdade da leitura. Assim, palavras, histórias, rimas, imagens vão compondo um mosaico de possibilidades de trocas e de apropriações, nem sempre previsíveis nas práticas pedagógicas.

Mergulhados no infomar

Podemos viver sem os livros. Podemos viver sem o jornal. Podemos viver sem o rádio, sem a televisão, sem o cinema, sem o computador. Mas a falta dos livros nos exclui de um universo de prazer e de descobertas. Como defende Guzmán (2007),

... "leer novelas es un proceso progresivo de creación de problemas que al terminar el libro pueden encontrar una solución iluminadora y hasta deslumbrante, pero no necesitan encontrarla. Aún sin eso, el lector descubre que recorriendo las páginas ha llegado a algunas comprensiones que antes nunca tuvo, comprensiones a veces de sí mismo, a veces del propio mundo, a veces de ambos, y que también, tal como las otras actividades de lectura, ésta no lo ha dejado igual, aunque casi nunca habrá alguien tan consciente de sí mismo que pueda decirse con claridad en qué ha consistido el cambio."
(Guzmán, 2007 p.47)

Da mesma forma, a vida sem o rádio, sem o jornal, sem a televisão, sem o cinema, entre outros meios de comunicação, nos exclui de um mundo de informações, separando-nos do contato com outras pessoas, outros lugares, outras culturas, em suma, impedindo-nos o acesso à informação, à cultura, a outras formas de pensar.

Esse acesso à informação deveria ser um direito das pessoas. Além desse direito, a elas deveria ser possibilitado o acesso fácil a esses dados, sob pena de que elas, sem eles, sejam excluídas de parte das atividades da sociedade.

Podemos viver sem o computador, mas sem ele somos excluídos de uma sociedade digital que se constitui e se consolida a cada dia, passando a ser, em muitos casos, uma necessidade e não um luxo.

Uma criança que tem acesso à Internet, que se comunica com os amigos pela web, que navega, que lê, que escuta música, que assiste a vídeos, que busca informação, certamente será uma pessoa diferente daquela que não pode fazer nada disso. Usada com equilíbrio e com bom senso, a informática é mais uma fonte de informação e de desenvolvimento cognitivo. Quem não tem isso está em desvantagem ou, no mínimo, está em um regime de possibilidades mais limitadas. Ler e escrever no computador, por exemplo, possivelmente gera no usuário uma forma diferente de conceber a escrita, tanto no que se refere aos mecanismos de escrita (poder facilmente deletar, trocar partes do texto de lugar, controlar o tamanho, cor e design da fonte, formatar o texto, entre inúmeras outras) e de leitura (navegação no texto para sua leitura) quanto no que diz respeito às funções da escrita, que parecem mais vivas, mais reais, mais dinâmicas no computador (isso pode mudar logo com a sofisticação da tecnologia das webcams, mas, atualmente, interagimos muito por escrito com e-mails, MSNs, entre outros). As funções da escrita e a necessidade dela podem ficar mais claras para quem lida com o computador, uma vez que esse equipamento exige, na maioria das vezes, a leitura e/ou a escrita. O uso do computador pode mudar nosso jeito de pensar, assim como o fizeram o livro de bolso, as calculadoras, o lápis, a imprensa entre outras tecnologias da escrita.

Isso não significa dizer que a informática representa uma revolução total em relação à leitura e à escrita. Muita coisa muda com a informática, muita informação está disponível na Internet, novos gêneros textuais são criados, novas formas de ler e de escrever são desenvolvidas. Por outro lado, no entanto, para serem leitores, independente do suporte do portador de texto, de o texto estar impresso ou projetado na tela, há habilidades de leitura que são essenciais para a compreensão do texto. Essas habilidades podem variar de acordo com os gêneros, mas não há habilidades de leitura que sejam específicas do ambiente impresso ou do ambiente digital. Há sim diferenças na navegação dos textos, em como e onde o leitor vai encontrar as informações que procura (biblioteca, índices x mecanismos de busca), mas, uma vez encontradas, a compreensão do texto não depende tanto de o texto ser impresso ou digital, mas das habilidades de leitura que o leitor já desenvolveu. (há uma discussão sobre a influência do formato hipertextual na leitura e na produção de texto, que não nos cabe desenvolver, aqui, mas que pode ser conhecida com a leitura de textos como Rouet, Landow, Lévy, Coscarelli, Ribeiro etc. Acreditamos, no entanto, que se o leitor tem habilidades leitoras bem desenvolvidas, ou seja, se é um bom leitor, ele transfere essas habilidades para

novos ambientes (Ribeiro, 2003) sendo também bom leitor de novos gêneros em novos suportes ou ambientes assim que se familiariza com os mecanismos de navegação dele.)

Não devemos pensar também que o computador é um vilão que interfere negativamente na escrita, que dificulta a leitura, que deixa os usuários perdidos e mal informados. Estudos como o de Santos (2003) mostram que estudantes, quando bem orientados, são capazes de explorar bem a variante lingüística que a situação demanda.

A informática e, sobretudo, a Internet, criaram – e ainda estão criando – novos gêneros textuais (e-mail, chat, sites, banners, floaters, scraps etc), novas formas de escrita (web jornalismo), e adaptando ou recriando novas formas para gêneros já conhecidos (como o diário que se transforma em blog e passa ser público, sem necessariamente perder seu tom intimista).

Independentemente do julgamento que se faz do universo digital é inevitável que ele seja objeto de uso e de reflexão na escola, uma vez que faz parte da vida contemporânea. Àqueles que ainda não têm acesso a ele, deve ser dada a oportunidade de conhecê-lo e de se familiarizar com esse ambiente, a fim de que não tornemos ainda maior a exclusão social, impedindo que essas pessoas aumentem o número dos analfabetos funcionais ou digitalmente iletrados (Pereira, 2005). Os ambientes digitais não são mais “vaso de rosa na janela dos fundos”.

Sendo assim, é importante que livros didáticos (LD) ajudem o professor a fazer uso desse material. O LD pode ter um papel muito importante neste momento em que o computador e suas redes estão entrando na vida das pessoas. O LD pode encorajar os professores a querer conhecer melhor esse novo universo, bem como mostrar a eles como esse universo pode fazer parte de suas aulas.

Acreditando no importante papel do LD neste momento de incorporação das novas tecnologias aos ambientes escolares, muitos autores desses materiais já lançam mão de materiais da Internet em suas coleções. Na próxima seção, vamos mostrar que elementos estão sendo incorporados ao LD e que trabalho tem sido feito com eles.

O PNLD estimula mudanças

É sabido que o livro didático é uma das principais fontes de consulta dos professores brasileiros, atuando, inclusive, como seu principal formador, como afirma Batista (2003)

“O livro didático brasileiro se converteu numa das poucas formas de documentação e consulta empregadas por professores e alunos. Tornou-se, sobretudo, um dos principais fatores que influenciam o trabalho pedagógico, determinando sua finalidade, definindo o currículo, cristalizando abordagens metodológicas e quadros conceituais, organizando, enfim, o cotidiano da sala de aula.” (Batista, 2003,p.28)

Isso é muito sério, tendo em vista que o professor, dos grandes, médios e pequenos centros, sem muita possibilidade de fazer cursos de extensão e de formação continuada, e em busca contínua de material a ser aplicado em sala busca(va) apoio **direto**, no LD adotado, e **indireto**, em outros livros didáticos não adotados que usa(va) de forma paralela, para reprodução de exercícios de aprofundamento e confecção de provas. Entretanto, o material em que se apoia(va), era precário. Desde 1960, estudos vinham denunciando a baixa qualidade do material dos livros de então, que, em geral, veiculavam sérios problemas conceituais e metodológicos, além de alta carga discriminatória (Batista, 2003). É aqui que o Programa Nacional do Livro Didático (PNLD) entra em campo!

Atacando a raiz do problema, estabeleceram-se critérios amplos e cuidadosamente pensados que serviriam de parâmetros para a análise da qualidade dos livros didáticos dirigidos ao ensino fundamental. Esses critérios cercam, entre outros, os quatro eixos do ensino da língua (escrita, produção de textos, conhecimentos lingüísticos e oralidade), além propor a produção de um Manual do Professor – com metodologias bem explicadas e orientador da prática pedagógica – visando à melhoria da qualidade dos livros didáticos a serem distribuídos gratuitamente para professores e alunos. Não há como negar que, ao longo desses 11 anos, o PNLD vem mudando a cara do LD brasileiro, desde que foi implantado em 1996, fazendo com que hoje chegue às mãos dos professores e dos alunos livros de melhor qualidade, capazes de atender a diferentes posicionamentos teóricos e metodológicos para o ensino da língua.

Dentre os critérios de análise estabelecidos pelo PNLD, alguns são especialmente importantes para a proposição e incorporação de novas tecnologias, visando ao ensino da língua, em ambientes escolares. Vejamos alguns:

Quanto à **coletânea**, propõe-se :

- 1- deve ser multimodal;
- 2- os gêneros textuais selecionados devem estar associados a esferas de uso socialmente relevantes como a jornalística, científica, literária etc., do ponto de vista do jovem do Ensino Fundamental.

Quanto às atividades de **leitura**, dentre outros critérios, propõe-se:

- 1- propiciar o desenvolvimento da proficiência;

- 2- colaborar para a formação do leitor em diversos tipos de letramento (literário, midiático, digital, jurídico);
- 3- propor apreciações e valorações estéticas, éticas, políticas e ideológicas envolvidas na formação do leitor crítico;
- 4- explorar a intertextualidade e/ou a interdiscursividade entre diferentes textos e linguagens;
- 5- explorar a compreensão das relações que se estabelecem entre texto verbal e imagem em textos multissemióticos;
- 6- incentivar professores e alunos a buscarem textos e informações fora dos limites do próprio livro.

Quanto à **produção de textos**:

- 1- explorar a produção dos mais diversos gêneros e tipos de texto, contemplando suas especificidades;
- 2- apresentar, discutir e orientar o uso dos aspectos relativos à variedade lingüística pertinente;
- 3- propor referências e/ou exemplos dos gêneros e tipos de texto que se pretende ensinar o aluno a produzir;

Quanto ao **projeto editorial**:

- 1- ter um sumário funcional na localização das informações;
- 2- ter uma estrutura hierarquizada (títulos, subtítulos etc.), evidenciada por meio de recursos gráficos;
- 3- ter recursos de descanso visual na diagramação dos textos mais longos, de forma a não desencorajar a leitura;
- 4- oferecer recurso a diferentes linguagens visuais.

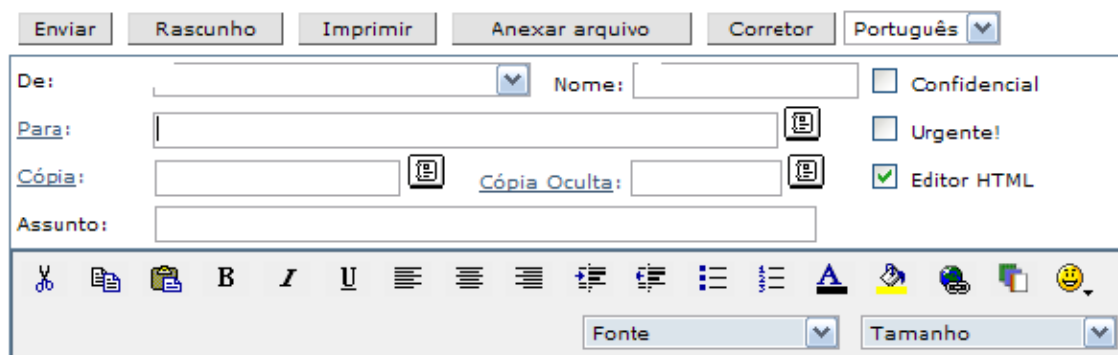

Você, leitor, dever ter percebido que não há, dentre os critérios elencados, nada que **force explicitamente** a entrada das novas tecnologias nos LDs, mas há elementos que estão relacionados a elas, como o caráter multimodal da seleção textual, a colaboração para o letramento midiático e digital, a exploração das relações entre texto verbal e imagem em textos multissemióticos e o incentivo da busca de informações fora dos limites do próprio livro. Esses quesitos podem ter estimulado o aparecimento de elementos das novas tecnologias nos LDs. Outras razões podem ser acrescentadas: i) a necessidade de trazer para os livros gêneros textuais da esfera digital; ii) a busca de um livro com aparência arrojada e inovadora, que parecesse agradável aos jovens sendo funcional, bonito, “descolado” e moderno; iii) a necessidade de atuar no processo de letramento digital, iv) o oferecimento de textos de diferentes mídias para atividades variadas de leitura e de produção de textos; v) a necessidade de oferecer apoio pedagógico online aos professores, bem como endereços da WWW que ampliassem a visão de um assunto qualquer em estudo, atraindo o docente para a adoção do livro.

Diante dos critérios estabelecidos, autores e editores, procurando atender às exigências do PNLD, começaram a dar um ar de modernidade às suas produções – nada mais moderno que a Internet! O primeiro passo foi a mudança de formatação das páginas, ou seja, alguns livros passaram a ter aparência de página de Internet.

Ficaram cheios de quadros, linhas, informações paralelas, textos mais curtos a título de explicações, palavras em negrito, itálico, com fontes diferenciadas – funcionado como links – muito uso de sinais típicos da rede como @, e-, www dentre outros.

Rápido constatou-se que ser arrojado não passava simplesmente pela mudança da forma, do visual do livro. O passo seguinte foi a inserção, nos LDs, de textos dos mais variados gêneros cuja fonte é a Internet. Há muitos textos retirados de sites da Internet, embora não sejam textos típicos dela e não tratem de temas relacionados à informática ou temas afins. Vê-se, portanto, que alguns autores têm a rede como fonte de consulta e de busca de textos. Um terceiro passo, foi a inserção de análise de gêneros típicos do ambiente digital, nos LDs. Pode-se dizer que alguns autores iniciaram um processo de incorporação em suas obras de estudos relevantes acerca de alguns **gêneros digitais**, tais como e-mail, chats e blogs. Esses trabalhos, entretanto, estão ainda muito voltados para o simples reconhecimento das partes que compõem cada gênero, num estudo classificatório e pouco se fala dos usos, linguagem e função social dos mesmos.

Assim, em se tratando de um e-mail, por exemplo, há trabalhos em que se procura analisar as partes do gênero, reconhecer cada elemento que o estrutura, ou seja, o que é uma “cópia”, quando se usa “cópia” ou “cópia oculta”, pra que serve o link “anexar arquivo”, como usar o corretor ortográfico, como postar uma mensagem urgente etc. Ensinados esses e outros tópicos formais, parte-se, então para uma produção de e-mail – ora usando o computador, ora em folhas soltas – e pára-se por aí.

Fonte: www.terra.com.br

O que falta a essa proposta? Dentre outras questões, verificar o gênero em seu uso, criar situações reais de troca de e-mails, conversar sobre a questão da adequação do registro a ser usado em função do objetivo do texto e de quem vai lê-lo. Além de trabalhar o gênero, voltado para a questão da sua composição e da

escolha lexical que ele envolve, associar a isso um real trabalho com a linguagem, contribuindo de forma mais efetiva para o letramento digital dos estudantes.

Outra característica da Internet já bem incorporada aos LD é a indicação de **endereços de sites educacionais** que sejam valiosos para os professores usarem como apoio pedagógico. Essas entradas tímidas no LD vêm gerando uma rápida e importante mudança, influenciando os autores que ainda não haviam percebido a importância do LD no processo de letramento digital. Vêm, também, alertando o professor para a necessidade de se letrar digitalmente, para melhor orientar seus alunos. Nesse sentido, quando o livro trabalha adequadamente os diversos gêneros digitais, o professor vai também aprendendo e tendo novas idéias que, aos poucos, vai colocando em prática.

Elementos Incorporados aos LDs

Passamos agora a analisar mais alguns casos das novas tecnologias que podem ser vistos nos livros didáticos inscritos no PNLD 2007 e em outros livros didáticos de Português que analisamos.

1) **Uso de links** – é comum, nos livros didáticos, como também tem acontecido em textos de revistas e jornais, o uso de links, ou seja, de ligações que se estabelecem visualmente entre o texto principal e textos normalmente apresentados em boxes. No exemplo a seguir, informações breves sobre Aníbal Machado e sobre a Cinelândia, são dadas como se fossem aqueles links azuis tão utilizados na Internet, ou como as caixas de informação, que aparecem quando passamos o mouse sobre alguns ícones na tela. Essa é uma forma de trazer para o impresso alguns elementos da tecnologia da escrita digital.

Estou para começar a escrever o bilhete solicitado. Mas me ocorre um outro texto. O “telegrama ao futuro” que Aníbal Machado insere no romance *João Ternura*. É um telegrama que alguém lê em meio ao Carnaval na Cinelândia. Temos que divulgá-lo:

Aníbal Machado — romancista e contista, 1894-1964.

Largo na região central da cidade do Rio de Janeiro.

Fonte: Soares, M. *Português (2004), uma proposta para o letramento*. São Paulo: Editora Moderna, p 81

2) **Configuração dos textos adequando-os ao formato de páginas da Internet** – também é comum encontrarmos layouts de páginas que se assemelham a páginas da Internet ou que se utilizam de algumas estratégias usadas nos ambientes digitais. Embora muitas vezes seja difícil saber exatamente quem influencia quem – se é o impresso que influencia o digital ou se é o digital que exerce influência sobre o impresso.

3) **Indicação de sites para aprofundamento de temas em discussão** – Muitos sites têm sido indicados nos LD como sugestões para professores e alunos encontrarem mais informações sobre os temas em estudo, naquela determinada parte do material didático. Embora raramente o LD ofereça sugestões aos professores sobre como explorar os sites indicados, o trabalho de selecionar sites interessantes e relacionados com as questões que estão sendo trabalhadas, pode ser de muita valia para os professores que ainda não sabem onde encontrar determinadas informações na Internet ou para aqueles que não dispõem de muito tempo para fazer isso. Um exemplo dessas indicações pode ser visto a seguir

Para saber mais

SE LIGUE NA INTERNET

 www.escolanet.com.br

Além do acesso a várias escolas de todo o país (são mais de 170 só em São Paulo), o site dispõe de 18 matérias escolares para quem quiser estudar.

 www.futuro.usp.br

A Escola do Futuro é vinculada à Universidade de São Paulo (USP).

4) **propostas de desenvolvimento de projetos utilizando programas de computador variados** – Alguns livros, propõem projetos utilizando diferentes programas como Excel, Word, Animator, programas de animação, Power-point etc. Entretanto, não há indicação de como usar esses programas. São apenas citados como se fossem de uso rotineiro para incrementar uma aula, tornando-a um pouco mais interessante, sem considerar que muitos profissionais ainda não sabem lidar com alguns programas e nem sabem como acessá-los gratuitamente na rede.

5) Atividades de reconhecimento das ferramentas de navegação na internet –

É importante que os alunos se familiarizem com o vocabulário do universo digital, bem como com as ferramentas usadas nele. Alguns LDs trazem essa preocupação e procuram apresentar vocábulos, emoticons, e termos que se referem à navegação. O exemplo a seguir, encontrado em um LD de primeira série do ensino fundamental, mostra a preocupação do material em discutir com as crianças a diferença entre site e endereço eletrônico e como essa diferença é marcada linguisticamente.

2. Os leitores da revista poderiam mandar suas frases através do correio ou por *e-mail* (fala-se "i-mêiu").

E-mail significa "carta eletrônica". **Endereço de e-mail** também é um tipo de endereço da Internet, só que não podemos "visitá-lo" e ver imagens ou textos como num *website*. O endereço de *e-mail* só serve para receber... *e-mails*!

Todo endereço de *e-mail* começa com algo escrito (pode ser um nome, ou uma combinação de letras e números), seguido pelo símbolo @ (o nome desse símbolo é **arroba**), seguido por mais algumas letras.

Agora marque **S** nos endereços de *sites* e **E** nos endereços de *e-mail*:

Há também livros que criam um glossário com alguns termos que circulam na rede como se pode ver no seguinte exemplo. Entretanto, nenhuma proposta é feita a partir da apresentação desses itens. Eles surgem no LD motivados por um estudo de texto; não passam, portanto de pretexto para estudo de verbetes. Observe-se que muitas atividades poderiam ser propostas a partir desse glossário. Solicitar aos alunos que aprofundem a pesquisa, por exemplo, buscando o sentido de novos termos, advindos da tecnologia – já corriqueiros na vida de todos –, que busquem novos emoticons – próprios de chats – e os usem em uma “batalha” de bilhetes (troca rápida de bilhetes em sala de aula), verificando as situações de uso (gênero textual, objetivo do texto, intimidade com o leitor etc). Pode-se também elaborar uma aula online, usando o chat, ou uma busca de sites interessantes sobre um determinado assunto, ou pesquisa sobre programas livres que trabalhem imagens e elaborar um projeto de história em quadrinho.

A presença de vocábulos ou ícones do mundo digital nos LDs revela uma preocupação desses com a inserção do aluno nesse universo que nem sempre lhe é tão familiar.

Fonte: Faraco, C. & Moura, F. (2007). *Linguagem Nova*. São Paulo: Editora Ática.

A Internet aparece em alguns LDs como **tópico** a ser discutido e melhor compreendido pelos alunos. Aspectos como seu surgimento, seu crescimento, número de usuários em diferentes países, além de novidades e novos equipamentos são temas de textos usados em alguns materiais didáticos.

6) Ilustrações explorando simbologia da Internet, para dar um ar de modernidade, debates.

A ilustração ao lado (fonte: Faraco, C. & Moura, F. *Linguagem Nova*. São Paulo: Editora Ática, p. 249) compõe uma página que propõe uma discussão sobre a Internet. Não se trabalha o e-mail ou o sentido do sinal de arroba, posto em endereçamento eletrônico, como separador entre a identificação do usuário e a designação da rede a que pertence sua conta. No LD de onde a retiramos, funciona apenas como uma ilustração que ajuda no descanso de uma página que tem, como já dito,

o objetivo de encaminhar um debate sobre a Internet. O comando dado é o seguinte: “Leia as várias opiniões sobre a Internet. Algumas são favoráveis e outras desfavoráveis. Leia com atenção, reflita e chegue às suas próprias conclusões.”

Após esse comando, são oferecidos quatro pequenos textos falando sobre a Internet. Dois discorrem sobre a chegada da tecnologia na vida de todos nós e a inevitabilidade de nos adequarmos às novas situações que essa tecnologia, inevitavelmente, gerará no comportamento social. Outros dois abordando a questão da solidão que a máquina nos impõe, o estímulo ao comportamento individualista e egoísta, bem como o embotamento da criatividade e da inteligência.

O gênero debate não é trabalhado, não há nenhuma indicação de como elaborar a atividade, mas já se propõe uma reflexão crítica sobre a chegada da tecnologia em nossas vidas. Um professor bem preparado pode desenvolver ótimas reflexões éticas sobre o uso da Internet, que não é mais terra de ninguém, exigindo um uso responsável. Com isso pode trazer para o debate o uso do Orkut e do MSN, sem moralismos, sem tecnofilias ou tecnofobias, mas procurando aprofundar uma discussão sobre os novos gêneros/portadores que surgem nesses programas (como os scraps, por exemplo) e seu uso social.

7) Análise e produção de gêneros digitais

Gêneros textuais que surgiram com as tecnologias digitais já fazem parte de alguns LDs e são lidos, discutidos e às vezes produzidos pelos alunos. Entre eles podemos citar sobretudo o e-mail e os blogs.

Já há LDs que fazem comparação entre gêneros digitais e gêneros impressos, demonstrando como diferentes portadores podem gerar diferentes gêneros textuais, num processo híbrido claro, em que se verifica que um gênero não surge do nada, mas é fruto de transformações de outros, em função das necessidades sociais. Essa comparação que pode se estender a vários portadores, como por exemplo, o jornal on-line e o jornal impresso e até mesmo o jornal falado; ou gêneros, um diário e um blog, uma carta ou bilhete e um e-mail, colabora para que os alunos entendam a “hereditariedade” dos gêneros digitais – que na verdade pouco se cria e muito se transforma e que dessa transformação novos gêneros vão surgindo. A exploração contrastiva de textos impressos e eletrônicos leva o estudante a perceber semelhanças e diferenças entre eles, familiarizando-se com os diferentes suportes, bem como a perceber como o mesmo gênero sofre modificações para se adaptar às exigências daquele meio pelo qual ele é veiculado, colocando em prática as discussões propostas por Mc Luhan, já em 1977, de que o meio é a mensagem.

8) Apresentação de textos que trazem como temática a Internet.

Um texto muito encontrado em LDs, quando da produção deste artigo, foi a canção *Pela Internet*, de Gilberto Gil. Geralmente, junto ou após à canção é oferecido um glossário explicando o sentido de home page, gigabyte, byte, hot-link, Mac, navegação. Atividades dessa natureza ajudam os estudantes a conhecer esses termos que fazem parte do universo digital contribuindo, dessa forma para letrar digitalmente o educando. É preciso, no entanto, que esses conceitos sejam realmente experimentados, vivenciados pelos usuários. Os estudantes precisam velejar nesse “infomar”, aproveitar a “infomaré” e criar sites, enviar e receber e-mails, saber sobre vírus – o que são, como evitá-los e como se livrar deles – bem como se familiarizar com esse mar de informações e participar dele, uma vez que “a máquina somos nós” (Referência ao vídeo com esse título, disponibilizado com versão em português no Youtube <http://br.youtube.com/watch?v=NJsacDCsiPg>). Embora sejam poucos, há LDs fazendo propostas que envolvem os alunos nesse “infomar” propondo a busca de informações, reflexões sobre linguagem usada na Internet, discutindo sobre o crescimento da rede e seu desenvolvimento tecnológico, assim como propondo a criação de sites individuais ou coletivos.

Novas janelas...

Se algumas das inovações são superficiais e mexem apenas com o aspecto físico do livro, funcionando como elemento produtor de prazer estético, outras são (e precisam ser cada vez) mais profundas.

Pensemos, por exemplo, nas propostas de estudo dos novos gêneros e/ou ambientes digitais, tais como e-mail, chat, blog, e-zine, lista de discussão, site, youtube (hoje se faz até cinema com telefone celular. Imagens gravadas em celulares viraram mania mundial no site do Youtube e agora estão sendo transmitidas pela televisão – como acontece no programa “O gordo viaja” (MTV) que

PELA INTERNET Gilberto Gil, 1996

Criar meu web site
Fazer minha home-page
Com quantos gigabytes
Se faz uma jangada
Um barco que veleje

Que veleje nesse infomar
Que aproveite a vazante da infomaré
Que leve um oriki do meu velho orixá
Ao porto de um disquete de um micro
em Taipé

Um barco que veleje nesse infomar
Que aproveite a vazante da infomaré
Que leve meu e-mail até Calcutá
Depois de um hot-link
Num site de Helsinque
Para abastecer

Eu quero entrar na rede
Promover um debate
Juntar via Internet
Um grupo de tietes de Connecticut
(...)

http://www.gilbertogil.com.br/sec_discografi_a_view.php?id=34

é todo feito com imagens captadas por celular – e podem virar cinema – como o curta-metragem feito por Marcelo Yuka, “O filme do filme roubado do roubo da loja de filme”, todo feito em celular.). É muito importante que eles sejam incorporados pelo LD, pois assim ele estará ajudando a escola a cumprir, de forma menos lacunar, seu papel de agência de letramento.

A presença de elementos do mundo digital nos LDs revela uma preocupação deles com a inserção do aluno nesse universo que nem sempre lhe é tão familiar. Essas são todas formas de explorar o digital contribuindo para o letramento dos alunos. A presença desses elementos, no LD, no entanto, não significa que o letramento digital tem sido bem abordado nas atividades e seja um objetivo a traçado pelos materiais. Muitas vezes a abordagem é ainda esporádica e superficial, mas já demonstra uma preocupação, é um começo de uma ação que vai fazer história.

Mesmo em escolas onde não haja laboratórios de informática com computadores conectados à Internet, é preciso que se inicie um processo de letramento digital e o LD pode contribuir para isso. Saber que há uma “coisa” chamada e-mail, que se parece com uma carta, mas que não é carta, que tem formulário próprio com alguns dados muito parecidos com os da carta, que é transmitido online, que as pessoas recebem assim que se conectam a uma máquina, em um lugar qualquer, que pode vir com anexos; saber que há a possibilidade de se bater um bom papo na Internet, oralmente ou por escrito, sem ter de se preocupar muito com as normas gramaticais porque esse gênero tem regras próprias de uso da língua; saber como navegar, que ícones clicar para se alcançar um determinado objetivo, reconhecer um emoticon e sua carga semântica na produção do sentido; aprender a navegar em busca de uma informação, encaminhar um professor a desenvolver pesquisas online com seus alunos, orientando-o quanto ao processo de desenvolvimento da atividade; refletir sobre vídeos e sobre possibilidade de criar e disponibilizar seus próprios vídeos na rede; ensinar a um aluno as marcas textuais importantes para a leitura e produção de diferentes gêneros digitais são papéis que a escola pode cumprir, recebendo para isso o apoio do LD.

Retomando nossa epígrafe, olha a janela ficando mais bela! O trabalho com o universo digital deve quebrar medos e resistências e despertar curiosidades, abrindo novas janelas e isso vai fazer toda a diferença.

Presentación de los Avances del Grupo de Investigación “Fracaso Escolar Y Competencias Comunicativas” en Relación con Prácticas Educativas de Carácter Inclusivo en La Enseñanza de la Lectura y la Escritura

**Estela D’Angelo
Laura Benítez
Rosa Sobrino

Universidad Complutense de Madrid, España

1. Una problemática que moviliza distintos procesos de investigación: el fracaso escolar como expresión de un sistema excluyente

El Grupo de Investigación realiza un acercamiento interparadigmático a la problemática del *fracaso escolar* en las sociedades que se identifican con el *bienestar* con la intención de comprender, interpretar y valorar este fenómeno que hoy se reconstruye ante el vertiginoso dinamismo que marcan las relaciones neoliberales: nuevos escenarios y nuevas problemáticas en relación con la socialización, la educación y la inclusión social de niños y adolescentes han generado una multiplicidad de factores que, de una u otra manera, condicionan el surgimiento de distintos grupos de riesgo hasta ahora inexistentes y, al mismo tiempo, han reconceptualizado los que ya existían, como es el caso de los y las adolescentes que fracasan en su proceso de acreditación escolar. En la sociedad española actual, los adolescentes tienen dificultades para permanecer en la Enseñanza Secundaria Obligatoria (ESO) y llegar a la correspondiente acreditación académica. Los indicadores de este *fracaso escolar* son jóvenes que dejan la ESO con calificaciones poco válidas para continuar su vida académica, que se consideran segregados/excluidos por cualquier causa dentro del ámbito escolar o, simplemente, que abandonan los estudios porque la enseñanza les parece irrelevante en sus vidas. Evidentemente, son situaciones de exclusión entendiendo, de acuerdo con Gerardo Echeita (2006), que la inclusión es una respuesta preventiva y reactiva -en determinadas circunstancias- al riesgo de exclusión. Por ello, el Grupo se interesó por registrar las voces heterogéneas de adolescentes en alguna situación de fracaso escolar para poner en evidencia cómo construyen socialmente (y viven) estas experiencias de exclusión y, en consecuencia, cómo configuran identidades identificadas con fracaso en la incorporación, permanencia y/o acreditación escolar. Desde el enfoque biográfico-narrativo, el Grupo analizó relatos de vida incitados por los entrevistadores para construir el sentido del fenómeno investigado, entendiendo, de acuerdo con Antonio Bolívar y otros (2001),

que al relatar la singularidad de una vida, se refleja también la colectividad social en la que se ha ido tejiendo, con las múltiples experiencias que –en sus tiempos y contratiempos- han jalonado y configurado el itinerario e identidad de vida. Es decir, las historias de vida visibilizan aquel conjunto de percepciones, intereses, contextos sociales y circunstancias familiares que se han cruzado en las trayectorias de los individuos y, en ocasiones, han impedido el proyecto inicial de “llegar a ser”. De este modo, se identificaron aquellos elementos del pasado que los adolescentes en circunstancias de fracaso escolar (o con factores de riesgo al respecto) consideraron relevantes para describir, entender, representar y analizar su situación con el fin de enfrentarse al futuro. Los datos aportados en estos relatos se triangularon con los aportes del análisis del material documental (grabaciones en vídeo de segmentos de clase, entrevistas a docentes y familiares, etcétera) obtenidos en el estudio de campo realizado en Educación Infantil, Primaria y Secundaria en relación con la temática del fracaso escolar. En esta etapa del estudio, el Grupo pudo establecer ciertos patrones y regularidades concurrentes en el material analizado que pueden ayudar a comprender las circunstancias curriculares y relacionales que confluyen en este fenómeno, cuestión que colabora con las acciones para superar el riesgo de exclusión que debieran promoverse. Dichos patrones y regularidades se organizaron en torno a tres ejes:

A) Desajuste entre las prácticas de enseñanza y las necesidades de un alumnado marcadamente hipersatisfecho.

Se interpreta que este desajuste alimenta situaciones de desencuentro intergeneracional en los escenarios familiares y escolares, cuestión que dificulta la organización emocional que requieren los niños y los jóvenes para resolver con autonomía el repertorio de aprendizajes propio de cada momento del ciclo vital.

B) Dificultades en los sistemas sociales -básicamente, el escolar y el familiar- para desarrollar metodologías y pautas relacionales que fomenten sujetos capaces de autorregularse emocional y cognitivamente para organizar y resolver sus propios procesos de aprendizaje acorde con las exigencias, valores, pautas relacionales, etcétera que plantea la dinámica social actual.

Se interpreta que estos contextos no potencian el desarrollo del pensamiento crítico y reflexivo en niños y jóvenes, imprescindible tanto para el dominio de las diferentes áreas de la ESO como para la autogestión de un proyecto vital marcado por los criterios de salud bio-psico-social.

C) Registro de problemas, desde etapas educativas previas a la ESO, en el desarrollo de competencias comunicativas y lingüísticas en gran parte de los adolescentes que, en la actualidad, presentan bajo rendimiento académico. Y, de forma subsidiaria cual eje transversal, evidencias de que estos problemas influyen en el aprendizaje en todas las áreas curriculares (problemas en los procesos de alfabetización académica).

El Grupo de Investigación interrelacionó estos distintos aportes, interpretando la relación que se establece entre “*poder pensar, sentir y actuar autónomamente*” y disponer de buenas condiciones para aprender distintos objetos de conocimiento, entre ellos, la *lengua materna*, cuestión de gran trascendencia social pues, la lengua, más que un sistema de sonidos, unidades de significados y sintaxis, y más que una herramienta para transmitir significados, es un *comportamiento social*. *La sociedad moldea la lengua*. Familia, vecindad, clase social, empleo, país, religión, raza, sexo, política, grupos regionales..., generan lenguaje. Y la praxis del lenguaje genera, a su vez, transformación social. El uso de la lengua se lleva a cabo en forma de enunciados (orales y escritos) que pertenecen a los participantes de una u otra esfera de la praxis humana (Batjin, 1982). Cada esfera del uso de la lengua elabora sus tipos de enunciados relativamente estables. El reconocimiento del sistema de la lengua se entreteje junto con los modelos de la vida social. Aprender la lengua es un comportamiento social. Es expresar enunciados apropiados. Implica un modo de comprender la sociedad en la que se vive. La sociedad demanda usuarios de la lengua escrita competentes. Las acciones relacionadas con la instrucción deben posibilitar, entonces, la frecuentación y producción de diversos tipos de textos, coherentes y cohesionados a una comunicación comunicativa determinada, así como la sistematización escrita de los textos requeridos en distintos proyectos. Sin embargo, tal como alerta Freire, “*el otro mundo, el mundo de los hechos, el mundo de la vida, el mundo de los conflictos, el mundo de la discriminación y de las crisis económicas... no tiene contacto con los estudiantes en la escuela a través de las palabras que la escuela da a leer a los estudiantes*”.

Paralelamente, tampoco resulta suficiente aprender las reglas del sistema para ser un auténtico usuario de la lengua. A la gramática se le otorga un valor restringido, pues se suele pensar que la competencia lingüística está ligada sólo a la capacidad de generar discursos gramaticales aceptables y sin embargo, tal como afirma Bourdieu, dicha competencia se relaciona con la posibilidad de producir frases oportunas y con un propósito definido. La intención expresiva, la manera de manifestarla y las condiciones en que se manifiesta son inseparables. El manejo práctico de la gramática no sirve de nada sin el manejo de las condiciones de utilización. La enseñanza de la gramática debe ser aprendida como parte del proceso de la escritura y no separado de él. Esto no inhibe la posibilidad de reflexionar sobre las normas y reglas del sistema.

El propósito de la enseñanza debe, entonces, incidir para que los aprendices dispongan de la estrategia de aunar las formas lingüísticas con las funciones comunicativas en contextos de uso social. Se necesitan muchas ocasiones para escribir espontáneamente sin privarse de usar una determinada palabra por no

conocer su grafía o la norma que se relaciona con su uso; para enfrentarse a un texto y construir su propio significado; para establecer las propias reflexiones. De este modo, la enseñanza de la lengua contextual puede servir como una base valiosa para el desarrollo posterior de la competencia comunicativa. Ernesto Sábato comenta, recordando a su maestro Henríquez Ureña en “Apologías y Rechazos”, que enseñaba el lenguaje con el lenguaje mismo, como Hegel afirmaba que se debe enseñar a nadar nadando. No exigía un previo aprendizaje gramatical sino, más bien, daba ese conocimiento a medida que el aprendizaje empírico del lenguaje (...) lo hacía indispensable.
