Language teacher education for learner autonomy: the empowering potential of case pedagogy

Flávia Vieira
University of Minho, Portugal [flaviav@ie.uminho.pt]

Manuel Jiménez Raya
University of Granada, Spain [mjraya@ugre.es]
Although discourses advocating autonomy pervade current educational research and policies, teaching practices are often alien to theoretical proposals and policy recommendations. This mismatch can be explained by historical and structural factors, one of them being that teacher education has often represented a disempowering space where teachers are expected to assimilate and apply academic knowledge, rather than inquire into and explore their own practices. As a result, teacher education programmes may fail to promote educational change towards autonomy. (Jiménez Raya & Vieira, in press)
Teacher education for autonomy: what does it entail?

• An ideal vision of education as empowerment and transformation where teachers act as critical intellectuals and agents of change (Freire, 1986; Giroux, 2013; Kincheloe, 2003; Smyth, 1987)

• A critical view of education as it is, so as to envision possibilities (what it can be) and explore the interspace between reality ideals (Jiménez Raya & Vieira, in press; Jiménez Raya, Lamb & Vieira, 2017)

• A view of teacher education as a ‘third space’ (Zeichner, 2010) and teacher educators as ‘third space professionals’ (Whitchurch, 2013)
Pedagogy of experience in teacher education

- Promoting an epistemology of practice by focusing on professional reflection and action so as to enhance the theorisation of experience and the renewal of practice with a transformative purpose
- Using public theories to help teachers scrutinise and reconstruct personal professional knowledge (rejecting a theory-to-practice rationale)
- Favouring teachers’ epistemological and situational autonomy to make decisions that are conceptually and ethically sound, locally valid, and socially relevant
- Enhancing teachers’ ability to identify and resist constraints, and find spaces for manoeuvre → pedagogy for autonomy as a re(ide)alistic practice
- Understanding and enhancing teachers’ professional knowledge and practice as situated, exploratory and transitional phenomena
TEACHERS WRITING CASES FROM THEIR OWN EXPERIENCE

- Exploring the interspace between reality and ideals → a re(ide)alistic approach
- Promoting an inquiry-based approach to teaching
- *Case analysis* for understanding PA (analysing professional narratives of autonomy-oriented experiences)
- *Case construction* for exploring and understanding PA (designing, implementing and narrating autonomy-oriented experiences)

To assert that a narrative is a case is to engage in an act of theory. (...) I do not mean that cases are, in themselves, inherently theoretical. Nor do I mean that the purpose of cases is to teach theory. Instead I am claiming that any story that can be called a case must be arguably a case of something. It must be seen as an exemplar of a class, an instance of a larger category.

For this reason, the key move made in teaching with cases occurs when instructor and students explore the question, “what is this a case of?” As they wrestle with this question, they move the case in two directions simultaneously. They connect this narrative to their remembered (personal) experiences or to vicariously experienced cases written or recounted by others, thus relating this particular case to other specific cases. They also connect this narrative to categories of experience, to theoretical classifications through which they organise and make sense of their world. (Shulman, 2004: 474)
Context

• 2-year Master degree programme for in-service language teachers (University of Minho, Portugal)
• Course on Language Education and Pedagogical Supervision (45h)
• Exploration of a pedagogy of experience (since 2003)
• Theoretical input on visions of language education and professional development, pedagogy for autonomy, collaborative supervision, and classroom-based inquiry.
• Case analysis (whole class) and case construction (groups)
• Inquiry-based approach to case development in schools
• Case narratives in case portfolios
• Participatory evaluation (professional learning & course quality)
## Approach to inquiry-based case construction

A more democratic approach: more explicit/ transparent, negotiated, cooperative, participatory, and reflective
What teachers’ narratives tell us about teacher empowerment...

- The starting point for inquiry is usually related to how teachers come to perceive mismatches between real practice and imagined practice.
- Teachers interrogate established practices and explore alternative practices that they believe to be more in tune with humanistic and democratic values.
- Teachers explore learner-centred approaches that amplify students’ voice through pedagogical negotiation, metacognitive awareness, self-regulation, and joint evaluation of learning and teaching.
- In promoting learner autonomy, teachers realise they enhance their own autonomy by interrogating mainstream teaching cultures, becoming more critical, and being more able to innovate and evaluate practice.
- Pedagogical change is experienced, to a large extent, as a journey into the unknown which requires tolerance of uncertainty and an exploratory approach to pedagogy.
- Writing is a method of (self)inquiry whereby Teachers’ develop a ‘language of experience’ (Larrosa Bondía, 2010), a hybrid language that combines creativity and rigour and represents a ‘third idiom’ situated in-between professional and academic codes (Shor, 1992).
Awareness of the complexity of education
Critical stance
Resistance to constraints
Agency & Inquiry
Writing from experience

A LEGACY OF CASES FOR OTHER TEACHERS TO REFLECT AND BUILD UPON
Case pedagogy: tensions and challenges

- Time-consuming
- Context-sensitive and exploratory
- Demanding for teachers and teacher educators
- Runs counter to mainstream teaching and TE cultures
- Teachers’ projects are small-scale and isolated
- Learner autonomy is only briefly explored
- No follow-up assessment of impact

NEED TO DEVELOP A SCHOLARSHIP OF TEACHER EDUCATION
Educational experience and TE for autonomy as re(ide)alistic practices...

- Unique
- Uncertain
- Dilemmatic
- Ineffable
- Situated
- Value-laden
- Hybrid
- Transitory

Pedagogy as “the third margin of the river” (Nóvoa, 2011)
